Resolutions of the house.

Farther resolution of the house.

The commons prejudiced against the company. The house address the king to dissolve the company.

² Debates of the House under this Year.

³ RALPH, vol. ii. ubi sup.

⁴ RALPH, *ibid.*

" give

"give the commons an answer." Although his majesty appeared quite undetermined, yet a his presenting Mr. *Goldborough*, then governor of *India*, with the honour of knighthood, was looked upon as a favourable omen to the present company ^a.

The dispute referred to the privy council.

The whole dispute being now brought before the privy council, the company shewed the greatest readiness to stand by their award; and signified in writing, the cheerfulness with which they submitted the dispute to the arbitration of the privy council. Notwithstanding this, when they received, by the hands of the earl of *Nottingham*, a copy of the conditions agreed upon by the privy council, they objected in almost every article, and accompanied those objections with a paper of their own, shewing that neither the model or conduct of such a trading company could be altered for the better (P).

In

^a RALPH, vol. ii. an. 1642. DOWSLEY, vol. ii. c. 3.

(P) The following is the paper of propositions by the lords of the council, with the answers of the company.

Prop. 1. The fund to be made up of 1,500,000 pounds at least, and not to exceed 2,000,000.

Ans. The company do humbly aver, and are ready to prove to his majesty's satisfaction, that their present quick and dead stock is of more real value than the said sum of 1,500,000 *l.*

Prop. 2. The stock of the present company to be part of this fund, and to be rated at 744,000 *l.* if they can give security that it shall effectually produce that sum; or else at so much less, as they will engage to make good, after debts paid, and satisfaction made to the *Mogul* and his subjects; against whose pretensions the new stock to be indemnified by the like security.

Ans. The company say, that the value of every thing is what it will sell for; that their stock, under all the calumnies of their enemies, currently sells at 150 *per cent.* and they know, and can prove it to be intrinsically of more value than that current price. But they know no law or reason why they should be dispossessed of their estates for less than they are really worth in ready money, by all the measures by which any thing is valued in any part of the world. They humbly say, as to security, they know no cause why they should give security for their own estates. They affirm, that they owe not a penny to the *Mogul*, or any of his subjects, other than their running accounts with their own banyans and brokers, which are daily changing, like merchants running cash in a goldsmith's hands. Although the company owe nothing to the *Mogul*, yet the bare mentioning it in a public act of his majesty, would be enough to persuade him to make demands on the company, for transactions and pretences done in past ages, before any of the present adventurers were born; and therefore part of the proposition seems manifestly impossible, as well as unjust; neither the *Mogul*, nor any of his subjects, having made complaint to his majesty of the company's being in debt to them; that being only a suggestion of the interlopers and their adherents, not only now, but for many years past. As to that hypothesis, if they can give security, it will not become the company to say what they might of their own ability, or that of their adversaries; they are on both sides well known upon the *Exchange*.

Prop. 3. That the stock of the present company shall be brought home at any time within — years, in the ships abroad, or those to be sent on account of the new stock, paying the same freight, and disposed of at public sales by the members of the present company, and the nett produce thereof to be taken as part of the 744,000 *l.* as shall also the value of their forts, to be estimated by indifferent persons, and put into the hands of the new charter company. But after — days, no goods to be exported to the *East Indies* on account of the old stock.

Ans. The company say, they have as real a right to all their forts, cities, towns, and territories in *India*, to them and their successors for ever, as they have to their purchased lands and warehouses in *England*, belonging to the company's joint stock, or other private lands or manors belonging to the particular adventurers: *Rex Dei gratia* being the original title by which many manors, court leets, court barons, and lands are held in

England. And the company are unwilling to be dispossessed of their said real estates, till they are paid for them, which they believe in their consciences have, at several times, cost them above a million of money sterling, besides interest. But as to the price, were that the only point, they would submit it to his majesty's known justice.

Prop. 4. That whatever the quick and dead stock shall thus produce more than 744,000 *l.* shall be divided wholly between the members of the present company, proportionable to their respective stocks.

Prop. 5. Books to be provided for the new subscription, within —, and then the books to be closed.

Prop. 6. If the subscriptions exceed two millions, each subscriber to be reduced proportionably, till the whole make but two millions.

Prop. 7. That every subscriber pay in his money upon pain of —

Ans. To the 4th, 5th, 6th, and 7th propositions, the company humbly reply, that they do as little understand the new subscribers, as they suppose most of those subscribers do the affairs of *India*. But the company know the late new method of subscribing, without authority from his majesty, is an old practice of interlopers and others emulous of the company's prosperity. This has formerly been often debated, upon the like voluntary subscriptions, and particularly in the reign of king *Charles* the second, when some of the lords of his now majesty's most honourable privy council were present. But it always ended in only giving unnecessary trouble to his majesty and the company.

Prop. 8. No one person to have above 10,000 *l.* in this stock, in his own name, or in trust for him. Every subscriber shall make oath accordingly, that it is his own money.

Ans. This proposition, in duty to his majesty, and love to their country, the company most freely declare against, as being notoriously prejudicial to the nation, whoever the adventurers are. 1st. Because trade is a free agent, and must not be limited or circumscribed; whenever it is so it never thrives. 2d. It is contrary to the laws and customs of *England*, and of every other country, that a man who buys and honestly pays for a commodity, should swear it was with his own money; this being only a trick of the first proposers to serve a particular turn, without any notion of, or regard to, right or public good. 3d. If such a limitation were advisable, certainly some other nation must have hit on the expedient ere now; whereas, on the contrary, the prudent *Dutch* indulge and favour the very *Jews*, and the more, for buying the greater stock. One of these, *Swaffe* by name, had at one time 75,000 *l.* share. The *French* king likewise, for the encouragement of large subscriptions in that stock, propounded many considerable privileges and immunities, both to natives and foreigners, proportionable to the greatness of their said subscriptions. The *Danes*, likewise, it is said, made a law not long since, that such as would not add a certain proportion to their stock already wrote, should forfeit the said stock; which was a constraint equally erroneous with the former proposition. 4th. Such kind of levelling and limiting personal estates, was never known in commonwealths, much less in monarchies. Our levellers in *England*, and much less the tribunes of *Rome*, never

IN this suspense the contest hung till the next session of parliament, when it was again renewed with no less heat than before. Both parties, with equal eagerness, made their applications

never pretended to the limitation of personal estates; but of possessions in land, and not of all lands, not in their provinces, but those only of *Italy*, the seat or country of the Republic. 5th. No considerable man of fortune or experience, will ever endure the fatigue of continual study in the *East India* company's affairs, without finding his account some way; and that must be either by a great reward, or a great stock, or by other worse ways of paying himself. The most that *English* companies give a committee-man is about 50 *l. per ann.* whereas the *Dutch* have allowed *Peter Van Dam* 800 *l. per ann.* with about 400 *l. per ann.* to his son. But it is most more beneficial that such an active able man have a large stock, than any reward whatsoever. A man who is rewarded, is united to the company's interest but by one tie; but the other is induced by strong motives of profit and fears of loss, to an assiduity and industry the most he is capable of.

Prop. 9. That every member of the present company, who hath above ten thousand pounds stock, shall forthwith sell the overplus, at the rate of 100 *l.* for 100 *l.*; but so that if the whole nett produce of the present stock exceeds 744,000 *l.* this overplus shall go to the person that has sold his overplus stock, proportionable to the stock he had before such sale.

Ans. The company can see no shadow of reason or equity in this proposition; but a direct contradiction to common right, and the admirable laws of this kingdom, for the preservation of property.

Prop. 10. No person to have a vote that hath in his own right, and not in trust, less than 500 *l.* stock, nor more than one vote unless he have 4000 *l.* and then two votes; if he have 6000 *l.* three votes, and so in proportion to 10,000 *l.*

Ans. The company are humbly of opinion, this is more justly and equally provided for already in their present charter. This proposal of giving advantage to the small stock, is but a *Hieron proteron*, never before known in any part of the world, in mercantile affairs; wherein, as far as the sun shines, men vote according to their proper shares in the shipping, or as they are interested more or less, and not otherwise.

Prop. 11. All members of the present company, and new subscribers, to be incorporated by the name of

Prop. 12. All who have, or subscribe, 500 *l.* stock, to meet and chuse a governor, deputy, and twenty-four committee-men, to manage the trade. None to be governor or deputy who hath subscribed less than 2000 *l.* nor committee-man less than 1000 *l.* stock.

Prop. 13. The governor, deputy, and committees, to be annually chosen; and those who die within the year to be replaced by others, chosen by a general court.

Prop. 14. The governor, deputy, and committees, to take the oaths of fidelity: and also an oath for the faithful discharge of their trust.

Prop. 15. That every one purchasing any stock shall take his freedom, and, before his admittance, pay — for a fine, and take the oaths appointed.

Ans. In the 11th, 12th, 13th, 14th, and 15th propositions the company see nothing new; all is provided for in the same, or a better manner, by their present charter.

Prop. 16. That all free of the former company, or capable to be so, and all subscribing to the present stock, shall be admitted gratis.

Ans. In this there is but a trivial difference from the company's present charter, which enjoins all new adventurers, except the sons and servants of freemen, to pay five pounds each for their admittance. The old adventurers have paid their respective five pounds; and we can see no reason, if new men be admitted, why they should not do the same.

Prop. 17. That the company hereby established may make by-laws for their better government. That no by-laws shall be binding to the company, unless ap-

Mod. Hist. Vol. IV.

proved in a general court of the adventurers, and not repugnant to the laws of the land.

Prop. 18. That every general court and committee be called by the governor, or deputy; at all which the governor, or deputy, shall be present; and, in case of equality of voices, shall have a casting vote.

Prop. 19. That the company shall enjoy the sole trade to the *East Indies*, in the several countries lying between the *Cape de bona Esperanza* and the *Streights of Magellan*.

Prop. 20. That it shall not be lawful for any, save the said company only, directly or indirectly, to trade within the limits granted to the said company, on pain of forfeiting —

Ans. As to the 17th, 18th, 19th, and 20th propositions, the company can observe nothing in them that is not already contained in their present charter, in the same manner.

Prop. 21. That no licence or permission shall be granted to any persons or ships, to trade to the *East Indies* on any private account; and that all such permissions shall be void.

Ans. This is an unreasonable proposition, and against the sense of all charters, and ought, for the public good, to be left to the company's discretion. In the late war with the *Mogul*, permissive ships were of great use; now that peace is restored, they are only useful in particular instances, which might be specified; and in settling of new plantations, which the company best know when and how to effect. No *East India* company in any part of *Europe* is loaded with such shackles, which in many cases would impede their progress for the public good.

Prop. 22. That there shall be no private contract for the sale of any goods; but they shall all be sold in public by inch of candle, for the company's account.

Prop. 23. That no lot of any goods to be sold, exceed 500 *l.* value.

Ans. These two are novelties, and such as were never imposed upon any *East India* company in *Europe*; they are against the national right, and if established, will tend to the prejudice of the kingdom, as the company doubt not to make evident to his majesty by irrefragable instances. Trade must be free for the public good, otherwise it will languish and die.

Prop. 24. Every year the company shall deliver to his majesty's use, 500 tons of salt-petre, at — per ton, if required, the refraction not exceeding —

Ans. The company will always serve their majesties with salt-petre as cheap as they can afford it; and doubt not but to please their majesties therein, as they have done all their royal predecessors. But to be limited to a certain price, quantity and refraction, is a novelty that was never imposed on this or any other *East India* company. It had been an unhappy accident for *England*, if such a restraint had been laid upon the company ten or twenty years past, which would have prevented one fourth of the quantity of salt-petre from being found in *England*, which was at that time in the company's warehouses; viz. 3000 tons, when this war with *France* began. There is a famous story confirming the truth of this, in the reign of *James the first*. — At that time, a great dearth of corn happened, which occasioned his majesty to send for the *Eastland* company. He told them, that to obviate the present scarcity, they must load their homeward-bound ships with corn, which they promised to do, and were dismissed. After their departure, one of the lords of the council told the king, that such a promise signified nothing, unless they agreed upon what price they would sell their wheat at; on which they were called back, and acquainted, that the king desired a more explicit answer. The deputy replied, "Sir, we will freight and buy our corn as cheap as we can, and sell it here as we can afford it; but to be confined to any certain price, we cannot." But being pressed

cations to the courtiers, and every man of weight, who, on their parts, were induced to put a value on their services, proportionable to the consequence given them by such applications. As nothing decisive had been done last year, either in parliament or council, it was generally imagined that the company had, upon the whole, the advantage. To propagate which belief, they talked of opening a new subscription, to the amount of 756,000*l.* which, together with the value put on their old stock, made the million and a half, voted by the commons, to be a fund sufficient for this trade. They even applied for a new charter, to authorize them to do so; and gave out, after having obtained an order of council to the attorney-general for preparing one, that all persons had now agreed to the regulations on which this charter was to be erected; but more particularly those who had solicited the establishment of a new company by act of parliament ^k.

This report did not long pass unattacked. The enemies of the company presented a *new* petition to her majesty, in which they solicited as before a *new* company, by a *new*, free, and national subscription. They declared, that the adding the new subscriptions to the *imaginary stock* of the present company, would expose the new stock to the debts of the old, by which it might be wholly absorbed, and the trade annihilated. By this they intended to destroy the prevailing notion, that a compromise had taken place. They farther presumed, that the company, by their misconduct, had traced out a path for their own ruin. When the bill for taxing several joint stocks was in agitation in the house of commons, and the company's stock was valued at 744,000*l.* the proprietors of the stock imprudently pleaded an abatement, affirming, that their debts paid, their stock would dwindle to nothing. Assertions so contradictory as those they gave in to the council; and this to the commons only served to strengthen the aspersions of their adversaries. Notwithstanding this pitiful plea of poverty, the commons tacked a clause to their bill, providing that, in default of payment of the tax imposed upon the several joint stocks, at the times specified, the charter of the respective company should be, and was thereby, adjudged void. To pursue their mismanagement, the company were so infatuated, as to neglect the first quarterly payment of the said tax charged on the

^k SOMERS'S Coll. vol. xxx. p. 100.

pressed for a more distinct answer, the deputy, who was a great fox-hunter, told the king, "Sir, your majesty is a lover of the noble sport of hunting, and so am I, and I keep a few dogs; but if my dogs do not love the sport as well as I, I might as well hunt with hogs as with dogs." The king replied, "Say no more, man, thou art in the right; go and do as well as you can, but be sure you bring corn."

Prop. 25. That the company shall export yearly to the *East Indies*, no less than the value of 100,000*l.* in goods of the product and manufacture of *England*.

Ans. The company may do this in general, some years more, some less, when their cloth lies unfold, eaten up with moths, and white ants in *India*. This ought, for the public good, to be left to the company's discretion.

Prop. 26. That all dividends be made in money.

Ans. This is commonly done here and beyond sea; but some instances may be given, wherein it would be highly detrimental to make this limitation. So it ought to be left to discretion, as is the case here, and in all other nations.

Prop. 27. That no dividend be made without leaving the original fund; or at least 1,500,000*l.* besides what is requisite for the payment of debts.

Ans. This is a discretionary rule the company now observe; but it was never enjoined them by charter; nor is there any company in the world so circumscribed. It is against natural right to debar any man from doing with his natural estate what he pleases.

Prop. 28. That the company's accountant keep a book to enter the value of the stock upon oath, to lie open for the perusal of all persons concerned.

Prop. 29. That all transfers of stock be registered and entered in a book, to lie open for all persons concerned.

Ans. The 28th and 29th propositions are already provided for in the same manner by the company.

Prop. 30. That the said joint stock shall continue for 21 years, and no longer.

Prop. 31. That a book of new subscriptions be laid open for a succeeding new general joint stock,

before the expiration of the said 21 years appointed for this stock.

Ans. This is so strange, that if admitted, the company would become the ridicule of mankind. It is in fact, saying, that a man shall plant a great orchard, and remove his trees, or depart from his possession at the end of 21 years; or that he shall build a fine house, a town or a city, upon such terms. The *Dutch* have spent within 30 years, the sum of 700,000*l.* upon *Ceylon*, and have not yet seen above 300,000*l.* of the principal. This company has been building and fortifying at *Bencoolen* about ten or eleven years, and they must proceed still for thirty to come, in which work they have spent from 250 to 300,000*l.* and though, indeed, they have preserved the proper trade to this nation by it, yet have they received no other advantage, or in the least reimbursed themselves; nay, on the contrary, it will cost them 200,000*l.* more, before it is rendered complete, secure, and, morally speaking, an impregnable asylum to the *English* nation. It is a most impolitic notion, that any company can thrive by frequent changing. any more than a nation, by the frequent alteration of the fundamental laws. The *Dutch* company stand on the original footing; and the *English* have never been changed but once; in the time of *Oliver Cromwell*, and then by their own consent. By the true rules of policy, the company should never alter; nor any man be forced to sell, any more than buy stock. It would be equally reasonable, to oblige a man of large landed property to sell a part, to make room for other purchasers.

Prop. 32. That the company be obliged, for the better and more secure carrying on this trade, to have ships of their own.

Ans. This is a constraint never laid on any company. These having ships of their own, and likewise hired ones, know best when to use either. There are few considerable merchants in *Europe*, that do not employ both; nor was it ever before thought, or sound political, to put trade into such strait-laced bodice, which, instead of making it grow upright and proper, will either kill or force it to grow awry."

a joint stock; whereby their charters became void, and fresh arguments for dissolving them ^{forfeit their charters.} were afforded to their adversaries¹.

In this condition all things remain for some time. It was generally imagined that the court would take advantage of the forfeiture, to oblige the commons, without regarding the three years notice stipulated by charter, and esteemed a point of equity. But the influence of the company was greater than was supposed, and sufficient to suspend the effects of their indiscretion. So little was the court disposed to take an advantage of their late slip, that, on the contrary, the directions for drawing a new charter given to the attorney-general, were calculated both to restore the company to their former grants, and to authorize and establish their new regulations. The dispute now became more warm than ever; both sides were inflamed with the different motives of enmity, prejudice, passion, interest, and avarice. The company's adversaries entered caveats against the charter at all the offices, and talked so big, that the ministry thought it necessary to give them a regular summons before the council, to shew cause why the company might not be re-established, according to the purport of the intended charter. As the time granted was too short, a fortnight's respite was given, during which time the company petitioned a protection for 1200 seamen, to be employed as usual in their service. Their opponents also petitioned for four hundred to be employed likewise in the *East India* trade, which they understood to lie open to all adventurers^m. When the day of hearing arrived, the 17th of *August*, both parties being called in, the council against the company urged, 1st. The unseasonableness of passing a charter so near the sitting of parliament, as this trade had been recommended to the peers and commons by a message last session from his majesty 2d. The unlawfulness of an exclusive grant; and 3d. The illegality of many powers contained in their former charter, and intended to be renewed in this. On the other hand, the counsel for the company asserted the power of the prerogative in that and similar cases, admitting of neither precedent nor authority to the prejudice of this right. Upon this, the opposite counsel proposed, that an issue might be settled, in which they would cheerfully join, that so the point might be decided at common law, in the next term. This was overruled, the company urging, that the matters had been already decided in *Westminster Hall*, the judges, after a trial, having affirmed their charter. To this no other reply was made, than that the judgment referred to was given by those very judges who had declared, that the king had a power to dispense with all laws; and that that their opinions in both cases should be held of equal authorityⁿ.

So equal were the arguments alleged on both sides, that the council broke up without coming to any resolution. After some days spent in expectation, the associated merchants renewed their petition for protections, accompanying it with another, setting forth, that they were advised, that the charters of the company becoming void by act of parliament, could not be restored. That they ought not to be restored, as they contained powers repugnant to the laws, to *magna charta*, and several statutes. That under colour of these powers, the company had greatly oppressed his majesty's subjects; and they would now more than ever think themselves authorized so to do. They prayed, therefore, that passing the said charter might be suspended, till the common right of the subject to the *India* trade might be determined by due course of law. Petitions were endless. This last they backed with two others; one from the linnen-draperies dealing in *East India* goods; another from the clothiers and other woollen manufacturers of *Gloucestershire*. The latter solicited, that as the trade to *Turkey* and the *Streights* was in a manner wholly obstructed, whence little or no cloth was sold; and that as their stock could not hold out to employ the poor, who daily cried at their doors for work, a general liberty might be granted at this time, to export freely woollen manufactures to the *East Indies*; affirming, that this trade was capable of taking off ten times the quantity yearly which the company exported. The petition from the linnen-draperies suggested, that the trade to the *East Indies* was much impaired, and in danger of being lost, through the mal-administration of the company. That in consequence of their misconduct, such was the scarcity of calicoes, that the kingdom was chiefly supplied with them by stealth from *Holland*, at an exorbitant price, to the destruction of trade, and diminution of the revenue. They prayed, that, to prevent a monopoly of the said trade in the hands of those by whom it was so abused, the charter might not pass^o.

A COALITION of so many considerable bodies so far alarmed the ministry, that they thought fit to transmit copies of those several papers to the company, and to require their answer in writing, to the several particulars and objections contained in them. On the next council day, their secretary did accordingly present to the board a written answer to this effect. That such a licentious and indiscriminate traffick would necessarily end in the ruin of the trade, and prejudice of the nation. That although in strictness of law charters should be avoided, the king

in this instance was his own chancellor, and might, as a point of equity and justice, restore theirs. This, they said, was the more reasonable, as the tax required on stock by the parliament, was ready for payment, and would have been paid on *Lady day*, had the exchequer been open; for it was actually paid a few days after. That nothing illegal appeared either in the restitution or the clauses of the charter; because by an express clause therein, the company was to be restored to nothing but what they lawfully held. In answer to the clothiers petition, they urged, that their not being permitted, in the years 1689 and 1690, to send out more than four ships, by reason of the situation of the kingdom, was the reason why a less quantity of woollen goods than otherwise would have happened, was exported. That for the two last years they had sent to *India* to the amount of 100,000*l.* in cloth and other goods. That this year, pursuant to the votes of the house of commons (Q), a larger quantity than ever was intended for exportation, in case they might be allowed sufficient shipping. That as to the scarcity of callicoes charged upon them, it was occasioned by the loss of three of their homeward-bound fleet; viz. two wrecked and one blown up. That the said scarcity would soon be remedied by two ships already arrived, five more expected this year, and nine the next. Lastly, that as to the petitions of their opponents for protections for 400 men, they conceived them as intended to gain countenance from their majesties, that the petitioners might, by her majesty's permission of so licentious a trade as was solicited, invade and lessen her royal prerogative of restoring the company to their charter; they humbly hoped, therefore, that no such allowance would be granted. In consequence of this written answer, an order of council was issued, that a copy should be given to the parties concerned, who were to attend upon a day appointed for a hearing; viz. the 21st of *September*^p. Accordingly, at this time the associated merchants delivered in a written reply, in which they asserted, that instead of managing the trade for the honour of the nation, as the company had boldly averred in their own commendation, they were ready to prove their unjust and unwarrantable actions a scandal to religion, to morals, the crown, and the nation; a reproach to our laws; an oppression of the people, and the ruin of trade; for which they and some of their agents had been reprimanded by parliament. That the company, in avoiding a trial of the merits of the cause by a due course of law, and soliciting a determination before her majesty in council, where they knew it would not be determined, tacitly confessed a conviction that the law was against them. That the charter they solicited was a creation of a new, rather than a restoration of their former powers. That their so eagerly pursuing the point, when a sitting of parliament was so near, argued a purpose in them to take the settlement of the trade out of those hands to which his majesty had committed it. That as to their pretence of equity in cases of penalty and forfeiture, there could be no equity against the penalty of an act of parliament. That what they averred of their intention to pay the tax on stock on *Lady-day*, if the exchequer had been open, was false; for it appeared by several affidavits, which they were ready to produce, that the office doors were open till the usual hours of shutting; that the officers were in waiting; that public business was dispatched; and that the money would have been

^p RALPH, vol. ii. A. 1693.

(Q) It must be observed, that on the 14th of *November*, the preceding year, Sir *Edward Seymour*, by the king's command, had laid before the house a copy of the new regulations proposed in the *India* trade, which we have inserted, together with the company's objections to those regulations. He also laid before the house the opinion of the judges, that three years notice must be given to the company before they could be legally dissolved, or a new one erected. This was the reason his majesty left it to the Commons to act as they saw proper. On the same day that these reports were made, the associated merchants presented a petition for dissolving the company. On the 17th, the pretensions of both sides were examined, the issue of which day's debates was a resolution, *namine contradicente*, that a bill should be brought for regulating, preserving, and establishing the *East India* trade to this kingdom. On the 24th it was farther resolved in a committee of the whole house, that a new subscription for a joint stock should be opened, not exceeding 2,000,000 *l.* and not less than 1,500,000 *l.* to continue for twenty-one years. On the 7th of *December*, it was yet farther resolved, that no individuals should possess a share exceeding 10,000 *l.* That the deputy governor should have 10,000 *l.* with several particulars coinciding with what we have related of the privy council.

All these several heads having been agreed upon, it was resolved to move the house that a bill might be brought in thereon to settle the said trade. On the 10th of *December*, the report was made and received, and it was now expected, at least by the public, that the whole affair would be brought to a speedy issue. But the company, it would appear, understood intrigue as well as the court; for all of a sudden the heat with which the house pursued the affair, was subsided; the chairman grew tired of his seat; and though, on the 4th of *January*, advantage was taken of a thin house to procure a vote, that the subscription for a new stock should be opened ten days after passing the act, yet no further progress was made in the bill. Nay, as if the business of the house was to husband the jobb with the utmost frugality, it was finally resolved on the 25th of *February* 1693, that an address of the whole house should humbly be presented to his majesty, that he would be pleased to dissolve the said company, upon three years notice, according to the condition of their charter. Accordingly, on the 2d of *March* the said address was presented; to which his majesty only replied, "Gentlemen, I always will do all the good in my power for this kingdom, and I will consider your address" (1).

(1) *Debates of the Commons*, an. 1693. *Somers's Coll.* vol. xxx. *Ralph's Hist.*

received

- a received had it been offered. That all the company's arguments drawn from the rights and powers of the prerogative, were of no validity against positive and express laws. That they claimed the benefit of the law as their undoubted right, by virtue of which (as they were advised) all her majesty's subjects were equally intitled to the freedom of foreign trade, and could not, under colour of any grant from the crown, be restrained from it. That both the clause in the new charter, which restrains the grant to such powers as the company might have lawfully exercised in virtue of the old, and what is replied to that clause, was evasive and equivocal, because the company were thereby left in possession of all the powers which they thought lawful. How they were likely to interpret them, might be judged from their conduct at *St. Helena*, in condemning thirteen persons by the martial law; which execution the parliament had voted a murder. That the construction put on the merchants petition by the company, was a forced and unnatural one, since it had not the least tendency to diminish the royal prerogative; but only, by virtue of the prerogative, to secure 400 men in the quiet exercise of their callings, to the general advantage of the nation, and the particular advantage of the revenue. Lastly, they humbly prayed, that the settlement of the trade might rather be left to parliament, or the right be determined by due course of law, before a new charter was granted; that they might be favoured with the requested protections; in consequence of which, an addition of 60,000 *l.* would accrue to the customs, and one branch of commerce be most seasonably opened, at a time when, by reason of the war, all others were in a manner shut and obstructed.
- b To this sensible and spirited reply, they subjoined an abstract of some few of those numerous precedents in common law, on which the said reply was founded. The linnen-draper also gave in a reply to that part of the company's answer which related to their petition. Nor were the clothiers less forward in their zeal, having prepared a reply on their behalf, which, however, they were induced to suppress. To supply this deficiency, the merchants presented a draught from the Custom-house books, of all the cloth exported for the five last years by the company. By this it appeared, that the whole amounted only to 1827 cloths; whereas in 1692 only 953 cloths had been exported in two private ships, about three times the quantity the company had exported in any three of the said five years. They enforced the whole by a petition from the freighters and owners of the said two ships, praying, that the illegal clauses in the former charters might be particularly excepted, that so the liberties, lives, and estates of their factors, agents, servants, mariners, and others of their fellow subjects, might not be invaded in places so remote, where they could neither secure themselves against outrages, nor obtain a remedy; the aggressors being out of the reach of the ordinary law of the kingdom.

The company's reply.

- c HOWEVER, all their endeavours proved ineffectual; the company had a powerful interest, and the countenance of some great personages. No answer was given to the petition for protection to the 400 seamen. Wherefore the merchants made a new effort on that head, by way of inducement, undertaking to export more cloth in this present year, than the company had done for the five preceding. They likewise promised to furnish the government, on the return of their ships, with 500 tons of salt-petre, at 3 *l.* per hundred weight, which now sold at eight pounds. They affirmed the state of the company to be so low, that they had neither sufficient stock of their own in *England*, to load the ships they petitioned for, nor in *India* to load them back again. That as, by reason of the war, the petitioners were in effect deprived of their livelihood; and as the *India* trade was the most profitable, as well as least hazardous commerce of any, it was their humble request, that in order to repair their losses, protections for this year might be granted them for the above seamen. But they were no less unsuccessful in this than in the former petitions. So far was the council from complying with their request, that they issued an order, *September* 28, to either of the secretaries, to prepare a warrant for her majesty's signature, for passing the charter. Notwithstanding the merchants were heard by their council, upon the caveats they had entered; notwithstanding they had in particular presented to the lord keeper *Somers* a paper, containing their reasons against granting the charter, and such as seemed unanswerable (R); such was the influence, intrigue, and power

The company are opposed by some persons of rank and weight on the a minimization of the merchants, and their proposals.

Meets with no regard from the council; and an order is given for renewing the company's charter.

* SOMERS'S Col. vol. xxx. p. 105.

* SOMERS'S Collect. ibid. RALPH. sub. A. 1693-4. vol. ii.

(R) The reasons were contained under the following articles; *viz.*

I. We humbly conceive your lordship to be a judicial officer, indifferent between the king and his people, and a check which the law has appointed over all grants of the crown; that none may pass the great seal which are either prejudicial to the prerogative of the monarch, or the rights and liberties of the people.

MOD. HIST. VOL. IV.

II. We humbly apprehend, that no order can warrant the passing a charter containing any grants in themselves illegal.

III. That the charter now before your lordship, is a restitution of several grants of the sole trade to the *East Indies*, to a few persons, excluding all the rest of their majesties subjects; which exclusion, we conceive, is contrary to the common law of the land, the authorities of which are too numerous to be inserted here;

power of the company, that they obtained their charter, which, however, was less explicit and full than they expected'. The council knowing the determined spirit of the opposing party, and apprehending they would bring the dispute again before the parliament, were careful to limit the grants, that they should not amount to an absolute exclusion of all others. They likewise provided, that the company should submit to such alterations, restrictions, and qualifications as the king should direct before the 29th of *September* following.

THE penalty annexed to a transgression of these restrictions was, that letters of revocation should be issued, whereby all their powers and privileges should be rendered null and void, and of no effect. It was also stipulated, that the governor and company should once every year, in the month of *August*, transmit to the privy council, a true and faithful account of the qualities, quantities, and value at prime cost, of the goods and manufactures of *England* b by them exported, together with the place from whence exported, and this certified by the oaths of the officers of the customs, and of the company's servants. It was at the same time provided, that none of the goods and merchandize so exported, should be reloaded in the dominions of *Great Britain*, nor conveyed to any other ports beyond sea, than the places limited by charter. It was further ordered, that on application made by six or more propri-

* HARRIS, tom. ii. b. i. c. 2.

here; and likewise contrary to divers statutes, some of which are particularly expressed in the paper annexed, of which we pray your lordship's consideration.

- IV. That if the king can restrain some of his subjects, and license others, it may be a precedent for any of his majesty's successors to set what price they please on such licences. Hence they will never need the aid of parliament to supply them with money; the consequence of which may be dangerous to the kingdom.
- V. That the former charters which are to be restored and confirmed by this act, contain divers other illegal powers. As, the power of executing martial laws, of imprisoning the persons, and confiscating the estates of their majesties subjects, &c. some of which were lately acknowledged to be illegal, even by their majesties council at law.
- VI. The said charter declares the late company to have been for a long time a corporation, to the honour and welfare of the nation, which may be interpreted a justification of the illegalities which they have acted, and a vindication of them, in that for which they have been censured by parliament. If there can be any reason to restore the late company, without doubt there can be none to commend them.
- VII. That the restoring the said charters, wherein such illegal powers are granted, may occasion the loss of the lives of their majesties subjects, which can neither be restored nor repaired.
- VIII. That the execution of the said powers contained in their former charters, being in places so remote, the aggressors are out of the reach of ordinary justice, and the parties aggrieved left without remedy, or at least unable to contend with a joint stock, so as to procure legal satisfaction.
- IX. We farther represent to your lordship, that some of the concerned in the said caveat, have factors, servants, mariners, as well as estates in *India*; and the offering the said charters may expose not only them, but all others, who may go into those parts on their lawful occasions, to the arbitrary powers contained in the old charters, for no provision is made in the new one to secure them: And the company may be encouraged by this grant to execute the said unlawful powers, as they have formerly done.
- X. That the industrious application of the company to get this charter passed, so near the session of parliament, where this matter had been so long depending, can be accounted nothing but a design in them to obstruct the settlement of that trade by parliament.

XI. That the copy of the said charter, since its alteration, hath been denied, whereby they are debarred from the opportunity of making such just exceptions as otherwise we might or ought to do, in a matter of so great consequence.

XII. That the granting of this charter will be, in effect, the giving away that trade to the *Dutch*; who have already in a great measure driven us out of it, furnishing most other countries, as well as this, with *East India* goods, the late company having neither credit or stock sufficient to carry on their trade.

And notwithstanding the pretence made as to the seeming limitation contained in the said charter, we humbly beg leave to represent to your lordship, that all the powers contained in their former charters are as fully and absolutely restored and confirmed as ever they were granted; and cannot otherwise be understood by those to whom the grant was intended, who having formerly executed them as if they were lawful, will by this grant be encouraged to do the like. It is so far from being an intimation of the illegality of any of those powers, that it is rather an intimation of their being legal; for it cannot be presumed that any thing which is otherwise should so solemnly pass under the royal authority, and through the hands of the great officers of the kingdom, who have examined and approved the same, after long deliberation. It may rather be concluded, that if any of the above powers had been contrary to law, they would have been particularly distinguished and excepted out of the said grant. For by the general granting and confirming of their former charters, and the powers therein contained, without distinction, and especially (as the charter expresses it) as fully as if the said powers and charters were particularly recited; all the powers in their said former charters cannot but be supposed to be restored and confirmed; whereby the lives, liberties, and estates of the subjects of *England*, will be again exposed to the same unjust violence and oppression which they have formerly suffered from the late company, by colour of those powers contained in the said former charters, which are now intended to be restored and confirmed.

All which, the concerned in the caveat before your lordship, do humbly offer, in behalf of themselves and their fellow subjects, as their reasons against passing the said charter to the late *East India* company; and do humbly claim the benefit of the common law, and the said statutes, and all our statutes and customs of the realm, for the securing to the subjects the liberty of foreign trade, as their undoubted right.

London. Oct. 7, A. C. 1693 (1).

(1) Somers's Collection, vol. xxx.

etors,

a etors, each of whom should be possessed of one thousand pounds capital stock in the funds of the company, demanding a general court to be held, that then the governor, or deputy governor, should, within eight days after the above application, call such a court, which might not be adjourned but by consent of the majority of proprietors then assembled¹.

STILL, however, the company received other favours, though less directly. They applied to the queen in council, that a stop might be put to the sailing of the ship *Redbridge*, under pretence that she was bound for the *East Indies*, though entered and cleared for *Alicant*. Upon which application, the ship was accordingly stopped, and detained at the expence to the owners of 9 *l.* per day. Nor was she permitted to set sail, till the owners had undeniably demonstrated, that she was actually bound, by charter-party, to *Alicant*; and to return from thence directly to *London*, in company with four more ships. Although matters were thus carried against the associated merchants at court, they came to a resolution, to lay a summary in print before the public, of all the transactions during the recess. This they actually did, inferring from the whole, that such proceedings, if not checked, would render all the foreign trade of *England* precarious, by subjecting it to interruption, from the caprice, insolence, or malice of any one committee-man of the *East India* company. That admitting such a power in the crown would be of dangerous consequence, as having a direct tendency to induce future kings to farm out all trade, and so to raise money without the assistance of parliaments. And that asserting the right of the subject was become the more necessary, as the omitting it so long had paved the way for pleading prescription, which had been urged as an argument of the power of the crown to restrain this trade. That it was apparent, the crown had not the power of restraining foreign trade to some, and excluding others, without consent of parliament, from the following circumstances.

1st. THE confirming the *Hudson's Bay* company, since the accession of their majesties, by act of parliament. This was a demonstration of the insufficiency of a charter to exclude the subject. Nay, the petition of the *East India* company to the house of commons acknowledged as much. *Their arguments.*

2d, His majesty's message, sent last session to the house of commons, in answer to their address for dissolving the *India* company. Here the king declared, that he could not determine the trade by his own single authority.

d 3d, THE several judgments given in *Westminster-Hall*, against stopping ships belonging to private traders bound to the *East Indies*, or seizing of ships or goods by virtue of such exclusive charter; and this too, since their majesties happy accession to the throne.

LASTLY, It was intimated, that as that bill for declaring and asserting the right of the subject to the freedom of foreign trade, might be passed speedily, without obstruction to other public affairs, this would facilitate the establishment of a new *East India* company for carrying on this trade, without any of the present oppressive objections².

IN spite of all the power, vigour and justice on the side of the associated merchants, the company, on the credit of their newly acquired charter, proceeded to take in subscriptions to the amount of 44,000 *l.* which filled with infinitely more expedition than was expected.

e Their adversaries then, as the next step, presented a petition to the house of commons, founded on the several facts, claims, and authorities already recited. They requested, that from this consideration, the trade to *India* might be established by the authority of parliament. That their pretensions might be favourably heard by the house, and they be set upon an equal footing with the company, they assiduously courted the new ministry, appeared at the levees of the most popular noblemen, and caressed the leading members of the lower house. On the other hand, the company, not satisfied with a bare defence of the charter they had obtained by their influences at court, laboured to have it ratified by a parliamentary sanction. But here they found a strong current against them. Their friends were chiefly of the tory party, whose influence was on the decline³. The conduct of the commons indicated an intention of siding with the strongest, or implicitly coinciding with the measures of the new administration; while the ministers thought it adviseable that some tenderness should be shewn the company, and the affair kept in suspense, till some advantage could be drawn from it. *The company actually open a new subscription.*

f THE company relied greatly upon the influence that had put her in possession of her two charters (S). Nor were their adversaries less sanguine in the interest they imagined they had with the commons and new ministry. It was the general opinion, that all those powers and advantages secured to the former by so many charters, would have settled their affairs upon a solid basis, and especially in a reign that seemed to deny them nothing. This was, however, far from being true at this juncture. The difficulties to which the administration were driven, and the poverty of the government, influenced them to a violation of those very

charters they had granted; for which the company had paid exorbitant sums, and on the faith of which so many persons of all ranks had thrown their fortunes into the company's capital. It was in fact a trial which side should bribe the highest, public authority inclining to one or other, as the irresistible force of gold directed.

In this state were affairs, when the merchants petition to the commons was taken into consideration. After all the allegations contained in it had been repeatedly debated, and after the charters granted to the company, their new subscription, the state of their stock, and every other particular relating to the merits of the cause had been examined, the issue of all was, that in effect the trade was laid open, in virtue of this resolution; "That all the subjects of *England* had an equal right to trade to the *East-Indies*, unless prohibited by parliament." But no censure was passed on the charters, or the manner of obtaining them; nor was any scheme for regulating the trade by authority of parliament, adopted. Having by this trimming conduct paved the way for the extraordinary field of venality and corruption which broke out in the ensuing session, things rested here for the present. The following year it was notorious, that voting was become a lucrative trade; and that members of the house of commons became sharers in every profitable adventure referred to parliament. In the present instance it is well known, that the favour shewn by the court to the *East India* company proceeded from the same source. It was soon proved by a discovery of facts both at court and in the house of commons. An enquiry was therefore set on foot, and it was so contrived, that the same committee which had the inspection of the chamberlain's books, should also examine those of the company. The first thing that occurred, was an abstract of all monies paid for the special service of the company since the year 1687, which served as a clue to their subsequent proceedings. Here it appeared, that the charge for special service, before the dispute between the merchants and company, never exceeded 10,000*l.* and in general was from 1200 to 3000*l.* whereas this last year it amounted to 80,468*l.* 16*s.* 8*d.* a sum by several thousand pounds short of what in fact had been expended*.

SIR *Thomas Cooke*, and Mr. *Tyffon*, had been governor and deputy for the two last years; it was probable therefore, that the secret lay in the former. In order to a regular train of discovery, recourse was had to the minute books of the court of committees. In these entries were found, of certain informations given by the governor, of his endeavours to obtain a new charter, together with accounts of sums disbursed in this pursuit, but without descending to particulars, which was a method of proceeding never before permitted. Among the entries were likewise found orders to their cashiers to make payment of such sums of money for the company's service, as the governor should direct (T). Proceeding next to such other particulars as could be discovered, the committee observed, that the money issued by *Heine* and *Cooke*, while the latter was deputy only, was expended upon private service, but brought to account under general charges. The equivocation of *Cooke*, the acknowledgements of Sir *Benjamin Batburst*, one of the court of committees, with many other circumstances, put it beyond all doubt that bribery and corruption had been practised; but yet nothing clear against any individual could be made out. Sir *Thomas Cooke* owned, that the 90,000*l.* was to gratify certain persons, if the bill should pass; but he would give no account of the distribution. Sir *Basil Firebrace* acknowledged his having received 16,000*l.* which he had laid out in stock with the company's permission. As to an accommodation with the merchants (interlopers, as they were called) for buying their shares, in this private trade, at 25 *per cent.* advance, and half the profit, the committee was informed, that lord *Nottingham* had acquainted the company by letter, that his majesty's pleasure was, they should come to an agreement. That about one half accepted the terms; but messrs. *Godfrey* and *Colston* insisting upon 30 *per cent.* the rest went off. Besides, it was imagined the contract for saltpetre to be imported in the ship *Seymour*, made with *Colston*, was only in trust with him for some other person, though the original inducement for the leave given.

In this light it was, that this unprecedented affair appeared in the report of the committee to the house. The report was made on *March* the 12th, yet was *Cooke's* examination put

* RALPH, *ibid.* HARRIS and DODSLEY, *ibid.*

(T) The following sums were found specified, with particular orders for the payment; viz. April 13, A. 1693, for 22,275*l.* November 24, for 24,983*l.* For January, A. 1694, for the sum of 30,000*l.* besides smaller sums, to the amount of ten thousand pounds; the whole amounting to 87,402*l.* 12*s.* 3*d.*—The point was now to trace the disposal of this money. A great part of it, it was said, had been paid into the hands of Sir *Basil Firebrace*. Upon examination of the company's cash book, it appeared, that the balance was

124,249*l.* 15*s.* 10*d.* But when the question was put to the cashier, whether he had that sum in cash, he answered in the negative, and produced a receipt of the governor's, dated January 1694, for 90,000*l.* and signifying, that he had expended the sum of 99,197*l.* *East India* stock, on the company's account. But the committee could neither find any warrant for the said sum, nor any transfer of stock on the company's account, except for eighteen thousand three hundred pounds (1).

(1) *Vid. Journ. H. of C. Debates of the H. of C. Parliam. Hist. A. 1693-4.*

- a off till the 26th. As he was a member, decency and justice required that he should immediately be examined. All of a sudden, the phlegm of the house was converted into choler: the heat with which they now pursued the enquiry, was equal to the coldness with which they a few days since regarded it. *Cooke*, on refusing to answer the questions put to him, was committed to the *Tower*, and a bill of pains and penalties ordered in to oblige him to account for the sum of 17,302 *l.* 12 *s.* 3 *d.* mentioned in the report. The bill was read on the 29th, and referred to a committee of the whole house, when *Cooke* desired leave to be heard against it by his council. After some amendments on it, *Cooke's* council were heard a second time; after which, the bill was passed and sent up to the lords. Here it took a different turn. The duke of *Leeds*, after solemn asseverations of purity and innocence, exclaimed with great warmth against the bill. He exhausted his whole stock of eloquence to convince the lords, that they ought to reject it, as contrary to law and equity, and furnishing a dangerous precedent. Either his grace's elocution, or something else more powerful, prevailed. For seven days the bill was entirely dropt; and when resumed, an expedient was found to keep matters in agitation, and yet avoid the chief aim. *Cooke* petitioned for a bill of indemnity, saying, that nothing besides prevented his making ample discovery. He made his apology to the commons, for making this request to the lords; their refusal occasioning this appeal. A bill accordingly was prepared to indemnify him against all suits and actions, those of the company excepted, and sent down to the commons on the 17th. After having tacked a penal clause to it, by way of amendment, it was returned, and the lords signified their concurrence to the amendment, by a message on the 19th. By this means the two bills were in effect reduced to one; notwithstanding which unanimity and seeming ardor for the discovery of transactions so black and infamous, all that was done for several days, was the appointing a committee to make the inquest. All parties, the patriot, the courtier, the whig and the tory, equally affected a concern for the prosecution; nor is it to be doubted, that they were equally concerned in it. Each had friends to screen, and enemies to expose; and the point of contest probably was, which of the parties should be made answerable to the public. In short, after *Cooke* had given in a written discovery, in which several persons of note in both houses were hinted at as having touched the company's money; after *Firebrace*, *Alton*, and *Bates* had been examined, and next Sir *J. Child*, *Tysson* and *Craggs*; an imputation fixed on the duke of *Leeds*, and an easy clue for discovery in their hands; the whole affair was dropt, never to be resumed, as if by unanimous consent. Hence it was concluded, that too many of all parties were deeply concerned in the dirty jobb^y. Bishop *Burnet*, and all succeeding historians, seem to join in this opinion; and truly, from the evidences of *Cooke*, *Firebrace*, *Alton*, *Child*, and others, it is difficult to determine where the greater share of this scandalous corruption lay.

- THUS stood the whole process till the year 1698; the ministry indulging private merchants with licences, in contempt of those exclusive charters they had granted to the company; while this last was reduced to poverty and disgrace by the exorbitant sums expended in prosecution of those charters, and the discoveries made of their unconstitutional corruption. Now a greater stroke was requisite; the sum wanted by the government was two millions. It was not believed, that any number of new proprietors would advance so large a sum for a new charter on the credit of an administration that had so lately prevaricated with the company. The affair was therefore laid before the house of commons, in order to have every thing settled upon a solid basis, that of national security. This was the time when ministerial service was deemed the highest political merit; nay, when ministers were to be gratified in all their demands, and that in the way and manner in which they desired. Some considerable persons first sounded the company, to know how they stood disposed to advance money by loan, in consideration of a settlement by authority of parliament. Undertakers were found to lay the proposition before a general court; but the persons entrusted with the management, either from want of address, courage or zeal, suffered the affair to languish in their hands. The occasion was urgent; the court, wearied with expectation, had now an opportunity offered of striking in with the merchants, which was accordingly done. By this the motions of the company were quickened. They were sensible, that no alteration in the present course of trade could be made without affecting their charter, which but four years ago had cost them so dear, or their profits, or both^y.

UNDER these apprehensions it was resolved in a general court to advance the sum of 700,000 *l.* in procuring a parliamentary settlement, as had been some time before suggested to them. This sum was determined upon, because it had appeared to be the sense of the public, that considering their losses by the war, a constitutional establishment might be granted

^y SOMERS'S Collect. *ibid.* RALPH, A. 1694. HARRIS, vol. ii. b. i. c. 2. A. 1698.

^z RALPH, vol. ii.

Mr. Montague proposes a scheme for raising the two millions. A bill of regulations brought into the house.

The company's offer rejected, and they petition the parliament.

No success from the petition.

An unfavourable report of the state of the company made to the house, by the committee appointed to inspect their stock.

them for a loan of 600,000 *l.* The resolution was presented to the ministry, and by them to the house of commons. Both the court and commons seemed disposed to accept the offer; but this, according to *Kennet*^a, was but a snare; for in the mean time, a new bill, under the direction of Mr. *Montague*, was preparing. By this, a method for raising two millions, by way of loan, at eight *per cent.* on the security of a fund sufficient for repaying both principal and interest, was proposed. This proposal was laid before the house on the 20th of May; and so much favour did it find with the majority, that a bill agreeable to it was ordered to be brought into the house, with the following additions; *viz.* 1st. That every subscriber have liberty of trading yearly to the amount of his subscription; or assign over his right to any other. 2d. That his majesty have power to incorporate such of those subscribers as should desire it. 3d. That the privileges for conducting the *East India* trade, be settled by parliament. 4th. That the subscribers enjoy eight *per cent.* and the liberty of trading to *India*, exclusive of all others, for the term of ten years, and till the sum subscribed be redeemed by parliament. 5th. That every share of 500 *l.* have a vote; and no person enjoy more than one vote. 6th. That all ships loaded in *India* should unload in *England*. 7th. That no person being a member of any corporation trading to *England*, should trade otherwise than in the joint stock of such corporation of which he was a member. 8th. That 5 *l. per an. ad valorem*, be paid by the importer on all returns from the *East Indies*, to be placed to the account of the subscribers, towards the expence of embassies, and other extraordinary charges. 9th. That besides the duties now payable, a further duty of 1 *s.* 10 *d.* *per lb.* be laid on all wrought silks imported from *India* and *Persia*; this to be paid by the importer^b.

ALTHOUGH the company were informed by hints, that their offer even of raising the two millions would be rejected, yet did they by petition appeal to the justice and equity of parliament, as well as to the public. They again recited their rights and claims under so many royal charters, particularly the last, calculated to remove every reasonable objection, and superinduce many national advantages, agreeable to several regulations proposed and resolved in the house of commons; no forfeiture of which either had or could be urged. 2d. The regard that was due to the property of above a thousand families deeply engaged in the stock, and in particular to 781 new adventurers, who subscribed on the credit of the new charter the sum of 744,000 *l.* Nor was the company's property in *India*, amounting to 44,000 *l. per annum* revenue, a consideration undeserving of notice, before an attempt was made to deprive them of it. 3d. The expence the company had been at in fortifications, amounting to a million sterling. 4th. Their losses during the war, by which, since their last subscription, twelve great ships, worth a million and a half, had been wrecked or taken by the enemy. 5th. Their merits to the government, their contributing so largely to the customs, their furnishing a great quantity of powder on a pressing emergency, and advancing 80,000 *l.* for circulating exchequer bills in a case of extremity, at that time esteemed a very important service^c.

BOTH bishop *Burnet* and the continuator of *Rapin*, acquaint us, that this petition met with so much regard in the house, that an offer was made of settling the trade on the company, if they would accept of it on the limitations, and under the restrictions, agreed to by the merchants; which they refused. We do not find any authority on which to ground this assertion, nor indeed is it reconcileable with the sequel of the transaction. The petition was, it is true, read a second time, and proceeded upon as a point of business immediately to be dispatched; yet when the company, in consequence of a resolution of the general court, offered to submit their stock to a valuation of 50 *per cent.* *viz.* 20 on the dead, and 30 on the quick stock, which they were content to warrant at the sum, and to open subscriptions for the two millions, this concession produced nothing favourable to them. On the contrary, the committee appointed to inspect their books, stock, &c. made their report three days after, by which it appeared, that the company had not only, at several different periods, greatly over-rated their stock, and raised their dividends above the profits, but also that out of the new subscription a sum of 325,565 *l.* 0 *s.* 4 *d.* was paid to the proprietors, together with several sums for bribery, corruption, and the purposes of venality, under the article of special service. Hence a motion was made, for giving satisfaction to the new subscribers for all damages done them, by making dividends beyond the real value of the stock; and also by the payment of the above sums to the old proprietors, out of the estate of the new. The debate on this motion was, however, adjourned till the next day, when the company made it appear, that the said payment was made by the consent of the new subscribers, upon which the motion was dropt^d.

^b Debates of the House of Commons. A. 1698.
^c Debates of the Commons, A. 1698.

^d SOMERS'S Collect.

- a ALARMED with so home an attack, and justly apprehensive of what was next to ensue, the directors called another general court of the proprietors, in which the persons of the most credit agreed to open an immediate subscription of 200,000 *l.* as the first payment of the 2,000,000 *l.* and subject to forfeiture, in case the subsequent payments were not made good. Proposals on this plan were, the same day, presented to the commons, as were also those of the merchants. The latter appeared to the ministry the most reasonable, and accordingly had the preference. Their sway was great, and the whole business of the nation was made a jobb. The new company, as it now began to be called, was formed out of the old *interlopers*, having set out upon their foundation, although it did not include all the private traders that went by this name. Such of them, whose stocks were better suited to a separate than a joint trade, and who found themselves more likely to be excluded now than ever they were, equally opposed the pretensions of both contending parties. They published a sensible pamphlet, intitled, *A Letter to a Gentleman*, in which the reasoning against an exclusive trade, in the manner in which it had been conducted, was forcible, convincing, and spirited; but unsuccessful, as it did not square with the views of the court and commons (U). The bill, against which they opposed all their might, was passed by the commons, and sent up to the peers. The old company, having obtained leave to be heard by their counsel, insisted, as before, upon their rights by charter, and even vigorously attacked the new regulations in the bill, asserting them to be less beneficial to the public than those inserted in their last charter. According to the charter, they were obliged to take in additional subscriptions, to the amount of 744,000 *l.* whereas by the present bill, no provision was made for any certain stock. They were likewise obliged to export home manufactures, to the value of 100,000 *l.* per annum, whereas the new subscribers were laid under no such obligation. By their charter, none but natural born subjects, and persons naturalized, had the privilege of a share; but the new bill admitted foreigners, which might produce effects pernicious to the general good of the nation. Though the old company had offered to raise two millions, the new were obliged, by the bill, to raise no more than one. It was therefore not unreasonable to question, whether the remaining million would be raised by voluntary subscription? Lastly, the counsel for the old company urged, that whereas, by the votes of peers and commons, the best way to carry on a trade was by a joint stock, exclusive of all others, the bill provided both for a joint stock and a separate trade; a circumstance which, they apprehended, would increase the difficulty of raising the two millions. These were the arguments advanced in allegation of their right, and against the claim of their adversaries, by the company.

* SOMERS'S Collect. *ibid.* HARRIS, *ubi supra.*

(U) "The landholders," says the letter writer, "of England, who all depend on trade, and who are traders, would think it highly irrational to erect by law monopolizing corporations for corn, cattle, wool, &c. well knowing that those, by commanding the markets, buying cheap and selling dear, would grind both the first seller and consumer. They would rob the landlords of their income, deprive the people of their subsistence, discourage manufactures, labour, and all sorts of industry, relating to the produce of the country. By the artifice of combination they would cut up the roots of trade at home, which depends on *cheap living*; whereas such corporations relating to foreign trade are no less pernicious, by destroying the foundation of wealth to be drawn from abroad, which is *cheap selling*. The present company, and what may be designed to succeed it, being but one buyer of commodities proper for trade, and one seller of whatever is imported from thence, will get such a mastery over the markets, in both cases, as to buy and sell with their own stated profits. Whereas private traders must take the markets as they find them. It is certain, that from A. 1653 to 1657, while the trade was open, the Dutch suffered greatly, by the low prices of the

English. Nor can any thing be more serviceable to the *Hollanders*, than that the opulence and enterprising spirit of this nation be confined and fettered in a lazy monopoly, which can regulate the prices with them to their own mutual advantage, but to the prejudice of the public. I shall not," says the letter writer, "insist on the difficulty of good government in a new corporation, though some late instances of corruption, charged on the *India* company, might justify me: I shall only remind you of the national constitution. In the late reigns, the *East India* company, and the bankers of *Lombard-street*, were thought dangerous to liberty, by the loans of great sums to *Charles* and *James* the second, on the credit of the exchequer only. In the present reign, the bank of *England* was restrained, for the same measures, from loans to the crown, but on parliamentary security. But if a new corporation of two millions fund, with a million or two occasionally or otherwise advanced, with pretence to carry on the trade, together with the constant profits; if this gives no umbrage to patriots, threatens no danger to the constitution, I may then safely conclude this nation for ever out of hazard from secret or open attacks on liberty (1)."

(1) *Vide a Letter concerning the East India trade, A. 1698.*

Some peers
protest against
the bill.

vehemence. No argument, legal artifice, or trick of parliament, were omitted, to dispute and impede its progress. After the bill had passed, by a majority of twenty-seven voices, a protest was signed by twenty-one peers, among whom was the lord *Godolphin*, then first commissioner of the treasury. The reasons contained in the protest were as follow :

“ I. BECAUSE this bill put an unreasonable hardship upon the present *East India* company, since it plainly appeared, at the bar of this house, that a security, of which we conceive there was no reason to doubt, had been offered by the said company, for raising the two millions for the public service : whereas the bill, investing the new subscribers with the trade, upon the subscription of one million only, does not, as we apprehend, give so much as a probability for raising more. And it may be reasonably doubted, whether the separate trade allowed in the bill, concurrent with a joint stock, may not prove so inconsistent, as to discourage the subscription from ever coming near to the said million.”

“ II. BECAUSE the bill puts a period to the charter of the *East India* company, and gives the trade thither to other persons, without so much as suggesting that the said charter, or the trade carried on by virtue of it, hath been prejudicial to the king or kingdom, though the said company have an express clause in their charter, that it shall not be determined without three years notice, even if it should appear not profitable to the king and this realm. And the bill granting likewise a supply of two millions, in which the commons pretended the house of peers ought not to make any alteration, we are of opinion, their lordships are thereby deprived of the freedom of their votes in the matter of the *East India* trade, to which it cannot be denied but they have an equal right with the commons. And yet, by its being joined to a bill of supply, this house must either be the occasion of dilapointing so large and necessary a grant for the public service, or be put on the unreasonable hardship of consenting to a matter, which, though it seems so unjust, it is fruitless to them to examine, if their amendments are not to be admitted, because offered to a money bill, which we conceive to be a manifest violation of the rights of the house, and tending to an alteration of the constitution of the government.”

Bishop Burnet's remark
on the whole
proceeding.

UPON the whole, we will conclude this affair with bishop *Burnet*'s observations on it. “ It is certain,” says he, “ that this act, together with the inclinations which those whigs, who were in good posts, had expressed for keeping up a greater land force, did contribute to the blasting the reputation they had hitherto maintained of being good patriots, and was made use of by the tories to disgrace both the king and them. To this another charge of a high nature was added, that they robbed the public, and applied much of the money, that was given for the service of the nation, both to the supporting a vast expence, and to the raising great estates among themselves. This was sensible to the people, who were uneasy under heavy taxes, and too ready to believe, that, according to the practice in king *Charles*'s time, a great deal of the money that was given in parliament was divided among those who gave it. These clamours were raised and managed with great dexterity, by those who intended to render the king, and all who were best affected to him, so odious to the nation, that by this means they might carry such an election of a new house of commons, as that by it all might be overturned. It was said, that the bank of *England*, and the new *East India* company, being in the hands of whigs, they would have the command of all the money, and by consequence of all the trade, of *England*.” And, indeed, whatever,

The ministry
push the in-
terest of the
merchants.

the bishop might imagine, certain it is, there was great room for this apprehension. Notwithstanding the opinion of the protesting lords, the ministry was fully persuaded, that the old company would not give security for a subscription of two millions, the sum wanted ; they were equally persuaded, that no number of new proprietors would advance so great a sum, without the sanction of parliament ; and they were made to believe, that though half was only stipulated, yet that the remaining million would soon be voluntarily subscribed for, if this check was given to the old company. This determined them, together with the power which it would throw into their hands, to push the affair in parliament with all their strength.

The company's
rights sacrific-
ed to the in-
terest of the
nation, the ne-
cessities of the
court, and the
ambition of in-
dividuals.

Nothing was wanting by the old company, that money or eloquence could effect ; but the bill passed with peers and commons, though in the former their rights were enforced by their counsel, Sir *Thomas Powis* and Sir *Bartholomew Shower*, with all the energy of diction, and strength of argument, which the cause would admit of. It was, indeed, a thing determined, to sacrifice justice and the company to the artifice of certain persons, and to the necessities of the government. However strong the arguments for laying open the trade may be, yet we cannot but esteem it an act of the most flagrant injustice to rob the old company of rights which they had done nothing to forfeit since the last grant ; and to give to other persons an exclusive right, which had been solemnly made over to them but four years before.

^f Debates of the Lords for this year.

^e History of his own Times, p. 170, fol. edit.

- a** Thus a new company was constituted and incorporated by law, at the price of a loan of *A new com-* two millions, for which they received interest at the rate of eight *per cent.* though by sub-*pany erected.* sequent acts of the legislature it has been reduced to six and five *per cent* ^a.
- b** ALTHO' the old company did not look upon themselves as dissolved, yet so diffident were *A. 1699.* they of their right, that they assiduously applied to parliament, to be continued as a com-*The old com-* pany, during the remainder of their charter. Nor was the new company in a condition to *pany continued,* withstand this effort. *Montagu*, their great patron, was no longer lord of the ascendant *during the re-* either in the cabinet or in the house. During the suspense of the supply for the year, the *mainder of* commons, of all the branches of the constitution, assumed the most consideration. The old company set out with distributing their case in print, at the door of both houses, in which
- c** they made the most of the equity of their claim, and the injuries they had sustained. The new company took a similar method to answer them, in which, for the sake of exposing the corrupt practices of their adversaries, they again laid open the venality of the court, with as much freedom as if there had not been the least room to suspect, that to a corrupt influence in parliament they owed their very existence. But their invectives served only to exasperate; they were imprudent and ill timed, by exciting resentments fatal and destructive of their arguments. Though the old company could not prevent the establishment of the new, they yet had sufficient influence to procure a like establishment for themselves. The bill for au-*Their charter* thorizing their charter by parliament passed, in defiance of all the opposition that was made. *authorized by* Thus the nation had two *East India* companies constituted upon parliamentary authority, in-*parliament.* stead of one, by an act of royal prerogative ¹ (W).
- d** THE two companies appeared now as solicitous for each other's destruction, as before each had been for its own establishment. The same heats, animosity, and resentment, were rather inflamed than abated. They had both tasted the sweets of the profits accruing from the trade, and looked on each other with that jealousy, and deep resentment, which ambition and avarice will ever inspire. In the year 1700, they had both been detected in bribery and corruption at elections. The old, indeed, began with corrupting members, and purchasing voices in the house: the new followed their example with a little variation; for instead of purchasing votes, they bought seats; instead of corrupting the representatives, they began with bribing the constituents, and securing a majority in the house. A great number of attempts to unite
- e** both the companies for the two last years were made, but they were ineffectual.
- f** THE commons had appointed a committee to receive proposals for paying off the public debts, and advancing the credit of the nation. To this committee did the old company *A. 1701.* propose, by the interposition of their old factor Sir *Thomas Cooke*, to pay the principal and *Proposals made* interest of so much of the two millions as had been advanced by the new company and se-*to the house by* parate traders, at an interest of eight *per cent.* This sum, which was the consideration of *the old com-* their establishment, amounted on the whole to 1,688,000 *l.* As to the remainder of the two millions, it was advanced by the old company, at five *per cent.* payable out of certain funds already settled by act of parliament. With what views and with what ends this loan was made, at an interest so low, does not appear; probably it was the price of their parliamen-*pany.* tary establishment. The principal money so paid (which was to be at ten payments in twenty months) to be redeemable in a certain number of years, to be determined by the house, and subject to such regulations and restrictions, as might be necessary for the public good, and the preservation, progress, and security of trade. An opening too was to be left for any persons whatsoever to subscribe a certain sum to be fixed by the house, and thereby to become proprietors ².
- THIS was a proposal of dangerous tendency to the new company, and which, if accepted, must infallibly have destroyed them. But they were sufficiently aware of their danger, and vigilant to prevent it. While, therefore, their rivals were drawing up the proposal in form, as they were required to do by the committee, the new company began to talk and write in the same strain their adversaries had formerly done. They declaimed on the importance of preserving the public faith unhurt and unmolested; on the wrong policy of saving 60,000 *l.* *per ann.* by a measure which would not only disoblige, but even ruin, a thousand families, subscribers in the new company. Without reserve, they exposed the perfidy of resuming, under any pretence whatsoever, the right (the exclusive right, as they at first understood it to be) vested in them, till the 20th of *September 1711*, only because three words had been

(W) It is remarkable that in the abridgment of the statutes, this act, which is of the extraordinary nature, and which so essentially concerned so vast a

branch of trade, is ranged under the head of private acts.

omitted in the act (X). In short, with such success did they talk, write, and act, that when the committee reported the proposal of the old company to the house, no resolution was taken upon it¹.

Both companies
make secret
offers of a co-
alition.
Terms of the
agreement
between the
companies.

AFTER these civil feuds had continued upwards of two years, at length both sides growing sick of a quarrel which might possibly terminate in the ruin of both, by laying the trade open, began secretly to think of a reconciliation, and an union of stocks. An agreement was soon determined, by which it was resolved, that the effects of both companies should be brought home with all convenient expedition, to be disposed of for their separate accounts, and all precautions taken for doing it with security. That no advantages, either on the part of the crown or of the new company, should be taken of the old, under pretence of forfeiture (which clause would seem unnecessary after the charters of regulation, granted and afterwards confirmed by parliament); that a release should be given by the two companies to each other reciprocally, and by each of them to their respective factors and servants. That the funds of the old company, amounting to 315,000 *l.* should immediately, on the execution of the above part of the agreement, be united to the capital of the new company. That the old company purchase of the new 693,500 *l.* in the capital stock and fund of 1,662,000 *l.* to be transferred by three of the members in their political capacity. Thus the old company may have 988,500 *l.* in the common funds, an equivalent to the interest of the new company therein. That the above stock of 673,500 *l.* should be transferred at four several times, one fourth to be paid for at each transfer, at the rate of par. That the dead stock of the old company at home and abroad should be valued at 33,000 *l.* that of the new company at 70,000 *l.* That the old company should, at the time of transferring their first fourth of the said 673,500 *l.* transfer all their dead stock at home and abroad to the new company, the latter paying for one moiety thereof 16,500 *l.* That the old company would also pay to the new company the sum 35,500 *l.* as the one moiety of their dead stock, upon which the old company shall be intitled to one moiety of both dead stocks, in the same manner as the members of the new. The members of the new company transferring shall be intitled to the arrears of their annuities, till the time of the said transfers; after which all annuities arising from the stock of the old company (315,000 *l.*) to be paid to persons appointed for that purpose by the old company for their use. In like manner the new company to enjoy all profits previous to this agreement, and also 5 *l. per cent.* on all ships entered homeward, or cleared outwards, previous to the same agreement; but that each company desist from any separate exportation².

It was likewise stipulated, that both companies should, for seven years next ensuing, share equally in the administration of all affairs relating to their funds or commerce; and that twelve persons should be elected by the general court of each company respectively, out of the courts of committees and directors of the said companies, to be nominated in the new charter, the *managers* of the *united trade to India*; and that a new and additional stock should be raised for the support and increase of the future trade, to be advanced at the time, and in the manner, determined by the twenty-four directors composed of each court, the general court approving of their determination. That for the seven ensuing years the old company should remain a separate corporation, and preserve their stock as a body politic, with power to transfer and assign in their own books, as at the time of signing the agreement. That at the end of this term they should transfer and assign in the books of the new company their share in the capital, to such members as should then stand intitled to the same, upon which the members of the old company should, without fee or cost, become members of the new. That each company should indemnify the other from their debts and demands, and a proper proviso be made for that purpose. That the new company, from the time that this agreement is in force, should not take up money on their common seal, nor do any other act that related to both, without the consent and concurrence of the old company. That it should be stipulated, agreed, and covenanted between them, that his majesty should, within ten days after making the above assignment, make a re-grant, and that the old company should surrender their charter and act of incorporation within one month after the expiration of the above term of seven years. Also that the king should, within ten days after the said surrender, make a new grant to the trustees, and subject to the same trustees, all estate and effects of the old company as should come to or devolve upon the crown, by reason of the said surrender. Lastly, That immediately from and after the said surrender, the new company shall be styled, *The united company of merchants of England trading to the East Indies*. That the future management of the said

¹ HARRIS, vol. ii. *ibid.*

² DODSLEY, vol. ii. c. 3. RALPH'S Hist. Eng. under this year.

(X) The words, *and not former*, having been omitted in the act, the old company laid hold of this mistake, to endeavour to prevail on the commons to restore the grant they had, saying it might be done, according to the literal sense of the act.

- a stock and trade, after the expiration of the term of seven years, should be according to the charter of the new company, bearing date the 5th of September, *an.* 1698. That there shall be a tripartite indenture for the better obtaining the purposes specified above, to be executed by the king and both the said companies; and that here such provisions and covenants should be made as should be thought reasonable, with proper releases to each company, in such manner as that as soon as the above term of seven years should be expired, the two companies should thenceforward become one in name and effect ^a.

- Thus were the animosities, heats, and enmities between the two companies terminated by an union, equally beneficial to both. The markets, which took advantage of the rivalry between them, were lowered, and the stock to carry on trade enlarged. It was, indeed, the only possible remedy for so great an evil, the bad consequences of which were foreseen by the prudent and impartial, before the two charters had been granted. Experience, however, multiplied the bad effects prognosticated, and probably pointed out the cure. It was the opinion of many, that the animosities between the company and private merchants, and afterwards the project of two companies, was, if not planned, at least promoted, by the Dutch. Nor is the conjecture without probability, considering the advantages they reaped from it. A circumstance that strongly corroborates the notion is, that the subscription for the two millions was chiefly filled up by foreigners. It has the air of a paradox, that people would lend their money to hurt the old *East India* company; but this difficulty will be easily solved, if we consider, that the subscribers relied less upon the dividends and advantages of trade, than on the 8 *l.* per cent. interest.

- c But however things might be brought to an amicable crisis at home, by this union of the two companies, it was by no means so abroad for a considerable time. The coalition was known, but little observed, in those distant parts. Their rancour, jealousy, and enmity would seem to be inflamed by the heat of the climate; and what originally had its rise from interest and selfish notions, to have now become constitutional from habit.

- To give the reader a more distinct idea how far those prejudices were carried, we shall take a succinct view of the settlements abroad, and of the conduct of the governors, factors, and servants of the companies. It is somewhat difficult to represent in one distinct scene, so great a variety of objects; but we shall attempt it, hoping for the candid reader's excuse for any slips we may be guilty of, whilst we are pursuing a theme hardly touched upon by former historians (Y).

- Nothing but the cement of avarice and self interest had held the *British* subjects engaged in this commerce united. By means of this, persons who secretly entertained the greatest aversion for each other, were forced to a certain degree of compliance, in order to obtain their several ends. It will easily be believed that the companies affairs were in a languid condition, as they were intirely conducted by such as had no other concern for them than in the proportion their private interests were connected with those of their masters. Hence every opportunity of enriching themselves, at the expence of their constituents, were laid hold of by the governors and factors. The divisions among the servants of each company arose from opposite private interests, as much as from the enmities between the companies. Neither honour, justice, or humanity were regarded, whenever an occasion of injuring each other, or bettering themselves, occurred; all was conducted by fraud or open force (Z). The ministry were

^a The above cited authors, *ibid.*

(Y) Captain Hamilton's history is our only guide; who, tho' an honest and faithful writer, is so diffuse, perplexed, and languid, as almost to nauseate a reader.

(Z) The following story from Captain Hamilton will strongly mark the character of the *East India* governors at this time.

"Perrin, the master of a ship A. 1706, took up 500 *l.* on *respondentia* from Mr. Sheldon, one of the company's governors in Bengal. The money was intended for a voyage to *Perfia*, and was payable on his return to Bengal. Perrin having dispatched his affairs in *Perfia*, called, in his return, at *Goa*, where he bought a *Surat* built ship. This he loaded at *Calicut* with pepper, designed for the *Bengal* market. He also took in store of *Perfia* wines, for which having no sale at *Fort St. George*, he carried the whole to Bengal. On his arrival, he complimented Sheldon with the first offer of his pepper and wines, which he declined, taking no more than would balance the account between them of principal and *respondentia*. On delivering the goods,

he desired his bond; which Sheldon refused, saying, that, as he was an *interloper*, he would keep the bond as a security for his future conduct. Perrin used all his influence and arguments to procure the surrender of his bond, but to no purpose. Nor was the governor satisfied with this exertion of his power and resentment; he used a still more cruel method of hurting Perrin, which was by vilifying his pepper and wines, and spoiling their sale. Sheldon's intention was to bring down the price in such a manner, that he and his associates might have a bargain of them, which Perrin was at last obliged to grant, holding a quarter part in his own hands. Perrin made his complaint to me, but I was in no condition to assist him, because having three or four large ships at Bengal, I was reckoned a criminal, guilty of that unpardonable sin of *interloping*. However, I advised him to comply with his inexorable master on any terms, which he endeavoured to do, that he might at least keep the command of his ship, which he had hardly done but by an accident. One day meeting me on the green near the fort, he stopped

were taken up with humbling the exorbitant power of the house of *Bourbon*; the ballance of *Europe* engrossed their whole attention, and prevented their finding leisure for the more tranquil concerns of manufactures, trade, and commerce. There is nothing, however, more obvious, than that commerce ought to be a principal concern with a *British* ministry; since the extension of trade is, perhaps, the sole means of raising the power and credit of the nation. Our naval force will ever render us considerable abroad; but this cannot be maintained by any other means than promoting a spirit of trade and navigation.

stopped me to relate his grievances, and begged that if he was turned out of his ship he might be employed in one of mine; which I promised he should. *Sheldon* observed us out of a window, holding a long conversation, and being impatient to know the subject of it, sent a servant to call *Perrin*, and he, obeying the summons, was interrogated about the nature of our conversation. *Perrin* told him of my promise; upon which the governor replied, that he was as able to employ him as I was. *Perrin* answered, that he knew that, but wished he would be as willing. Upon which *Sheldon* promised, that he should command his own ship to *Persia*.

But the wine still lay unfold, though at that time it was scarce in *Bengal*. The bad name it had got by *Sheldon's* means stuck so fast to it, that none would go off. I therefore advised *Perrin* to carry it off in the night in my boats, on board of one of my ships, and I would try whether I could not serve him, which was done accordingly. Two gentlemen of the council coming one day to dine with me, I treated them and the rest of the company with *Perrin's* wine, which they all praised, and asked where I got it? I told them, that knowing good wine would be scarce that year in *Bengal*, I had provided a good quantity at *Surat*. Every one begged that I would spare them some chests, which I condescended to do as a favour, and next day sent it at double the price the owner demanded. Thus I disposed of 100 chests, by which *Perrin* was enabled to satisfy most of his creditors. *Sheldon* provided a stock and freight for him to *Persia*,

putting on board some rotten long pepper, which he could not otherwise dispose of, and some damaged *Gunnies*, much used, if good, in *Persia*, for embalming; and obliged poor *Perrin*, *volens nolens*, to sign bills of lading for sound well-conditioned goods. Just as he was setting sail he was stopped, till he could raise the sum of 2500 rupees, to discharge a bill then due, and indorsed to *Sheldon*. I helped him out of this difficulty likewise, upon which he proceeded on his voyage; but called at *Calcut*, where he laid up his ship, and took protection of a *Nayer*, with the full hand of 11,000 *l*. From hence he wrote to *Sheldon*, that he might keep his former bond, and he would take care of his part of the stock in his hands. He wrote also to me, that he would soon reimburse me; but he died soon afterward, and his effects came into the *English* chief's hands, who detained them several years, denying that he ever received any. At length, on Mr. *Bozot's* coming, A. 1715, to the government of *Bombay*, the affair was somewhat cleared up by a lame account. I have been so prolix and particular in this story, says the Captain, as it forms an idea of the deformity and dismal image of tyranny and villainy, supported by a power that neither divine nor human laws have force enough to bridle or restrain (1). It is, indeed, apparent, from a number of circumstances, that the grossest abuses were committed by these petty tyrants, while the attention of the companies were engaged too much at home, to regard the conduct of their servants abroad.

S E C T. V.

Containing an act empowering the company to borrow money on their common seal; an act to prevent foreigners from establishing a trade prejudicial to the interest of the company; several other acts in their favour; massacre of the factory at Pulo Condore; the revolt of the natives at Bencoolen, &c.

The United company resolve to lend the government money.

An act passed in favour of the company.

AS the views of the ministry, during the long war with *France*, were wholly abstracted from the concerns of trade, the *India* company was obliged to devise means for the removal of many inconveniences, which remained after the union of both companies. To obtain such a law as would settle their affairs upon a proper footing, they resolved, in the sixth year of queen *Anne*, to lend the government the sum of 1,200,000 *l*. over and above the former loans. This had been a way of procuring the protection of the government of antient standing, and it was practised on this occasion with success. The proposal was readily embraced; in consideration of which the parliament was ready to grant whatever they required for the benefit of their trade (A). A law was therefore passed, in which it was enacted, That the *English* company trading to the *East Indies* shall pay into the exchequer the above-mentioned sum at certain stated payments, in failure whereof the money to be recovered of

(A) It may be proper to observe, that here the *India* company is to be considered in a double capacity, as creditors to the public, and as a trading company. In the first they have a security, as other companies have, for the money they advance to the government, and a proportionable interest for it. In their other capacity, their directors are trustees for the company's trade, the profits of which likewise belong to the proprietors. Hence it appears, that the dividends upon their stock are compounded of the profits on

trade, and the interest from the government. This latter being fixed and invariable (except on the reduction of interest by parliamentary authority), serves as an index to the former; since at all times the interest paid to the company, being deducted from the dividend paid by them to the proprietors, leaves the clear profits of trade. This short note will serve the reader as a key to the nature of *East India* stock, the difficulty of understanding which we have heard many sensible persons complain of.

the

- a the company by action of debt, with 12 *per cent.* damages; and that the company be empowered to borrow on their common seal a sum of money, the principal not exceeding 1,500,000*l.* over and above what they were before legally intitled to borrow on their common stock. In case the governor and company of merchants of *London* trading to the *East Indies*, and the general court of the said company, whilst they continue separate, shall think fit to call in money from their respective adventurers, towards raising the said sum of 1,200,000*l.* or repayment of money borrowed for that purpose, they are invested with full powers to make such calls. And if any members shall neglect or refuse to pay their money so called in, or which the company, in pursuance of statute 9th *Wm.* III. c. 44. or their charters, shall call in for carrying on their trade (after notice fixed on the Royal Exchange),
- b that then the company may stop the dividends payable to such members, and apply the same towards such payment, till it be satisfied. They may also stop the transfers of the shares of such defaulters, and charge them with interest at 5 *per cent.* till such payment. If the same be neglected for three months, the company may afterwards sell so much of the defaulters stock as will amount to the sum required by the call ^a.

- THE above sum of 1,200,000*l.* shall be deemed an addition to the stock of the *English East India* company, and be free of taxes. The united stock of the company shall be subject to the debts contracted by the said company, and such persons intitled to 7,200*l.* part of the 2,000,000*l.* original stock, as have not united their stock to the corporation's, and who are authorized to carry on a trade for their separate use, may hold and enjoy the trade as if this
- c act had not been made. The company may repay the same at the expiration of three years, together with the annuities due thereon, upon which the whole trade shall be invested in the said company. Disputes between the two companies, relative to the union between them, to be referred to the arbitration of *Sidney* earl of *Godolphin*. After award is made, and the charter of the governor and company surrendered, the persons who, at the time of the surrender, pursuant to an indenture tripartite, made between the queen on the first part, the said governor and company on the second part, and the said company on the third part, shall be directors and managers of the United Company, and shall continue in that capacity until new directors are chosen, according to their charter, dated *September* 5th, and 10th *William* III.; provided, That after a term limited, and repayment of the said two millions two hundred
- d thousand pounds, and all arrears then due for annuities, which annuities amount to 160,000*l.* *per ann.* and upon three years notice, that then the aforesaid duties on salt, &c. and the benefit of trade given by this and the former charter cease. This proviso is extended as to the time, by stat. 10 *Ann.* c. 28 & 29. and impowers the company to enter such goods as they shall import at the custom-house, by bills at sight or sufferance, and shall give security under their common seal for payment of such customs and duties as are rated in the book of rates, and upon coffee, to be ascertained on the oath of the importer; viz. for payment of one half at the end of six calendar months, and the other half at the end of twelve months. The custom-house officers shall grant to the company such bills at sight or sufferance, and take security as aforesaid, making such allowances and deductions as are made to other merchants
- e paying their customs at or before the landing their goods and merchandize. Nothing however, herein contained, to extend to alter the method of paying the duties of 15 *per cent.* on muslins and calicoes, or the duties of any other goods, to be ascertained by sale of candle ^b.

- NOT long after the accession of *George* the first to the *British* crown, a new evil was discovered, the preventing of which was of the utmost consequence to the whole nation, as well as to the company. It was found that various attempts had been made to penetrate into the secrets of this commerce, for the information of foreigners, who projected a scheme for sharing in so beneficial a traffick. To put a stop to so dangerous a design, a bill passed in parliament, and received the royal assent, to render all such practices ineffectual. It was
- f enacted, That all his majesty's subjects, who shall sail or go to the *East Indies*, or such places of *Asia*, &c. beyond the *Cape of Good Hope*, to the *Streights of Magellan*, contrary to the laws in being, or the tenor of this act, shall be liable to the punishments inflicted by law for such offences; and it shall be lawful for the united company of *English* merchants trading to the *East Indies*, and their successors, to seize such persons, and to send them to *England* to stand trial, and to be punished according to law: whoever shall solicit, procure, obtain, or act under, any commission, authority, or pass, from any foreign power, to sail or trade to or in the *East Indies*, shall forfeit 500*l.* whereof one moiety to the informer, another to the crown; the said penalties and forfeitures to be recoverable in any court of record at *Westminster* ^c.

^b Debates of

*This law in-
effectual.*

THIS law, notwithstanding the severity, did not produce the intended effect. The profits of the *English* company, who had, for several years past, divided ten *per cent.* on their capital, excited a general eagerness among foreigners and others to share in so lucrative a commerce. The *English* merchants, excluded by the company's charter, thought themselves injured by this monopoly, and determined, if possible, to avoid the penalty by other means projected. This gave occasion, among other plans laid out by our neighbours, to the establishment of a new company at *Ostend*, of which we shall speak more particularly in another place. In this project so many *English* traders and merchants were concerned, that, to obviate the inconveniencies resulting to the company and nation from the share they had in the new foreign subscription, an act was passed in the 9th year of *George* the first. By this act all the subjects of the three kingdoms were prohibited from encouraging, in any way, the establishment of any foreign company trading from the *Austrian Netherlands* to any place mentioned in the *English* company's charter, or to have any interest or share in the stocks or actions of any such foreign company, or to make payment in money, bills, or any other method whatsoever, towards the promoting or support of that or any other foreign company; the persons so offending to forfeit their interest and share in the stocks of such company, with thrice the value thereof; one third to go to the crown, and the remainder to the *English* company, in case they inform or sue for it; otherwise one third to go to the certain informer, recoverable by action of debt.

*Act to prevent
British subjects
from encouraging
foreign
East India
commerce.*

*Terms of the
act.*

THE attorney-general, of his own authority, or on the relation of the said united company, and for the company, may file a bill of complaint in the court of chancery or of the exchequer, against any person who shall have contributed to, promoted, or any ways become interested in, the establishment of any such foreign *East India* company, or the stock or trade thereof, for the discovery of his offence, remitting or waving the forfeiture of the treble value of the offender's stock or concern in any such company, and insisting only on the single value. And if, upon this, such person shall answer to the bill, and not plead or demur to the discovery thereby sought; and in case the single value only of such stock, share, or interest, shall be decreed to be paid, one third part thereof shall go to his majesty, and the other two thirds to the company. If any *British* subject shall have accepted of any trust, or know of any interest, share, or concern, which any of his majesty's subjects shall have in such foreign company, and shall not, within six months after accepting the trust, or the coming to the knowledge of any such interest, truly discover the same in writing to the said united company of *England*, or their court of directors, he shall forfeit thrice the value of the said concern, interest, &c. so accepted in trust, or so known and not discovered; one moiety to the crown, the other to him who will sue for it by action of debt; or such offender shall, at the discretion of the court where the cause is tried, suffer one year's imprisonment: such persons as shall, within the time limited above, voluntarily come to the court of directors, and make a true discovery in writing of the interest, &c. of any subject in the stock of any foreign company, shall have one half of the clear amount of the forfeitures arising from this act.

ANY of his majesty's subjects, not legally authorized, found in the *East Indies*, are declared guilty of a high misdemeanor, and may be prosecuted for the same; and if found guilty, shall be liable to such corporal punishment, imprisonment, or fine, as the court where the prosecution is commenced shall see fit. And the offenders may be seized and brought to *England*, and any justice of the peace may commit them to the next county jail, till sufficient security be given by natural-born subjects, or denizens, for their appearance in court, &c. and not to depart out of the kingdom without leave. All actions on account of offences against this act, or against the 9th of *William III.* c. 44. or 5th *Geo. I.* c. 21. shall be laid in *London* or *Middlesex*, at the option of the prosecutor; and a *capias* in the first process shall issue upon any bill, plaint, or indictment, prosecuted for the said offences^d.

THESE laws, one would imagine, would be sufficient to prevent *British* subjects from engaging in schemes pernicious to the nation; yet so far was it otherwise, that all the measures taken since by foreigners, to the prejudice of our commerce, owed their birth, in a great degree, to *Britons*. To make great fortunes at any rate, was the resolution of numbers of determined pursuers; and no laws were a sufficient barrier against the irresistible motions of ambition and avarice.

*Another act
passed for the
security of
commerce.*

IN the 7th year of *George* the first, a law was passed for the better preventing an unlawful and securing a legal commerce to the *East Indies*. Here it was enacted, That any goods shipped for the *East Indies*, except goods for the company, goods licensed by them, naval stores, provisions, and necessaries for the ships in their voyage; and all goods taken out of such ships in their voyage homewards from the *East Indies* and to *England*, before her arrival here, shall be forfeited, with double the value; and the master or officer of such ships, know- g

^d HARRIS, vol. ii. b. i. c. 2. DODSLEY, vol. ii. c. 3.

a ingly permitting such goods to be shipped or unshipped, shall, for every offence, forfeit one thousand pounds, and wages.

ALL agreements or contracts made or entered into by any of his majesty's subjects, or in trust for them, on the loan of money, by way of bottomry, upon any ship in the service of foreigners, and bound to the *East Indies*, &c. and all contracts for loading or supplying any ship with a cargo of any sort of goods, merchandizes, treasure, or effects, or with provisions, stores, or necessities; and copartnerships entered into with relation to any such voyage; shall be void. Every subject of his majesty that shall go to the *East Indies*, contrary to the laws now in force, shall be deemed a trader, and to have traded there; and all the goods there bartered or trafficked for, purchased by such person, or found in his custody, or any other in trust for him, by his order or procurement, shall be forfeited, with double the value.

LIKEWISE by this act it shall be lawful for the attorney-general, or the company, to file informations in any court at *Westminster*, against clandestine traders. If the defendants are found guilty, the court shall immediately proceed to give judgment against them. It shall also be lawful for the attorney-general, at the relation of the company, or by his own authority, to exhibit bills of complaint in the exchequer, against persons trading to or from the *East Indies*, contrary to law. All copartners, agents, and factors, of such illicit traders may be prosecuted, for the discovery of such their trading, and for recovering the duties and damages. And such persons shall pay to his majesty the customs of the goods of such unlawful trading; shall answer to the company 30 per cent. according to the value of the goods in *England*; the amount of such customs being paid into the exchequer, and damages to the company, the prosecution shall drop. But if a decree be obtained against the offender, he shall pay costs to his majesty and the relator respectively.

If such bills as are exhibited at the relation of the company be dismissed by the court, the company shall pay every defendant his full costs. The forfeitures and penalties herein before appointed, or in former acts, relating to the *East India* company, may be sued for, not only by the attorney-general, or the said company, but also by any officer of the customs, such officer having the consent and order of the court of directors, as by the act is particularly required: one third of the penalty shall be to the crown, one third to the company, and the remaining third to such officer of the customs as shall inform and sue as aforesaid.

It is also provided, That the United Company be permitted to ship out stores, provisions, utensils of war, and necessities for maintaining the garrisons and settlements, free of all duties, so that such duties, if they had been paid, should not exceed 300 l. No *East India* goods to be imported into *Ireland* or the plantations, but from *Great Britain*, on pain of forfeiting ship and goods.

THUS have we seen the *East India* company struggle with a variety of difficulties, dangers, and perplexities, through a series of years. They were partly owing to the maxims of certain leading men in the nation, who obliged them to purchase every favour at an exorbitant price. The *Dutch* too had been the cause of numberless hazards to them. This advantage the *Hollanders* had over the *English*, that they were always sure of the utmost support from their government, and were permitted to conduct their affairs in the manner they thought most advantageous, in a sovereign and independent manner. Of late years, indeed, the circumstances of the *India* company have been greatly altered for the better. The legislature has now taken under their protection a corporation from which the nation in general, and the revenue in particular, receives infinite benefits. In consequence the company has been gaining ground on the *Dutch*; at least in those countries where an equal freedom of trade is permitted, and where the success depends on the choice and good opinion of the natives.

THE desire we had of continuing the chain of domestic transactions prevented us from taking notice of accidents that gave a disagreeable check to the rapid progress the company was making in this commerce.

THE company had a settlement in the island of *Pulo Condore*, subject to the monarch of *Cochin China*, and inhabited by *Cochin Chinese* and *Cambodians*. The first residence of the *English* here was in the year 1702, when they built a slight fort with earth and palisadoes, mounting on it a few pieces of cannon. It was garrisoned with about 45 *Europeans*, including the agents and servants, with eight *Topazes* and sixteen *Bugasses*. With the caution of persons not well fixed in their habitation, and unacquainted with the manners, disposition, and inclination of the inhabitants towards them, the *English* prohibited the natives from keeping arms in their custody on any pretence whatever. The misfortune of the *English* factory is attributed to the disgust of the *Bugass* or *Maccassar* soldiers, who were threatened with corporal punishment for letting two of the slaves belonging to the factory escape. The revenge they meditated was cruel, and strongly marks the vindictive nature of those wretches. At night, on the 3d of

March, 1705, while the garrison was asleep, they set fire to the houses within the fort, and murdered the *English* as they ran out naked to extinguish it. Above thirty of the *English* were massacred amidst the confusion the fire had occasioned, twelve only out of forty-five having escaped the resentment of the *Macassars*, by means of a sloop that lay in the harbour. The following letter from Mr. *James Cunningham* to the company's supercargoes and captains in *China*, gives a minute account of the horrid tragedy.

“ BEFORE this comes to your hands, you may have heard of the overthrow of the settlement
 “ at *Condore*, of which I shall here give you a more particular account, that you may impart
 “ the same to our honourable masters. Our *Macassars* were told they should be punished for
 “ letting some of our slaves escape, whereupon they resolved to take a cruel revenge: for on
 “ the 2d of *March*, at one o'clock in the morning, they set fire to the fort, and at the same
 “ time killed Mr. *Catchpole* the governor, Mr. *Lloyd*, Captain *Rashwell*, Mr. *Fuller*, and
 “ others, to the number of nineteen. Doctor *Pound*, Mr. *Chitty*, and Captain *Dennet*, with
 “ eight or nine more, made their escape in a sloop to *Malacca*, I suppose, and from thence
 “ to *Batavia*. Those that remained were so dispersed that hardly two remained together. I
 “ went to the *Cochin Chinese* for their assistance; but their fear was so great, that they went
 “ to barricado themselves. The *Macassars* having perpetrated their villainy, got into a *Cochin*
 “ *Chinese* prow to put to sea, but were assaulted by the people of a *Cambodia* vessel, which
 “ was then on the island. Our armourer, who was with the *Cambodians*, killed one of the
 “ *Macassars*, and wounded two more, which made them put again to shore, and make their
 “ escape to the woods. In the morning betimes, the *Cochin Chinese* took possession of the
 “ fort; fearing, I suppose, we should have joined with the *Cambodians* to carry away what
 “ the fire had not destroyed; for being got together we were sixteen *English*, four of whom
 “ were dangerously wounded, six *Topazes*, and about twenty slaves, too small a number to cope
 “ with these, who were above 200. The *Chinese* being like so many cyphers, and the *Madrafs*
 “ sloop in *Cochin China*, obliged us to desire their friendly assistance. Whereupon the money
 “ was all put into chests, and the most part weighed and carried into their custody. During
 “ this time, the *Macassars* thought to have seized another prow to escape in, but were frightened
 “ away by the *Cochin Chinese*, who promised, in a few days, to bring them all, dead or alive.
 “ Most of us were dubious of their friendship, but did not know how to answer it to our
 “ honourable masters, to leave so much money, while they pretended to be our friends, and
 “ we had not deserved otherwise at their hands. We could have got away in the *Cambodia*
 “ boat that sailed, which sailed the seventh following, and Mr. *Baldwin* and Mr. *Wingate* did
 “ go to *Cambodia*, to make the best of their way to *Batavia*; but we staid to take care of the
 “ money. The day after the departure of the boat, the *Cochin Chinese* caught one of the
 “ *Macassars*, and immediately cut off his head, by which we began to make sure of their
 “ friendship. Yet on the tenth, and without any the least provocation, but to make sure of
 “ their prey, they barbarously murdered all the *English*, among which were Mr. *Pottinger*,
 “ Mr. *Townshend*, Mr. *Ridges*, and Mr. *St. Paul*, with four *Topazes*, and six slaves; only
 “ me they saved alive, after giving me two wounds, one slight in the arm, and the other
 “ more dangerous in my left side, of which I am now well. They besides saved two *Topazes*
 “ and fifteen slaves. On the 18th arrived in the island from *Borea* some *Cochin Chinese* galleys,
 “ with prows, amounting in all to 65, and in them 300 soldiers, the other *Cochin Chinese*
 “ making about 300 more. In these they embarked every thing worth taking away, and
 “ during their stay sent three or four times in search of the *Macassars*. Lighting on them at
 “ last, they put four to death.
 “ On the 7th of *April* I was ordered on board one of the galleys, and not having leave
 “ to stir but attended by a soldier. I saw and understood that all the people belonging to
 “ the *Madrafs* sloop were in confinement, in separate houses, and also in *Congas*, except Captain
 “ *Ridley*. I desired several times to wait upon the governor, but was denied admittance, he
 “ was so busy in over-hauling the goods brought from *Pulo Condore*, and weighing the money,
 “ which, it was found, amounted to 21,300 tale. At last, on the 28th, I was obliged to
 “ appear as a criminal, in *Congas*, before the governor and his grand council, attended with
 “ all the slaves in *Congas*. Here I was charged with three crimes: the first, That the *English*,
 “ when they arrived at *Pulo Condore*, said they would stay there whether the king of *Cochin*
 “ *China* would or not. The second, That there were no *English* sent with the present to
 “ court last year. And the third, That we sent a ship to *Cambodia*, and did not acquaint the
 “ governor of *Borea* with it. To the first charge I replied, that we had never said any such
 “ thing. For, on our arrival, we did not know that the island was inhabited; and that, as
 “ soon as our governor had dispatched the ships for *China*, he sent an embassy to *Cochin*
 “ *China*, and obtained leave to stay. To the second article I answered, That all the *English*
 “ were so sickly, that we had not one of any rank to send, and therefore spoke to a *Chinese*
 “ captain, then present, who agreed to go; but that the *Casem* taking the present upon
 “ himself,

- a " himself, promised to make our apology to the king. To this they replied, that the
 " sending a *Chinese* was all one as sending the *Cafom*, and that an *Englishman* would have
 " done better. I answered, That was the *Cafom*'s fault, who ought to have informed us
 " better. They then asked why we did not get some out of the ships to send, when there
 " were so many? To which I replied, That we had no power over the ships. As to the
 " third article, I said that we were never informed that we ought to have acquainted the
 " governor of *Borca* before we sent a ship to *Cambodia*. They insisted upon it, that no
 " *Englishman* came from the ship at the mouth of *Cambodia* river, when the governor sent
 " to speak about the ships. To this I replied, that the ship was not yet returned to *Pulo*
 " *Condore*, therefore I could not say what the reason of their conduct might be. Upon
 b " this I was dismissed, and returned home, where I had the *Congas* (thumb-bolts) taken
 " off. The next day I was at the governor's son's house, and the governor, accidentally
 " passing by, saw me, and sent for me to his house. He asked me nothing of moment,
 " but why I sent two *Englishmen* to *Cambodia*, and how much I had given them. After
 " answering his questions, I desired to know what he intended doing with us. He told
 " me we must stay here till he had a return from court, which would take up two months.
 " I then asked for captain *Ridley*, who was sick at *Dangai*, about twenty leagues from
 " thence, and to have the *Congas* taken off his people; he only replied, he would see to
 " it shortly. I know not what our honourable masters will be willing to do, therefore
 " cannot advise them herein. I am,
- c " With much respect, &c.

" Signed,
 " CUNNINGHAM."

THIS gentleman was afterwards president of *Banjar*, where he was equally unfortunate, the settlement having been ruined by the natives before he had been there ten days; but in a less fatal manner. At *Pulo Condore* were massacred by the *Macassars* the following gentlemen; viz. Mr. *Catchpole*, governor, Messrs. *Ridges*, *Rasbwell*, *Fuller*, *Aust*, *Emneet*, *Manfield*, *Boult*, *Stratford*, *Herring*, *Watts*, *Walton*, *Ormond*, *Hill*, *Bensley*, *Lindsey*, *Ormans*, *Bradford*. Some days after were massacred by the *Cochin Chinese*, Messrs. *Loyd*, *Pottin-*
 d *ger*, *Townshend*, *Savage*, *St. Paul*, *Hudson*, *Dorothy*, *Pennyman*, *Lynch*, *Cellon*, *Cornelius*, *Ridges*. Many of these were persons of inferior rank, and menials or mechanics. We no-where can find that the company ever recovered their effects, or obtained satisfaction for this injury and barbarous treatment. It is possible the distance might have rendered this difficult^f.

IN the year 1719, the governor and council at *Bencoulen* had resolved, on account of ^{The company} the unwholsomeness of the situation, to remove the factory to a few miles distance from ^{remove their} its present situation. For this purpose the ground was traced out for *Marlborough* fort, ^{settlement from} and the work carried on with great vigour and spirit; but the council had not sufficiently ^{Bencoulen to} consulted the temper and inclinations of the natives, who were greatly displeased with this ^{rough.} design. Some little jealousies and heartburnings had appeared among them before; but as they did not break out into an open rupture, the factory disregarded them. The natives observing that this new fortification was applied to with such diligence, mistook the intention of it, interpreting it into a design upon their liberties, or, at least, into a suspicion in the *English* of their affection. This notion taking root, diffused such a spirit of rebellion among them, that nothing less than a general revolt, and an absolute destruction of the power they began to dread, was meditated. They concealed, however, their sentiments so artfully, and shewed so little sign of uneasiness or resentment, that the *English* proceeded in their work without any apprehension of what was contriving against them, till it was on the point of breaking out^g. The whole affair will best appear, and the conclusion of
 f the conspiracy be set in the most genuine light, by the following letter from the council at *Bencoulen* to *Joseph Collett*, Esq; governor of *Fort St. George*.

— " It is with the greatest concern that we acquaint you with the misfortunes that ^{Discontent of} have befallen us and our honourable masters affairs since our last advices. In these we ^{the natives,} assured you, with too much confidence, of the perfect peace and tranquility we then ^{their revolt,} enjoyed, which the satisfaction the natives seemed to express in our administration gave ^{and the massa-} us but little reason to imagine would prove of so short duration. Our pepper, for ^{cre of the set-} some time, coming in very plentifully, and we having frequent promises from them of ^{tlement.} much greater quantities being ready to be brought out of the country, we had made a
 g " progress in our buildings, even beyond our expectations. The foundations of one gorge

" and

“ and two curtains of our fort walls were laid, and raised in brick and chinan a foot above a
 “ ground, and the earth laid open for a third, in the space of a little more than a month.
 “ We had laid in such provision of brick and chinan that we should have had sufficient to
 “ complete the whole in less than twelve months, at the rate we had begun. Thus we
 “ thought ourselves successful in our undertaking; and it was no small pleasure to us to
 “ think, that, by diligently serving our masters, it would add to our credit, and, in a
 “ more peculiar manner, recommend us to their favour hereafter. But, in the midst of
 “ our prosperity, all our hopes were blasted by a secret combination of the whole coun-
 “ try against us, which they certainly designed to execute while we had no ship in the road
 “ to help us. The *Metck-lapatane* had been at *Bantal* since the 21st of *January*, but fortu-
 “ nately returned to our assistance the 18th of *March*, a few days before the discovery of b
 “ this horrid plot.

“ It was late at night, on the 23d of *March*, before we had the least suspicion of any
 “ treachery, when captain *Gibb* advised the deputy-governor that *Dupurty Bentlorin* had got
 “ together between four and five thousand men in his *Dusan*, and he believed they designed
 “ to make war on the company. Upon this the deputy-governor dispatched a letter to
 “ *Bentlorin*, to demand the reason of his assembling such a number of people, ordering
 “ him immediately to disperse them, and to come himself to the fort in the morning,
 “ that if he had any grievances they might be heard and redressed. That if he did not
 “ immediately comply he should no longer be considered as a friend, but be treated as an
 “ enemy. Early in the morning *Bentlorin* returned an answer, filled with frivolous excuses c
 “ and false assurances of friendship, without taking notice of dispersing his army, or of
 “ coming in person to the fort. The council was immediately assembled, and acquainted
 “ with what had passed, when it was determined to send Mr. *Mackey*, who was *Bentlorin*’s
 “ friend, to confer with him, and persuade him to come to the fort. About noon *Mackey*
 “ returned with the *Dupurty*’s answer, and promise to wait on the governor next morning.
 “ In the mean time our *Pangarans* and *Dattoos* were sent for to consult with on this occa-
 “ sion, who were the persons that ought to have given us the first notice; but they seemed
 “ to make light of our apprehensions, persuading us, that the *Dupurty* was an honest and
 “ well-affected man. That the people of his *Dusan* were only friends he had assembled d
 “ from the country to feast with him; and that he had no intention to hurt the company.
 “ This opinion of theirs made us jealous of their fidelity, and tender a fresh oath of alle-
 “ giance to them, which, after much persuasion, they took at the hands of their *Paars*.
 “ After this *Pangaran Munco Rajah* undertook to bring in the *Dupurty*, and did accordingly
 “ set out himself for *Bentlorin*. Not an hour after we were alarmed with the dreadful sight
 “ of the sugar plantations on fire, it being then about six o’clock in the evening. A strong
 “ party, commanded by ensign *Adaire*, was immediately sent out to *Bencoulen*, with orders
 “ to proceed next morning to *Dusan Bentlorin*, and to engage the enemy either there or
 “ where-ever he should meet them, using his endeavours to destroy the *Dusan*, and as many
 “ of their people as he could. But in this he had no success, for want of the *Pangaran*’s
 “ assistance, who had promised to supply *sampars* to ferry his people over the water at e
 “ *Bentlorin*, or where-ever he should have occasion for them, in which they deceived us.
 “ For our party finding a body of the enemy had fortified themselves with a strong breast-
 “ work of fire-wood, and some small guns, on the other side of the river, opposite to the
 “ sugar plantations, and not one *sampar* sent by the *Pangarans*, *Adaire* was prevented from
 “ fighting them, and obliged to return to the fort, after he had been deserted by the *Bu-*
 “ *gasses*, *Blacks*, and *Chinese*, who went over to the enemy. By the ensign’s account, it
 “ was plain that the whole country were concerned in this rebellion. The principal per-
 “ sons whom he saw and knew among them, were *Rajong*, *Pangaran Munco Rajah*; most
 “ of the *Dupurtys* of the *Dusans* adjacent to us, with many of the people and *Bazars* of f
 “ *Bencoulen*, headed by *Dupurty Bentlorin* and *Selebrian*; but he could not guess at their num-
 “ ber, as they were under the cover of trees and the breast-work they had raised of fire-wood.
 “ Mr. *Alcock*, from *Sellenbar*, acquainted us the same day, that *Pangaran Fantentaley* and his
 “ country were also in concert with them.

“ On the 26th of *March*, in the morning, the strongest party we could muster of *English*,
 “ *Bugasses*, *Blacks*, and *Chinese*, was ordered out to engage the enemy, under the command
 “ of Mr. *Newcombe*, and ensign *Johnson*. When they came to *Bencoulen* to join the *Bugasses*,
 “ they were strangely surprised at their refusing to fight without a present reward; and
 “ Mr. *Newcombe* was credibly informed, that a considerable number of *Bugasses* were laid
 “ in ambush to fall on the *English*, of which he sent immediate notice to the fort. Where-
 “ upon the signal was given for recalling the party, which prevented our coming to an g
 “ action that day. The Sultan being examined, pretended that a wrong construction was
 “ put on what he said at *Bencoulen*, and affirmed that he had always been, and was still,
 “ ready

- a “ ready and willing to fight for the company ; but our suspicion of his treachery made us
 “ unwilling to trust him at that time. About eleven o'clock the same day *Pangaran Munco*
 “ *Rajah* brought a token, which, as he said, was from his uncle *Rajah Boojong*, from *Sin-*
 “ *gledemand*, to acquaint us that 200 *Orangcomoes* were come over to our side at *Singledemand*,
 “ and desired we would lend the *Malayes* some weapons to defend themselves. This
 “ we had great reason to suspect was false, *Rajah Boojong* being at that time in arms against
 “ us at *Bentlerin*, but the *Pangaran* positively affirmed he was then at *Singledemand*, not-
 “ withstanding ensign *Adaire* had seen and spoke to him at *Bentlerin*.
 “ WHEN we found ourselves so deeply involved in trouble on all sides, that we were
 “ betrayed by our *Pangarans*, and deserted by our *Bugasses*, none remaining but the *English*,
 b “ *Blacks*, and *Chinese*, and that the former did not exceed 120 men both civil and military,
 “ many of them unexperienced, and others disabled, while the others had given us but
 “ little confidence in them, from their conduct under *Adaire* ; we thought ourselves in the
 “ utmost danger. Wherefore a general council was called of all the company's servants,
 “ and inhabitants of the place, to consult about saving what we could of the company's
 “ effects, and making some provision for our passage, if we should be defeated. Here it
 “ was the unanimous opinion, that it was adviseable to put on board the ship *Metch-lapa-*
 “ *tane* the company's treasure and books, with what stores and provisions our time would
 “ permit, with all the expedition and secrecy possible. After which, if we were forced, we
 “ might make our escape in the best manner possible. The remainder of the day was spent
 c “ in pursuing that resolution ; but no boats could be got off that evening. Early next
 “ day the company's treasure, &c. as *per* the inclosed bill of lading, were sent on board.
 “ About eight o'clock news came that both the *Pangarans* and families were eloped from
 “ *Bencoulen*, and no account could be given of their route. About ten Sultan *Catcheel*
 “ undertook to accommodate matters with the country people, provided we would con-
 “ sent to their chusing new *Pangarans* ; to which we agreed. But before we could come
 “ to a *Bechar*, or conference with them, the *Portuguese Padre*'s slave told us, that the *Bu-*
 “ *gasses* and *Malayes* were risen at *Bencoulen*, and had cut off the *Padre*, and most of the
 “ *Portuguese*, without distinction of sex or ages. He had hardly finished his account,
 “ when a great fire broke out at *Bencoulen*, another near the fort, behind *Canbury Paggar*,
 d “ another towards *Sillebar*, and soon after at the *Hermitage* house. Till this time no enemy
 “ appeared, but still fresh fires were seen in different places, which could only have been
 “ done by our own *Bugasses* and *Malayes*. As no enemy as yet appeared, we discharged
 “ all the great guns we had mounted at the thickest of these fires, as we thought : in doing
 “ which, one of the wads of our own guns unfortunately fell upon the top of the fort
 “ buildings, which took fire, and burnt so fierce, that there was no extinguishing it ; at
 “ which time we marched out of the fort in one body to meet the enemy. We first passed
 “ the lower ground, from thence round the *Horse Stable Hill*, to the *Hermitage*, and so by
 “ the *China Town* and brick-shades, which were all on fire, but no enemy to be seen. We
 “ thence proceeded to the sea-side, where we saw some thousands of *Malayes*, headed by
 e “ our Sultan and *Bugasses*. Most of the *Chinese* had secured themselves in boats, and on
 “ board of their own prows. We had then none to stand by us but our own *Blacks*.
 “ Under these disadvantages, we thought it vain longer to hazard our lives against so
 “ numerous an enemy. Our fort and most of our buildings being destroyed by fire, put
 “ every man upon saving his life by swimming, or getting on board the boats in the best
 “ manner he could ; in which attempt near half our people were drowned, or killed by
 “ the enemy. Next morning we computed near 350 black and white men, women, and
 “ children, were saved on board the ship *Metch-lapatane*, Mr. *Newcombe*'s barge, and three
 “ *Tombongons*, or boats for going on board ships, for which number we had not water
 “ for above five days, at a pint a day each. Our first design was to go to *Bantal* ; but
 f “ both the wind and current were so strong against us, that, after continuing in the road
 “ till the 26th of *March*, we were obliged to alter it, and make the best of our way to
 “ *Batavia*. After supplying each boat with water and provisions for five days, we set sail
 “ in company for *Batavia*.” The remainder of the letter is taken up with a journal of
 their voyage to *Batavia* ; their usage there, and their being transported from thence to
Nagapatam, from whence this account is wrote, signed by the deputy-governor and two
 of the council.

g SUBSEQUENT to this is a paper signed *Thomas Cooke*, containing a narrative of the cir-
 cumstances which brought about the ruin of this settlement. Among these the following
 seem most remarkable. The *English* had been involved in troubles with the country
 government both at *Mariborough* and *Bantal* before. Mr. *Cooke* had seemingly terminated

those differences amicably, and a fair correspondence for several months ensued with the natives. Under the mask of friendship they had, however, harboured resentments, and at the time they preserved the most specious appearances were forming plots, combinations, and conspiracies against the *English*. Seeing fort *Marlborough* in great forwardness, they apprehended their schemes would be frustrated if they delayed the execution till the *English* were secured by strong brick walls and cannon. Besides, they suspected that this fortress was an attack upon their liberties, and would be an asylum to those who had committed the most unpardonable injuries against them. Not long after this rebellion a difference had happened between *Dupattay Bandarin* and *Sec Gibb*, captain of the *Chinese*, and undertaker of the company's sugar and arrack plantations. The *Dupattay* is one of the second men in the kingdom, and governor of *Dasanore*. He is well beloved among the natives, being esteemed a priest among them, and always thought to be a good friend to the *English*. The quarrel first began to shew itself by the *Chinese* killing four of the *Dupattay's* buffaloes, breaking down his fences, and damaging his plantations, which they affirmed had been done by order of Mr. *Farmer*, the preceding deputy-governor. Mr. *Cooke*, however, put a stop to this violence, obliging the *Chinese* to render the *Dupattay* full satisfaction for the damages done him. Notwithstanding this, some of the *Dupattay's* men, in revenge, killed a slave belonging to the captain; and his brother was known to be of the party. The governor ordered him to be seized and confined in the cock-house till next day, when he took his trial, and was acquitted, without sustaining other damage than one night's confinement. This affront sunk deep in the *Dupattay's* mind, and was the original cause of the catastrophe which soon ensued, in obliging the *English* to quit *Bencoulen* ^b (B).

The original cause of this unfortunate affair.

The *English* permitted to re-establish the settlement.

NOTWITHSTANDING the *English* were thus driven from *Bencoulen*, their best settlement on the island of *Sumatra*, they were permitted by the natives to return the year following, and proceed without interruption in the building *Marlborough* fort. Thus what the council affirm in their letter, of the fort's being the chief bone of contention, seems groundless; it plainly appearing, from the letters quoted in our notes, that the natives thought themselves injured and oppressed by the *English*. The chiefs of the factory did not always abound in discretion; and their assuming and imperious behaviour had greatly disgusted the natives: but as this was very tolerable in comparison of the brutal tyranny the *Dutch* ^d exerted where-ever they were settled, the *Malayes*, upon the expulsion of the *English*, began to apprehend a visit from those cruel and unwelcome neighbours. From this dread, they soon dropt their resentments against the *English*, and burying in oblivion their indiscretions, welcomed them back with as much zeal as they had expelled them ⁱ.

THE new fort, notwithstanding its vicinity to the old, was incomparably more healthy; besides, as it is a place of much greater strength than *York Fort* in *Bencoulen*, the servants of the company are freed of all apprehensions of surprize from the natives. So that every thing contributed to extend the traffick and consequence of the company on this island (C).

THESE

^b LOCKYER'S Account, c. 4.

ⁱ HAMILTON, vol. ii. c. 41.

(B) The following letter, intercepted by the *English*, A. 1717, shews the disposition of the natives for some time before the rebellion broke out.

"This comes from Sultan *Manfore*, *Rajah Guillamat*, *Datta Pandasb*, all the great men in *Bandat Sapalo*, and the overseers of trade in *Bantyan* and *Tego Loora*; to *Datta Rajah Quasso*, with all the *Proateens* and *Limocotras* from *Salabat* and *Cotroun*, to *Calaboon*, *Suramlu*, and *Malacca*. *Rajah Quasso's* letter is received, which we like well. We are now certified the whole country, as far as *Abong*, likewise *Juan de Gomo*, with his people, will unanimously join us: and when this arrives, send *Juan Mallin* into the country, to advise that we intend utterly to destroy the *English*, and spoil their settlements throughout the whole coast, because they have broke faith, and become quite otherwise than they were formerly. We shall proceed as soon as the festival is over; therefore would have you, *Datta Rajah Quasso*, dispatch a messenger with your real sentiments of this affair, signifying also how the *Proateens* and *Limocotras* are affected." To this letter the following answer was intercepted. "This letter comes from him that eats nothing, to *Rajah Manfore* and *Sultan Guillamat*, assuring them that he will collect all those like himself, and march di-

rectly against *Bencoulen*; therefore desires the assistance of arms, which yourselves, and *Rajah Passassar*, must not fail sending to *Juan de Gomo*, who is resolved, if the kings are agreed, to be their ally; and you may depend upon his fidelity, for he knows not how to tell a lie. When he comes down to the country, he will bring over to his interest the people of *Serangi* to *Bencoulen* and *Lowt Corut*, with those belonging to *Pangaran Munco Anovin*, even as far as *Palombong*. This is what I promise to do; desiring your letter in answer to it. So God blefs and keep you in all your undertakings." After so early information, we cannot but wonder at the security in which the council wrapt themselves. They are blamed with asperity, and deservedly, by Captain *Hamilton*, from whom we have partly extracted this relation. Vol. ii.

(C) The year succeeding this, a kind of war broke out in the kingdom of *Vissafum*, on the *Malabar* coast, between the *English* factory and the *Sandab Rajah*. The *Rajah* had built batteries at the mouth of the river; by this means, locking up the *English* fort from the harbour. This the president complained of, but had no redress. Towards the end of the year, a ship was wrecked on the coast, about four miles from the factory,

- ^a THESE successes, joined to the caution of the company, in sending none but persons of *The great profits of the company, and the thriving condition of their trade.* prudence and abilities in quality of chiefs to *India*, soon gave their affairs a prosperous turn. It has been said, that had it not been for the losses sustained by the establishment of new companies abroad, they would have been in a condition to have doubled their dividends; the benefit of which was laid open by the exhibition of the company's books, and the amount of their sales; a step occasioned by the clamour then raised about the decay of trade^k. The conduct of the ministry it was that gave birth to many new attempts of foreigners, to obtain a share in a traffick they saw attended with such immense returns. While these designs were vigorously pursued by foreigners, there were not wanting men of eminence and weight at home, who were for laying the *India* trade open. A variety of ^{*New attempts to lay the trade open.*} plausible arguments, which greatly alarmed the company, were urged upon this head. The whole nation was filled with complaints of the injustice of a monopoly, by which a body of private merchants satiated their avarice, at the expence of all his majesty's other subjects.

- THE company, to obviate the consequences of arguments become so general, made proposals to the ministry, highly beneficial to the government. No other conditions did they require, than a perfect security to an exclusive right of trading to the *East Indies*. A law was soon passed, by which all their powers, privileges, and immunities were confirmed in the manner they required. By this it was enacted, that the company do, on or before a fixed day, pay into the exchequer 200,000*l.* to be applied to the supplies granted to his majesty. For this no interest shall be paid, nor any addition made to the capital of the company by the public, on account of this grant; nor the same, nor any part of it be paid to the company. That after the 29th day of *September* 1730, the annuity, or yearly fund, of 160,000*l.* be reduced to 128,000*l.* in respect of the capital stock of 3,200,000*l.* That the annuity, so reduced, shall be charged on the same duties and revenues by the like weekly or quarterly payments, and with the same provisions for making good deficiencies in the said reduced funds, as their present fund or annuity is now charged on, till
- ^{*The company obviate those attempts, by making certain proposals to the government.*}
- ^{*The contents of their proposals.*}

^k DODSLEY, vol. ii. HARRIS, vol. ii. b. i. c. 2.

to which Mr. Taylor, the *English* chief, claimed a right, as lord of the manor. The *Rajah* disputed his title; but Taylor imprudently maintained it, which highly incensed the sovereign. In consequence, he raised an army, and besieged the fort for two months, before the season would permit relief to be sent by sea. At last, some of the company's ships arrived; but they found it difficult to land in the teeth of the enemy, as the sea ran high. In the first attempt to disembark, they were unsuccessful, thro' the neglect of orders; about 80 *English* were killed, and some made prisoners. However, a few days after, a landing was effected without loss; and in a few weeks their revenge taken on the *Rajah*. An engagement happened on the side of a hill, among thick bushes. The enemy being on the higher ground, attempted to beat the *English* from a spring of fine water, of which they had possession, near the sea; but the small vessels lying close by the shore, to cover 400 men who had the guard of the spring, fired with so much success, that in less than an hour, the *Rajah's* forces were defeated, leaving 200 men dead on the field.

This victory was, however, so far from being decisive, that the *English* were forced still to act on the defensive. They were greatly inferior in number, and diffident of their own military prowess; yet they did not fail to harass the enemy, and keep them in perpetual alarm. They likewise took some vessels belonging to the *Rajah*, laden with salt, provisions, and about 140 *Arabian* horses. At length a reinforcement arrived, and the *English* army, including seamen, mustered 2250 men. To prevent the landing of the succours, *Sandab Rajah* had erected batteries on the strand. The *English* opposed these by some floating batteries, having made the prizes shot-proof above the water, and mounted them with guns, each of them under cover of a frigate of 20 guns. With these they played upon the enemy briskly, and in the mean while landed 1250 men, without molestation. The enemy were preparing for their flight, when they observed some confusion among

the *English*, who were endeavouring to form themselves into a hollow square. The soldiers not being very perfect in their evolutions, instead of making a regular figure, went into the utmost disorder; in which situation they were attacked by the *Rajah*. The consequence was a defeat, after the loss of 250 men; but the floating batteries prevented the enemy from pursuing their success. So terrified were they by the balls which dropt among them, that they did not wait to gather the *English* arms left upon the field. This gave the sailors courage to advance, who brought back to the ships about 200 stands of arms, most of them loaded. On the *Rajah's* side, the loss was trifling, not above a dozen of horse or foot being left dead.

Although he had been thus successful, yet he began to tire of a war, by which little besides empty honour was to be acquired. To support an army of seven or eight thousand men, exceeded his revenues, which were but slender. The loss of his shipping and provisions distressed him; besides, the *Sandab Rajah* had made an invasion on his northern borders, which divided his forces. All these circumstances inclined him to peace; but his pride would not suffer him to make the first overtures. However, he permitted a Brachman to go on board the commodore, to make certain proposals, as if from himself, which he would endeavour to prevail on the *Rajah* to accede to. The commodore referred the agent to Mr. Taylor, the president; but he would by no means treat with him, who had been the occasion of the war; and he affirmed, that *Sandab Rajah* would refuse the most advantageous terms, from the man he had so much reason to dislike. Both sides, however, being desirous of peace, it was brought about by the mediation of a Seic, who pretended the utmost impartiality and friendship for both sides. Nor indeed had the *English* any other reason to complain, than that the *Rajah* still kept the batteries at the mouth of the river (1).

(1) Hamilton's Voyage to the East Indies, vol. i.

other provision is made by parliament with consent of the company. That upon one year's notice by parliament, after the 25th of *March* 1736, after the expiration of that year, and on repayment of the said debt of 3,200,000*l.* to the company, and all arrears of their reduced annuity of 128,000*l.* which shall be due at the end of the said year; then and thenceforwards the said annuity or yearly fund shall cease, and be no longer payable. At any time after the said 25th day of *March*, after a year's notice by parliament, and after the expiration of that year, upon repayment made to the company of any sum not less than 500,000*l.* part of the capital stock, and on payment of all arrears then due on their reduced annuity, that after such payments made, such part of the said annuity as shall bear a certain proportion to the capital so paid in part, shall cease and be abated. Thus from time to time, upon such yearly notices, and payment of such other sums in part of the said capital stock, till the whole of their annuity be intirely sunk and determined.

NOTWITHSTANDING any such redemption, all persons intituled to any interest in the stock, &c. of the said company, shall be and continue a body politic and corporate with perpetual succession, with power to purchase lands, &c. in *Great Britain*, not exceeding ten thousand pounds in value at any one purchase, with full enjoyment of all powers, privileges, and immunities, as by former charters have been granted, with power to declare what share in their remaining capital shall qualify members to be directors, or to vote in general courts. The company, notwithstanding such redemption, shall continue to enjoy the whole and sole trade to the *East Indies*, &c. but with the proviso of determination herein mentioned.

ALL persons (factors, &c. excepted) sailing or trading to the *East Indies*, shall forfeit the goods, ship, and double the value, to be sued for, recovered, and distributed, as in the statute of 7 *Geo. I.* c. 21, is directed. The company shall enjoy all the powers granted them by former charters, and not charged by this act, freed and discharged from all provisos of redemption, as fully as if the same were here repeated; but subject to the restrictions as are contained in acts and letters patent now in force; as also to all provisions following:

PROVIDED, that upon three years notice by parliament, after the 25th of *March* 1736, and repayment made to the company of the capital stock, with all arrears due with regard to it; then and from thenceforth the right, title, and interest of the said company to the sole, intire, and exclusive trade to the *East Indies*, shall cease and determine. But after the said determination of the company's right, the corporation may, with all or part of their joint stock, trade to those parts in common with other subjects of his majesty. Any notice in writing from the speaker of the house of commons, to be deemed a due and proper notice by parliament. Nothing in this act to extend to subject the *Levant* company to any penalties and forfeitures on account of their traffick in the *Levant* seas; nor restrain any trade within the limits of the *East India* company, that the *South Sea* company are any way intituled to¹.

In this condition did the *East India* company continue till the beginning of the last war with *France*. Towards the close of 1743, after the *French* had attacked the confederate army, headed by his *Britannic* majesty, lord *Carteret*, who at that time had the direction of public affairs, proposed sending a squadron to the *East Indies*. It was not doubted but the *French* would embrace every opportunity of attacking this nation in her most vital part, her commerce; on which depends her strength, her wealth, and happiness. The scheme was, however, for that time postponed. We shall shew, in the progress of our account of commerce, what a number of unsuccessful attempts had been made in *France* to erect and support an *East India* company, for near fourscore years. About 1720, the *French* company began to make a figure, and almost ever since had regular returns of three, four, five, six, and seven fine rich ships. It was therefore the business of a *British* ministry, not only to secure the settlements of the *English* company, but, if possible, to check the progress of the *French*. Accordingly war was no sooner declared, than the minister made the above proposal of sending a squadron thither, under the conduct of commodore *Barnet*. This was the more necessary, as the *British* company had of late both suffered in their trade by a competition with the *French*, and also by the encouragement that had been given to the latter by smuggling their *India* goods into the kingdom. In point of interest, it is true, the *Dutch* were more nearly concerned than we to ruin the *French* commerce to the *East Indies*. It was likewise now easy for them to effect this, as they had beyond doubt an incomparably greater strength in those parts. But though it was an effort expedient to their maritime power, yet as they had not declared war with *France*, nothing of this sort was to be expected from them. *Great Britain* was left to attend the concerns of *Holland*, as well as her own; g

Scheme of the
ministry to
send a squad-
ron to the
East Indies.

¹ HARRIS, vol. ii. b. i. c. 2.

a and by attacking the *French* in *India*, gave the States General an equal advantage in her success with the *British* subjects, entirely at her expence.

THE affairs of the *French* company, and their head settlement at *Pondicherry*, were now in a prosperous condition. As from hence apprehensions arose, that the commerce of this nation would be incommoded, an application was made from the court of directors to the lords of the admiralty, that a fleet should be sent for the protection of their settlements, and the annoyance of the enemy. In consequence, three ships of the line and a frigate were ordered to be got ready (D). *Barnet*, with his squadron, sailed from *Portsmouth* on the 5th of May 1744. On the 26th he arrived at *St. Jago*, where he found a *Spanish* privateer of fourteen guns and seventy-nine men, with a pink of 250 tons, under *Spanish* colours. As this was a neutral port belonging to the *Portuguese*, the commodore had no intention of attacking the privateer, till he was informed, that she had taken and burnt three *English* ships at anchor in the *Isle of May*, the crews of which she had left upon that island. Finding she had thus notoriously violated the laws of nations, he summoned her and the pink to surrender, which they accordingly did. He then sent the pink to the *Isle of May* for the masters and sailors of the *British* vessels: he put them on board her, and a brigantine he took in the offing, furnished them with provisions, and gave them all the effects he could recover to which they laid claim.

c LORD *Northesk* in the *Preston*, intended getting in the *Streights of Sunda*; from thence to the *Streights of Banca*; while the *Medway* and *Diamond* proceeded in their course to the *Streights of Malacca*. His design was to intercept the *French East India* fleet of merchant-men, expected to be on their return to *Europe* without convoy; for there was but one fifty-gun ship for the protection of the *French* settlements in those seas. The commodore disguised the *Deptford* and *Preston*, by rigging and painting them in the *Dutch* manner, arriving in this condition in the *Streights of Banca*. Here they continued at anchor till the 25th of January, when they could descry three sail of large ships coming towards them. They had no sooner discovered them to be *French* built, than it was concluded they were *Chinamen*, under convoy of the fifty-gun man of war from *Pondicherry*. The commodore got under sail to receive them, and so effectually disguised his ships, that they were taken for *Dutch*, till he came within musket-shot of the enemy. He then struck the *Dutch*, and hoisted *English* colours. The commodore gave the enemy a broadside, which they briskly returned, and a sharp engagement ensued. He then ordered the *Preston* to board one of the ships with all possible expedition, at the same time that he intended boarding another. As they were both preparing for this, the enemy's shot cut the tillers of both ships, and frustrated their intention. Upon this the engagement was renewed with great guns and small arms, when in about three glasses the *French* struck, after a gallant resistance. The prizes were the *Dauphin*, the *Hercules*, and the *Jason*, from *Canton*, of 700 tons burthen, 30 guns, and 150 men each.

d THE commodore sent officers and men to take possession of them, and to bring the captains and supercargoes on board his own ship. They were generously received, the commodore shewing them the utmost favour, friendship, and humanity. He soon found himself possessed of a valuable acquisition, the supercargoes acquainting him that the cargo of each ship was worth 100,000*l.* in *France*. Some of the officers and supercargoes were put on board two of the *English* company's ships, homeward-bound, and the rest with the prizes carried into *Batavia* ^m.

e NOR was captain *Peyton*, with the *Medway* and *Diamond*, less successful in the *Streights of Malacca*, where he took a *French* ship from *Manila*, worth 246,000*l.* having on board 72 ton, with a chests of dollars, each containing 3000*l.* besides two chests of gold, amounting to 30,000*l.* He then proceeded to the *Streights of Banca*, resolving to wait for the *Chinamen*. Here he was informed, by an *English* officer on board a homeward-bound *Swedish* Indiaman with intelligence to the lords of the admiralty from the commodore, that he was anticipated; upon which he steered his course for *Batavia*, where he soon after met with the commodore.

f BEFORE we proceed farther with commodore *Barnet*, we shall stop to make a few reflections on the state of the *French* company, and the methods they took to render *Barnet's* voyage ineffectual. The *French* company found a great return of treasure in the *Asiatic* commerce; but their advantages were still inferior to ours. For some time before war was declared, the

French were at prodigious expences at *Pondicherry*, and their lesser factories, while their ^a remittances from *France* were but slow. This obliged them to contract large debts in *India*, to carry on their affairs; and they were conscious, that a war would put a total stop to supplies from *Europe*, as well as to their credit abroad. These circumstances being thoroughly weighed by the court of *Versailles*, before a rupture with *England*, *Pondicherry* was in consequence put in a state of defence. M. *Bourdonnais* was sent thither in 1739, with 1500 men, to reinforce that and the other settlements ^b. Notwithstanding this precaution of the ministry, the *French* company, although they were sensible that the *English* had neglected to put their principal settlement in a defensible condition, were willing to establish a neutrality between the two companies. To extend the flames of war to so great a distance, must, they foresaw, be attended with a prodigious expence. Accordingly, in *November* ^c 1742, the directors of the company drew up certain proposals for concluding a convention of neutrality. These proposals they confined to three articles. The first was to prevent hostilities in any of the settlements belonging to either company. The second, to grant the ships of either company leave reciprocally to touch at any of their settlements, and not only to depart without obstruction or impediment, but to be furnished with such fresh necessities as the place could supply them with. And thirdly, to restrain the ships of either company, meeting at sea, from attacking or making prize of one another. The proposals of the directors met with a favourable reception from the cardinals *Fleury* and *Tencin*. They were afterwards presented to the king by M. *Orry*, comptroller-general, and returned with this answer, "That his majesty would ratify any conditions stipulated for the benefit of com- ^d merce between the two companies."

AFTER this the proposals were sent over to *Britain*, upon which the directors met to deliberate upon what measures were most adviseable. The result was to reject them, because they imagined the neutrality could be of no service, but by an agreement among the settle- ^e ments, as in the last war, when the governors of *Madras* and *Pondicherry* came to a resolution to commit no hostilities upon either of their presidencies. They were farther of opinion, it would be for their interest to procure a squadron of men of war to be sent into *India*, if for no other purpose than the destruction of the *French* marine on that coast. The value of the prizes they doubted not would excite diligence in the officers; and the success of *Barnet* proved they were not mistaken in this particular ^f.

THE *French* company were greatly concerned to have their proposed neutrality frustrated. They pretended not to be able to discover what motives could induce the *English* to reject a scheme which had nothing in view but the security of trade. It would, they said, most certainly prevent expences, and might probably obviate great losses; besides, the *English* were in every particular gainers, because carrying on a more considerable trade, they had more to lose, consequently the advantage was on their side. Finding that the *British* company persevered in their resolution; that commodore *Barnet*, with a squadron, was cruising on the *Indian* coasts, where he made rich captures; and that tampering with the enemy would only be losing time, they resolved to exert themselves with vigour, and try to effect by arms, what was denied them by treaties. On the 11th of *April* his most Christian majesty granted ^e M. *Bourdonnais* a commission, ordaining, that all captains and officers of the *India* company's ships should acknowledge him for a commander, and obey him as such. As soon as this commission was received by *Bourdonnais*, he applied his whole attention to oppress the *British* company. As the means most effectual, he meditated the reduction of *Madras*, the head settlement. This he thought a more rational method than spending his time in uncertain cruizes, and endeavouring to intercept the *English* ships ^f.

COMMODORE *Barnet* dying about this time, was succeeded in command by captain *Peyton*. He sent home the *Deptford* and *Diamond*, and was reinforced by three men of war from *England* in their room. This fleet consisted now of one ship of sixty guns, three of fifty, one of forty, and one of twenty; for the *Medway's* prize was retained, and the com- ^f mand given to captain *Griffith*. *Peyton* seemed wholly bent in cruising, while the settlements, on which depended the safety and success of trade, were intirely neglected. The governor of *Madras* had made repeated remonstrances on the weak and defenceless condition of the place; the *French* had set a seasonable example, and *Bourdonnais* was at the head of a formidable squadron (E); yet did the company, as well as *Peyton*, seem to be lulled in a

^a Memoire pour le Sieur BOURDONNAIS, vol. i.

^b ROLT, vol. iii. ibid.

^c Memoire BOURDONNAIS, ibid.

(E) M. *Dupleix* then had the command in *Pondicherry*, while *Bourdonnais* took upon him the conduct of the fleet, which consisted of the *Achilles*, of 70 guns, and 700 men; *Duc d'Orleans* and *Bourbon*, of 50 guns; the *Nep-*

tune and *Phoenix*, of 54 guns; and the *St. Louis*, of 44 guns, with each 400 men; the *Lis*, of 40 guns, 300 men, six of these being the company's ships, fitted out as men of war (1).

(1) Mem. de S. Bourdonnais, vol. iii. p. 29.

a perfect security. The *British* squadron had taken five merchantmen, four of them exceeding rich, a privateer and two sloops, before the *French* admiral had taken one; they were now watching each other's motions at their different stations; the first at *Fort St. David's*, and the last preparing for his expedition against *Madrafs* at *Pondicherry* ¹.

ON the 24th of *June*, while *Peyton* anchored in the *Nagapatâm* road, he spied a fleet, about day-break, to the offing, which he soon discovered to be *Bourdonnais's* squadron. Upon this he immediately got under sail, and both fleets prepared for battle; but it being almost a calm, they could not get within cannon-shot before four in the afternoon. At this time the engagement began, and continued till seven o'clock, when the darkness occasioned the separation of both squadrons. They continued within sight of each other all the next day, without renewing the fight; when in the evening *Peyton* called a council of war, in which it was determined to avoid battle, and to proceed to *Trinquimâl Bay*. *Peyton*, after refitting his ships here, appeared again off *Nagapatâm*, on the 3d of *August*, and was soon followed by *Bourdonnais*, who wanted to draw him into a general engagement. As the *British* commodore had no such intention, he soon disappeared, making the best of his way to the bay of *Bengal*; upon which the *French* squadron returned to *Pondicherry* ².

BOURDONNAIS having now got every-thing in readiness for his enterprize against *Madrafs*, was desirous to know whether the *British* commodore would endeavour to frustrate him. For this purpose he appeared before the place on the 18th of *August*, and fired on the *Princess Mary*, one of the company's ships, which was returned both by the ship and the fort. Each of *Bourdonnais's* squadron gave a broadside; after which he retired to *Pondicherry*, to watch *Peyton's* intentions. On the 23d of *August*, the *British* squadron appeared before *Madrafs*, and stood into *Pullicât* road, to the northward of the city. Here he sent a lieutenant on board a ship in the road, where he was informed of what the *French* admiral had done. This he no sooner heard, than he disappeared, leaving *Madrafs* an easy prey to the *French* ³. *Bourdonnais*, pleased with this intelligence, immediately determined upon the attack. He arrived before *Madrafs* on the 3d of *September*, having on board 3,200 *Europeans*, 500 *Caffrs*, a considerable number of *Sipoys* and *Peons*, the natives of the coast of *Coromandel*. The *White Town* was in a tenable condition, if the garrison had been sufficiently numerous, and infantry provided to sustain a siege; but this the company had neglected. Besides the remon-

d strances made by Mr. *Morse*, then governor, commodore *Barnet* had acquainted the secret committee with the insufficiency of the garrison, and bad state of the fortifications. This judicious officer expresses his surprize that a settlement of such consequence to the company should be left in so bad a condition: "The works," says he in his letter, "seem rather built by chance than design; the bastions are placed contrary to all rule, and the curtain no better than a long unflanked garden-wall; the garrison so weak, that I should never sleep sound in a *French* war, while there were 500 *Europeans* in *Pondicherry*. I have seen and considered the plan proposed, which I think a good one: when completed, the town will be sufficiently fortified on that side: but then something must be done towards the sea, where the embrasures are rather for form than use, there being no rampart to mount guns on. The distance between the bastions is too great; and the wall insufficient to stand the fire of a sixty-gun ship for two hours. It is my opinion, that in this space she would make an intire breast from bastion to bastion ⁴."

SUCH was the condition of this valuable settlement when M. *Bourdonnais* appeared a second time before it. *Nicholas Morse*, Esq; governor, did all that lay in his power for the security of the place; but he was no military man; nor indeed had the company one engineer or tolerable officer in the garrison. In the beginning of 1745, the governor sent to *Bombay* for military persons of the most judgment and experience he could procure; but had these answered his wishes, what could be done against a powerful and bitter enemy, with a garrison so slender! The company had, long before the commencement of the war, promised to augment it with 600 *Europeans*, exclusive of the gun-room crew; yet when the *French* came before *Madrafs*, the whole muster of *Europeans* they could make amounted only to 300, 23 of which were *Portuguese* deserters from *Goa*, 34 in the hospital, and many others incapable of service. The whole garrison fit to bear arms, it is certain, was composed of 200 *Europeans*, with the crew of the *Princess Mary*, consisting of 80 men; and about 200 *Tepasses*, a black, degenerate, and wretched race of the antient *Portuguese*, little to be confided in where danger appeared. *Peter Eckman*, a superannuated and superficial *Swede*, was the principal officer. He had been a common soldier; but now bore the rank of a lieutenant. This officer was assisted by two other lieutenants, and seven ensigns. The garrison had cannon; but they wanted gunners, and persons able to charge, play, and

¹ ROLT, vol. iv. part 8.

⁴ ROLT, vol. iv. part 8.

point them; which, with the scarcity of ammunition, gave M. Bourdonnais every advantage a he could desire.

The prudent
conduct of
Bourdonnais.

THIS officer had made himself perfectly acquainted with every circumstance relating to his design; he well knew the situation of *Madrafs*, the nature of the works, the force and ability of the garrison. As he had been preparing the execution of this plan for above a year, nothing was wanting to insure success. Every implement and instrument of war, with persons skilled in the use of them, were provided; so that he came before it with no other doubt of taking it, than what arose from his apprehensions that the *British* commodore would have performed his duty. On the 1st of *September*, Bourdonnais landed 600 men twenty miles south of *Madrafs*, with orders for this corps to march to *St. Thomas's*, within three miles of the town. Here they could cover the landing of the remainder of the troops, without sustaining any loss from the garrison, which was not in a condition to send out a detachment strong enough to incommode the enemy. As soon as the troops were disembarked, the town was invested on the land side, Bourdonnais forming his grand camp at *Gbindadu Pettah*; the fleet at the same time blocking it up by sea. Almost all the *Asiatic* inhabitants fled up into the country with their most valuable effects; and a general panic had spread over the whole town and garrison. Some relief was expected from the Nabob of *Arkkât*, in consequence of his promise; but this viceroy preferred *French* gold to *English* professions. He had indeed received considerable presents and favours from the settlement; but these were forgot, either through fear or policy.

He lands his
troops before
Madrafs.

The garrison
abandon the
Black Town.

THE *French* were no sooner landed, than the garrison abandoned the *Black Town*, after having withdrawn or nailed up all the cannon; and this before one shot had been fired, or the enemy's artillery landed. On the 6th, two batteries were raised, one of nine mortars, behind the garden-house, on the north side of the town; the other of six, to the southward. These they immediately opened, and began to play with great vigour, but did little execution for that day. On the 7th, Mr. *Smith*, the only real engineer in the garrison, died of a fever, which furnished the enemy with an opportunity of proceeding in their works, almost without molestation. They threw their bombs into the town without intermission till the 8th, by which time 700 shells had fallen into the *White Town*. The besieged, however, were not so much disturbed, but they had leisure to plunder the *Black Town*; in which laudable employment, and drinking of arrack, the greatest part of the garrison was busied, instead of attending to the defence of the place. The utmost disorder reigned within the walls, in defiance of all the arguments and threats of the governor. On the 9th, the besiegers played both their batteries so warmly, that before night above 500 shells had fallen into the town. The ships likewise kept up a constant fire; the *Topasses* deserted, and every thing contributed to bring destruction upon the place. The governor and council began now to join in the panic, which before had seized the inhabitants. Intelligence was brought, that the enemy were erecting a battery of eighteen pounders, and had sent for a number of seamen to begin an assault. The notion of standing an assault, and being put to the sword, increased the terrors of the besieged. Nothing but the shrieks of women, and confusion of men disordered with spirits and want of rest, was to be heard or seen. In this emergency, it was necessary the council should come to a final resolution. That the most prudent measures which their situation would admit might be taken, the strength of both sides was maturely weighed. The military men gave it as their opinion, that the place was not defensible against the number of the enemy. There was no place that was bomb-proof for the garrison to sleep in. This, with a number of other deficiencies, the clamours of the inhabitants, and other discouraging circumstances, induced the council to believe there was little probability of being able to resist an assault. Upon these considerations, and seeing no hopes of relief, either from the Nabob or from commodore *Peyton*, it was agreed, "That to wait being stormed, whether the *White Town* was first attacked, or the enemy possessed themselves of the *Black Town*, would only be to expose the whole to be plundered, the garrison to be massacred, and to leave the town to the discretion of the incensed besiegers. As the value and importance of the settlement to the company appeared to the governor and council of a different value and nature from the common towns in *Europe* to their sovereigns; it seemed more for the future credit and interest of the company, and the *British* nation in these parts, to redeem it, if possible, out of the hands of the besiegers, though at the expence of a very heavy ransom, than to sacrifice the lives of the best part of their countrymen, and the properties of all the inhabitants, without a prospect of maintaining the place thereby, and consequently without any advantage accruing to the company from their obstinacy. It was there-

^w Mem. pour BOURDONNAIS, *ibid.*

- a “ fore determined to send a deputation to the *Sieur Bourdonnais*, to try what terms would be granted *.”

IMMEDIATELY the resolution was drawn up, and *William Monson* and *John Hallyburton*, They send proposals of surrender to M. Bourdonnais. Esqrs. were sent in quality of deputies to the *French* camp. Their instructions were to obtain the mildest terms possible, and above all, the ransom of the settlement. They arrived there on the 10th, and were genteelly received by *Bourdonnais*, who, after conferring with them, made the following proposals; viz.

- “ I. THAT *Fort St. George* and the town of *Madrafs*, with their dependencies, should be delivered up to M. *Bourdonnais*, by two o'clock in the afternoon, on the 21st of September, with the whole garrison, officers, and council; the *English* in general remaining prisoners of war. His terms of surrender.
- b “ II. THAT all the council, officers, servants, and other *English* gentlemen of the better fort, should have liberty to go and come where-ever they thought proper, even to *Europe*, provided they did not bear arms against *France* offensively or defensively, till they were exchanged, according to the terms prescribed to the *French* by Mr. *Barnet*.
- “ III. THAT to facilitate the *English* in ransoming the place, and to render valid the acts which should in consequence pass, the governor and council should cease to be prisoners of war the moment they should enter into negotiation; and M. *De la Bourdonnais* oblige himself to give them an authentic act, twenty-four hours before the first sitting.
- c “ IV. THAT the articles of capitulation being signed, those of the ransom should be amicably adjusted between M. *Bourdonnais* and the *English* governor, or his deputies, who should engage to surrender all the effects, merchandizes already received, or to be received, the books of accounts, arsenals, magazines, ammunition, provision, and vessels, together with all other goods belonging to the company, without reserving any thing, whether in gold, silver, merchandize, moveables, or other effects whatsoever, contained in the fort, town, or suburbs, to whomsoever they belonged, without excepting any thing, in such manner as the right of war requires.
- “ V. THAT the garrison should be conducted to *Fort St. David*, as prisoners of war. And if by ransom the town of *Madrafs* should be delivered, the *English* should be at liberty to repossess their garrison to defend themselves against the country people, for which there should be returned to the *French* by the *English* an equal number of prisoners. And if at present they had not a sufficient number, the first *French* that should be made prisoners after the capitulation, should be free to complete the article.
- d “ VI. THAT the sailors should be sent to *Caddalore*, and their exchange begin with those who were actually at *Pondicherry*, and the others pass in their own ships to *England*. But they should not be at liberty to bear arms against *France*, until an exchange had been made of a like number of sailors in *India* or *Europe*; but in *India* by preference.
- “ VII. THAT on these conditions the water-gate should be delivered up to M. *De la Bourdonnais*; at two o'clock the gates of the town be relieved by his troops; and a full declaration made to M. *Bourdonnais*, of all mines, countermines, and other subterraneous works charged with powder † (F).”

e As *Bourdonnais* had no instructions for forming a new settlement, 'tis obvious he had only this alternative, either to destroy what he became possessed of, or else to treat for a ransom. This last was the most suitable both to his disposition and interest; and as he had only agreed that it should be regulated in a friendly manner, the deputies demanded a farther explanation. “ Gentlemen,” says M. *Bourdonnais*, “ I do not sell honour. The flag of my king shall fly over *Madrafs*, or I will die before the walls. In the ransom of the town, as in every thing else, you shall be satisfied with me.” Then taking his hat from one of the deputies, “ This hat,” says he, “ is worth six rupees: you shall give me three or four for it. In this manner we shall adjust other particulars.” The deputies struck dumb with this noble answer, and with the freedom and greatness of the *French* admiral, Mr. *Hallyburton* returned to the governor and council with the conditions signed by M. *Bourdonnais*. The same day he went back with the articles accepted by the governor and council. In consequence, *Bourdonnais* entered the fort with part of his troops, and took possession of the magazines, warehouses, and other places. All the *English* soldiers and sailors were carried on board the fleet, while the governor and council consulted with the *French* commander concerning the price of the ransom. After a good deal of deliberation, it was at length stated at 1,100,000 pagodas; Bourdonnais agrees to restore it at a certain ransom.

* ROLT, vol. iv. p. 8.

† ROLT, *ibid.* Mem. BOURDON. *ibid.*

(F) It would be tedious to give all the particulars of this affair, as we find them in the *Memoire* published at *Paris*, in justification of *Bourdonnais*; sufficient it is, that *Bourdonnais* and Mr. *Morje* appear from this

piece to be the only persons who discharged their trust with honour and fidelity, though they alone were questioned by the constituents.

pagodas, equal to 421,666 l. 13 s. 4 d. sterling. A valuable present was agreed upon to *M. Bourdonnais*, for the noble manner in which he treated the prisoners; and it was finally adjusted, that the *English*, on these considerations, should be fully reinstated in their former possessions * (G).

M. Dupliex
refuses to rati-
fy the treaty
of ransom.

THIS agreement soon came to nothing; for after it had been signed by *Bourdonnais*, the *English* governor and council, and ratified by the government of *Pondicherry*, it was revoked. *M. le Bourdonnais* was reembarking his troops, when a protest arrived from *M. Dupliex*, declaring the contract null, void, and of no effect. This protest, although the treaty had been ratified by the council of *Pondicherry*, ran in the following terms; viz. That the treaty of ransom was an act of *M. Bourdonnais*, without power or lawful authority to perform it, and with prisoners who could not engage in an affair of so much importance, but for their own conduct only. It was the will of the governor and high council of *Pondicherry*, that things should remain at *Madras* in the situation in which they were at the treaty of capitulation; and that all subsequent acts should be void, null, and regarded as nothing. *Bourdonnais* was incensed at this insult upon his authority. He put *M. Paradis*, appointed governor of *Madras* by *Dupliex* and the council of *Pondicherry*, with several of his officers, under arrest. *Mr. Morfe*, the *English* governor, sent to the *French* presidency a counter instrument, bearing date the 25th of September 1746, in the name of his *Britannic* majesty and the united company of *England*. Here he protested against all those who should obstruct the intire and full execution of the capitulation and subsequent agreement, rendering them responsible for the consequences. He complained of the injurious suspicions industriously propagated, that the *English* would not fulfil their engagements. He represented, that if the *British* hostages, if the parole of honour of all *Madras*, were insufficient to satisfy the *French* government at *Pondicherry*; yet the respect due to a nation like his ought to have suspended a judgment so precipitate and false, till the *English* had at least countenanced the reflection by a breach of their word, which they never would.

Mr. Morfe
draws up an
instrument a-
gainst Du-
plicx's remon-
strance.

Bourdonnais
is forced to re-
voke the treaty.

NOTWITHSTANDING this spirited conduct of *Morfe* and *Bourdonnais*, they were foiled, and the latter forced to revoke the terms of ransom he had granted; and re-demand the parole of honour he had given the *British* governor and council. They were conducted prisoners to *Pondicherry*, while the rest of the *English* were ordered to quit the town on a day fixed; upon which they dispersed themselves to different places, leaving the *French* in the quiet possession of all their effects. *Bourdonnais* resented this usage the more, because it gave the *English* room to call his honour in question. *Morfe* had surrendered the town sooner than otherwise he might have done, from the expectation given him of a ransom; and if the *French* had kept their engagements, the terms were such as the *English* ought to have been satisfied with (H). The enemy obtained a booty of silver, woollen cloths, velvets, copper, iron,

* Ibid. p. 143. vol. i.

(G) After *Bourdonnais* had entered the town, he was met by the governor, who delivered to him his sword, which the other immediately returned. The governor acquainted him, that the utmost disorder had prevailed in the garrison from the time it was first invested. This he did in order to obviate the reflections that might arise from any insults committed on *Bourdonnais* or his officers. So elevated with rage and arrack were many of the soldiers, that they openly declared, they would cheerfully sacrifice their lives for the satisfaction of putting the *French* commander to death; and yet those very persons could not be kept to their duty while there was a prospect of being able to defend the town. *Mr. Morfe* expressed the utmost uneasiness at this conduct; acquainted *Bourdonnais* with it; apprized him of his danger; gave him the strongest assurances that it was not connived at by any of the superiors of the garrison; and desired he would take the necessary measures for appeasing the tumult, and his own security. This *Bourdonnais* did, by sending the soldiers and sailors on board the fleet in the road, and accepting the offer of some marine officers, who desired leave to attend his person (1).

(H) It must be observed, that after *Bourdonnais* had signed, and the council of *Pondicherry* ratified, the treaty of ransom, he received a letter from *Dupliex*, acquainting him, that he had entered into treaty with the Nabob to give *Madras* up to him. *Bourdonnais* was at a loss what to make of this letter, in which *Dupliex* assumed to himself a sovereign power, in giving to one prince the towns conquered from another. He was still more at a

loss what *Dupliex*'s intention could be in entering on this treaty, unless it was to oblige him to forfeit his honour, which he had engaged to the governor's council of *Madras*. However, it soon appeared that this pretended treaty was a mere feint to impose on both the Nabob and *Bourdonnais*. The monsoons were soon approaching, which would oblige the fleet to quit *Madras*; in which event *Dupliex*'s creatures would have full scope and liberty to ravage and plunder the town. These are the reasons given in *Bourdonnais*'s *Memoire* for the conduct of his rival; and they are such as facts have proved. For, first, the treaty with the Nabob was broken off as soon as *Bourdonnais* quitted the road; and in consequence of this it was, that the vizier's orders had been sent to the Nabob of *Arkhāt* to expel the *French*. *M. Dupliex*'s motives were more strongly expressed by letters which *Bourdonnais* received from him, towards the close of the month. In these he observed, that *Madras*, the moment the king's standard was erected in it, became a dependence upon the governor and council of *Pondicherry*; and that the sieur *Bourdonnais*, altho' entrusted by the king with the conduct of the fleet, was, notwithstanding, subjected to his and the council's authority. He therefore ordered him to revoke the engagement he had entered into with the *English*; the parole he had granted; and to depart from the road. These orders *Bourdonnais* for a long time delayed. The quarrel was carried so high, that the *French* deputies from *Pondicherry* made some attempts to arrest and carry him prisoner with them. Nor did it terminate here; *Bourdonnais* was

(1) *Memoire sur le Sieur de la Bourdonnais*, tom. i. p. 139.

a iron, lead, and stores for use and sale, to the amount of 73,000*l.* in plate, furniture, and ^{Besty obtained in Madras.} other small articles, about 12,000*l.* besides 7000 bags of saltpetre, 1600 bales of calicoes, and 800 landies of red wood, valued at 72,000*l.* prime cost, with the ships in the harbour, and every thing else included, the whole loss to the company exceeded 200,000*l.* To this might be added a much more considerable sum, from the deprivation of so important a branch of commerce; from the loss of revenues; from the public buildings, which alone cost 160,000*l.* In short, the loss of *Madras* was a great, and almost fatal stroke to the *India* company; especially as it was attended with danger to all their other settlements on the coast of *Coromandel*^a.

b THE *English* were no sooner gone, than the *French* intended demolishing the town, and would have executed this design, if they had not received fresh instructions, in consequence of *Cape Breton*'s falling into the hands of the *English*. This caused them to alter their measures, with the view of exchanging them; which was actually done about two years after. In this the *French* did not act up to those professions of honour of which they are so liberal; for although they received *Cape Breton*, in pursuance of the general treaty, whole, intire, and in a better condition than they left it, yet did they demolish the fortifications, and ruin the chief buildings, before they surrendered *Madras*.

c BUT the *French* did not propose confining their conquests to the taking *Madras*. M. Bourdonnais meditated nothing less than the extirpation of all the *English* settlements in *India*; at least on the coast of *Coromandel*. He was soon in a condition to attempt this, by the arrival of a seventy and two fifty-gun ships from *Europe*; nor is there any doubt but his designs would have succeeded against *Fort St. David*, had not his fleet suffered by a storm before he left *Madras Road*. In this tempest he had three ships foundered; and several rendered unfit for immediate service. A thousand two hundred of his men perished, together with sixty of the *English* prisoners, who were on board the *Duc d'Orleans*, which foundered. Bourdonnais, instead of prosecuting his intention, was under the necessity of returning directly to *Pondicherry*, after he had sent four of his fleet to refit at the isle of *Bourbon*. Soon after his departure, M. *Paradis*, who commanded a garrison of 500 men at *Madras*, was invested by the Nabob of *Arkhât*, in consequence of orders he had received from the grand vizier *Nizam Mulmulock*, to drive the *French* out of the settlement, and to restore the *English*. To execute these orders he came with a body of troops before the town, on the 17th of *October*. M. *Paradis*, the governor, ordered a party of 200 *Europeans* to sally out upon his advanced guard. After the fight had continued the whole night, the *French* being reinforced by a party from *Pondicherry*, attacked and defeated the main body of the *Moors*; after which they committed the most shocking barbarities. Where-ever they went, they burnt the houses and corn, cut down the grass, and spoiled the orchards; at the same time that they slew without distinction men, women, and children^b.

d BEFORE the disputes between M. *Dupliex* and Bourdonnais were terminated, the other *English* settlements at *Fort St. David*, *Bengal*, and *Bombay*, had leisure to put themselves in a state of defence; but their greatest security were the damages the *French* navy had sustained in the late storm, and the differences between those two commanders. Mr. *Hynd*, governor of *Fort St. David*, took every possible precaution for resisting the enemy, if they attacked him. He took a number of militia into pay, strengthened the fortifications, laid in provisions, and regulated the whole conduct of the garrison in case of a siege. These precautions soon became necessary; for, on the 8th of *December*, the greatest part of the garrison of *Pondicherry* appeared before the fort, with a strong train of artillery. This detachment consisted of 1000 regulars, and about 200 well disciplined *Peons*, with about 500 other natives. Governor *Hynd* sent out a party of 1600 *Indians* to attack the enemy before they began to erect batteries; to harass them all night, and keep them in perpetual alarm. This they did with great success; and in the morning began a regular engagement. The *French* soon forced their way to the garden-house; which Mr. *Hynd* observing, detached another body of *Moors*, with an hundred *Europeans*, to support and maintain the battle. For an hour the enemy stood their ground; at last, fearing to be surrounded, they retreated with great precipitation, leaving dead upon the field about 200 men, among which were four officers of some distinction. Their tents, ammunition, six camels, two mortars, with their shells, two chests of arms, four drums, and all their provisions, fell into the hands of the garrison^c. The *French* returned to *Pondicherry*.

^c ROLT, vol. iv. ibid.

recalled, put in the *Basile*, at which time his *Memoire* was published. It has so much the air of truth, is so circumstantial and particular in relation to facts, that we can no more doubt of Bourdonnais's conduct at *Madras*, than of his bravery and generosity. His misfortunes we attribute to the clamours raised against him by the interest of his rival, who never had it in his power to

equal him in any thing but wealth; in which he surpassed most subjects in *Europe*. In his way to *Europe*, he was taken by an *English* privateer, conducted to *London*, and soon sent over to *France*, where he was arrested by the *India* company for a debt of a million of livres, and thrown into the *Basile*, in which he continued for some time (1).

Commodore Griffin arrived in India, and takes the command of the English fleet. after their defeat, where they renewed their preparations for another attempt. But this likewise a was frustrated by the arrival of commodore Griffin, with a fleet from Europe, to take upon him the command of Peyton's squadron.

ABOUT the middle of December 1746, Mr. Griffin, with two ships, joined the squadron before stationed in India, and found himself at the head of an armament consisting of the *Princess Mary* and *Medway* of 60 guns, the *Harwich*, *Winchelsea*, and *Preston*, of 50 guns, the *Pearl* and *Medway's Prize* of 40, and the *Lively* of 20 guns; and next year the squadron was farther reinforced by the *Exeter* and *York* of 60, and the *Eltham* of 40 guns. At this time the French squadron was composed of two ships of 74 guns, two of 56, one of 54, two of 50 guns, and a bomb-ketch. These had been refitted after the storm, at the island of *Mauritius*, but had not as yet attempted returning into the *East Indies*, or making any dispositions to engage the British squadron, which continued to block up and cut off provisions from *Pondicherry*, for near the space of two years. Mr. Griffin's disposition was so good, that he prevented the settlements receiving any kind of supplies, by means of his cruisers, and squadron generally lying in *Fort St. David's* road, but five leagues to windward of *Pondicherry*. He also burnt the *Neptune* ship of war of 54 guns, in *Madras* road; and of six vessels which had got into *Pondicherry* with provisions, he destroyed five, and run the sixth ashore. These advantages counterbalanced the loss of the *Princess Amelia* India ship, which, having put into *Madras* road, supposing it still in the possession of the English, was taken by M. *Paradis*, who had kept English colours flying upon the fort; a stratagem that had nearly decoyed several other India ships into his power.

COMMODORE Griffin found the force he commanded too slender to reduce either *Pondicherry* or retake *Madras*. The former was defended by 200 pieces of heavy cannon, mounted upon regular fortifications; six additional forts, to flank the exterior works, had lately been erected; the magazines and arsenals were well stored; and the garrison, with the trained Indians, formed a body of 4500 effective men. Nor was *Madras* neglected; the garrison was not only augmented, stores and ammunition laid in, but some new works raised, and many additional cannon mounted. Nor was this all; for the court of *Dehli*, after the Nabob's defeat before *Madras*, professed a strict neutrality. The viceroy for some time continued to threaten; but *Dupleix* silenced him with a sum of money, the most irresistible argument that can be urged with an Asiatic minister. In such a situation of things, Griffin found himself unable to assert the character of his country, and retrieve the circumstances of the company, till the arrival of a proper reinforcement. The French, having refitted their ships, and procured a supply of money, returned to India; and on the 10th of June 1748 appeared off *Fort St. David's*, and about four in the afternoon brought to at the distance of three or four leagues to windward of the British squadron, then lying in *Fort St. David's* road. It would seem that the French commandant's design was to attack the British squadron, if he could have surprised it unprepared; or much inferior to his, on account of the detached cruisers; at the same time that he kept it in his power to avoid being forced to an action, from the nature of the regular winds on that coast. Admiral Griffin had intelligence, by a frigate cruising for that purpose, of the approach of a fleet, supposed to be the enemy's squadron, and therefore made immediate preparations for receiving or attacking them; but perceiving the French designs, and the danger of getting under sail after the enemy appeared, as the sea breeze had set in (which, by driving his squadron to leeward, might have enabled them to attack *Fort St. David* in his sight, without his having power either to protect or secure the settlement), was forced to remain at anchor till the evening, when the land breeze furnished him with an opportunity to sail. Losing sight, however, of the enemy in the dark, and uncertain of their intended route and measures, they, under cover of the night, steered for *Madras*, where in a few hours they landed money and some men; and, immediately after quitting the coast, returned to the island of *Mauritius*. Such, at least, are the assertions advanced in the admiral's appeal, to which we accede, as they stand unanswered, and are perfectly consistent with his former conduct.

Thus disappointed, he returned to *Fort St. David*, where, on the 29th of July, rear-admiral *Boscawen* arrived, and took upon him the command. After this junction, the British fleet consisted of nine ships of the line, two frigates, a sloop, and two tenders, having on board 3580 seamen, eight companies of independent foot, besides marines. Every thing was put in motion, with intention to undertake the siege of *Pondicherry*. The troops and marines were landed, and joined by a detachment of the garrison, with which a body of 3600 British troops was formed: besides this, there were 148 artillery men, 120 Dutch lent from their settlements, and 2000 Indians. All things being in readiness, the army set out by land for *Pondicherry*, while the fleet blocked up the harbour, and cut off all communication with the French squadron. On the 11th they arrived within four miles of the fort, where they discovered the enemy posted behind an intrenchment they had thrown up. Mr. *Boscawen*, who led the forces, still advancing, the enemy abandoned their works; but notwithstanding his near approach, the garrison apprehended no danger. It consisted of 2000 Europeans, and 3000 Indians. *Dupleix* had taken the most seasonable and best precautions against an attack, having

^a ROLIN, vol. iv. p. 10. c. 3. See also the Gazettes published by authority.

- a intelligence of the design of Mr. *Boscawen*, long before his arrival. Besides the additional fortifications round the town, he had likewise put the fort of *Aria Coupan* in a state of defence, having garrisoned it with 200 *Europeans* and blacks. Mr. *Boscawen* having advice that this fort was maintained by no more than 100 men, resolved to attack and gain a lodgment in a village contiguous to it, where he proposed erecting a bomb battery. Accordingly he ordered a body of grenadiers and piquets, accompanied by a detachment of *Indians*, to march up to the village. As they came within musket-shot of the enemy, a cannon-ball lighting among the *Indians*, employed in carrying up the tools necessary for raising an intrenchment, put them to flight, which unfortunately frustrated the design. The detachment was at the same time flanked by two batteries the enemy had erected on the opposite side of *Aria Coupan* river: these playing with great vigour, occasioned some confusion in the *British* troops, who found means, however, of opening a pass to the sea, by means of which cannon, and the materials for a siege, might be landed. It was now perceived, that approaches in form against *Aria Coupan* fort were necessary, as they found it defended by a berm, ditch, draw-bridge, and covered way. The detachment was obliged to lie on their arms the whole night, after losing several men in the attack on the village: one lieutenant was killed, and three officers wounded, besides major *Goudier*, the commanding officer of the artillery, who was rendered incapable of service by a cannon-shot in the leg; a loss the more sensible, as he was an able and experienced officer, who would have conducted their approaches in a different manner than that in which they were performed. Early the next day the army joined the detachment, and was farther reinforced by a body of 1100 seamen. These the admiral had caused to be disciplined on board, and experienced in platoons, under the command of captain *Loyd*. They mounted guard, and performed every other part of the duty of the land troops. On the 16th, four 18 and as many 12 pounders were landed, with which the admiral ordered two batteries to be erected. One was constructed by the engineers, and began to play the next morning, but without success, it having been injudiciously contrived. On the 18th the other battery, executed by the artillery men, was opened, when the effects answered the most sanguine expectations. The enemy, with a troop of *European* horse, supported by an equal number of foot, and some seamen, sallied out of the fort, with intention to destroy this battery. They attacked the advanced guard in the trench with so much fury, that it was put in disorder; but soon after rallying, they repulsed the *French*, and made the commanding officer prisoner. Soon after one of the *French* batteries blew up, and destroyed about 120 men; upon which the besiegers played with great vigour on the fort. About noon it was blown up by a bomb-shell; but the garrison had seasonably retired, leaving behind all their cloaths and effects. The admiral immediately removed his camp to *Aria Coupan* fort, which he repaired with all possible diligence. On the 25th it was completed, and the army crossing the river, took possession of a strong post in the round hedge of the town, about a mile from the walls of *Pondicherry*, which the enemy injudiciously abandoned, though it was so situated as, with a small number of men, to have foiled all *Boscawen's* power, and of great importance to the defence of the town. Having got possession of this post to the north-west of the town, Mr. *Boscawen* ordered his fleet to the northward of it. He then opened a communication that way to the sea, and gave directions for landing all the necessaries for breaking ground before the fort. This was begun on the 30th, in pursuance of a plan produced by one of the engineers, which seemed feasible. On the 1st of *September* the besieged made a sally, in which they were repulsed with the loss of 100 men, three officers killed, and *Monf. Paradis*, the chief engineer and director of all the military affairs, who was just returned from *Madrafs*, mortally wounded: after which the engineers continued working every night, without any material progress. The batteries were not completed till the 25th, when they began to play: they consisted of one of eight guns, and one of four, together with a bomb battery of five large mortars, and fifteen royals, besides another of fifteen cohorns. Nor were the *French* on their parts less active and industrious. They raised three fascine batteries to play on the admiral's trenches, which gave him much annoyance, obliging him to erect two more batteries against them. These consisted one of three and the other of two guns, continuing to play till the grand batteries were completed. Besides this, the besieged had laid the ground round the town under water; by this rendering it impossible for the besiegers to carry their approaches nearer. Upon first breaking ground, the admiral had directed captain *Lisle* to bring the bomb ketch close by the walls, and begin bombarding the citadel without intermission. This he did, but with little damage to the besieged; for in a short time they had got her length so exactly, that she was forced to discontinue her fire in the day, renewing it always at night. Besides this, captain *Lisle* was ordered to extend the fleet in line of battle before the town, to work in, and begin cannonading as soon as the batteries were opened. Captain *Lisle* obeyed his orders, keeping a constant and warm fire on the town, which was briskly returned for a while; after which the fire towards the sea was slackened, and the whole force

He lays siege to Pondicherry.

Condition of Pondicherry.

A sharp engagement between the besiegers and the garrison.

The garrison make a sally, and are repulsed.

Slow progress of the besiegers.

Mr. Duplex lays the town under water, and impedes the approach of the admiral.

of the besieged converted to the land side; the season being now far advanced, and the besieged too well fortified and provided for the admiral to have any other expectation of taking the town, than what might arise from a random shot, and the garrison's being harassed and fatigued. He, however, continued firing, beating down a great part of the defence where the attack was intended. As he was prevented by the inundation from carrying his approaches nearer, and his troops were insufficient to begin a new attack, he endeavoured to make a breach in the curtain, at the distance he then was. This he soon found to be impracticable, the enemy's batteries being greatly superior to his. Upon this a council of war was called on the 30th of *September*. Here the state of affairs was deliberated; and it appearing that the strength of the army was greatly reduced, and daily diminishing by sickness and fatigue; that the ships could be of no use in the siege, having cannonaded a whole day without effect; that the monsoons and rainy season approached; that these would not only oblige them to raise the siege with the loss of their artillery and stores, but probably render the rivers impassable, destroy the roads, and cut off the retreat of the army to *Fort St. David*; besides the risque of having the ships driven off the shore, and dispersed and lost in the tempest; upon these considerations it was unanimously resolved to embark the stores and cannon, and to raise the siege. From the 1st of *October* to the 4th was employed in shipping these; on the 5th the admiral set fire to the batteries, and reembarked the sailors; and the day following the army began its march to *Fort St. David*, where it arrived the day following, having destroyed the fort of *Aria Coupan* in their way. Thus terminated the siege of *Pondicherry*, with the loss of 757 soldiers, 43 cannon, and 265 seamen, to the besiegers; and about 500 *Europeans* on the side of the besieged. There would seem neither courage nor conduct wanting in the admiral's army; yet it was unsuccessful; although a force less proportioned to the occasion had the year before got possession of *Madras*. *Pondicherry* was still a place of liberty; *Madras* was in captivity, and likely to remain so, if a peace did not rescue it. The *French* were now too formidable to dread any future attempts; and their intelligence was too good not to take the requisite measures for safety. In short, the ill success of the expedition may be reasonably attributed to the long detention of Mr. *Boscawen* in *England*, of which the *French* being apprised, had sent a squadron with supplies to frustrate his designs.

The siege raised.

Peace concluded with France.

A part of admiral Boscawen's fleet lost in a storm.

General account of the wars in India, in which the French and English were engaged as allies, on opposite sides.

BEFORE the admiral had time after the monsoons to attempt any thing else for the advantage of the *English* company, or annoyance of the *French*, all hostilities were ended by the arrival of intelligence of a cessation of arms, and the conclusion of a general peace. Soon after this, he had the misfortune to see several of his ships, and about 1200 seamen, miserably perish in a storm on the *Coromandel* coast; after which he returned into *Europe*.

AFTER the restitution of *Madras*, at the general peace of *Aix-la-Chapelle*, the affairs of the company prospered till the late unhappy affair at *Bengal*. They were, however, embroiled on the coast of *Coromandel*, in a war with *Sundab Sâbeb*, assisted by the *French* at *Pondicherry*. The particulars of this affair we shall endeavour to lay before the reader in as concise a manner as possible, not doubting but the relation will be agreeable to our readers, both as it connects the narrative, gives the first instances of the valour of that self-instructed general Mr. *Clive*, and presents a series of facts but little known, even to persons deeply concerned in the affairs of the company. As we are here necessarily obliged to rely upon private letters and intelligence, we hope we shall be excused if we fail of that accuracy that might reasonably be expected, had we written testimonies always before us.

ABOUT the end of the year 1742, or the beginning of the following year, animosity, jealousy, and discord, began to appear among the Nabobs of *Arkbât*, *Velûr*, *Polûr*, and *Tiruchirapalli*. Each of them aspired to the possession of *Arkbât*, the first to stand his ground, and all the rest to supplant him. In consequence *Daft Ali Khân* was defeated and cut off by *Muley Ali Khân*, the former Nabob of *Arkbât*, or *Arcot*, and the latter of *Velûr*. This revolution was brought about in favour of *Sundab Sâbeb*, brother-in-law to *Muley Ali Khân*, who was made governor of the capital. His promotion, however, was disagreeable to the Mogul's court: he was deposed, and *Anawerdi Khân* put in his room. *Sundab Sâbeb*, resolving to recover his government, applied to the Count *D'Anteuil*, the *French* general in *Pondicherry*, and received from him a supply of 2000 *Sipoys*, 60 *Blacks* or *Caffrs*, and 420 *French* soldiers; on condition that, if he was successful, he should cede to the *French* the town of *Velûr*, in the neighbourhood of *Pondicherry*, with its dependencies, consisting of forty-five villages. This may serve for a key to the mysteriousness of the *French* conduct, who, after obtaining so many favours from the court of *Debli* for protecting the lawful sovereign of *Arkbât* against the *Mabarattas* in 1741, should now draw the sword in the cause of a rebel and usurper. It is even suggested, that the scheme for distressing *Anawerdi Khân* was formed by *Sundab Sâbeb* and Mr. *Dupliex*: in consequence, *Anawerdi Khân* was defeated by the *French* and their allies, in which action the Count *D'Anteuil* was wounded; *Sundab Sâbeb* was reinstated in the government of *Arkbât*,

- a and his conditions and engagements to the *French* were punctually executed. *Anawardi Khán* had been killed in the action; and his son *Mohammed Ali Khán*, flying to *Tiruchirapalli*, supplicated the assistance of the *English*, who sent him a reinforcement of men, money, and stores, under major *Lawrence*, a resolute and experienced officer. Some advantages were gained over the enemy; they were forced to retreat, but no decisive blow had been struck. Soon after *Mohammed Ali* came in person to *Fort St. David's*, to solicit more powerful assistance, alleging that his interest and that of the *English* were mutual, as it was apparent, if the enemy were suffered to proceed in their conquests, the *English* would soon be forced to abandon the whole coast. Perhaps likewise thinking this a proper occasion to revenge the loss of *Madrafs*, they dispatched a strong reinforcement, under the command of captain *Cope*; however nothing was done, and the *English*, after some unsuccessful attempts, retired; the enemy attacked *Mohammed Ali* in their absence, and obtained over him a complete victory. The unfortunate Nabob entered then into a stricter alliance with the *English*, and ceded to them some commercial points which had been long in dispute. Captain *Gingen*, a *Swiss* officer, in the service of the company, was sent with 400 *Europeans* as auxiliaries, and captain *Cope* dispatched to put *Tiruchirapalli* in a posture of defence. The two armies lay for a month encamped within sight of each other; but nothing happened besides skirmishes, which generally terminated to the advantage of the *English*, and their Nabob ally*.
- b

- To make a diversion, and divide the *French* forces, it was thought expedient to send a detachment into the province of *Arkkát*. Mr. *Clive*, then purveyor of the army, a gentleman born with all the talents of a great officer, and a hero rather by instinct than from education, offered his service without pay on this occasion. He set sail in the *Wager* to *Madrafs*, with 130 *Europeans*, and on his arrival there was reinforced by 80 more. With this slender force he marched with such secrecy and expedition to *Arkkát*, that he got possession of the capital without opposition. The inhabitants, expecting to be plundered, offered him a large sum to spare the city; but his own generosity and prudence were their security: he refused their money, and at the same time ordered proclamation to be made, that those who were willing to remain in their houses should receive no injury, and the rest have leave to retire with all their effects, except provisions, for which he promised to pay the full value. By this wise conduct he gained the affections of the natives so completely, that they who did not chuse to stay in the town, gave him afterwards, when he was besieged, the most exact intelligence of the enemy's designs, which probably saved the place. For *Sundab Sábeb* appearing soon before it with a large army, laid siege to it; but it was the 24th of September before the place was fully invested, the enemy's approaches being retarded by the frequent and brisk sallies made by Mr. *Clive*; and although the siege was under the direction of the *French*, it was more than a fortnight before they could effect a breach. About that time, indeed, two very considerable ones were made; but such was the diligence of Mr. *Clive* in repairing them, that before the enemy could prepare for storming they were filled up, and as strong as any part of the walls. At length, on the 14th of October, at three in the morning, they attacked both breaches and one of the gates, which they attempted to force open with elephants; but Mr. *Clive*, having received intelligence when the assault was intended, had so well prepared for it with masked batteries, that he repulsed the besiegers in every quarter, with great slaughter, not 20 men returning alive from the breaches, and obliged them to raise the siege with the utmost precipitation. Such were the first glimmerings of that greatness of soul, which, a few years afterwards, burst forth in the full blaze of glory.

- d
- e

An account of Mr. Clive's first appearance in a military capacity. 1751.

Mr. Clive besieged in Arkkát, and the besiegers repulsed.

- AFTER receiving a reinforcement under captain *Kirkpatrick*, he pursued the enemy; and coming up with them in the plains of *Arani*, on the 3d of December, he attacked them with the utmost intrepidity, and, after a contest of five hours, totally defeated them, with little or no loss on his own side. He soon obliged *Arani* and *Kajevarán* to surrender, rather to the terror of his name than to the force of his arms; after which he returned covered with laurels to *Fort St. David's*.
- f

He defeats the enemy in the field, and takes several towns.

Mr. *Clive* had not resided above a month at the fort, when fresh incursions of the enemy called him again into the field. He marched to *Madrafs* with 150 men, and there was joined by a reinforcement from *Bengal* of 160 more (A). With this slender force he joined battle with the *French* and *Indians* at *Kavaripakkán*, commonly called *Koveripauk*. The enemy had 1500 *Sipoy*s and 100 *French* in front, with eight pieces of cannon; 50 *Europeans* more, with some natives, drawn up on a rising ground, formed the left wing, and on the right were posted 1700 horse. Mr. *Clive* immediately advanced within push of bayonet, ordering his troops to reserve their fire, and soon drove them within their intrenchments; but it being now

1752. Defeats them a second time.

* Private intelligence, and a letter to the directors of the India company from a gentleman of the council at *Madrafs*.

(A) We can learn from no authority what number of natives Mr. *Clive* had under his command; yet it is probable that he must have had some, as it can hardly be supposed he would have engaged the enemy with so unequal a force.

dark, and his troops raw and undisciplined, the victory remained for a time doubtful. At length Mr. *Clive* sending a detachment round to fall on the rear of their battery, the design succeeded happily, as it was executed with courage and planned with prudence. The *English* entered with fixed bayonets, and firing a platoon, so disconcerted the enemy, that the *French* to a man threw down their arms, and surrendered prisoners of war, whilst many of the rest, especially the horse, made their escape under cover of the night. This battery was defended by 48 *French*, 14 *Topasses* or *Portuguese* of the country, and a body of *Indians*, under the command of a lieutenant, all of whom surrendered at discretion: eight pieces of cannon, nine tumbrils of powder, 208 stands of arms were likewise taken; a great number were killed; and the victory would have been decisive, but for the intervention of the night.

Major Lawrence takes the command of the English troops.

THE brave and fortunate *Clive* having cleared the province of enemies, set out for *Fort St. David*, where he arrived on the 11th of *March*, the command of the troops devolving upon major *Lawrence*, then returned from *England*, as the superior officer (B). The only action deserving notice was performed by a detachment under the command of Mr. *Clive*, who returned to the army to serve in an inferior capacity. With a party of 400 men he dislodged a large body of the enemy, posted at *Samcaveram*, a strong fort and temple upon the river *Kalderon*, upon which *Sundab Sâbeb* broke up his camp before *Sirangbam*, and retired within the temple. Here *Clive* proposed to attack him; but receiving advice that captain *D'Anteuil* was arrived from *Pondicherry* at *Utatur*, with money and stores for the enemy's camp, he marched directly thither. Being disappointed by false intelligence, he returned the same night, and, though much fatigued, immediately invested the temple. The commanding officer, and several others, attempting to push out at the gate, were killed, and the rest surrendered, to the amount of 66 *Europeans*, and a great number of *Sipoys*. The enemy had still possession of another ecclesiastical fortress, against which *Clive* carried on regular approaches, which soon reduced the enemy to the necessity of hanging out a flag of capitulation, just as *Clive* was advancing to storm the breach. The *Sipoys*, ignorant of the meaning of the flag, and mounting the breach, pushed on the attack, which so terrified the enemy, that 24 *French* plunged themselves in the river, and all perished but four: an accident that gave Mr. *Clive* great uneasiness. The remainder, in all 72 and three officers, were made prisoners. The officers made loud complaints that no regard had been paid to their flag; yet certain it is, that the clemency of Mr. *Clive* alone saved them from being cut in pieces, in the heat of action, and the career of victory. To the same complaint Mr. *Dupliex* added another, of the contempt with which that gentleman had treated the *French*; but this invective was disproved by all the prisoners to a man, and very justly attributed to the effects of *Dupliex's* resentment, for *Clive's* having demolished his new city.

Mr. Clive possesses himself of a strong fort, and takes the garrison prisoners.

Mr. Clive defeats a French detachment.

AFTER the reduction of *Acbeveram*, Mr. *Clive*, equally judicious in forming and alert in executing his plans, marched directly to *Golkonda*, whither he was told *D'Anteuil* had retired. Here he attacked and drove him out of the village where he was retrenched, making himself master of all the cannon. The enemy attempted to escape into the fort; but the governor apprehending they might be followed by the *English*, shut the gates against them, which obliged them to scale the walls for refuge, and afforded Mr. *Clive* an opportunity of destroying the whole body. After he had made a prodigious slaughter, humanity supplanted in his breast every other passion, and he sent the conquered a flag of truce, which they joyfully accepting, a capitulation was signed, the terms of which were, that *D'Anteuil* and three other officers should remain prisoners on parole for one year; that the rest of the garrison should be prisoners till they were exchanged; and that the money and stores should belong to the Nabob in the *English* alliance. On this occasion were taken 48,000 rupees, four pieces of cannon, and a large quantity of warlike stores. But the consequences of Mr. *Clive's* rapid victories were more important, though less striking, than all his military strokes, the battles he had won, and the towns he had taken: for the enemy's army of 30,000 men was totally dispersed and ruined, for want of provisions. In the course of this war the *English* had killed and taken an army infinitely superior to their own; their artillery, which amounted to forty pieces of cannon and ten mortars, with all their ammunition and military stores. Among the prisoners were thirty *French* officers, and upwards of 800 men; whilst the whole loss on the side of the conquerors did not amount to fifty *Europeans*.

D'Anteuil the French commander made prisoner.

Number of French prisoners made during this war.

WE have delivered the transactions of this war the more explicitly, because it serves as a military history of the rise and first dawnings of *Clive's* genius; to record which faithfully is really no other than to write a panegyric. It is not always in pitched battles between great armies, on the success of which hangs the fate of empires, where the masterly strokes of genius are displayed; less affairs frequently call for as much or more sagacity, refinement, intrepidity, and presence of mind in the commander. Yet are they generally passed over as

(B) Major *Lawrence* set sail from *India* on the 12th of *September* 1750, and was now returned, with some additional rank, of which we know not the particulars.

a matters of no consequence, by those who rather consider the greatness of the event than the spirit of the enterprize; measuring every action by the narrow views of interest, or the superficial notions of the vulgar.

THE war being thus ended, so contrary to the hopes of Mr. Duplex, he, at the instance of his confederate Nabob, sent to solicit peace of *Mohammed Ali Khan*, who declared himself ready to consent, provided it was to the satisfaction of the *English*, his allies^b. Peace how-
ever did not take effect; but a cessation of arms ensuing, Mr. Clive set sail for *England*, where he remained till the year 1754, when the service of his country and of the *East India* company again required his attendance in *India*, previous to the most unfortunate and calamitous event recorded in history.

^b Private intelligence, letters to the directors, &c.

S E C T. VII.

Containing a short account of the unhappy affair at Calcutta; the reduction of Angria by admiral Watson and Mr. Clive; the retaking of Calcutta, and all the company's settlements on the Ganges; the reduction of the French settlement at Chandernagore; the defeat of the Nabob of Bengal; and lastly, a recapitulation of the preceding history of the company.

b **S**IX months after the departure of Mr. Clive, hostilities were re-commenced, while nei-
ther the *English* or *French* companies were at open war. They had each engaged in the war as allies to support the interest of those Nabobs in treaty with them; but they acted as principals, and with all the animosity and bitterness of rivals in arms and commerce. Major *Lawrence*, an officer of experience, resolution, and conduct, but of an haughty and insolent disposition, had the sole command of the *English* auxiliaries, obtained several advantages, and was in a fair way of terminating the dispute by dint of arms, when the unhappy affair at *Calcutta* for a time suspended the rapid progress of the company's flourishing condition. Without pretending to decide where the blame of this catastrophe ought justly to be placed, we shall briefly relate the circumstances. Indeed, such were the heats and prejudices of the proprietors of *India* stocks, and of the directors themselves, and such the interest of some persons the most suspected, that no clear knowledge of this calamitous affair ever appeared.

c **W**HILE a treaty between the *French* and *English* companies was upon the carpet, the Nabob of *Bengal*, irritated at the protection given to one of his subjects by the governor of *Calcutta*, and, as it is said, at the refusal of some duties to which he claimed a right, with some other co-operating reasons, levied a great army, and suddenly laid siege to that place, then in no posture of defence. Mr. D. the governor, terrified by the number of the enemy, with some of the principal persons in the settlement, immediately abandoned the fort, and took refuge on board the ships in the river, carrying along with them their most valuable effects, and the company's books. Thus deserted, Mr. *Holwell*, the second in command, bravely defended
d the place to the last extremity, assisted by a few gallant friends, and the remains of a feeble garrison. A very intrepid defence was insufficient to protect an untenable place against so powerful an enemy, or *Holwell's* character, which was aspersed with the most malevolent slander that cowardice, guilt, and envy could contrive. The fort was taken, and the garrison being made prisoners, were thrust into a narrow dungeon, from whence Mr. *Holwell* and a few others came out alive, to paint a scene of the most cruel distress which perhaps human nature ever suffered or survived. "Figure to yourself," says Mr. *Holwell*, "if possible, the situation of 146 wretches, exhausted by continual fatigue and action, thus
e "crammed together in a cube of eighteen feet, in a close sultry night, in *Bengal*; shut up
"to the eastward and southward, the only quarters from whence air could come to us, by
"dead walls, and by a wall and door to the north, open only to the westward by two win-
"dows, strongly barred within, from whence we could receive scarce any the least circulation
"of fresh air." Such was the residence of those unhappy victims for the space of twelve hours; which alone is sufficient to paint their distress, without our entering upon the melancholy tale, which must draw tears from the eyes, and pity from the heart, of the most obdurate and savage breast (C).

(C) Soon after Mr. *Holwell's* arrival in *England*, he published, in the year 1757, a full account of this deplorable disaster, in terms so pathetic, so feeling, and so moving, as could not be dictated but by a heart susceptible of the tenderest emotions of friendship, even though he was a sufferer. To this we refer the reader, as the best written account of the kind we have ever perused.

THUS

THUS from the height of prosperity the affairs of the company fell into the utmost confusion, and their credit at home kept pace with their fortune abroad; but it would be an invidious task to enter upon particulars so recent in the memory of every man; sufficient it is, that by the conduct of Mr. *Clive* and the brave admiral *Watson*, their affairs were soon retrieved, their settlements on the *Ganges* recovered, and the pride and cruelty of the Nabob justly punished.

Admiral Watson with his Squadron arrives in the East Indies.

Admiral Watson and Mr. Clive destroy Angria the famous pirate.

They sail for Bengal;

take Busbudgia fort;

and Tanna fort.

They retake Calcutta.

Take and destroy the city of Hugly.

ADMIRAL *Watson* being arrived at *Fort St. David's* with his majesty's ships, the *Kent* of 70 guns, the *Cumberland* of 66, *Tyger* of 60, *Salisbury* of 50, the *Bridgewater* of 24 guns, with sloops and bomb-ketches, the first expedition proposed was to reduce *Tulagee Angria*, a piratical prince, who had for many years molested the *East India* trade. The governor of *Fort St. David* had, on the admiral's arrival, received intelligence that *Angria* was entering upon some treaty with the *Mabarattas*, concerning *Geriab*, no way favourable to the company's affairs; and this it was that determined the admiral to proceed thither, after taking on board some of the company's forces. On his arrival before the harbour, he summoned the town to surrender; but no regard being paid to his menaces, he stood in in two divisions, the enemy firing all the while with great vigour from their batteries. As soon as the ships were properly disposed, they began so warm a fire as soon silenced the batteries, and gave the admiral an opportunity of landing the troops. The enemy, now invested on all hands, were plied so closely, that on the 13th of *February* 1756 they hung out a flag of capitulation; but the admiral, not chusing to grant their terms, began his attack with such vigour, that they were soon forced to call out for mercy, and submit at discretion. Among the prisoners were the brother, the wife, and the child of *Angria*, his brother-in-law, and the commander in chief of his grabs, or fleet. In the place the *English* found 200 pieces of cannon, six brass mortars, and a large supply of stores and ammunition; the money and effects amounting to 130,000*l*. *Angria's* fleet, consisting of eight large grabs, one ship in the harbour, and two upon the stocks, together with a number of small vessels called gallivats, were all destroyed; the spirits of the company somewhat restored, and fresh vigour given to their actions, which had been drooping from the time the loss of *Calcutta* was known^c.

In *October* following admiral *Watson* taking on board Mr. *Clive* and the company's troops, sailed for *Bengal*, with the *Kent*, *Tyger*, *Bridgewater*, *Salisbury*, and *Kingsfisher* sloop; and by the united endeavours of those two brave officers, soon changed the face of the company's affairs. On the 5th of *December* he anchored in *Balasore* road, in the kingdom of *Bengal*; and having crossed the *Braces* on the 8th, proceeded up the *Ganges*, and arrived at *Falta* on the 15th, where he found governor *Drake*, and those who had escaped from *Calcutta* before it was taken, on board the company's ships and vessels, in a very deplorable condition. After affording them all possible relief, and strengthening the land forces with all the recruits they could draw together, Mr. *Clive*, with his troops, was landed, in order to attack *Busbudgia* fort by land, while the squadron battered it on the side of the river. *Busbudgia* made but a slight resistance, the garrison having abandoned it in less than an hour after the first attack. This fort was extremely well situated for defence, having a wet ditch round it, but badly provided with cannon; no more than eighteen pieces, from twenty-four to six pounders, with forty barrels of powder, and ball in proportion, being found in it.

On the 1st of *January* the *Kent* and *Tyger* anchored between *Tanna* fort and a battery opposite to it, both which the enemy abandoned before either ship fired a single gun. About forty pieces of cannon, some twenty-four pounders, all mounted on good carriages, with some powder and ball, were found in the fort and battery. The passage now being open to *Calcutta*, admiral *Watson* resolved to lose no time in attacking it; and accordingly proceeded up the river, leaving the *Salisbury* as a guard-ship, to prevent the enemy's regaining the places he had taken. In the night several armed boats were sent before the squadron, to burn a ship and some vessels said to be filled with combustibles; an enterprize that succeeded happily, as all the former had done: and next morning Mr. *Clive* landed with his troops, and began his march towards *Calcutta*. Animated with revenge at the affecting sight of a place, the scene of the deplorable sufferings of so many of their countrymen, the ships and land forces attacked it with such spirit and undaunted resolution, that the *Indians*, unable to maintain their ground, surrendered the fort the same day it was approached. The ships had scarce suffered any-thing in their hulls or rigging; nine seamen only were killed, and twenty-one wounded; and the loss was still less considerable among the land forces, where not an officer was either killed or hurt. Four mortars, ninety-one guns of different sizes, and a considerable quantity of all kinds of ammunition, were found in the fort; and the company once more put into full possession of this settlement, that had cost the lives of so many brave men. A few days after, *Hugly*, situated higher up the *Ganges*, was reduced with as little difficulty, but greater loss^d; for here fell captain *Dugall Campbell*, an officer in the service

^c See the Gazette printed by authority, November 6, 1756.

^d Ibid. July 23, 1757.

a of the company, endued with every social and generous virtue; brave, liberal, and humane; neglected in his early years by *relations* who knew not his merit, and cut off from *friends* in the bloom of youth and career of fortune, who loved and now bewail him.—This tribute to his memory friendship and affection demand, affinity forbids more. In *Hughy* the *English* found twenty pieces of cannon, from twenty-four pounders downwards, with a quantity of ammunition. The city was soon after burnt and destroyed, together with the granaries and storehouses, which greatly distressed the Nabob, and facilitated the farther designs of Mr. Clive.

b THIS vigilant and brave officer, not contented with reinstating the company in all their settlements, had resolved to humble the pride of the Nabob; who perceiving that the torrent of Clive's valour was not to be resisted by such feeble dams as forts defended by *Indians*, drew down an army consisting of 10,000 horse and 15,000 foot. Infinitely inferior as Mr. Clive was in number, he did not hesitate to engage and even attack the Nabob. On the 2d of February the Nabob's army were seen marching towards the town, within a mile of the *English* camp; upon which Mr. Clive sent for a reinforcement to the admiral. Accordingly captain Warwick received orders from admiral Watson to take upon him the command of a detachment of 569 seamen, and immediately proceed to the camp. At two o'clock the same day he joined Mr. Clive, and found him ready to march, the men being all under arms. The king's troops and company's grenadiers were in the front; captain Warwick, with his seamen, were ordered to take charge of the artillery; and the *Sipoy*s were in the rear. At three c Mr. Clive altered his disposition, by strengthening the front, in which order he came up with the Nabob, and was soon charged in the van by the enemy's horse. Before the rear got up to the Nabob's camp, the engagement became general from hedges and bushes; upon which Mr. Clive ordered the artillery to be pointed against the thickest of the enemy's fire, and with a success that proved the wisdom of this measure. The Nabob was soon dislodged, and driven before the victorious *English*; a great slaughter was made, but not a complete victory obtained. The consequences were, however, nearly to that effect; for the Nabob was forced to sue for peace, and to grant the company the following terms:

Mr. Clive defeats the Nabob and obliges him to sue for peace.

d "1. THAT whatever rights and privileges the king has granted the *English* company in their *phirmaund*, and the *busbulboorums* sent from *Dilly*, shall not be disputed or taken from them; and the immunities therein mentioned be acknowledged and stand good. Whatever villages are given the company by the *phirmaund* shall likewise be granted, notwithstanding they have been denied by former *Subabs*; the *Zemindars* of those villages not to be put out or displaced without just cause." Signed. *The articles of the treaty.*

e "2. ALL goods passing or repassing through the country by land or water, with *English* stamps, shall be exempt from any tax, fee, or condition whatever, from *Chokeys*, *Gaalvals*, *Zemindars*, or any other officers."

"3. ALL the company's factories seized by the Nabob shall be returned. All monies, goods, and effects, belonging to the company, their servants, and tenants, and which have been seized and taken by the Nabob, shall be restored. What has been plundered and pilaged by his people made good, by the payment of such a sum of money as his justice shall think reasonable." Agreed and consented to.

"4. THAT the company have permission to fortify *Calcutta* in such manner as they may think proper, without interruption." Granted.

"5. THAT the company shall have liberty to coin *siccas*, both of gold and silver, of equal weight and fineness as those of *Muxadavad*, which shall pass in the provinces." I consent to the *English* company's coining their own imports of bullion and gold into *siccas*. Signed by the Nabob.

f "6. THAT a treaty shall be ratified by signing and sealing, and swearing to abide by the articles therein contained, not only by the Nabob, but by his principal officers and ministers."

I have sealed and signed those articles in the presence of God.

(In the Nabob's own hand.)

"7. THAT admiral *Charles Watson*, and colonel *Robert Clive*, on the part and behalf of the *English* nation, and of the company, do agree to live in a good understanding with the Nabob, to put an end to these troubles, and to be in friendship with him, while those articles are performed and observed by the Nabob."

SUCH were the terms obtained for the company by the vigorous and gallant measures of those two brave officers, who conducted every thing with a harmony and unanimity that shewed their minds congenial, ambitious of glory, and zealous in the cause and for the honour of their country.

* Gazette, September 20, 1757.

THE war was now broke out in *Europe* and *America* between *Great Britain* and *France*, after both courts had endeavoured, by a tedious negotiation, to adjust the difference and settle the pretensions of each nation in *North America*. The time limited for a cessation of arms between the two companies was likewise expired; and the flames of war began to spread themselves over every quarter of the earth. Notwithstanding the *French* in *Bengal* had treated the unfortunate remains of the deplorable tragedy at *Calcutta* with the humanity and feeling of a civilized and polite nation, yet was it believed, upon good authority, that their intrigues had greatly encouraged the Nabob in this attempt, and that they had even supplied him with ammunition and gunners to assist in the execution of his design. All obstruction having been removed on the side of the *Indians*, admiral *Watson* and colonel *Clive* resolved therefore to turn their arms against the *French*, and to attack their fort at *Chandénagore*, their principal settlement in *Bengal*. *Chandénagore* is a regular fortification: it was on this occasion defended by a numerous garrison, composed of 500 *Europeans* and 700 *Indians*, 183 pieces of cannon, many of them twenty-four pounders, three mortars, and a sufficient quantity of stores and ammunition. In this expedition Mr. *Clive* commanded 700 *Europeans* and 1600 black soldiers or *Sipoy*s. The admirals *Watson* and *Pocock* commanded the squadron, consisting only of three ships of the line and a sloop. Mr. *Clive* made himself master of all the out-posts before the admirals arrival, except one redoubt situated between the fort and the river, which mounted eight pieces of cannon of twenty-four pounders, four of which pointed to the river. Admiral *Watson* having ordered the sloop up the river, to cover the boats attending on the camp, followed with the rest of the squadron with all the expedition possible. On the 18th of *March* 1757 he anchored about two miles below *Chandénagore*, and found the *French* had done everything in their power to obstruct his passage, by sinking two ships, a ketch, a hulk, a snow, and a vessel without masts, all directly in the chanel, within gun-shot of the fort, and that they had laid two booms, moored with chains, across the river. This occasioned some delay, the admiral being forced to cut down the booms, and sound the chanel before he advanced. On the 24th he overcame all those obstructions; and the leading ship having got abreast of the redoubt, soon silenced it, and obliged the garrison to abandon it. The squadron began to play upon the walls, which was returned with great spirit for the space of three hours, while Mr. *Clive* was making his approaches, and firing from a battery on the other side. At nine in the evening the enemy hoisted a white flag; and it was agreed that the fort should be surrendered, the garrison made prisoners of war, the *Indian* inhabitants preserved in the full use of their liberties, and the *Jesuits*, the director, counsellors, and inferior servants of the company, to be dismissed with their cloaths, linen, and church ornaments^f. The goods and money found in the fort were considerable; but the chief advantage consisted in their having deprived the *French* of their principal settlement on the *Ganges*. All the operations were judiciously timed; the taking of four considerable forts cost those gallant officers no more than four days; a fifth day defeated the whole power of the Nabob. Such were the happy consequences of foresight, conduct, unanimity, and courage.

BEFORE the *French* were alarmed, and any attempts made on *Chandénagore*, care was taken to repossess all the posts the company had formerly held; to humble the Nabob by some effectual blow; and by a treaty to bind him up from acting against the interests of the company. This prince had shewn himself, from the moment of his signing that treaty, but little inclined to perform the articles to which he acceded. He was liberal indeed of his promises, but dilatory in the execution of them; and upon such frivolous pretences as evidently demonstrated that his affections were not with the company. In fact, he waited but a proper occasion for breaking through all his engagements; and of this Mr. *Clive* was aware, but resolved to conceal his sentiments till he had reduced the *French* power in *Bengal*, which was more formidable to him, small as it was, than all the power of the Nabob. When, in conjunction with admiral *Watson*, he had accomplished this view, both these officers deliberated together, whether they ought not to re-commence hostilities with *Sulajud Dowla*, and oblige him by force to the performance of the treaty. A resolution in the affirmative had been attended with great difficulty and danger, if a most fortunate incident, improved by the address of the gentlemen of the council, and especially by Mr. *Watts*, had not helped to insure success.

The Nabob refuses to comply with the late treaty.

THE Nabob's delaying the final execution of the peace was, in effect, the same to the commerce of the province as if none had been concluded. The leading men in his court and army knew his faithless disposition; they were oppressed and discontented. He had shewn to his own subjects the same haughty and perfidious spirit which had lately broke out with such violence against the *English* company, and still continued to distress it. Some of his chiefs therefore, perceiving no probability of a solid peace in the country, while *Sulajud Dowla* held the reins of government, began first to murmur, and soon after to form a plan

^f *Id. ibid.*

- a for deposing him. *Jaffier Ali Khán*, or *Cawn*, one of his principal ministers and generals, a man of great weight and power in the province, was at the head of this conspiracy. He first communicated the design to Mr. *Watts*, the second in council at *Calcutta*, by whose letters of the 26th and 28th of *April* 1757, the council was informed of the affair. Here it was debated with all the attention and circumspection possible, it being a matter of the utmost consequence, as upon its success depended the fate of the whole commerce of *Bengal*. The Nabob's equivocal conduct, his breach of the articles of the peace he had solemnly sworn to maintain, his refusing to admit a garrison into *Cassembuzar*, and his prohibiting a pound of powder or ball to pass up the river, together with the certain intelligence the council received of his having invited M. *Buffey*, the *French* commandant in *Golkonda*, to join him,
- b with all the troops he could bring, sufficiently evinced, that the Nabob's intention was to begin hostilities, as soon as his designs were ripe for execution. It was therefore determined to enter upon the project concerted by *Jaffier Ali Khán*, to assist it by the most vigorous measures, and thereby settle the company's affairs upon a solid and lasting foundation. The council knew the capacity of Mr. *Clive*, and had all the reason in the world to confide in the conduct of an officer who had given such repeated proofs of his valour. He was ordered to take the field; the admiral undertaking to garrison *Chandernagore* with his seamen, thereby to strengthen Mr. *Clive's* little army, by reinforcing him with the former garrison. A detachment of fifty seamen with their officers was likewise added, to serve as gunners; and a twenty-gun ship stationed above *Hugly*, to preserve a communication between the army and the fleet.

A conspiracy formed against the Nabob by his own generals.

The council of Bengal determined to attack the Nabob.

- On the 19th of *June*, *Catwa* fort and town, situated on that side the river which forms the island of *Cassembuzar*, were taken by a party detached for that purpose. There the army halted for two days, expecting intelligence from *Jaffier Ali Khán*; but none arriving, Mr. *Clive* put his troops in motion on the 22d, crossed the river, and next day, with his own forces only, engaged the Nabob. *Sulajud Dowla's* army consisted of 20,000 fighting men, besides 50 *French* who directed the artillery, and exclusive of the party formed by the conspirators. The event of the battle was agreeable to the good fortune of Mr. *Clive*; it was successful, and obtained in a short time, with little loss. Fifty pieces of cannon were taken, and all the Nabob's baggage. It is probable, indeed, that victory would have been disputed with more obstinacy, had not *Sulajud Dowla* been discouraged with the treachery of his officers, and the cowardice of his troops, who were seized with a panic as soon as they had discovered the conspiracy that was set on foot. After his defeat the Nabob withdrew privately, as did *Montole* his prime minister, and *Monick Chaud* one of his generals, not having sufficient confidence in the fidelity of their troops. *Jaffier Ali Khán*, now declaring himself openly, entered *Muxadavad*, the capital of the province, with an army of his friends, and victorious allies. It had been previously concerted, that *Ali Khán*, who was born of a good family, and greatly esteemed in the province, should succeed to the Nabobship: accordingly he was invested on the 28th of *June* by Mr. *Clive*, with all the badges of authority, and received the homage of every degree of men, as *Subab* of the provinces of *Bengal*, *Baber*, and *Orixa*. On the 30th the late Nabob was made prisoner, just as Mr. *Law*, the *French* chief at *Cassembuzar*, was ready to join him with 200 *Europeans*: and on the 4th he was put to death by his successor *Jaffier Ali Khán*, who granted his allies such generous rewards and immunities as evinced how justly he merited all their assistance. Thus, in the space of about twelve days, this great revolution in the affairs of the company, and the richest kingdoms of *Asia*, was effected by a handful of men; the trade was restored, and even increased beyond what it ever had been; the *English* were strengthened by a powerful ally, whose interest it was to remain firm to his engagements; the sufferers at *Calcutta* compensated for their losses, as far as money could atone for such a calamity; the soldiers and seamen rewarded beyond their most sanguine expectations, for the zeal and courage they had exerted; and the *French* intirely driven out of *Bengal*, and all its dependencies. It may indeed be questioned, whether all the great powers of *Europe* engaged in a war, in which rivers of blood have already been spilt, and millions of treasure exhausted, will, in the conclusion, reap so much solid profit as the *English East India* company did, with no more than 2000 men, two-thirds of them *Indians*, under the conduct of Mr. *Clive*, whose martial abilities posterity will read with amazement, and which even cotemporary envy, jealousy, and malignity, are forced to admire.

Mr. Clive defeats his army.

invests Ali Cawn with the nabobship.

Sulajud Dowla taken and put to death.

The consequences of this revolution.

- But the joy of the nation, and in particular of the *India* company, was not a little damped by the death of admiral *Watson*, who fell a sacrifice to the unwholsomeness of the climate, in which he had established the reputation of a diligent, faithful, and brave officer, and a good man (D). Besides this real loss, *Vizagapatam* was besieged and soon taken by the *French*, and a garrison of 130 *Europeans*, and 200 *Sipoys*, made prisoners; notwithstanding the

Death of admiral Watson.

Loss of Vizagapatam.

(D) Vice-admiral *Watson* was buried on the 17th of *August*, his corpse being attended to the grave by all his own officers, who lamented him as a father, and the inhabitants of the place, who have erected a handsome monument to his memory.

governor made all the defence which became a faithful servant of the company, but unskilled in the art of war.

THE following is a translation of the treaty executed with *Jaffier Ali Khán Bahadr*, written and signed by his own hand.

Treaty with the Nabob.

“ IN the presence of GOD and his prophet, I swear to abide by the terms of this agreement made with admiral *Watson*, colonel *Clive*, governor *Drake*, Mr. *Watts*, and the *English* council at *Calcutta*.”

Signed, MEER MAHMUD JAFFIER KHAN BAHADR,
The slave of ALLAM GEER MOGOL.

- “ 1. THE agreement and treaty made with Nabob *Sulajud Dowla* I agree to and admit of.
- “ 2. THE enemies of the *English* are my enemies, whether *Europeans* or others.
- “ 3. WHATEVER goods and factories belonged to the *French* in the provinces of *Bengal*, *Baber*, or *Orixa*, shall be delivered to the *English*; and the *French* never be permitted to have factories or settlements any more in these provinces.
- “ 4. To indemnify the company for their losses by the capture of *Calcutta*, and the charges they have been at to repossess their factories, I will give one *crore* of *rupees* (E).
- “ 5. To indemnify the *English* inhabitants who suffered by the capture of *Calcutta*, I will give fifty *lack* of *rupees*.
- “ 6. To indemnify the loss suffered by *Jentoos*, *Moormen*, &c. I will give twenty *lack* of *rupees*.
- “ To the inhabitants, the *Armenian Peotts* of *Calcutta*, who suffered by the capture of *Calcutta*, I will give seven *lack* of *rupees*. The division of these donations to be left to the admiral, the colonel, and the committee.
- “ 8. THE lands within the *Maharatta* ditch, all round *Calcutta*, which are now possessed by the other *Zemindars*, and 600 yards all round without the ditch, I will give up intirely to the company.
- “ 9. The *Zemindary* of the lands to the south of *Calcutta*, as low as *Culpee*, shall be in the hands of the company, and under their orders and government; the customary rents of every district within that tract to be paid by the *English* into the king's treasury.
- “ 10. WHENEVER I send for the assistance of the *English* troops, their pay and charges shall be disbursed by me.
- “ 11. FROM *Hugly* downwards I shall build no new forts near the river.
- “ 12. As soon as I am established *Subab* of the three provinces, I will immediately perform the above articles. Dated the 15th of the moon *Ramazan*, in the 4th year of the present reign.”

FROM the last article it is obvious, that the treaty was signed and sealed before Mr. *Clive* put his troops in motion, or the council took any steps to forward the designs of *Ali Khán* in deposing the Nabob. Beside the sums stipulated by treaty, the new Nabob presented the fleet and army with fifty *lack* of *rupees*^b, a sum that, with the plunder of the Nabob's camp, has put the meanest seaman and soldier in a state of affluence. As to the late loss of *Fort St. David*, and the engagement between the *English* Squadron under admiral *Pocock* and the *French* fleet, the public accounts are too unsatisfactory to merit a place in history.

THUS the reader has seen the foundation and origin of the *East India* company and commerce under queen *Elizabeth*; its progress, in consequence of the regulations made, and privileges granted by her successors; the vicissitudes of fortune their affairs have passed through, whether from their enemies the *Indians*, *Portuguese*, *Dutch*, or *French*; or from the negligence, avarice, pride, and misconduct of their governors and servants abroad; or whether from the still more pernicious practices of ministerial craft, by which prodigious sums have been drawn from them for privileges which are ever precarious: he has seen their flourishing state, from the time that their own consequence, and the services done the government, brought the whole body of the legislature to be their patrons and protectors: he has, lastly, had a view of their losses, chiefly owing to their own indolence and parsimony, as well as to the dilatory measures of the administration.

AFTER the restitution of *Madras* at the general peace of *Aix-la-Chapelle*, their affairs flourished extremely, till the late unhappy affair in *Bengal*, the particulars of which we have just recited. We have been credibly informed, that after admiral *Watson* and Mr. *Clive*

^a Gazette, February 14, 1758.

^b Id. *ibid*.

(E) One *crore* is an hundred *lack*, each *lack* making 12,500*l*. sterling.

- a had destroyed *Angria*, and previous to the loss of *Calcutta*, the company shared 10 *per cent.* on their capital; nor is there any reason to imagine that their profits have been diminished since, if we consider the glorious success that has ever attended the arms of the fortunate and brave *Clive*; what effect the late losses in *India* may have had on the *actions* of the company, it is not our intention to relate. In the war, terminated by the peace of *Aix-la-Chapelle*, the loss of *Madras* was more than compensated to the company by the ruin of the *French* marine, and the total stagnation of their *India* trade for the three last years of the war. If the enemy were successful in their attempts upon our head settlement, and in the defence of their own, still their trade gained little by either. The profits of the former went into the pockets of an individual; and the advantages of the latter consisted in the mere
- b preservation of a town, at that time of no utility to commerce; since the whole shipping of the company was employed in military affairs. In short, from the time that Mr. *Barnet* took the *Chinamen*, in the *Streights of Banca*, we believe not more than three or four ships returned into *Europe*, or sailed into *Asia*, on the business of commerce, during the last war. What-
 ever superiority they might seemingly maintain on the coast of *Coromandel*, it is evident, from the *actions* of the company, that their stock was extremely reduced, and their commerce at the last gasp. Another year's continuance of the war would, in all probability, have made the company bankrupt; and in fact it was little less, since the obstruction to supplies, and remittances from *Europe*, had put a total stop to their credit in *India*. All these circumstances were so many acquisitions to the *English* company, who continued to send out
- c fleets as usual, during the whole course of the war. The markets were intirely open to them; no rivalry, no anticipation there, to oblige them to buy at a great price. In short, it is not to be doubted, but under the protection of the king's squadrons, they might have flourished more in a war than in peace, and have made dividends on their profits, which would astonish all the merchants in *Europe*.

*The bad state
of the French
trade.*

- d HAVING now deduced the history of the *East India* company from their origin to the present times, in a manner more connected, full, and explicit, than, we believe, has ever been attempted, we shall proceed to lay before the reader an account of the possessions and settlements belonging to this wealthy body. In the mean time we must beg, that if some part of the preceding narrative appear tedious, the reader will excuse it, by reason of our desire of being complete. If many of the occurrences are languid, yet they are necessary, though incapable of historical embellishment. The history of trade requires a minuteness, a recital of many civil transactions, which would appear superfluous in the general history of a nation. In the present instance, the *India* company is a body separate and distinct, in some respects, from the people; yet in its effects, in its prosperity and adversity, strictly connected with the public good. It is therefore little capable of being placed in a striking view: if we have rendered it useful, we shall think we have sufficiently fulfilled our engagements, and merited the applause of every one who reads rather for instruction than amusement.

S E C T. VIII.

Containing a description of all the company's settlements; the nature of the trade of each; the goods exported and imported; the salaries of the governors and other servants; the manners, laws, and religion of the natives; the coins, measures, duties, and customs used or paid by the company; with several other particulars.

- e **T**O begin with the settlements of the *East India* company: the first in order is *Mocha*,
 a city seated at the entrance of the *Red Sea*, latitude 13 deg. 11 min. north. This
 place, from an inconsiderable fishing town, hardly known, is become, in less than two cen-
 turies, a flourishing city, and the emporium for the trade of all *India* to the *Red Sea*. The
 trade was removed hither from *Adan*, in consequence of the prophecy of a Sheykh, much
 revered by the people. This man, it is said, foretold that it would soon become a place
 of extensive commerce, notwithstanding some disadvantages in point of situation. Be this
 as it will, certain it is, that trade flourishes. *Mocha* stands close to the sea, in a large, dry,
 and sandy plain, that affords no good water within twenty miles of the city. What they
 drink comes from *Mofa*, and costs as dear as small beer in *England*. The water nearer the
 f town, it is imagined, produces a worm which naturalists call *Dracunculus*. It gene-
 rally breeds in the fleshy and muscular parts of the body, appearing commonly in the
 thighs and legs, accompanied with an extreme inflammation and acute pain. The method
 of cure among the natives is, by laying hold of it as soon as it appears on the surface of
 the skin, with small scissars or pincers, and pulling it gently out, about an inch in twenty-

*Description of
the city of
Mocha.*

four hours. They then roll it about a wire, hen's quill, or something of that nature, and extract it with the utmost caution, the consequence being dangerous if any part remains in the body. This animal is extremely active and lively, greatly resembling a fine violin string, and about two feet and a half long. We have lately seen one in the custody of a celebrated naturalist of our own country, corresponding to captain *Hamilton's* account, and, indeed, to that of the celebrated *Linnaeus*.

To proceed; *Mocha* is large, but meanly fortified. The buildings are lofty, and tolerably regular, having a pleasant aspect from *Mecca*. The steeples of several mosques raise their heads into the clouds, and present themselves to view at a great distance. Their markets are well stored with beef, mutton, lamb, kid, camel and antelope's flesh, common fowls, *Guiney* hens, partridge, and pigeon. The sea affords plenty of fish, but not savoury; which some think proceeds from the extreme saltiness of the water, and the nature of their aliment. Fruit, such as grapes, peaches, apricots, quinces, and nectarines, the markets are stocked with; although near the town not a shrub is to be seen, nor a tree, except a few date trees. Frequently no rain is known here for two or three years, and seldom more than a shower or two in a year. In the mountains, indeed, at the distance of twenty miles from *Mocha*, the earth is watered by a gentle shower every morning, which makes the vallies prolific in corn and the fruits natural to the climate.

THE religion of the country and city is *Mohammedism*, in which they are rigidly superstitious, though their practice is hardly reconcileable with any religion; and, indeed, hypocrisy seems the most distinguishing part of the character of an *Arabian* at *Mocha*. Their promises, which they seldom keep, are made with the most solemn invocations on God; and the judge pronounces a grave devout lecture against corruption, at the very time when his arm is extended to receive a bribe. Robbing, thieving, and piracy, are vices no less fashionable here, than are fornication, adultery, and drinking, in some cities in *Europe*; and yet, from the gravity of the people, you would imagine the integrity of a *Cato* lodged in every breast.

THE *English* and *Dutch* companies have handsome houses, but without the grandeur and state they maintain in some others of their settlements. The *English* are much caressed, and carry on an infinite trade for coffee, olibanum, myrrh, aloes, liquid storax, white and yellow arsenic, gum arabic, mummy, balm of gilead, and other drugs. One inconvenience, however, they sustain from the violence and exaction of the *Arabian* princes; for the king's customs are easy, being fixed at three *per cent.* to *Europeans*.

As to the coins at *Mocha*, the most current is the camassie, which rises or falls in value at the banker's discretion. They are from fifty to eighty for a current dollar, which is but an imaginary species, being always reckoned twenty-one and a half *per cent.* lower than *Spanish* dollars. As to their weights, they are almost infinite, according to the nature of the thing to be weighed. They have the *Banian* weight, the *Magiet*, the *Ambergrise*, the *Agala*, the gold and silver weights, &c. &c. *

Description of
Gombroon.

GOMBROON, or, as the natives call it, *Bander Abassi*, or the sea-port of *Abassi*, is the next settlement. This city, lying in the latitude of 27 deg. 40 min. north, owes its wealth and grandeur to the demolition of *Ormuz*, and the downfall of the *Portuguese* empire in the *East Indies*. It is now justly accounted one of the greatest marts in the east, was built by the great Shah *Abbas*, and from him, as some think, obtained the name *Bander Abassi*, which signifies the court of *Abbas*. We shall leave the reader to determine which of these etymons is the most natural. It stands on a bay, about four leagues to the northward of the east end of the island of *Kishmish*, and three leagues from the famous *Ormuz*. We are told that it had formerly been a fishing town, and of no consequence, till Shah *Abbas* began to build there (A). The *English* began to settle here about the year 1613, when, in consideration of their services against the *Portuguese*, Shah *Abbas* granted them half the customs of that port. This was confirmed by a phirmaund, and duly regarded, till the *English* began to neglect the services they had stipulated, upon which it dwindled to a thousand tomans a year, 3,333*l.* 6*s.* 8*d.* which was likewise ill paid, if it be true that the company has any emolument at all from the customs. The situation is bad, wanting almost every thing that contributes to the happiness, and even the support, of life. The city is large, and encompassed by a wall towards the land, which is ruined in several places through neglect. Against the sea are three small forts of five guns each, a platform of eight, and a castle, or citadel,

* HAMILTON, p. 143.

(A) Captain *Hamilton* says, that it had the name of *Gombroon*, or *Comerong*, by way of derision, from the *Portuguese*, because it was remarkable for the number of prawns and shrimps caught on its coasts. This species of shell-fish they call *Comerong* (1).

(1) Vol. i. p. 143.

mounting

- a mounting thirty-five heavy cannon, to secure it and the road from the attempts of an enemy by sea. The houses in most of the streets are so out of repair, some half down, others in a heap of rubbish, that a stranger would imagine the town had been sacked and ravaged by a barbarous people; not a vestige of the wealth really contained in the place appearing in view. The bazars and shops round are for the most part kept by *Banians*, whose houses are generally in good order. When the *Banians* are asked why the *Persians* are so negligent in repairing the buildings erected at a great expence by their ancestors, their common answer is, "For the vanity of building new ones themselves." In the walls of the best houses stone is used, but the common method of building is with earth and lime. Many of them have a contrivance at the top for making a draught of air through the whole
- b house, which, in effect, resembles a ventilator, but is itself a wooden machine of a conical form. These they call wind chimnies, which add not only to the elegance of the houses, but to the conveniency of living, as well as to health, in the intensely hot seasons of the year.

THE most sickly months of this unhealthy situation are *April* and *May*, towards the close of the vernal equinox; *September* and *October* in the autumnal. In fish and mutton the inhabitants are well supplied. Rice is imported from *India*, and wheat so plenty, that the poor chiefly subsist on bread and dates: as for pilloe it is a dish fashionable only among the better sort. This part of *Persia* abounds in the most delicious fruits. Apricots, peaches, pomegranates, pears, mangoes, grapes, guavas, plumbs, sweet quinces, water-melons, are

c here in the utmost profusion and perfection. The apricots, however, are small, and extremely dangerous if eaten to excess, for which reason the *Persians* call them *Kill Franks*; because *Europeans*, not knowing the danger, are often destroyed by them.

BUT the fruit most peculiar to this country and to *Arabia*, is the date. This tree grows much in the manner of the cocoa-nut tree, only the branches are shorter. The fruit hangs on small twigs, thick about the top of the tree under the boughs; and, when ripe, is esteemed there a delicious and wholesome diet. It is deemed fit for use when it begins to melt on the tree; but the dates intended for sale are plucked sooner, and laid wet in a heap, afterwards packed in bales of 100 pounds weight, their own juice candying and preserving them.

- d THESE conveniencies are more than over-balanced by the scarcity of *French* water, with which the inhabitants are supplied from *Afteen*^b (B), a place seven miles distance, there not being one spring or well in the town. Persons of distinction keep a camel in constant employment in bringing fresh and wholesome water. Captain *Hamilton* gives it as his opinion, that one cause of the unwholsomeness of this city is the reflection of the rays of light from a high mountain north of it. His expression is, That when the beams are reflected from this mountain, they almost fire the air; and, for two or three months in the year, render the situation intolerable. For this reason the people of condition retire into the country, to pass the heats of *June*, *July*, and *August*. The very sea, during this season, is affected; inasmuch that the stench is no less disagreeable than that of putrid carcases; and
- e this is increased by the quantities of shell-fish left by the surges on the shore, from which an exhalation arises that tarnishes gold and silver, and less tolerable than the bilge-water of a tight ship.

- ABOUT ten miles from *Afteen*, at the foot of the above mountain, is a place called *Minoa*, where are cold and hot natural baths, reckoned infallible in the cure of all scrophulous disorders, rheumatisms, and other diseases, by bathing. As they are rough and powerful emeticks if drank in the smallest quantity, their use in this respect is neglected. At *Afteen* the *English* factory have a country house and gardens, to which they retire occasionally. Here they have raised a number of fine *Seville* orange trees, which, though not natural to the country, arrive to the highest perfection. These trees, of which they have whole groves,
- f are always verdant, bearing ripe and green fruit, with blossoms, all at the same time. They have likewise *Tanks* and ponds of fine fresh water, with every thing else that can moderate the heat of the climate, and render life agreeable and elegant.

To return to the city of *Gombroon*: it is extremely populous, on account of the prodigious commerce carried on by the *Dutch* and *English* factories, as well as the natives. The *French* formerly had a trade here; but they were forced to withdraw their servants upon a revolution that happened in the company's affairs. The *English* factory is situated close upon the sea, at some distance from the *Dutch*, which is a commodious and fine new building. A great part of the company's profit arises from freights. As the natives have not one good ship of their own, and are extremely ignorant of navigation, they freight their goods for

^b LOCKYER, ch. 8. HAMILTON, vol. i. c. 9.

(B) Captain *Hamilton* says, that this place is fifteen miles distant from *Gombroon*; but Mr. *Lockyer* affirms it to be only seven, and with him agree the best geographers.

Surat and other *Indian* marts, in *English* and *Dutch* bottoms, at an exorbitant rate. The commodities of the *Gombroon* market are fine wines of different kinds, raisins, almonds, kismishes, prunellas, dates, pistachio nuts, ginger, silks, carpets, leather, lapis turty, galbanum, ammoniac, assa foetida, tragacanth, with other gums, and a variety of shop medicines. These are in a great measure the produce of *Carmania*, which they bring to *Gombroon* in caravans. The *English* company had a small factory in the province of *Carmania*, chiefly for the sake of a fine wool used by the hatters. Not long since the company had a project of carrying a breed of the goats to *St. Helena*, but what success it has met with we are no-where told. The fleeces of these animals are thick, long, and soft, of a reddish hue, and silky smoothness.

ALTHOUGH the *English* pay no customs, yet the *Shabander* keeps an officer at the factory, who examines every thing brought on shore, and delivered to the merchants, who usually make him a present, to avoid the trouble he has it in his power to give them. All private traders with the company's passes enjoy the same privileges, on paying 2 per cent. to the company, one to the agent and one to the broker.

WHEN a ship arrives, the *Shabander* sends his boat on board to know whence she came, what her cargo, and to whom she belongs. Were the *Shabander* applied to, in order to waive the company's privileges, he would hardly fail to extort 8 per cent. on the whole cargo, as is evident from his conduct to the interlopers, during the quarrels between the two companies (C). Hence it is, that most people would chuse to trade under the company's protection, notwithstanding some inconveniencies attend it. All private trade, either by *European* or country ships, has so long been engrossed by the company's servants, that they now look upon it as their right, and upon their own terms. The agent at *Isfahan* is one-third concerned, the chief of *Gombroon* one-third, and the rest of the factors in *Persia* the remaining third, in all investments. Hence it is, that scarcely an *Englishman* in

(C) We find the following state of the company's privileges in Mr. *Lockyer's* account of the *India* trade. This gentleman wrote in 1711, since which time no material change in this particular has happened. It is collected from an order hung up in the consultation room, by the agent and council. "The honourable Sir *Nicholas Waite*, general of *India*, &c. council of *Bombay*, having been pleased to appoint us agent and council to manage in *Persia* the affairs of the honourable *East India* company; we do, by virtue of the power given us, and the authority of our honourable masters, represented by us, appoint and order the following rules to be observed by all persons whatsoever, subjects of *Great Britain*, trading under the privileges of the *East India* company, and enjoying the advantage of their house and protection here in *Gombroon*, until they shall be altered or otherwise determined by the honourable company, or their general and council at *Bombay*.

I. "That if any person in the service of the honourable company, shall bring any goods into their house, or ashore to any other place belonging to *Armenians*, or any other natives of this country, or foreigners, under colour of his name to defraud the king of *Persia* of his customs, he shall be forthwith discharged their service, and sent to *Bombay*; there being nothing of more dangerous consequence, nor more likely to occasion the loss of the company's privileges, which, for so many years, and with vast expence, they have been obtaining, than such a practice. And if any commanders of ships, in the service of the company, or private ships trading thither, or any persons by their leave and connivance, shall permit any goods to be run or brought any-where else than to the custom-house, we declare we will protest against them for all damages that may thereby accrue to the company; and we will represent any such attempts to the general and council at *Bombay*, with as much severity as we can, and as the fatal consequences of such ruinous actions deserve.

II. "That as the duties the company require to be paid here on goods exceed not a fifth part of what is paid to the *Shabander*, so we require that when private *English* shipping come to *Persia*, to trade and merchandize that they bring into the company's

"house in *Gombroon*, and into no other part of *Persia*, their goods, where they must necessarily pay customs, which, by so ill an example, may occasion the company to fall under the same misfortune. In such a case they cannot but be esteemed by the general at *Bombay*, the governors of forts, the president in *India*, and us here, as open enemies to the *British* trade, and will be proceeded against by the company with all the rigour their charter will admit of, and to the full extent of the act for the exclusive trade of *India* to the company. And if any goods belonging to the *English* shall not first be brought to the factory, we will seize the same, and transmit them to *Bombay*, to be there condemned as unlicensed and forfeited goods.

III. "The consulage hitherto taken by the agents on private goods brought to the factory, being 2 per cent. we in like manner continue the same, and the 1 per cent. granted by them to their agent, on goods not consigned to him. And he is to be chief in the sale of all cargoes, if on the place, or, in his absence, the chief of *Gombroon*; which 3 per cent. is but one-fifth of 15 per cent. which goods at the custom-house usually pay before they are cleared, by over-valuing presents to the officers.

IV. "If any one load goods on board any of the company's ships without first acquainting the agent, or, in his absence, the chief, therewith, the said goods are, by the company's charter, obliged to pay 40 l. sterl. per ton freight; besides what other penalties the general and council of *Bombay* shall think fit to impose. These matters we have thought fit to make public, that no person hereafter may be ignorant of the same.

"Given under our hands at *Gombroon*, &c.

"Signed,

"*J. Locke*,

"*Will. Lee*,

"*J. Rawlins*,

"and

"*Ed Dennis*" (1).

By this privilege of exacting freight and customs from the *British* private traders the company raises yearly a very considerable revenue.

(1) *Lockyer*, p. 224.

a the plate will give a true account of the value of the goods against his own interest ; yet, that every thing may seem to be done for the benefit of the stranger, the *Cbittera*, or broker, acquaints the *Armenian* and *Banian* merchants of what is to be disposed of, and fixes a time for a number of them to meet at the factory. The chief presides as director of the sale ; they beat down the price, or let the goods remain, although they can and do often sell them the next day at 30 *per cent.* profit. By this collusion the poor trader is bubbled, and the whole profits flow into the pockets of *English* presidents, agents, brokers, and *Banian* or *Armenian* merchants. Another sensible disadvantage to the private trader is in the advance the broker usually puts on the money he pays. If payment is made in *Abasseees*, he will sometimes charge 10 *per cent.* for the difference in exchange. There is b always some allowance, but the honest broker seldom fails of having two *per cent.* more than the current price. It is true this is never done by the authority of the company, nor is it countenanced by them ; it is only a tax which the avarice, the poverty, and the insolence, of some chiefs impose on the industrious and fair trader.

TILL of late years the northern provinces of *Persia*, and most of the grand signor's dominions, were supplied with *English* cloths by the *Turkey* company. Since then, the *East India* company, having taken this branch of trade into consideration, sent large quantities of woollen manufactures round the *Cape of Good Hope* to *Gombroon*, and so by caravans to the respective marts. Some years ago they were very earnest and intent on the exportation of this article ; if they continue it, the advantage will be general, and obviate, in a great c measure, the clamours we every day hear against this monopoly.

AT *Gombroon* all bargains are driven for *Shabeees*, and the company keep their accounts in this imaginary coin (for hardly such a piece of money is to be met with), which is valued at four pence. Payments are made in *Coz*, *Mamoodas*, &c. which are the current coin of the country ; but horses, camels, houses, &c. are commonly sold or bought by the *Toman*, which is 200 *Shabeees*, or 50 *Abasseees*. This is the usual way of rating estates, effects, and a man's wealth ; such a man is worth so many *Tomans*, as in *England* we say he is worth so many pounds. Their great weights are *Maunds*, which differ according to the nature of the commodity to be weighed. Sugar, copper, and all sorts of drugs are sold by the *Maund Tabrees*, which, in the custom-house and factory is esteemed at six pounds and three quarters avoirdupois ; but in the *Bazar*, reckoned at no more than six pounds and a quarter. d Eatables, and all sorts of fruits and vegetables, are sold by the *Maund Copara*, of seven pounds and three quarters in the factory, and from seven and a quarter to seven and a half in the *Bazar*. Fine goods, as gold, silver, musk, *Acben* camphire, bezoar, coral, amber, cloves, and cinnamon oil, with dyed *Cbina* silks, or painted sattins, are sold by the *Miscal*, six of which are estimated at an ounce avoirdupois. Its just weight is 2 dwts. 23 gr. 24 d. ps. troy. The *Maund Shaw* is two *Maund Tabrees*, used in *Ispahan* (D). To conclude our account of this city, one great part of the company's profit here arises from passengers with the freight of their effects. They rarely dispatch a ship from *Gombroon* but she is filled with passengers, deep laden with goods, with immense quantities of pearls e and treasure on board, sometimes to the value of 300,000 *l.* Upon all these the freight is prodigious, and often rated by the value of the cargo. Although the company has regu-

(D) The following table of coins and weights in use at *Gombroon*, will not be disagreeable to the curious reader.

10 <i>Coz</i> , or <i>Pice</i> , a copper coin,	—	—	—	1 <i>Shabee</i> .
2 <i>Shabeees</i>	—	—	—	1 <i>Mamooda</i> .
2 <i>Shabeees</i> and 5 <i>Coz</i> ,	—	—	—	1 <i>Laree</i> .
2 <i>Mamoodas</i> ,	—	—	—	1 <i>Abassee</i> .
4 <i>Mamoodas</i> , or 2 <i>Abasseees</i> ,	—	—	—	1 <i>Surat Rupee</i> .

The *Shabee*, in the company's accounts, is valued at 4 *d.* sterl. The *Saree* is used about *Ispahan* ; but *Abasseees* are not to be got without allowing 7 and sometimes 8 *per cent.* for the difference of exchange. Yet returns to *Fort St. George*, and other ports of *India*, are commonly made in them. Next to these, *Chequeens* are the most profitable. Of these there are several kinds, of which the *Venetian* are the best by near 2 *per cent.* at *Surat*, and other *Indian* ports. When a parcel of *Venetian* ducats are mixed with others, the whole goes by the name of *Chequeens* ; but when separate, one sort is called *Venetian*, and all the rest indifferently by the name of *Gubbas*. As the *Surat Rupees* are overvalued, they seldom pass, few caring to take them at the fixed price (1).

Charges on the port to those who trade under the company's protection.

- 2 *Per cent.* on the sale of goods to the company.
- 1 *Per cent.* consulage to the agent.
- 1 *Per cent.* to the broker.
- 30 *Mamoodas* per 2000 *Maund Tabrees*, for a boat, or *Trankey*, hired for landing goods.
- 1 *Coz* of every 20 *Maund Tabrees* for *Hamalage*, or *Cooly*, hire at weighing.
- 10 Bottles make a chest of wine, each containing five quarts ; or two *Carboys* and two bottles to a chest, each *Carboy* holding five gallons.

Rose water, which is a great commodity at *Gombroon*, is also sold by the chest, twenty-four bottles making a chest. But the sizes of the bottles greatly differ, so that the measure has no certain standard (2).

(2) *Ibid.* p. 247.

lated the price of a passage from *Gombroon* to *Surat*; yet the captain of the ship makes a valuable perquisite of it, raising his price according to the disposition and wealth of the passenger. Some gross enormities and grievous extortions have been committed in this manner.

Description of
the town and
English settle-
ment of Surat.

THE next sea-port where the company have a factory is *Surat*. It is situate in 21 deg. and a half north latitude, on the banks of the river *Tapee*, and was built in the year 1660. It is the chief trading town in the *Mogul's* dominions, people of all nations generally residing under the protection of the government. Soon after the *English* settled there, they removed about two miles farther down the river, on account of some inconveniencies in the former situation. In a little time after, others followed their example; so that in a short space, the spot they had chosen for their residence became a large town. After *Rajah Savajee*, who never submitted to the *Mogul's* authority, had taken and ravaged it, the *European* factories excepted, the inhabitants petitioned *Aurengzeb* to be secured by a wall round their town. Their request was granted, and the city was inclosed with a wall four miles in compass. As trade increased, the people became too numerous for so small a space; to remedy which inconvenience, several large suburbs were added, for the convenience of mechanics. The wall was built of brick, about eight yards in height, with round bastions 200 paces distant from each other, with five or six cannon mounted on each.

Its flourishing trade was first disturbed by the governor of *Bombay*, an. 1686, the particulars of which we have related. In the year 1695 its trade and tranquility were a second time disturbed by captain *Avery*, a pirate. In 1705, when *Aurengzeb* was in his dotage, the neighbouring *Rajahs*, with united forces, besieged *Surat* with 80,000 horse, plundering all the villages in its vicinity. This army being unprovided with artillery, could make no impression on the city, though it extremely straitened it, till this inconvenience was removed by getting provisions by sea from *Guzarat*. While this rabble lay before it, the citizens, under the direction of the *Europeans*, built sconces in convenient places, about half a mile from the walls, to protect the suburbs, which they effectually did, as they were mounted with cannon. In process of time, a high wall between each scone was drawn, by which means the whole suburbs are encompassed. All this inclosure is extremely populous, the inhabitants being computed at 200,000 souls, among which are several merchants of prodigious wealth (F).

THE trade of *Surat* is still very considerable, as appears from the customs and land-rents, amounting to 1,300,000 rupees, or 162,500*l*. In *Surat* are a variety of different religions. That by law established is the *Mohammedan*, of *Hali's* sect, the professors of which are called *Moors*. There is one particular sect called *Musey*, who believe both in the *Old Testament* and *Alkoran*, who pay an equal regard to the law of *Moses* and of *Mohammed*. Another sect whom they call *Molacks*, is pretty numerous, and stigmatized with the name of *Heretic* by all the other religions, on account of some detestable rites among them. On an annual festival, the time of celebration only known to themselves, after a great deal of mirth, men and women retire promiscuously into a dark apartment. The women take each a handkerchief, or some token by which they may again be known, before they adjourn to solemnize this rite. Here fathers, daughters, mothers, sons, brothers and sisters, and all without distinction, carefs on mats and carpets spread for the purpose; the women leave their handkerchiefs with persons whom accident has joined to them, and retire from the incestuous embrace. *Aurengzeb* made the solemnization of this festival a capital crime, yet was it never discontinued; and to this day it is practised among the *Molacks*.

OF all the religions in *Surat*, that of the *Banians* is the most numerous. They almost all are merchants, bankers, brokers, accomptants, collectors, or surveyors; few or none are bred to mechanical or mean employments, unless we except taylors and barbers. Those who embrace this religion have a variety of sub-distinctions, some reckoning about eighty-five different sects, where the chief articles of belief are the same, and the difference arising only from some ceremonies. The *Brakmans*, or *Bramanies*, are the priests of the greater part of these sects. Another set of priests there is that declaim against the polity of the former. They are called *Talapoins*, and recommend virtue and innocence as the

(E) Of this captain *Hamilton* relates a very striking instance, of a *Mohammedan* merchant he was acquainted with. This man, called *Abdel Gaffour*, drove a trade equal to the *English East India* company. Captain *Hamilton* has known him fit out in one year a fleet of twenty sail, from 300 to 800 tons burthen. None of those had a cargo worth less than 10,000*l*. and the greater num-

ber were valued at 25,000*l*. sterling. This was the stock he exported; what then must his returns have been? His wealth may be judged by this, that, at his death, his estate was divided among four grandsons. Each was wealthy to an extreme; and yet the *Mogul's* court had seized above a million sterling of his effects (1).

(1) *Hamilton's History of the East Indies*, vol. i. p. 149.

- a best guides to felicity. A third set called *Jougies* are in great esteem, though less followed than either of the others, on account of the many austerities and mortifications they practise. The *Jougies* condemn riches; they go almost naked, delighting in nastiness, and holy but beastly obscenity, with great shew of sanctity. Some of their austerities exceed belief to those who have not been eye-witnesses of them. Some stand for years on one foot, with their arms tied to the beam of a house or branch of a tree. By this their arms soon lose all motion and use, and often remain so for the remainder of their lives. Others will sit in the sunshine with their faces looking upwards, till they become incapable of altering the posture of their heads, their necks swelling to the breadth of their shoulders. Captain *Hamilton* relates, that he saw a woman in *Surat*, about thirty years of age, who had
- b made a vow to abstain from all food for three months^c. The governor, who was a zealous *Mohammedan*, ordered her to be confined in a dark prison, with no other nourishment than water. Before she had remained eighty days in those circumstances, captain *Hamilton*, and several *Europeans* with him, procured admittance to see her. They found her in health and spirits, but low, and her pulse weak. The keepers declared that she had no kind of sustenance but water, nor did she crave for any; and she herself told them that she had once before done the same kind of penance for sixty days. Certain it is, whatever credit we may give to particular relations, that some very extraordinary things are performed by those religious.

- c THE *Persees* are numerous in *Surat* and the adjacent country. They are a remnant of the antient *Persians*, who preferred banishment to changing their religion. About the seventh century, when the *Mohammedan* religion over-ran *Persia*, persecution prevailed, and 500 families were sent to sea in ships and boats, without compass or pilot. This miserable exiled crew, steering eastward, in the south-west monsoons, from *Jasques*, in twenty days fell in with the coast of *India*. As it was night, they were directed to the shore by a fire near the sea-side, by which the fleet steering, accidentally put into the river of *Narsaree*, seven leagues south of *Surat*. When they came on shore the charitable *Indians* flocked round them. Among the *Persians* there were some who spoke the *Indian* language; these related the melancholy tale, and the circumstances which had driven them in necessity upon the *Indian* coasts. Their story was heard with humanity, and they were generously invited
- d to settle about *Surat*, at least the place where this city was afterwards founded. The hospitable *Indians* gave them lands to cultivate, and seed to sow their grounds, upon the same conditions and tenure they enjoyed their own farms. They soon multiplied, and have since greatly increased, but without the smallest alteration in their religion. As a particular account of this sect will be found in its proper place in this history, it will be unnecessary to dwell upon it here.

- e ABOUT *Surat* the fields are all plain, the ground extremely fertile towards the country, but sandy and barren along the coast. Here they have good beef, mutton, and fowls, daily exposed in their markets, reasonably cheap. Beef with the bones is sold at three farthings a pound; without them, at a penny. Mutton is dearer, but still cheap in comparison of what this country affords; and their best fowls are sold at six pence and seven pence. Fish, wild fowl, and hare, are more than proportionably cheaper. The country affords abundance of wheat, pease, and beans, but no oats or barley. Here there is a species of legumen called *Dole*, which the natives mix with rice. These they boil together, and form a dish to which they give the name of *Kitcheree*, the common food of the country. They eat it with butter and salt-fish, and it is a pleasant nourishing diet, of which the great *Aurengzeb* was particularly fond. In short, no conveniency in life is wanting in this pleasant country and city.

- f THE *Mogul* has always a governor and garrison in a large fort adjoining to the town, and that commands the river. The *English*, *Dutch*, and *French*, have their factories here; but the *Moors*, *Banians*, *Armenians*, *Arabs*, and *Jews*, drive a much greater trade than the *Europeans*, although they chiefly use the shipping of the latter in long voyages. Both the *English* companies, before they were united, had houses in *Surat*, of which they are still in possession. The lower servants live in the old house, and the president and council in the new. Both the *English* and *Dutch* directors or agents make a good figure at *Surat*; this appearance of consequence and splendor being unavoidable in the eastern countries, where any degree of reputation must be kept up (F).

ALL

^c HAMILTON, vol. i. c. 14.

(F) Some years ago the order and œconomy of the store-keeper, and purser-marine formed the council. *English* factory was this. A president, accomptant, These had a secretary, who succeeded in council on a vacancy

ALL the *English* pay three and a half *per cent.* on merchandize, jewels, gold, and silver, they import or send abroad; whereas the *Dutch* pay but two and a half *per cent.* Here is no book of rates, as in *China*, every thing without distinction being charged *ad valorem*. The custom-house is the most scrupulous and strict in their searches and examinations of any in *India*. *Surat* may be looked upon as the repository of all the valuable rarities, and jewels and precious stones, of the coasts of *Africa*, *Malabar*, *Arabia*, *Persia*, and *Indostan*. The *Bazar* is continually replete with *Cambay* stones, as agates and cornelians, from a *pice*, or *corge*, to a *rupee* each. The streets on both sides are crowded with rich shops, resembling one of our richest towns. Their artists shew great genius in many branches, particularly in turning and working in ivory, a staple commodity among them, which they polish with infinite beauty and dexterity. Vast quantities of elephants teeth are yearly imported from the coasts of *Africa* and other parts; they are manufactured chiefly at *Surat*; and one would be amazed to think what a consumption of this elegant production there is within the *Mogul's* dominions.

THE current coins of *Surat* are *rupees* and *pice*; yet in accounts they reckon by *rupees*, *anas*, and *pice*: thus, sixteen *pice* make an *ana*, four *anas* one *rupee*. *Venetians* and *gubbers* have no fixed standard of value. As to the weights used at *Surat*, they are different in buying and selling, and adapted to different sorts of goods. *Bezoar* is sold by the *tola*, almost eight penny-weights troy, which is divided into thirty-two *vols*: diamond bolt they sell by the *ruttee*, of seventeen grains and a half: musk by the *seer*: and bulky commodities by the *maund*, and *Candy Beroch*. They commonly reckon forty *seer* to a *maund*, and twenty *maund* to a *Candy Beroch*. Pepper, assa foetida, dry ginger, benjamin, tyncal, and saltpetre, have forty-two *seer* to the *maund*; some goods rise higher, having forty-four *seer* to the *maund*; so that the criterion of weight is uncertain. On this account it is common, in all bargains, to specify the number of *seers* to be allowed in a *maund*; and strangers are often imposed on, from their ignorance of this. We shall dismiss this account, with observing, that *Surat* is still a flourishing, populous, industrious, and rich town, although the *English* trade thither has greatly fallen off of late years, and since the presidency has been removed to *Fort St. George* ^d (G).

WE

^d LOCKYER, c. 2. HAMILTON in the table of coins at the end of vol. ii.

vacancy. Besides, the company had factors, writers, and apprentices, who served three or five years according to agreement, after which they were gradually promoted. They had their diet and lodging in the factory, as well as salaries, with a liberty of trading to the different ports of *India*. Those of any credit, who were in want of money, borrowed it of the *Banians* at 25 *per cent.* bottomry, which they often converted to a profit of *cent. per cent.* The company had a chaplain, who preached once and read prayers thrice on *Sundays*, and twice on week-days; took place after the second in council, was treated with great respect, having a fine horse caparisoned, or a coach and handsome retinue always to attend him. The president's salary was 300 *l. per ann.* that of the second in council 120 *l.* the chaplains 100 *l.* each of the senior factors 40 *l.* the junior 15 *l.* the writers 7 *l. per ann.* and the lower servants in proportion.

The factory was rented of the *Mogul* at 60 *l. per ann.* a price not exorbitant, considering it afforded convenient apartments for 40 persons, besides handsome lodgings for the president, having, withal, cellars, a large warehouse, a *Tanque*, and a *Hummur*. Formerly the president had the superintendency of all the company's settlements on the west side of *India*, and towards the north. The table where the whole factory eat was splendidly adorned, and sumptuously provided. He kept three cooks; and all the dainties the country supplied, with the best of liquors. Every thing was served up in silver, and still more magnificence appeared on *Sunday*. After dinner the president frequently invited the rest of the factory to a small descent in the country. Thither he was carried in his *Palanquin* on the shoulders of *Pæons*, with two union flags

before him, and some fine *Persian* or *Arabian* led horses, richly accoutred. The saddles of these, as well as of the horses the factors rode, were of embroidered velvet; the bits of the bridles, stirrups, &c. of massive silver; the captain of the *Pæons*, at the head of 50 men armed, always preceding. The council followed in open coaches, drawn, after the manner of the country, by fine white oxen, and the rest of the company, some in chaises, and some on horseback (1).

(G) The *English*, as well as the *French* and *Dutch* factories, sustain numberless inconveniencies from being so much in the power of the *Moors*. If any shipping belonging to the latter fall into the hands of pirates, they expect to be reimbursed by the *Europeans*, and when this is refused they sometimes block up the factories with a body of troops. The *Dutch*, however, have found means to procure satisfaction, by blocking up the *Mogul's* ports with their fleets. An instance of the insults sometimes put upon *Europeans* happened, *an. 1691*. This year *Abdel Goffeur*, of whom we have made mention, complained that a ship of his had been taken by *Halmen*, by which is meant *Europeans*. Satisfaction was expected of the *English*, *Dutch*, and *French*, and their factories were surrounded with a strong body of horse and foot. Upon this the *English* president represented to the governor, that no credit was to be given to *Abdel Goffeur*, having formerly suborned several sailors to depose that one of his ships was taken, although they afterwards acknowledged that they had been bribed to give a false testimony. But that, should the charge appear to be true, it was as unreasonable that they should be obliged to stand to all damages committed at sea, as that the *Mogul* should indemnify all robberies on shore. The pirates at sea were

(1) Lockyer, Salmon, Hamilton, *ibid.*

- a WE next come to the island of *Bombay*, the property of the *East India* company, in the latitude of nineteen degrees north, about forty miles north of *Dunda Dejapore*. The *Portuguese*, who possessed themselves of it soon after their arrival in *India*, gave it the name of *Boon Bay*, from the excellency of its harbour, which, it is affirmed, will conveniently hold a thousand ships at anchor. We have already related many particulars of this famous island. To these we shall only add, that it is about seven miles in length, and twenty in circumference. The principal town is near a mile long, but the houses are mean, low, and paltry, a few only excepted, belonging to the *Portuguese*. The fort, which stands at a little distance from the town, we have already described. The soil is sterile, and not capable of improvement; nor has the island any good water upon it. The best is what
- b they preserve in cisterns after rain, that which their wells furnish having a brackish disagreeable taste. Those who can afford to keep servants may be tolerably supplied from a spring, some miles distant from town. What the estates on the island chiefly consist in, are fine groves of cocoa-nut trees. Their gardens also produce mangoes, jacks, and other *Indian* fruits. They make salt in large quantities, by letting the sea into the pits, where the sun evaporates the watry part, while the saline is left behind.

As to the air and climate they are rather unhealthy, although the natives, and persons seasoned to the country, live easily to a good old age. Most persons on their arrival are seized with fevers, fluxes, scrophulous disorders, or a disease they call the *Barbiers*, which wholly enervates the body, and reduces it to a total state of inactivity, and a deprivation

c of all the loco-motive faculties. After rains a multitude of venomous creatures appear, which grow to an extraordinary size. Their spiders are as large as a walnut, and their toads almost equal a duck in magnitude.

THE inhabitants are a mixture of several nations, *English*, *Portuguese*, and *Indians*, amounting in all to near 60,000, although some diminish this number by 10,000. Formerly the president of *Bombay* appeared with the state, magnificence, and pomp of a crowned head. He was attended, when he went abroad, with troops of *Mocrs* and *Bandarins*, colours flying, drums beating, and music playing. After the presidency was removed, the governor's splendor diminished; and, indeed, this vanity is kept up among

d no *European* nations to its former height, unless we except the *Dutch* government of *Batavia*. About two leagues from the fort is a small island belonging to the company, called *Butcher's Island*, of no other use besides grazing a few cattle, and hauling ships for careening on shore. At a league's distance from hence is another larger island, called *Elephants Island*, from the image of that animal carved out in a large black stone, seven foot high. As this little island is still the property of the *Portuguese*, we shall defer an account of it to its proper place.

THE company has a small settlement at *Baroche*, or *Baroach*, a town situated on a hill, Baroach. fifty miles north of *Surat*. This place was formerly walled round, and esteemed of considerable strength; but the fortifications have been long in ruins. However it has still a tolerable trade, carried on chiefly by the *English* and *Dutch* agents residing here. Of late, we

e are told, the *English* have withdrawn theirs.

THE next *English* settlement we meet with is *Corwar*, more considerable than the former, Corwar. though but a small fort. It stands in the latitude of fifteen degrees north, seven leagues to the south of *Cabo de Rama*, or, as the *English* call it, *Cape Ramus*. It has the advantage of a good harbour, on the south side of a bay, and a river capable of receiving ships of three hundred tons burden. It is one of the pleasantest and most healthful settlements the company hath on the *Malabar* coast. The country round is fertile and beautiful; in general, indeed, it is mountainous and woody; but the vallies abound with corn and pepper, and the woods with game of various kinds. Here are tigers, wolves, wild hogs, monkies, deer, elks, and wild cattle of a prodigious size. Mr. *Hamilton* saw a

neither authorized, within the power, or in the least known to the company.

Notwithstanding this equitable remonstrance, still the factories were closely invested, nor were they permitted free egress and regress till it was known that the *Danes* had taken *Gaffour's* ship, by way of reprisal for some injury they had received, the troops continuing four months to block up the *European* houses. On the year following the same *Abdel Gaffour*, to make up his losses, exhibited another complaint of a ship's being taken and plundered at sea. He procured the *English* factors to be confined, the suspicion falling

chiefly upon them. Happily, however, the fraud was discovered, it happening that part of the money the *Moor* pretended to have lost was brought by himself, clandestinely, on shore, and lodged in a garden by the river side. This brought infamy on the accuser, and procured liberty to the *English*, but still did not remove the inconvenience of being subjected again to the same usage. Besides, that however palpably the deceit of *Gaffour* appeared, yet great presents must be made to the viceroy, for his goodness in setting the innocent free; for here justice, truth, and every other virtue, are bought and sold (7).

(7) *Hamilton*, vol. i. *Salmon*, vol. i. p. 244.

bull killed, whose quarters, taken together, weighed a ton, besides the head, hide, and a garbage (H). A great variety of beautiful birds, as wild peacocks, pheasants, &c. are found in the woods: nor is the sea less bountiful in all manner of fish.

THE company has here a chief and council to manage the trade, principally valuable on account of the fine pepper, which is the natural product of the country. The factory is fortified with two bastions, each mounting nine or ten cannon, and the garrison consisting of thirty *Topasses*, besides *English*. The president is held in great esteem by the natives. When he hunts, all the people of condition in the vicinage attend him. They bring their vassals and servants with them, armed with fire arms, lances, and other weapons, and preceded by a number of warlike instruments, as drums, hautboys, and trumpets. When the *Mogul's* general had conquered this province, and taken possession of it for *Aurengzeb*, he burnt the *English* house, at the time the factory were at dinner with him. This obliged the company to build the fort they now possess. The architect or engineer has shewn no great judgment in the choice of the situation, which is at least a league from the sea; an error that appears strongly from the accident we have related to have happened A. 1718.

BEFORE *Aurengzeb* conquered *Visapore*, the country produced the finest *Betteelas*, or muslins, in *India*. At *Corwar* the company had a great trade, employing fifty thousand people in that branch of manufacture. When the *Mogul's* licentious army entered the province, all manner of industry was ruined. They plundered the inhabitants, cut the company's cloth from the looms, and used the weavers so rudely, that they forsook the country. Since that time trade has never recovered itself, nor risen to that flourishing height at which it then was. Their coins and weights differ in nothing from those in use at *Surat* ^c.

Tellicherry.

WE proceed to *Tellicherry*, a small settlement belonging to the *India* company on the *Malabar* coast. It stands on the frontiers of *Adda Rajah's* dominions, and is fortified with stone walls and cannon, the company keeping a constant garrison of thirty or forty foldiers in it. The place where the factory is situated was formerly possessed by the *French*. They left the mud walls of a fort they had built standing, which the factors lived in for some time after; but some years ago the company was at considerable pains and charges in building. We are at a loss to conjecture why they should be at any expence in fortifying a place which affords no protection to the shipping, or even to their warehouse. Behind the fort is the town, surrounded by a stone wall, which is indeed necessary, as the company were for a while at a kind of perpetual war with the *Nayer*. Their quarrel had its rise in the year 1703; but if it ever came to blows, the bloodshed was so little, as to deserve no notice here. The *Nayer* demands a kind of duty from every ship that unloads in his ports; but this is often paid to the *English* chief, which renews the dispute between him and the *Nayers*. The established religion of the town and country round is paganism; but there are a few black Christians, that live under the protection of the factory. The coins are five *finams* and a half to a *rupee*, three *rupees* to a *chequeen*, or *maggerbee*. *Maggerbees*, *gubbers*, and *venetians*, are all of a weight; the former, however, is of a paler, less pure gold, not above three-fourths of the fineness of the others. Their weights are twenty *pollams* to a *maund*, and twenty *maund* to a *candy*. The *maund* is about twenty-eight pounds and a half. Of this, as of the other *Malabar* settlements, the chief trade consists in pepper and cardamoms ^f.

Anjengo.

AT *Anjengo* the company have another small fort and settlement, in latitude eight degrees thirty minutes north. It is the most southerly possession they have upon the *Malabar* coast. The fort is regular, having two bastions, joined by a curtain, all of them mounted with cannon, as is likewise a platform towards the sea. On the land side it is secured by a deep and broad river, that, after winding round the greatest part of the fort, empties itself into the sea, a little to the south. This river would be useful, if the bar was not too shallow for ships of burden. A chief and three counsellors reside here, who, with a surgeon and a few servants, compose the whole factory. The gover-

^c HAMILTON, vol. i. c. 23, and the table above. LOCKYER, c. 9. as above.

^f See the cited author,

(H) So famous is the *Sandab Rajah's* country for hunting, that, in the year 1681, two gentlemen, Mr. *Limbourg* and a son of lord *Goring*, made a voyage to *Visapore* to enjoy that diversion in its utmost perfection.

They spent three years at *Corwar*, hunted perpetually, lived with great splendor, and at last set sail for *England*, Mr. *Goring* dying on the voyage (8).

(8) Captain Hamilton's account of the East Indies, vol. i. p. 263.

a nor's lodgings are within the walls of the fort: they are thatched with palm-leaves and mats; in other respects they are neat, and even elegant. The chief intention of this settlement is for managing the pepper trade, which is here of a less grain, and not so good as more to the north towards *Corwar*. Some attribute the fault to the manner of gathering it, before it is ripe; others blame the soil and climate. Here *rupees* are the current money. They likewise have *venetians*, *gubbers*, *maggerbees*, and *pagodas*. Their weights resemble those of *Tellicherry* and *Corwar* ^g.

We come now to speak of *Fort St. David*, a settlement of more consequence to the Fort St. David company than any we have yet mentioned, *Bombay* excepted. It stands in the latitude of ^{vid.} eleven degrees forty minutes north. Formerly it had the name of *Tegapatán*, which it still retains in some of the best modern maps, particularly in the *Atlas universelle, par M. Roberts*. A. 1656 a *Maharatta* prince sold it to Mr. *Elisha Yale*, for the use and benefit of the *East India* company. The price, with its territories, was 90,000 *pagodas*, a sum which the company has had no reason to complain of. Its territory extends about eight miles along the sea-coast, and four miles up the country, which is pleasant, healthful, and fertile, watered with a variety of rivers, that add to the strength and beauty of the fort, and fertility of the adjacent soil. The fort is regular, mounted with cannon, and always well provided and garrisoned, which is the more necessary, on account of its vicinity to *Pondicherry*. Besides, ever since the time that *Aurengzeb* conquered *Visapore* and *Golkonda*, numbers of malecontents have kept possession of the mountains, who frequently made dangerous incursions into the open country. Here they ravage, plunder, and destroy every thing in their way; nor can they be repelled, or at least suppressed, by the *Mogul's* forces (I). When the *English* purchased *Fort St. David*, the *Dutch* had a little factory there, which to this day they retain. They find that security and peace under the *English* at *Fort St. David* and *Madrafs*, which they denied them at *Poleroon* and *Amboyna*. It is true, the *Dutch* can possess no open trade here, without paying a certain duty to the *English* company. This colony produces good long cloths in large quantities. They have either brown, white, blue, or other colours; also sallampores, morees, dimities, gingham, succatoons. In short, this colony is the prop of *Fort St. George*, since without it it would make but a poor figure in commerce, notwithstanding its vicinity to the diamond mines of *Golkonda*. As to the coins, weights, manners of the natives, religion, produce, and climate, they differ but little from those we have already described, and more nearly resemble those of *Madrafs*, upon which we are now going to enter ^h.

MADRASS, or *Fort St. George*, as it is usually called, from the company's fort there, is situated in thirteen degrees thirty minutes north latitude, eighty degrees longitude, tho' some geographers erroneously make it ninety-five. The natives give it the appellation of *Chinapatam*. It is distant about three miles to the north of *St. Thomas*, an antient place, famous for a number of legends and fabulous tales (K). As it is a settlement of the utmost consequence

Madrafs, the head settlement, its description

to

^g SALMON, vol. i. p. 243.

^h HAMILTON's history of the East Indies, vol. i. c. 27.

(I) In the year 1658, before *Fort St. David* was fortified in the manner it now is, they were near becoming masters of the settlement by stratagem and surprize. As the contrivance was a little extraordinary, the reader may be pleased with a relation of it. They pretended to Mr. *Frazer*, then governor, that they were sent from the viceroy of *Visapore* to take charge of the revenue collected at *Porto Novo*, which they were carrying to the treasury at *Visapore*. As they apprehended danger from the *Maharatta* freebooters, they requested leave to lodge it for a few days in *Fort St. David*, which they obtained. Accordingly they brought into the fort ten or twelve oxen loaded with stores instead of treasure, each ox having two attendants, and the whole escorted by a body of 200 men. The governor admitted the treasure, but had the circumspection to oblige the guard to remain in a grove without the gate for the night. Thus disappointed, they attempted to enter by force, but were beat back, and then the conspiracy was detected (9).

(K) *St. Thomas*, or *Meliapour*, was once the most considerable city on the coast of *Coromandel*. When the *Portuguese* settled in it, it was almost in ruins, and totally abandoned by the inhabitants. They built it again, giving it the name of *St. Thomas*, whom tradition affirms to have suffered martyrdom here. His sepulchre is said to be on a hill at a small distance

from the town, where the *Portuguese* finding some human bones, immediately enshrined them. To this day the black *Portuguese* hold this place in veneration. The cave in which the saint was supposed to have hid himself, till the storm of pagan persecution was blown over, the *Portuguese* covered with a church. Another church they built on the hill where he was killed; and here they keep the lance which put him to death; a relic which is held in pious detestation.

Few people, perhaps, will subscribe to all that tradition relates of this holy man, altho' it is beyond doubt there were Christians in this part of *India* as far back as the time of *Alfred*, as we have already mentioned. The *Portuguese*, on their arrival, found Christians in the place, who held the memory of *St. Thomas* in great esteem, but refused to submit to the pope's supremacy. The missionaries have since converted them, yet still they keep up some distinctions, and are not entirely united with the *Roman catholic* religion. *St. Thomas's* was erected into a bishopric by the *Portuguese*, having several villages under its jurisdiction. The churches, monasteries, and private buildings were magnificent beyond credit, for that part of the world. It was regularly fortified, and became a flourishing, rich, and populous town; but they were beat out of it by the *Moors*.

In the year 1666, the *French* came before it with a

(9) Hamilton, vol. i.

to the *India* company, on account of its strength, wealth, and great yearly returns in calicoes and muslins, a minute description of it may be agreeable to the reader. Within these few years, *Madras* has received great improvements, equally to the honour and advantage of the company, and satisfaction of their council and governor there.

It is seated in a plain sandy situation, so close to the sea, that its walls have sometimes been endangered by the beating of prodigious surges; for here the ocean rolls higher than on any other part of the *Coromandel* coast. Behind it is defended by a salt water river, which adds to its security, but takes away from its conveniency, by obstructing all fresh water springs. This obliges the inhabitants to send above a mile for water that is drinkable. In the rainy season the sea threatens destruction on one side, while the river is no less terrifying on the other, from the apprehension of an inundation. The sun, from *April* to *September*, is scorching hot; and without the sea breezes to moisten and cool the air the place would not be habitable. This may be better understood from a more minute account of its situation on the globe. It is near 4,800 miles to the eastward of *London*, so that the sun visits them six hours earlier than it does us, and sets about our dinner time. There is so little difference in the length of the days, that it is always reckoned to be six o'clock at sun-rising and setting.

THE reason for this bad choice of a settlement is variously related. The person intrusted by the company to build a fort on the *Coromandel* coast, in the reign of *Charles II.* pitched upon this spot as the most likely to ruin the *Portuguese* trade at *St. Thomas*. Others again assert, that Sir *William Langborne*, for he was the founder, had reasons less politic in view, having no other motive than its vicinity to a mistress he had at the *Portuguese* colony. Be that as it will, certain it is, he could not have chosen a place less commodious for a settlement, and the intentions of his employers. About the city the soil is so poor, dry, and sandy, that it produces not a blade of grass spontaneously, nor corn with culture. The roots, herbage, and other vegetables, consumed in the place, are brought from a considerable distance (L). In short, nothing can be more unhappy than the aspect, more disagreeable or less commodious than the situation; yet, under all these disadvantages, it is the company's head settlement, and, next to *Batavia*, the richest *European* port in *India*.

THE fort lies N. N. E. and S. S. W. in the middle of the *White* or *English Town*. It is a regular square, about 100 yards on each side, built with a stone they call iron-stone, honey-combed externally, and of the colour of iron. It has no moat; and the walls are arched and hollow within, which greatly diminishes their strength. It has two gates, looking east and west; the latter, towards the land, is large, and always defended by two files of musqueteers, on the right and left: the former, to the sea, is small, and guarded only by one file of soldiers. At night the keys are brought to the governor, or, in his absence, to the next in council. In the centre stands the governor's house, in which also are apartments for the company's servants. It is a handsome, lofty, square stone building; the first rooms are ascended by ten or twelve steps, from which another pair of stairs leads to the council-chamber and the governor's lodgings.

THE *White Town*, where the *Europeans* live, is about a quarter of a mile in length, and near half as much in breadth. Captain *Hamilton* calls it 400 paces long, and 150 broad. To the northward of the fort are three decent strait streets, and an equal number to the south. The houses are flat-roofed, built with brick, and covered with a plaister made of sea-shells, which no rain can penetrate. The walls are thick, and rooms lofty; but few of them exceed one floor, though some are raised a floor above ground. What seems peculiar to this country is, that the upper floors are paved with brick, instead of being laid with boards. From the dimensions of the town it may be concluded, that the number of houses is not infinite, any more than the gardens and courts large. Indeed, the former are without the town, and as

fleet of ten sail, and took it, the king of *Golkonda* being then sovereign of the city and district round it. The *Dutch* who were jealous of their getting a footing in *India*, about four years after, blocked the *French* up with a fleet of fifteen ships, while the king of *Golkonda*, with an army, besieged it by land. The town holding out beyond expectation, the *Dutch* admiral landed 700 seamen, who joining the *Moors*, took it. Upon this the fortifications were destroyed, and the place quite dismantled, in which manner it now remains. The *Europeans* do not think it worth while to have factories here, though it is still inhabited by the descendants of the *Portuguese*, *Moors*, *Jenats*, and a mixture of other nations, and is a bishop's see. The people in general are poor, the whole trade being en-

grossed by *Madras*, whither many of the *Portuguese* have likewise removed (10).

(L) One cannot help being surprized, that Sir *W. Langborne* did not make choice of *Cabelén*, about six leagues to the south-ward, where the ground is fertile, the water good, with the conveniency of a point of rocks to facilitate boats to land; whereas now they are forced to use *Mafela's*, or ill-shaped flat-bottom boats, sewed with *Coyr* twine, on account of the swelling of the sea, and surges that roll upon the shore. *Pelicat*, where the *Dutch* have settled, would also have been a good situation; here is a fine soil, navigable river, good water, and the surges broke by banks of sand that run three leagues into the sea.

(10) *Hamilton*, vol. i. p. 360. *Lockyer*, c. i. *Salmon*, vol. i. p. 231.

- a to the latter they are of little use, the houses for the most part standing close to the street. Opposite to the west gate of the fort is a barrack, where the company's soldiers lodge when off guard: and adjoining to it is a very convenient hospital, whither they are conveyed and carefully attended when sick. At the other end of the barrack is a mint, where the company coin gold and silver. North of the fort stands the *Portuguese* church; and to the south the *English* church, a pretty neat building: it has an handsome altar-piece, a gallery of fine carved wood, and an organ. It is paved with white and black marble, the seats regular and convenient, and the whole light, elegant, and airy. What diminishes its beauty, but adds to its conveniency, is that the windows are not glazed, which would make it insupportably hot. At present the cooling breezes having a thorough passage, make it so cool, that persons may go through their devotions with tolerable ease. A town-house, where the magistrates assemble, and a court of justice is held, concludes the public buildings. The whole is encompassed with a strong wall, of the same stone with which the fort is built. It is defended by batteries, bastions, half-moons, and flankers; the whole mounted with near 200 pieces of cannon and three mortars, including the guns on the out-works, besides field pieces. Round it, on the west side, runs the river, by which alone, and a battery, it is defended here, having now all where the river is perfectly deep (*). South of the *White Town* is a little suburb, the residence of the black watermen, by whom it is wholly possessed. It consists of little, low, thatched cottages, hardly deserving the name of buildings. Beyond this is an out-guard of blacks, to give notice of any danger. In short, it cannot well be attacked, except on the south or north sides; for towards the sea the swell and surges of that element are a perfect security.

- c As to the *Black Town*, called *Madrafs*, and sometimes *Cbinapatam*, it is inhabited by *Jen-toos*, *Mohammedans*, and *Indian* Christians, as *Armenians* and *Portuguese*; nor is it without a number of *Jews*. It was walled in to the land side, under the government of Mr. *Pitt*. Apprehending that the *Mogul's* general in *Golkonda* might one day visit them, he persuaded the inhabitants to secure themselves and their property by a small contribution towards fortifying the place. The wall is of brick, seventeen foot thick, with bastions at proper distances, after the modern rules of fortification. It has also a river on the west, and the sea on the east. To the north a canal is cut from the river to the sea, which serves for a moat on that side. This town is about a mile and a half in circumference, and might be reckoned a place of strength, if the garrison were always proportioned. Indeed, the accident that befel the company in the last *French* war, has made them more attentive to its security. The fortifications have received great improvements; a body of his majesty's troops, as well as of the company's soldiers, are generally in garrison, at least in time of war; nor are stores, provisions, or any other necessaries, wanting for its defence and security. In the *Black Town* the streets are wide, with trees planted in some of them, which give great beauty and shelter from the piercing beams of the sun. Some of the houses are of brick; the rest miserable cottages, without a window to be seen on the outsides, or furniture within, except the mats and carpets they lie on. They are built with clay, and thatched; and of the same materials are the habitations of the *Indians* of better condition, who generally preserve the same form, with a square hole at the top to admit the light. Before their doors are little shades or porches, further than which they seldom invite strangers. Here they sit morning and evening to receive their friends, and transact business.

- f THE town is, in general, very populous; one of those little mean cottages containing seven, eight, or ten in a family: yet with all this appearance of poverty few places abound more in wealth, ready specie no where circulating with greater rapidity. The *Bazar*, or market-place, is every day crowded, and exchanges of property of immense value made, which they transfer with the same facility with which it is done on the *Exchange* of *London*. Upon the whole, the inhabitants of this town have nothing poor, mean, or unclean, but the outside aspect: all within is neat, decent, and, if the furniture is not rich, at least the landlord is generally so. In the *Black Town* stands an *Armenian* church, with several little *Pagodas*, or *Indian* temples, to which belong a number of priests, and female choristers. Those girls are early devoted to religion, in which they spend one part of their time, while the remainder is given up to their gallants of any nation, complexion, or religion. They constitute part of the equipage of a great man, upon all public occasions, and when he proposes to make a figure. Formerly the governor of *Fort St. George* used to be attended with fifty of them, as well as by the country music, when he went abroad; but the attendance of the ladies has been of late years dispensed with.

- g BESIDES the town of *Madrafs*, the company have a property in several of the neighbouring villages, from which they draw a considerable annual revenue; the whole having been purchased of the king of *Golkonda*, before the *Mogul* became sovereign of his country. They have also a house and garden at *St. Thomas's Mount*. Beyond the *Black Town* are gardens that extend

(*) What improvements it may have received since it fell into the hands of the *French* in the late war we have no circumstantial intelligence: that some additions have been made is certain.

for half a mile, planted with cocoa-nuts, guavas, mangoes, oranges, and the most delicious fruits, which may be bought for a trifle, together with the liberty of walking in the gardens. a

To begin with the privileges of the governor: he has, in the first place, the filling up of vacancies in the *Romish* church in the *White Town*, and may, as Mr. *Hamilton* observes, be called the Pope's legate *a latere* in spiritualities. In conjunction with the council, he is supreme director of the company's affairs. They dispose of all places of trust and profit; inflict punishments on all *Europeans* in the service, short of life and member; and, indeed, their power may be said to extend even to life, since they can commit to the *cock-room*, a no less sure, though more slow death than a halter. A court of mayor and aldermen sit twice a week in the town-hall, where the *Asiatic* inhabitants sue for debts, and implead one another. Suits among *Europeans* are generally determined by a jury, in the judge advocate's court, to which belong attornies, sergeants, and bailiffs. There are also justices of the peace, who hold their sessions periodically in the *Black Town*, and decide criminal matters among the *Indian* inhabitants. They do not proceed to punishment in capital cases; yet there have been instances where they have ordered a criminal's ears to be cut off on the pillory. A court of admiralty there likewise is for maritime affairs; and the governor sometimes permits the head officers to hold courts martial for the trial of offenders. Persons guilty of capital offences are confined, as we observed, to the *cock-room*, dark as a dungeon, and hot as a bagnio, where their only nourishment is rice and water. They are supposed to be sent to *Europe* to take their trials; but a very little of this confinement is sufficient to render that trouble unnecessary. b

BUT what constitutes the chief power of the governor is, the dispensing privilege he assumes of annulling the decision of the court of aldermen, and even that of the judge advocate. As the town is a corporation by charter, the mayor and aldermen are chosen by the free burghers; but the governor, it is imagined, generally determines their choice. Altho' it has laws and ordinances of its own, a court in form, in which the mayor and aldermen sit in their gowns, with their maces before them; yet a few pagodas well placed, or a message from the governor, turns the scale of justice. In piracy, by an act of *George I.* the company can delegate a power over life and death to the governor and council: this is frequently attended with unhappy consequences, since other trespasses are often strained into piracy. It gives the governor an undue influence over private traders, and too many opportunities of venting his spleen and resentment, arising from interest, prejudice, and personal views. In short, the government, civil and military, of the fort and both towns, is vested first in the governor, then in the council, and by them parcelled out into the inferior courts, over which they preserve their pristine influence, power, and authority. c

THE soldiers are, for the most part, hardly used: scarce a day passes but some of them are punished by some means. Tying them to a post, and whipping them, is the punishment most in use. This makes them dislike and hate the government they should defend. Servile punishments of this nature have been found by experience to enervate the spirit, and sink the courage, of a soldier. Their being cooped up like slaves, and never permitted to go abroad, fits them, indeed, for any-thing, however servile, and renders this punishment somewhat necessary. The inconveniencies of this severity of discipline cannot be set in a stronger light, than they appeared at the last siege of *Madras*. When an enemy was without the walls, and the soldiers found themselves necessary to the protection of the place, then they set order, government, and discipline at defiance, breaking out into the most unseasonable and extravagant licentiousness. Another hardship the soldiers justly complain of: it is, that, though they have served forty years, they shall not be released. How widely does this differ from the *Roman* regulations! If they are hardy enough to petition for their discharge, a dungeon will probably be their portion. d

THE governor is not only president of *Fort St. George*, but of all the other settlements on the *Malabar* and *Coromandel* coasts, as far as the island of *Sumatra*; for the governors at *Marlborough Fort*, &c. are, in fact, but deputies, who receive their instructions from him. Some new regulations in this particular have been made, we are informed, in respect to *Calcutta*, and the settlements about the *Ganges*. The governor is also captain of the first company of soldiers, the next in council of the second. Till lately, those who bore the name of captains were, in fact, but lieutenants, and had pay as such: this the company have been forced to alter, as no man of any degree of merit would enter into their service. However, for some time, they denied the captains the advantage of paying their companies; but this likewise they have been forced to give up; so that now the pay and perquisites of a company, in time of peace, amount to 700*l.* *per annum* (M). e

ALTHOUGH

(M) A lieutenant's pay is 14 pagodas, about 6*l.* 6*s.* and a common soldier's 1*l.* 2*s.* 9*d.* *per* month. Upon more or less, according to the rate of the pagoda, *per* this a private man lives well, provisions being exceedingly cheap. He always appears in fine clean linen, by reason of the great abundance of callico manufacture.

a ALTHOUGH the governor's salary is but small, not exceeding 300*l. per annum*, yet trade and perquisites make it an extreme lucrative employment. When he goes abroad, he has the respect paid to him of a sovereign prince. The guards are drawn out, the drums beat as he passes, and fifty or sixty blacks run before him. His *palanquin* is also escorted by a body of soldiers, armed with blunderbusses; a numerous train of servants follows; and notice of his march is given by the country music, and the harsh dissonance of their trumpets. But the greatest piece of luxury is his being fanned by persons whose sole business it is to attend him for that purpose, on his visits and excursions. Much of this pomp is now laid aside; and the governor of *Fort St. George* was ever infinitely short of the pomp seen at *Batavia*.

b THE council is composed of the six senior *European* merchants, who have salaries from 100 to 40*l. per ann.* according to their seniority. Every member has a respect shewn him proportioned to his seat in council, and all of them are greatly superior in dignity to any other inhabitant. They are summoned twice or thrice in a week, according to the urgency of affairs, or the governor's pleasure. All orders, general letters, and weekly accounts, as warehouses, sea-gate, store-keepers, &c. are examined, passed, and signed by them, or the secretary by their order.

c THERE are also two senior merchants, who have 40*l.* a year each, and two junior merchants with salaries of 30*l. per ann.* five factors at 15*l. per ann.* ten writers at 5*l. per ann.* each. These dine at the company's table, and have lodgings provided for them; succeed in course to employments and trade if they can raise a capital; yet withal no persons in the universe work harder for bread. The company allow two chaplains of the fort 100*l. per ann.* each, and a house. They are not permitted to trade publicly, yet few or none return without large fortunes. The surgeon of the fort has 40*l. per ann.* salary, but innumerable ways besides of replenishing his pockets. The judge advocate's salary is 100*l.* with which, and other emoluments, he lives with the affluence of a lord chief justice in *England*. The company have also two mint officers, called Assay Masters, to whom they allow salaries of 120*l. per ann.* each. Here they coin their bullion from *Europe* and elsewhere, into rupees, which brings a considerable profit. They also coin pagodas; and the current money of the town and country is from the company's mint (N). The rupee is stamped with *Persian* characters, with the *Mogul's* name, year of his reign, and some of his titles.

d CUSTOM on goods imported and exported, is, perhaps, one of the most considerable branches of the company's revenue. They have 5 *per cent.* on all goods brought by sea, with 3, 6, or 12 finams fee, according to the amount of the import. These fees are divided among the custom officer, the head searcher, and receiver. Run goods are fined at the discretion of the custom officer. We have heard this revenue computed at 50,000 pagodas *per ann.* All goods brought in at the west gate, or country commodities, pay 2 $\frac{1}{2}$ *per cent.* and those very goods again exported pay 2 $\frac{1}{2}$ more at the east or sea-gate. These goods, however, paying the full duty here, are exempted at all the company's other ports in *India*. The revenue arising from land goods, we have heard from good authority called 15,000 pagodas yearly. Another branch of the company's revenue arises from anchorage duty on boats, which are e rated according to their burdens. *Dutch* ships are exempted from this duty; but for what reason we could never yet learn. Vessels under 100 tons pay from 18 finams to 5 pagodas; from 100 tons and upwards from 5 to 9 pagodas. Country ships and boats pay the same price for passes as they do for anchorage, which is a perquisite of the secretary; tho' we believe he now receives but one-third, the rest going into the company's coffers.

THE company have besides a number of other little revenues, such as the rents of *New Town*, *Egmore*, *Old Garden*, *Scavenger*, *Fishing Farm*, *Wine Licence*, *City Quit-rents*, all which they farm out for considerable profits. The duties arising from tobacco and betel are still larger. This and the arrack farm they let to the black merchants at above 20,000 pagodas

tures. He has his boy to wait on him; for the *Indians* are glad to have their children attend the *English* to learn the language (11).

(N) It must be observed, that here, as in most of the Eastern settlements, the price of gold rises and falls, according to the plenty or scarcity of silver. Thus the pagoda rises from 7*s.* 10*d.* to 9*s.* in value. This coin is of gold, about 8 $\frac{5}{8}$ matts, or 86 $\frac{1}{4}$ touch, or waters fine. It weighs 2 penny-weight, 4 gr. 17 $\frac{1}{2}$ mt. Other pagodas there are, such as *Allumgeer*, *Nagapattam*, *Policot*, &c. but they are all $\frac{1}{2}$ *per cent.* worse than the *Madras* pagoda. The *Allumgeer* indeed is the scarcest; but as it wants weight, the other is preferred. As to the finams, they are not coined by the company; 36 are current to a pagoda; but in the Bazar 36 $\frac{1}{2}$ are allowed, and often more. They are dollar matt, or fineness. The rupees coined in the com-

pany's mint are 3 or 4 *per cent.* better than others; and this is allowed in all payments, being sold at 326, when mixed rupees are 338 *per* 100 pagodas. At the same time, dollars are 15, 15 $\frac{1}{2}$ *per* 10 pagodas. The *Madras* rupee P. z. 7 dwt. 22 gr. 13 mt. $\frac{3}{8}$ $\frac{1}{4}$ standard is 1 rupee. Mixed rupees are most common; but neither sort used in payment at a fixed rate, which varies with the quantity of silver.

Their weights are, 10 pagodas 1 pollam; 40 pollam 1 viss, of 3 $\frac{1}{2}$ lb. *English*. 8 viss 1 maund; and 20 maund 1 candy of 500 lb. Liquid measure is as follows; 1 measure is 1 $\frac{1}{2}$ pint; 8 measures 1 mercial; 400 mercials 1 garse. As to dry measure, or rather long measure, 1 coved is 18 $\frac{1}{2}$ inches. As to the method of reckoning by aggregate numbers, it is confined. We know of no other than a corge, which is twenty, in the same manner as a score expresses that number in *England*.

(11) *Private information.*

yearly. As the tobacco, betel, and *Parian* arrack are chiefly consumed in the *Black Town*, the place must be extremely populous.

WE shall close this account of *Madras* with a short view of some useful establishments, tho' by abuse and mismanagement perverted from the original intention. At *Fort St. George* is a free school, where children are taught to read and write. To this foundation belongs a library of books, chiefly in divinity, reckoned worth 438*l.* sterling. The church has a stock of 40*l.* usually put out to interest at 10 *per cent.* which is applied to repairs of the church and charity. As the interest is seldom wholly taken up with these purposes, the remainder is applied to the capital, which, together with an annual collection, amounts to a handsome sum. Orphans, the children of wealthy parents, are frequently committed to the care of the trustees for the church. Here they are reckoned more secure than in private hands, though we do not find, from experience on this side the globe, that public guardians are a whit more conscientious than private; nay, the contrary has often been imagined. The fortunes of the children are put out to interest; the price of borrowed money at present being 10 *per cent.* out of which they are maintained and educated, the capital and surplus of interest being restored them as soon as they are of a proper age. Where no will is made, the governor and council take upon them the care of the intestate's effects, which they account for to the relations of the deceased, whether in *Europe* or *Asia*. A college they have likewise; but as no art or science is studied in it, it can only be nominal. We cannot but wonder that the company have not cultivated the study of mathematics and astronomy here. Nothing would recommend their agents more to the *Asiatic* princes, and sooner procure them a proper footing in *China*, than skill in these. This the Jesuits have experienced, who have obtained valuable privileges on account of a very superficial knowledge in practical mathematics and astronomy. Nothing can be more favourable to the progress of those studies, than the leisure and peculiar circumstances which attend many of the company's agents. The length of their voyages, the changes of climate, the serenity and clearness of the sky, the necessary knowledge they must have in arithmetic, and the principles of geometry, navigation, and geography, all afford the happiest occasions for promoting science and the arts. But the acquisition of money seems to be the only view of those gentlemen, in which, indeed, they are not to be blamed, considering the value put upon it in the mother country, where it gives honour, esteem, and worth at pleasure.

ALTHOUGH we have extended this history of *Madras* to a great length, we must not close it without touching upon the trade. Their commerce is carried on to all parts eastward of the *Cape of Good Hope*. That of *China* used formerly to be the most cultivated, on account of the returns of gold and fine goods; but this the company have reduced to nothing, by sending ships directly to *China* from *England*. *Manila*, under *Armenian* colours, is a profitable voyage. *Batavia*, the coasts of *Java*, *Jancre*, *Malacca*, *Bengal*, *Quedah*, *Pegu*, and *Arracan*, together with the ports of *Achen*, *Priaman*, *Bencoolen*, *Bantall*, and *Idriapore*, are visited annually. The largest ships go to *Mocha*, *Surat*, and other ports of *Persia* and *India* (P), with *Bengal* and *China* commodities, touching at several ports on the *Malabar* coast for pepper, cocoa-kernels, corn, cardamoms, nux vomica, turmeric, &c. &c. But the distinguishing advantage to *Madras*, and what first brought a conflux of inhabitants here, was its vicinity to the diamond mines of *Golkonda*. They lie at the distance of a week's journey from the town. The custom is, when a person goes to the mines with a design to trade, he acquaints the *Mogul's* officers with his intentions, after he has made choice of a piece of ground to dig in. Having paid the money for this spot, the ground is immediately inclosed, and centinels placed round. All stones above sixty grains belong to the emperor; and frauds in this particular are punished with death. Some acquire fortunes, while others lose their money, their time, and their expectations (Q).

(P) Indeed the *Madras* trade to *Persia* must first come down the *Ganges*, at least in the shortest manner: and this is now engrossed by the *English* factories in the bay of *Bengal*. It never had any trade to *Mocha*, in the manufactures and produce of the *Coromandel* coast, before the year 1713. *Fort St. David* now supplies that port. In short, the trade is thought to be on the decline, which some attribute to the disappointments and oppression the trader is subjected to. The influence of the governor, even at public sales, is obviously pernicious. Here it is criminal to bid higher than his commission; and those who have courage to do it, generally find reason to repent their temerity (1).

(Q) The following account of the diamond mines may not be unacceptable to some of our readers. Those on the coast of *Coromandel*, in the kingdom of *Golkonda*, are generally in the vicinity of the craggy hills and

mountains. In, among, and about these hills, are the places where this precious natural product is sought for. *Golkonda* and *Visapore* are known to have mines sufficient to furnish the whole world; but the sovereign, to keep up the price, permits only certain places to be dug. In *Golkonda* are about 23 mines. That of *Quohure* was the first opened. The earth here is of a yellowish cast, abounding with smooth pebbles. The diamonds lie scattered two or three fathom deep in this earth; altho' some falsely imagined, they are found in a vein, or continued clusters. That it is not so, is evident from their sometimes digging a quarter of an acre, without having discovered one bit of the precious stone to compensate their labour. Where the surface is covered with great stones, the diamonds found here lie deep, but are valuable on account of their size, pointedness, and lively white water. The common size is about a sixth of a *Mangelin* (a *Man-*

(1) *Hamilton's voyage to the East Indies*, vol. i. p. 370.

a By the last estimate that was made, there appeared to be between 80 and 90,000 inhabitants in *Madras*, and the towns and villages in its territory, and under the jurisdiction of the company. Five hundred of these are *Europeans* living in *Madras*. The town is supplied with rice from *Ganjans* and *Orixa*, on the same coast; with wheat from *Surat* and *Bengal*; and with fuel from the island of *Dise*, near *Massulipatam*. This island the viceroy of the coast offered to present to the governor of *Fort St. George*, and the inhabitants were desirous of being under the government of the company. But the president and council not immediately accepting of the proposal, both the viceroy and natives altered their sentiments, and refused to let the company erect a factory there^k.

^k SALMON, LOCKYER, *Memoires pour BOURDONNAIS*, vol. i. HAMILTON, &c.

gelin is four grains); some are found weighing from one to twenty Mangelins: but they are extremely rare. The diamonds found in *Quolure* mine, have generally a bright and transparent lustre, inclining to a greenish colour; but the inside of the stone is perfectly white. This mine is nearly, if not altogether exhausted.

The mines of *Malabar*, *Pattepalian*, and *Coda-willikall*, consist of a reddish earth, inclining to orange, which stains the cloaths of the labourers. Here they dig about four fathoms, and find stones of an excellent water, and chrystalline coat; but smaller than those of the former mine. But of all the mines in this kingdom, that of *Currure* is the most famous. The soil is reddish, a good deal resembling the last we have described. In it have been found diamonds weighing of assize weight, *i. e.* 9 ounces troy, or 8 $\frac{1}{2}$ Pagos. In general it affords well spread stones, of a pale, greenish surface, but white within. The stones are seldom so small as those in the other mines; and they are all kept for the use of the sovereign; at least so they were of late years.

Not far from hence are the mines *Lattawaar* and *Ganjeconto*, in the same soil as *Currure*, and affording similar stones. Those of *Lattawaar*, however, are deficient in shape, being thick at one side, and thin on the other, like a gun-flint. In other respects, they are at least equal to any in size and beauty. The mine is almost now wore out, and *Ganjeconto* solely preserved for the use of the *Mogul*. *Jonagerie*, *Pirai*, *Anantabelle*, *Pagalli*, *Parawilli*, all of them consisting of red earth, and now employed, afford many large stones, frequently of a green water. They are, however, much in request, on account of the soundness, shape, size, and freeness from blemishes. But the most absolute mines, and what alone deserve that name (the others being more properly pits) are those of *Wazergerre* and *Manuemurg*. Here they sink through rocks of a great height, digging sometimes 40 or 50 fathom below the base. The superficies of the rocks is composed of a hard, firm, friable stone, into which the miners cut a pit about six feet deep, before they arrive at a crust of mineral stone, resembling iron ore. Their method is, they fill this pit with wood, which they keep three or four days burning with the utmost violence. When they think it sufficiently heated, they quench the fire, by suddenly pouring in quantities of cold water. By this means, they imagine they crack the stone, and mollify the mineral crust. When it is cold, they dig away all they can, and repeat the same operation till they come to a vein of earth, that usually runs for two or three furlongs under the rock. The earth they dig away, and if this has not satisfied expectation, they proceed deeper, till they are prevented from going farther by water. They search the earth, and break all the crust and mineral off carefully. In these the diamonds are found, most of them large, and few weighing less than six Mangelins. Connoisseurs complain of the shape of diamonds found here; but they admit the water to equal any. As the miners are entirely ignorant of the use of engines for drawing off the water, they are almost always prevented from pursuing their success.

Maddeburg far exceeds any of the other mines in diamonds of a delicate shape, elegant water, and bright pellucid skin. Many of them are, notwithstanding, veiny and cracked; yet these cannot always be discovered, un-

less by a jeweller and nice artist. This mine produces stones of various magnitudes, from 10 or 12 in a Mangelin, to 6 or 7 Mangelins each. The water round is so bad, that to all, excepting the neighbouring nations, it occasions fevers and other acute disorders, terminating in sudden death. In other respects, it is the most valuable, the vein lying near the surface of the earth, and pursued with little expence and labour. It is likewise thought, that besides the unwholesomeness of the water, the situation of the town, in a low, marshy ground, environed with hills, may contribute to the unhealthiness of the place.

Other mines there are at *Lavagamboot*, where they dig in the same manner as at *Wazergerre* and *Manuemurg*. The rock is not so hard or solid; but the earth and stones it produces, altogether similar. *Wootore*, a place near *Currure*, affords stones of a like size, shape, and water with it. This mine is employed solely to the emperor's use; and singular in this, that the diamonds are found in a black earth.

Melwillee produces stones from five or six in a Mangelin, to 15 or 16 Mangelins each. They are found in a very red earth, which adheres so closely to the diamond, that it seems to tinge, and even indent it. This circumstance would seem to prove Mr. *Tournisfort's* hypothesis of their vegetation, or rather, that they had once been in a liquid form. Most of the stones found here have a thick, dull coat, inclining to a yellowish water, less stony and lively than those of the other mines. Few or none produced at *Melwillee* have a pure chrystalline skin. Another fault they have, that they are apt to split in working, or to fly off in flaws in splitting. Some of the diamonds that flatter the most from their whiteness, no sooner pass the mill, than they discover the deceit, and present a yellow hue, to the disappointment of the proprietor. What, however, they want in quality, is made up in number; for no mine in *Golkonda* produces large quantities of diamonds.

In *Visapoure* or *Visap-re*, another province belonging to the *Great Mogul*, are fifteen or twenty diamond mines employed. These produce stones equal in size, shape, water, and every point of beauty to the mines of *Golkonda*. The large diamonds are indeed less common; and the precious stones in general found in a less quantity. The matrix, or surrounding earth, differs in different mines, as does likewise the method of working the mine, and washing the matrix. In both provinces, the miners, the employers, and the merchants, are in general *Ethnics*, not a *Musfulman* following either branch of the business. The merchants are generally the *Banians* of *Gazarate*, who, for some generations, have deserted their country, to follow an employment attended with immense profits. They correspond with their countrymen at *Madras*, *Surat*, *Goa*, and other maritime ports. The governors of the mines are also idolaters. In the province of *Golkonda*, they were rented by a *Feringa* Bramin, whose agreement with the adventurers is, that all the stones exceeding a pagoda weight, (or nine Mangelins) shall be his, for the king's use; the rest their own. In general, the severity with which frauds and concealments are punished in *Golkonda*, makes those who have possessed themselves of a large stone, fly to some other country, where they may with safety dispose of their property (1).

(1) *Salmon*, vol. i. *Hamilton*, vol. i. *Lockyer*, *passim*. *Abbé de Guyon*, tom. i.

Maffulipatam.

WE now proceed to the company's other settlements. Formerly they had a factory at *Maffulipatam*, and another at *Narsipore*, for long cloths, both which we are told are withdrawn, as indeed are most of the *European* settlements on that coast, on account of unreasonable exactions of the neighbouring Rajahs. The *English* had likewise a settlement at *Angerang*, a place situated upon a deep river, and famous for the finest long cloth in *India*. But the establishment was soon abandoned for some particular reasons.

Vizagapatam.

AT *Vizagapatam* the company had a fortified factory, taken by the *French* about two years ago, and soon after the unhappy affair at *Calcutta*. It has four bastions, and mounts twenty or thirty pieces of cannon. This settlement is upon the *Coromandel* coast, about 18 degrees 40 minutes north latitude, having the advantage of a river, the bar of which is somewhat dangerous. The surrounding country affords cotton cloths of all degrees of fineness, together with the best doreas or striped muslins in *India*. The only thing that can prevent this settlement from flourishing, is too narrow a capital; most of the inhabitants being greatly distressed to procure specie.

IN the year 1709, this factory was engaged in a petty war with the Nabob of *Chizkacul*. Mr. *Holcomb*, chief of the factory, had borrowed money from the prince on the common seal. He dying, the succeeding chief refused the Nabob payment. Upon this the *Indian* prince applied to the governor of *Fort St. George* for redress; but meeting with no satisfactory answer, he had recourse to arms. At last the company compromised the affair, and terminated the war, which had been drawn out to a great length, without hardly any bloodshed (R).

IN the country round *Vizagapatam* are many antient pagods or temples. One in particular, upon a little mountain near the factory, is remarkable. Here the natives worship monkies, who live and breed in great numbers within the temple. They are maintained by priests, whose devotions consist in boiling rice for this tribe of deities. At meal times, the little gods assemble at the pagod, eat what their votaries have prepared for them, and then retire in good order into the fields and groves. Killing a man is a crime infinitely less heinous than destroying one of those animals.

ABOUT twelve leagues north of *Cunnaca*, stands the town of *Ballasore*, situated about four miles from the sea, on a river, and placed in about 20 degrees 45 minutes north latitude. There is a dangerous bar in this river, sufficiently known to those who navigate the coast, from the many losses and wrecks occasioned by it. Between *Cunnaca* and *Ballasore* rivers there is one continued sandy bank, where vast numbers of tortoises resort to lay their eggs. A very delicious fish, called the *Pamplée*, is caught in great plenty in this bay, and sold for two-pence the hundred. Two of them are sufficient for a meal. The adjacent country is admirably fruitful, producing, almost spontaneously, rice, wheat, grain, dole, callavances, a variety of pulse, anise, cummin, coriander, and carraway seeds, tobacco, butter, oil, and bees wax. Their manufactures are chiefly of cotton, in sannis, cassas, dimities, and mulmuls: then of silk, and silk and cotton mixed, they make romals, gariahs, and lungies: and of herba, or a species of tough grass, they manufacture gingham, pinafroes, and several other sorts of cloth for exportation. The *English*, *Dutch*, and *French*, had all their factories here; tho' they are at present of little consideration, since the navigation of *Hugly* river has been so much pursued.

THE town of *Ballasore* still pursues the *Maldiva* trade, supplying that island with rice and other productions of the country. In return they take cowries and cayar, or coyr, for the use of shipping. From *April* to *October*, the proper season for entering the bay of *Bengal*, this town furnishes all the shipping with pilots up *Hugly* river, who are kept in constant pay by the *Europeans*. We shall close this relation of *Ballasore* with a custom peculiar to the natives of this place. They fashion a piece of soft clay into the form of a suppository, which they harden in the sun, till it acquires the consistence of soft wax, and then introduce it into the *intestinum rectum*. This they imagine serves to cool the part; and every morning they renew the operation.

(R) The following incident deserves notice. After the war was ended, and the Nabob returned to his own dominions, he began reflecting upon the usage he had received from the settlements of *Fort St. George* and *Vizagapatam*. Finding that he was not likely to revenge himself by force, he had recourse to the following stratagem. Without giving notice, he came attended by a hundred horse to *Vizagapatam*, and was got into the factory with twenty or thirty followers, before the chief was apprized of his coming. The alarm being given, Mr. *Horden*, a resolute young fellow, in the service of the company, ran down stairs with a fusée and screwed

bayonet. Meeting the Nabob at the bottom of the stairs, he presented the gun to his breast, telling him in the *Gentoo* language, that he was welcome; but if any of his attendants should offer to advance, his (the Nabob's) life must answer for it. Disconcerted and astonished at the young gentleman's spirit and bravery, the Nabob sat down to weigh the affair, Mr. *Horden* still keeping the muzzle of his piece to the breast of the *Indian* chief, while one of the Nabob's attendants held a dagger's point close to his back, in which situation the conference held for half an hour, and at last broke up with the Nabob's resolution peaceably to depart (1).

(1) *Hamilton*, vol. i. p. 380.

a THE *English* company had formerly a factory at *Piply*, seated on a river supposed to be a branch of the *Ganges*. It is now withdrawn, for the same cause as the preceding. The country differs in none of its natural productions from *Ballafore*¹.

ADVANCING eight leagues on the western bank of the river *Hugly*, you meet with the river *Ganga*, another branch of the *Ganges*. It is broader but shallower than the *Hugly*, and more incommodious, on account of sand-banks, for shipping. A great variety of villages and little cottages appear below the opening of this river; and still greater numbers on those vast plains which extend along the *Hugly*; but no town of consequence till you come to *Calcutta*, a market for corn, butter, oil, coarse cloth, and other commodities. *Calcutta* and *Juanpardas* are both seated on deep rivers: that by the former runs eastward; b by the latter, by the back of *Hugly Island*, and is in fact a branch of the *Ganges*. This river leads up to a place called *Ruduagar*, famous for manufacturing cotton cloth and silk handkerchiefs. *Bussindri* and *Trafinddi*, or *Gorgat* and *Cotrong*, are situated on this river, and well known for their furnishing the best sugars to be met with in *India*. A little higher up on the east side of *Hugly* river, is *Ponjilly*; and about a league farther up stands *Calcutta* or *Fort William*, where the company has a settlement, and that the largest of all, *Fort St. George* alone excepted. The factory removed hither, A. 1690, from *Hugly*, Mr. *Chamock* being then agent in *Bengal*. Having the liberty of settling an emporium in any part of the banks of the river below *Hugly*, he fixed upon this spot, perhaps the most unhealthy he could have chosen (S). The fort is an irregular tetragon, built with bricks, c and a kind of mortar they call *Puckah*, a composition of brick-dust, lime, melasses, and cut hemp or oakum. This, when thoroughly dry, is as hard, firm and strong, as any stone, closely adhering to the bricks. The town is not more regular than the fort; the houses seeming, by their situation, to be rather a work of chance, than of design. Every man built as he thought proper, and best suited his conveniency and taste, without regard to the disposition of the whole. Some stand on a line with the street; others separated from it by a garden; and not two houses bear any resemblance to each other in situation or architecture.

ABOUT fifty yards from the fort stands the church, erected by the pious charity of merchants residing here, and the benevolence of mariners. When a minister dies, which d frequently happens, from the unwholesomeness of the air, one of the young merchants officiates in his room, for which he is allowed fifty pounds *per ann.* added to his other salary, during his apostolical service. The governor's house in the fort is esteemed the neatest and most compleat piece of architecture in *India*. Besides, the factors, writers, and other servants have commodious apartments within the fort; together with storehouses, magazines, &c. There is also a good hospital at *Calcutta*; a necessary precaution, considering the frequent occasions there are for it. The company has also pretty gardens, which furnish the factory with all kinds of vegetables. In the garden is a pond, well stored with carp, mullets, calkops, and other kinds of fish. All the other inhabitants of *Calcutta* enjoy the same conveniencies; every sort of provision being plentiful and e good.

ON the opposite side of the river are docks for careening and refitting the shipping. Here the *Armenians* have a good garden. We cannot but admire that this spot was not chosen to build the settlement in, as it enjoys almost every advantage in a degree superior to the present situation. The garrison of *Fort William* generally consists of three or four hundred men. Not many years since, the chief use of the soldiers was to escort the fleet from *Patana*, with the company's salt-petre, piece goods, raw silk, and opium. Afterwards, as they held the colony in fee-tail of the *Mogul*, they apprehended no enemies; but dear-bought experience has lately taught the company how little stress is to be laid on this particular, on which they founded their security. Upon whatever terms they stand f with the *Mogul*, they cannot be too vigilant and circumspect in watching the designs of the neighbouring Rajahs. These petty princes, who inhabit the banks of the river, pretend to exact a certain duty on all merchandize passing by their territories, or through their dominions on the river. They have been known to levy forces to compel payment,

¹ HAMILTON, vol. i. c. 31.

(S) For three miles to the north-east is a salt-water lake, that overflows in the months of *September* and *October*. In *November* and *December*, when those floods are withdrawn, the fishes are left dry in prodigious quantities. Their putrefaction is supposed to affect the air; which, together with the foetid putrid exhalations from

the ooze and slime, is conveyed by the north-east wind to *Fort William*, causing a yearly mortality. Captain *Hamilton* relates, that one year when he was there, out of no more than 3000 inhabitants, 460 died in less than one year (1).

(1) *Hamilton*, vol. ii.

but never successfully, till the year 1757, when this unhappy colony was taken, sacked, and several gentlemen of fortune and merit miserably stifled in the *Black Hole*.

In *Calcutta* there is hardly any sort of manufacture. The government, which is pretty arbitrary, imprudently discourages industry and ingenuity in the populace, founding their security partly on the poverty of the wretched natives. By the weight of the company's authority, if a native has the misfortune to incur the displeasure of the meanest *British* subject, he is liable to punishment by fine, imprisonment, or corporal suffering.

ALL religions are tolerated here, the Presbyterian excepted; for of all persons a sectarist is to them the most odious. The Pagans are permitted to carry their idols in procession; but a Presbyterian is not suffered to worship God, unless in a surplice. The company's colony is limited by a land-mark at *Governapore*, and another near *Baruagal*, about six miles distant; the salt-water lake bounding it on the land-side. It is reputed to contain about 15,000 souls. The revenues arising to the company are considerable, and well paid: they proceed from ground-rent, and consulage on all goods imported or exported by *British* subjects; for all other nations are free from all customs.

THE *English* gentlemen and ladies live splendidly and pleasantly in *Fort William*. The forenoons are dedicated to business, afternoons to rest, and evenings to recreation. They make excursions into the fields or gardens in chaises or palanquins; or by water in budgeroes, a convenient boat, that rows swiftly. Here they fish, and shoot teal, widgeon, and other wild fowl. At night they visit in a friendly manner, except where pride and ostentation, which too frequently happen, spoil society. The ladies in particular are in a perpetual state of hostilities, founded upon emulation of dress, table, and rank. In short, neither men or women are unanimous in any thing, besides oppressing the natives, enlarging their fortunes by any means, and yet maintaining the appearance of expence and grandeur^m.

The city of
Hugly.

ALTHOUGH the company has properly no factory at *Hugly*, yet being the great emporium of the trade of *Bengal*, a short account of it may not be impertinent. It is a town of large extent, but ill built, stretching for two miles along the river. It carries on a prodigious trade; all foreign goods being brought hither for import, and those of the produce of *Bengal*, and the neighbouring provinces, for exportation. Fifty or sixty rich ships take in cargoes here yearly, besides what is carried by small vessels to several adjacent countries. The vessels that bring saltpetre from *Patana* hither, are frequently fifty yards in length, five in breadth, and two and a half in depth, carrying 200 tons. They fall down in the month of *October* with the stream; but are carried back in tow, and by the strength of men, bullocks, and horses, for above 1000 miles. To enumerate all the goods exported from this port would swell into a great length. Many of them may be seen at the company's sales; but opium, pepper, piece goods, tobacco, and several other kinds of merchandize, are chiefly taken up by the *India* shipping. We shall conclude this account of the bay of *Bengal* with observing, that since the revolution in *Siam*, and the expulsion of the *English*, from their own imprudent conduct, the company's affairs have been fully reinstated; and they now enjoy the benefit of the commerce of the gulph of *Bengal*, from the mouths of the *Ganges*, to the extremity of the promontory of *Malacca*, without any disbursements for settlements, forts, or factories.

The company's
settlements in
the island of
Sumatra.

ON the island of *Sumatra* the company have two valuable settlements, viz. *Fort Marlborough* and *Sillebar*, besides factors residing in *Achen*. Their trade with this island is of early date, as may be seen by the commercial treaties between queen *Elizabeth* and the queen of *Achen*. Since then their privileges have been considerably enlarged by the judicious conduct of Mr. *Grey*, chief of the *English* settlements in the island. This gentleman obtained the following terms:

1st. THAT the *English* have free leave to buy sell, barter, tarry at, or depart from, *Achen* at their own pleasure.

2d. THAT they pay no other custom on goods imported or exported besides the ordinary duty of the *Chap*; a ceremony used on a ship's entering the river.

3d. IN case of shipwreck in the dominions of *Achen*, the subjects shall assist, and restore whatever is saved to the owners; and none of the men be enslaved, according to the laws of the country.

4. THEY shall have ground for a house, warehouse, and other conveniencies, and liberty at their departure to make the most of them.

5. IN case of death, the goods of the deceased shall be at the disposal of the chief of the factory.

6th. THE laws of the kingdom shall have no power over an *English* offender; but he shall be tried and punished at the discretion of the chief. And in case any native or

^m HAMILTON, vol. ii. c. 33, 34. SALMON, p. 256.

a subject whatsoever abuse the *English*, present justice shall be inflicted on him, as he deserves.

7th. THAT their goods shall not be forced from the *English*, nor returned to them after they are sold. Present payment shall be made, and they assisted in recovering debts, by such powers as shall be requisite.

8th. THAT no seizure be made in the sovereign's name; but current money paid for every thing bought for his or her use.

9th. THAT they exercise the Christian religion without molestation; and if a subject ridicule them on that account, he shall be punished.

10th. THAT no *English* refugee be protected; and on the other hand, that the *English* give b no sanctuary to a native who flies from the law.

11th. That, according to custom, they bring their annual presents.

12th. THAT, as formerly, they shall have all the sapan wood in these dominions, at tale, i. 4 M. S. *per Baban*.

13th. THAT such merchants as bring goods in any of their ships be free from paying *Savoa*, or the fifth part of the customs, provided the number of ships exceed not three every monsoon.

14th. THAT all ships bring a letter from the chief of the place from whence they came, to the governor of the town, certifying, that they belong to the company, &c.ⁿ.

THESE articles are a confirmation and extension of the original privileges granted to the c *English*, which we believe are retained to this day.

THE city of *Achen*, metropolis of the kingdom of that name, is situated in the north-west end of *Sumatra*, in five degrees thirty minutes north latitude, and is by much the most considerable port in the island. The city stands in a place surrounded with woods and marshes, about the distance of half a league from the sea. It is an open town, without wall or moat; the king's palace, with a ditch drawn round, seated in the centre. There are about 8000 houses in the city, most of them built on wooden pillars, to secure them against inundations and damps. The company had formerly a factory here, but finding it did not answer, they withdrew it. The chief produce of the kingdom of *Achen*, are some gold dust, camphor, and sapan wood, which they barter for opium, of which they are exceedingly fond, rice, d saltpetre, cotton, and silk manufactures, &c. The quantity of gold dust, however, merits little consideration.

*Description of
the city of
Achen.*

ON the arrival of a ship, the *Shabander* must be applied to for liberty to trade. At the *Great Quala*, or river's mouth, the persons who go first on shore are examined by the officer of the guard, who presently gives notice of their arrival to his superiors, whose province it is to adjust the preliminaries, which consist of a formal oath, agreed upon between the company and the sovereign, under the mediation of Mr. Grey. The current price of gold at *Achen*, in June 1704, was tale 7. 2. *per Buncal*, of 1 oz. 10 dwt. 21 gr. The current exchange is 2 pagodas *per Buncal*, about 24 finams less than the gold will produce in the mint.

e IN money, 1400 to 1600 cash are a mace, or one-third sterling; 1500 is allowed in accounts; one fourth of a mace is a copang; 16 mace 1 tale, an imaginary money.

THE provisions in the *Bazar*, or market, are goats flesh, fowls, buffaloes flesh, fish, &c. The camphor sold in this country is brought from the *Sunda Islands*. It is in general good, but the best sort appears in small scales, white and transparent, worth about 4 s. 6 d. *per* ounce. The common sort resembles large sea sand, and is sold at 2 s. 6 d. an ounce.

THE bezoar found here is taken from the hog deer, as they call them. It is an animal something larger than a rabbit, the head like a dog, legs and feet resembling a deer. This bezoar is valued at ten times its weight in gold. It is of a dark brown colour, smooth on the external coat, and that taken off, the colour is still darker, with small fibres underneath.

f It will swim on water. There are said to be stones bred in the maw of the *Nicobar* pigeon, not inferior to the best bezoar. Another sort of bezoar there is, said to be taken from the porcupine, from which animal it has its name. It is of a reddish colour, full of small transparent strias or veins. It has not the bitter taste of the *Siaca* bezoar we have spoken of, nor will it like it swim in water. The monkey bezoar is of a light green tinge, and of a finer polish and lustre than the goat bezoar. Some of them weigh half an ounce, which is valued at 40 or 50 rupees, about 3 l. 12 s. 6 d. But the bezoar from *Surat*, which is commonly termed monkey bezoar, is sold for 6 or 7 rupees an ounce. Some indeed have imagined, that what comes from both places is a composition, no way meriting the high price put upon it; and this indeed seems to be the opinion of the ablest physicians, g who make no difference between it and several succedaneums now substituted in its stead.

ⁿ LOCKYER, c. 2.

THE pepper plant is a production of this island, and a great part of the company's trade arises from this commodity, which the natives cultivate with great care, though without all the success which is found in other places on the *Indian* coast. As to the gold produced in this country, it is affirmed by many writers, that, *Japan* and *China* excepted, it is nowhere found in greater quantities. The *Dutch*, by being possessed of the neighbouring island of *Java*, have had the address to fix themselves likewise on *Sumatra*, where they are said to be in possession of a gold mine. However, it turns out but of small account to the proprietors°. It is not to be doubted, but the company act with more prudence in neglecting the search after the precious metal, well knowing, that commerce is of itself the richest mine; a maxim which the empires of *Japan*, *China*, and *Spain*, sufficiently evince. The two former have neglected to dig for gold, which they can more securely draw by trade; the latter has impolitically neglected trade to dig in *Potosi*; though, of all the kingdoms in *Europe*, *Spain* retains the smallest share of that immense wealth it yearly brings from *Mexico* and *Peru*. Industry and parsimony are always the best mines; and they alone have raised to the highest pitch of affluence every nation cultivating them.

THE company know, that the mines of *Sumatra* must be worked at a prodigious expence, and the hazard of incurring the aversion of the natives. The *Dutch* have proved the justness of their reasoning. The only certain method then of acquiring the benefit of the gold trade is what they have taken; settling colonies on the island, using the inhabitants with gentleness and affability, observing the most severe justice in all dealings with them, and thus by degrees conciliating their esteem to the *European* manners. This we take to be the true method of inducing them to use or take off *European* commodities. Thus the inconvenience and danger of securing the obedience of so many barbarous nations with a handful of men, will be avoided; a correspondence will be maintained, which will draw vast quantities of gold into *Europe*, will afford bread to infinite numbers of poor at home; the real and solid wealth of a state. Navigation and naval power, the arts, the sciences, and the true knowledge of life will be promoted.

Sillebar.

Bencoolen
and Fort
Marlborough.

PROCEEDING through the *Streights of Sunda*, to the west coast of *Sumatra*, and thence northward, we meet with the *English* settlement at *Sillebar*. It lies in a bay, at the mouth of a large river of the same name. There is nothing belonging to this little factory, established chiefly for the benefit of the pepper trade, worth notice. Ten miles farther to the northward is *Bencoolen*, where was the chief *English* colony, till it was removed at a small distance to *Fort Marlborough*. *Bencoolen* is known at sea by a high slender mountain, called the *Sugar Loaf*, that rises twenty miles beyond it in the country. Before the town lies an island, within which the shipping usually ride, and with this, the point of *Sillebar* extending two or three leagues southward of it, forms a large and commodious bay. The town is almost two miles in compass, inhabited chiefly by natives, who build their houses on bamboo pillars, as at *Achen*. The *English*, *Portuguese*, and *Chinese*, had each a separate quarter. The *Chinese* build all upon a floor, after the fashion of their country. The *English* and *Portuguese* build after their own model; but they found themselves under the necessity of using timber, instead of bricks or stone, on account of the frequent earthquakes with which the country is alarmed. As the town stands upon a morass, the noxious vapours, elevated by the heat of the sun, made the air extremely sickly to *European* constitutions. Shoals perished yearly, and had not a more healthy spot been fixed upon for the factory, it must probably have been intirely abandoned. We already have given a minute account of the new fort; it will therefore be unnecessary to enlarge farther upon it.

THE last place belonging to the company is the island of *St. Helena*, so called by the *Portuguese*, who were the first discoverers of it on *St. Helen's* day, in the year 1502. This island ought, in geographical order, to be described among the *African* islands; but as it is the property of a company, and so necessary to the refreshment of our ships, exhausted with so long a stretch as that from any of their settlements on *Coast and Bay*, as it is called, we have here given it a place. It stands in sixteen degrees of south latitude, about six hundred leagues north-west of the *Cape of Good Hope*, almost half-way between the continents of *Africa* and *America*, but nearer to that of the former, from whence it is distant about twelve hundred miles; and thence is accounted one of its islands (A).

° HAMILTON, vol. ii. c. 41—43. SALMON, p. 256—275.

(A) *Mandefloe*, in his voyage to *India*, says, that *St. Helena* stands sixteen degrees twelve minutes south, and is distant from *Angola* 350 leagues, from *Brazil* 510 leagues, and from the *Cape of Good Hope* 550 leagues. *Pirard de la Val* places it in sixteen degrees, and 620 leagues from the *Cape*; whereas, on the contrary, that sensible mariner *Roggeveen* affirms, that it lies in sixteen degrees fifteen minutes south latitude, 350 leagues from *Augustin*, which is the nearest land. *William Funnel*, in

his voyage, lays it down in sixteen degrees south latitude, and twenty-two degrees longitude west from the *Cape*; whereas the famous *Candish* says, that it stands in fifteen degrees forty-eight minutes south latitude. The situation we have given is, however, not only the medium between these discordant opinions, but the degree as determined by that excellent mathematician the great *Dr. Halley*.

- a As the winds always blow a moderate gale from the south-east, there cannot be a more pleasant voyage than from the *Cape of Good Hope* to *St. Helena*, which is generally performed in less than three weeks, without shifting a sail, or giving the least apprehension or trouble to the mariners. However, it must be reckoned one of the greatest inconveniencies attending the situation of this island, that the outward-bound *Indiamen* cannot touch upon it, and are forced to proceed at one stretch from *Madeira*, or at least from the *Canary* or *Cape de Verd* islands, where they seldom put in, to the *Cape of Good Hope*. The wind blowing constantly from the south-east in these seas, there is no sailing directly from the northward hither; and a ship sent from *England* to *St. Helena*, must first sail as far southward as the *Cape*, and return from thence to the island: it is indeed to be questioned, whether *St. Helena* has ever been three times made
- b in a direct course from *Europe*, though we have been told of such accidents arising from storms, or some extraordinary causes ^a.

WHEN the *Portuguese*, those great founders of trade and navigation, first discovered *St. Helena*, they stocked it with hogs, goats, and poultry, and used to touch at it for provisions, water, and refreshments, in their return from their *India* voyages, then deemed infinitely more hazardous and long, than experience and improvement in the sciences have now rendered them: but there is no certainty whether they ever established a colony in it, though it is highly probable they did, for the conveniency of preparing all things against the arrival of their shipping. What seems to strengthen this opinion is, the observation of the celebrated commodore *Roggevin*, who affirms, that the *Portuguese* having one of their *India* ships cast

c away here, they built a chapel afterwards of the wreck, which, though now intirely decayed, has given its name to the finest valley on the island, and one of the most beautiful in the world ^b. This judicious seaman further says, that, besides quadrupeds, the *Portuguese* brought hither fowls, partridges, pheasants, &c. which now run about the mountains in prodigious numbers, and planted a variety of fruit-trees, as lemons, oranges, and pomegranates, all of which, from the excellency of the climate, have increased so amazingly, as to make many people imagine they were the indigenous and native growth of the island (B). But, whether they planted a colony in it or not, certain it is, that it was totally abandoned when the *Dutch* first took possession; and that not a *Portuguese* was found on the island, when, in the year 1600, the *English* became its masters (C).

- d AFTER the *English* had once got possession of *St. Helena*, they maintained it without disturbance till the year 1673, when the *Dutch* took it by surprize, but did not long enjoy the fruits of their conquest; for it was retaken a short time afterwards, by the brave captain *Munden*, with three *Dutch East Indiamen* in the harbour, all of which became prize, the *Dutch* wholly driven out of the island, and quiet possession kept from that time. Upon this occasion the *Hollanders* had fortified the landing-place, and erected batteries of great guns there, to prevent a descent; but the *English* having knowlege of a small creek, where only two men abreast could creep up, climbed to the top of the rock in the night, and appearing the next morning behind the batteries, the *Dutch* were so terrified that they threw down their arms and surrendered at discretion. This creek has been since fortified, and a battery of large
- e cannon planted at the entrance of it; so that now the island is rendered perfectly secure against all regular approaches or sudden attacks.

THE island of *St. Helena* is about twenty-one miles in circumference (twenty according to *Lockyer*, and eight leagues in length, says captain *Funnel*), and the land so high, that it may be discerned at sea above twenty leagues distance. It consists indeed of one vast rock, perpendicular on every side, like a castle in the middle of the ocean, whose natural walls are too high to be attempted by scaling ladders; nor is there the smallest breach, except at the bay called *Chapel Valley Bay*, which is fortified with a strong battery of fifty large cannon, planted even with the water, and farther defended by the perpetual dashing of prodigious waves against the

f shore, which, without farther resistance, makes the landing difficult; and a little creek we have just mentioned, where two or three men may land from a small boat, but now rendered inaccessible by a battery. As there is no other anchorage but at *Chapel Valley*, touching here is extremely precarious; for the wind always setting from the south-east, if a ship once overshoots it, it is a matter of great difficulty again to recover the harbour.

^a PIRARD DE LA VAL, apud Harris, t. i. p. 702.

^b HARRIS, p. 312.

(B) There had formerly, says the same gentleman, been a hermit, who took up his residence here, and killed a number of goats, with the skins of which he traded with the *Portuguese* shipping; but they removed both him and some blacks that had settled in the mountains (1).

(C) *Cavendish* relates, in his curious voyage, that,

when he put in here, he found a chapel, with a handsome causeway leading to it. Within it was hung with painted cloths, having an altar, a frame with two bowls, and a free-stone cross adjoining to it. On the altar was the picture of the Virgin *Mary*, the story of the crucifixion, and some other religious paintings, not ill executed, upon a large table (2).

(1) *Roggevin*, p. 312.

(2) *Harris*, p. 20.

NOTWITHSTANDING *St. Helena* appears on every side to be a hard barren rock, yet on the top it is covered with a coat of fine rich mould, about a foot and a half deep, which produces all manner of grain, grass, fruits, herbs, roots, and every kind of vegetable, in the utmost perfection and plenty, did the industry of the people co-operate with the bounty of nature. In the year 1585, when *Cavendish* was there, it was one of the most delightful spots in the universe. The valley, says he, where the church stands, is exceedingly pleasant; so full of fine trees and useful plants, that it appears like a fine well cultivated garden, where are long walks of lemon, orange, citron, pomegranate, date, fig, and other trees, charged with fruit, green, ripe, and in blossom, all at the same time. Nothing can exceed the pleasure afforded by this delightful shade, not to be excelled by paradise itself; a chrystal spring rising at a distance, that diffuses itself into a number of small rivulets, watering the several parts of the valley, and refreshing every plant and every tree. In the whole, there is hardly a space empty: for what nature has left unoccupied, that art has supplied, by a happy imitation of her works. Such was the appearance of this admired scene, when *Cavendish* performed his voyage round the world; and such it still might be, were the *English* to bestow half the labour in cultivating it that the *Dutch* do at the *Cape of Good Hope* (D).

AFTER ascending the rock which borders it to the sea, the country is prettily diversified with rising hills and vallies, the first covered naturally with a great variety of herbs, and the latter adorned with elegant plantations of fruit-trees and gardens, among which are dispersed the houses of the natives; while herds of cattle low about the fields, some of which are fattened for the supply of shipping and of the islanders, and the rest kept for milk, butter, and cheese, and to afford a prospect equally rich and delightful. Although no country under heaven produces finer crops of wheat, yet such is the indolence and ignorance of the inhabitants (for we cannot attribute it to the quality of the climate), that amidst affluence they are starved, and their crops totally consumed by rats, which breed in incredible numbers, and destroy every thing with all the desolation occasioned by locusts in some other countries. This, however, is an evil to which certainly a remedy might be applied, as well as to the scarcity of wine, with which commodity they are now supplied by the company's ships, and also with flour and malt.

As the island is too sandy, and the soil too thin for large trees to take root, it is extremely deficient in wood; and their very houses are sent ready framed from *England*: but with regard to under-wood, they have as much as is wanted in this warm climate. There are upon the island between two and three hundred *English* families, or at least descended from *English* parents, or some way allied to them. Some *French* refugees were likewise encouraged to settle, in order to propagate vines and make wines, a point in which they have by no means been successful. Every family has its house and plantation on the higher part of the island, where they look after their cattle, hogs, goats, and poultry, fruit and kitchen gardens, without scarce ever descending to the town in *Chapel Valley*, unless it be once a week to church, or when the shipping arrives; at which time almost every house in the valley is converted to a punch-house, or lodgings for their guests, to whom they sell their hogs, poultry, and fruits, receiving in exchange flour, wine, and whatever necessaries they want; but they must first come into the company's warehouse. The merchandize usually laid in by the company are

(D) This island, next to *Tinian*, would undoubtedly be the pleasantest spot in the universe, and afford the happiest retreat for a speculative mind, wearied with the cares and hurry of the great world, were its dimensions greater, better inhabited with sociable beings, and somewhat nearer the continent, or at least more frequented by shipping. The climate is amazingly temperate, equal, and wholesome; the fresh water pure, the soil prolific, and fruits of all kinds in the utmost profusion. The land abounds with flesh and fowl, and the sea with fish; nor is any thing wanting that might not easily be procured by art, were the proper means followed. When the *Dutch* first settled on the *Cape of Good Hope*, imagination cannot paint a scene more the reverse of what it now is than what it was; but that prudent people, perceiving its importance, determined to improve it with that indefatigable industry for which they are famed, and deservedly esteemed. The difficulties they encountered were innumerable; but resolving not to be overcome, they persevered with such diligence, as, from a barren, despicable desert, they have, by force of human labour, rendered it incomparably the finest settlement on the globe; and have proved a number of maxims, then received with regard to planting, to be absolutely false. Among others it had been often declared, and indeed abandoned, as impossible, that vines should grow in

such a climate, at least in such perfection as to produce wine; but they have shewn that the *Cape* is capable of producing vines not only equal to those of *Spain*, *Portugal*, and *France*, but greatly superior in quality to many of their wines, and equal in the opinion of some to any. Their red and white wines are both of them rich, pleasant, and wholesome, if kept to a due age; and particularly the last, which is highly prized by the curious. The industry of this nation, and their great improvements, invite the *English* and *French* shipping to the *Cape*, which is possibly the reason that the company bestows less pains, and reaps a smaller advantage from *St. Helena*, than they probably might. It at the same time points out the different genius, and characterizes the natural dispositions, of the *English* and *Dutch*; for had the *Cape* been in the hands of our company, it is scarce probable it would have received half the improvement it has; and were *St. Helena* in the hands of the *Dutch*, they would hardly suffer the inhabitants to want bread, and depend upon the precarious supply of ships for wine, as they at present do. In a word, they would at least have put an end to those vermin that eat up all the produce, and are an equal disgrace and loss to the company; we mean rats, which are found here in such plenty, as cannot be described or hardly conceived.

a *Cape* wines, brandy, *European* or *Canary* wines, *Batavia* arrack, beer, malt, sugar, tea, coffee, china-ware, *Japan* cabinets, &c. linnen, callicoes, chints, muslins, ribbands, woollen cloths, and stuffs, with a variety of other particulars, which it would be unnecessary to recite.

THE complexions of people born in this island differ from those of all warm climates besides ; for here their faces look fresh and ruddy, with all the bloom of health and robustness of constitution, without that fallowness peculiar to those born within or near the *Tropics*, where white people look pale, sickly, and wan, without any of that mixture of red and white to be found in the natives of *St. Helena*, which may be ascribed to the following causes. Here they live on the top of a mountain, always open to the sea breezes, that blow constantly, and refresh the air. They are wholly employed in the healthful occupations of husbandry and gardening.

b Their island has no fens to annoy it, and no rivers which overflow their banks, and leave a stagnating water to be exhaled by the sun's beams, which renders the air gross, and charged with malignant vapours : besides, the atmosphere is greatly cooled by charming refreshing showers, that agreeably temper the warmth of the climate. To this may be added, the constant exercise the inhabitants undergo, from the very nature of the island ; for in going from the town in *Chapel Valley* to their plantations, the road is so steep, that they are forced to climb a great part of the way, and in one place to use a ladder, which from hence is called *Ladder Hill* ; nor can this be avoided without going two or three miles round (E).

As to the genius and disposition of the natives, most writers describe them to be the happiest, the most inoffensive, and hospitable people to be met with in any country. Upon their being

c asked if they had not a curiosity to see the world, of which they must have heard so much, and how they could confine their whole lives to a spot of earth scarce seven leagues in circumference, apart from the rest of mankind ? Their general answer was, that they enjoyed all the necessaries of life in profusion ; they were neither parched with excessive heat, or pinched with intense cold ; but enjoyed a happy medium between both ; they lived in perfect security, in no danger of enemies, robbers, wild beasts, rigorous seasons, the tumults of ambition, and were blessed with an uninterrupted flow of spirits and health : that if they had no exceeding rich men among them, they were also happy in having no poor, the oppression on the one hand, or the feelings of humanity on the other, that must necessarily attend so unequal a distribution of the gifts of fortune. There was among them scarce any planter worth more than a thousand

d dollars, and hardly any who did not possess four hundred ; and consequently not obliged to undergo more labour than was necessary to preserve his health. Such was the just manner in which this happy and primitive people reasoned. They added, that should they transport themselves into any other country, their small fortunes, which enabled them to live here with affluence, would there scarce preserve them from want ; and they should be exposed to innumerable hazards, difficulties, and hardships, of which they were now ignorant, but from the report of their countrymen. And indeed there is but one inconvenience that can be objected to their situation ; viz. the oppression of their governor, which has sometimes happened, though seldom, considering the opportunities he has, and that natural malignity of the human mind, which thinks itself exalted by debasing others, and measures its own greatness by the meanness of all around. As the inhabitants of *St. Helena* have no opportunity of making known their grievances to those who are able to redress them, it is amazing that they are not more oppressed than even they have been, under their most despotic governor. This may probably be attributed to the very causes which offered so many occasions of destroying the felicity of those beneath him ; for, cut off from all communication with the rest of mankind, he is naturally led into a train of reflections, which shew him that happiness is preferable to greatness, and the former to be acquired only by preserving the affections of those over whom he presides. As far as we are able to learn, they have been for generations back governed by an equal and impartial hand, and, while they continue to enjoy this felicity, *St. Helena* may be looked upon as the paradise of the world.

f IT is true, that the females of this island have been stigmatized by a certain diminutive writer, who would shew his ill-natured wit at the expence of candour, truth, and charity, with a looseness of morals, and turn for gallantry with the officers of the *East India* ships who put in there, which greatly obscures the picture we have above drawn : yet we will ven-

(E) Most voyagers who have touched here have soon experienced the healthfulness of the climate, and the salutary effects of the refreshing vegetables and wholesome water of this island. The most sickly and scorbutic crews have been restored to full vigour and strength, in a time incredibly short. *Francis Pirard de la Val*, who was afterwards shipwrecked on the *Maldivia* islands, touched at *St. Helena* in the year 1601,

with his crew in the most deplorable situation that imagination can picture to itself, hardly a man on board being fit to hand a sail or walk the deck, so eat up and weakened were they with the scurvy ; yet in the space of nine days they all recovered their former health, acquired an additional vigour and cheerfulness to what they possessed naturally, all owing to the climate and salubrious native vegetables of *St. Helena* (3).

(3) *Vide his voyage*, p. 52.

ture to affirm, that however true this may be of individuals, in general, female modesty, a chastity, and simplicity of manners, are no-where more strictly observed than at *St. Helena* (F). One thing, however, must be acknowledged; it is, that admitting the gallantry of the ladies, they are notwithstanding strict in all other principles of honour; nor does the latitude a female allows herself in one part of her conduct, at all influence the rest. Unlike the ladies of pleasure in *Europe*, they are here strictly honest, without that rapacious disposition that characterizes a truly fashionable prostitute. They seem to share in the joy they give, and to regard their pleasure without a view to their profit; the only circumstance that can palliate the violation of the most shining female ornament.

To conclude this account of *St. Helena*. Near *Chapel Valley* is the fort, where the governor and garrison reside, which is but inconsiderable, the situation of the island forming its chief strength. The governor has always centinels on the highest part of the island to the windward, who give notice of the approach of all shipping, upon which guns are fired, as a signal for every man to repair to his post. Thus it is impossible for a ship to come in the night, but preparations have been made the day before, when she cannot fail of having been discovered. This precaution, so well known to all nations, renders the natives secure against all attacks, and gives this satisfaction to our mariners, that as soon as they appear in the offing, they are sure to find every thing ready for their reception as friends. The reader we hope will pardon us, if we have dwelt so long upon this inconsiderable place, which we think might be improved greatly to the honour and advantage of the *East India* company. We rather expect this indulgence, as it is inhabited by one of the best colonies of our countrymen, who still retain the old *English* hospitality and sincerity, the unaffected simplicity and benevolence of our ancestors, unmixed with that narrow pride and selfish prodigality of their posterity, that squanders away princely estates in gratifying the passions and vanity of one worthless individual, without a single action useful to community, or becoming the dignity of human nature.

To conclude, the company were formerly in possession of divers settlements on the coast of the *Chinese* empire, as well as in the kingdom of *Tonquin*, all of them now withdrawn. They still trade largely to those parts; but without having any established factories. Their house was formerly in the island of *Chusan*, when the trade was carried on at *Ameyor*. From thence it was removed to *Canton*, where, for about forty years, it flourished with such vigour, that they were in expectation of wholly engrossing this beneficial branch of commerce. What defeated those expectations, were the high duties laid upon tea, and other *Chinese* commodities. This tax gave an encouragement to smuggling, which soon reduced the *China* trade far below its natural standard. As a part of this tax has been taken off, it is probable that the trade is now again upon a proper footing; though if we may judge from the late extravagant price of tea, there is still some defect, either in the commerce itself, or in the conduct of it. One thing is certain, that the government will always find it an imprudent measure to tax this commodity high; as the revenues will constantly rise in the proportion in which the price of tea falls. Whether this be a natural advantage, including all circumstances, it is not our business to enquire.

The English prohibited to trade to the Manila or Philippine Islands.

THE company are in a manner wholly excluded from the *Manila* or *Philippine Islands*, at least in a public manner. The *French*, indeed, allege that they trade there under *Irish* colours; but they best know what colours these are; or whether they would afford any protection to the shipping. Our opinion is, that any commerce carried on with those islands, is in fact done under *Morisco*, *Armenian*, or *Portuguese* flags. The custom of the *Spanish* nation in this particular is without example: the trade is laid open, and no people on earth excluded, except the *Dutch* and *English*; a precaution of little consequence, where the inhabitants find it their interest to overlook it. In *Japan* there is not the faintest trace of *English* commerce; all the commodities of that vast empire, with which our company is supplied, being furnished at second-hand by the *Chinese* and *Dutch*.

(F) "The chief town," says *Lockyer*, "is in *Chapel Valley*, where there may be forty or fifty houses contiguous, of which the punch-houses are the most remarkable, especially where there is a handsome girl or two in the family to humour the sailors. These, when they appear in their white aprons on the hills, are very agreeable objects to their *Johns*, as they come into the road. They have many of them pretty begging faces, and are dressed tolerably well while ships are there; but as soon as they are gone, the

scene is altered, and they can run up and down the country bare foot, as if they never had been shod." The same author acquaints us, "that the natives keep a number of blacks, whom they employ in all servile occupations. These, upon hard usage, run away from their masters, and hide themselves for whole months among the rocks, keeping secure by day, and roving about in the night in quest of provisions; which, though a hard life, they prefer to slavery (4).

(4) *Lockyer's account of India*, p. 306.

a We shall sum up the whole of our account of the *English East India* company with a few remarks, by way of introduction to the commercial histories of other *European* nations, as they follow in this volume. And first, it is observable, that no country was more famous and celebrated among the antients, and none less known, than the *Indies*. Nothing could be more perplexed and chimerical than the notions of this quarter of the globe, although they were founded on the nature of a country, whose wealth and profusion of the luxuries of life, had rendered it above all others remarkable. Common report had magnified every thing into the marvellous; the land produced men that were giants, and the rivers were replenished with monsters: fables that were believed in the most enlightened ages of *Greece* and *Rome*. The antients were sensible that nature afforded not a more abundant source of
b wealth than the *Indian* commerce, having bestowed on this happy climate not only every necessary, but every luxury of life, in the most profuse manner; and this it was that drew thither the first sons of fame. *Bacchus*, in the fabulous period, is supposed to have first penetrated into *India*; *Hercules* exercised his valour on this theatre; *Sesostris* visited these countries, as far as the coasts of *Japan*; and *Arabia* acquired the name of *felix*, or *happy*, from her commerce with *India*. But there are no older monuments of an established maritime trade thither than that which the *Egyptians* and *Phœnicians* afford, chiefly the latter, the most antient commercial nation that exists in the annals of human affairs^c. *Solomon*, the most prudent of monarchs, esteemed this traffick the brightest gem in his diadem; and hence drew such immense treasures, as rendered his government the admiration of mankind. During
c the *Persian* empire, the *Phœnicians* sent their fleets into the eastern ocean; but when the despotism of that enslaved people had chased commerce from *Phœnicia*, then *Alexandria* became the mart of *Indian* merchandize; in founding which noble city, *Alexander* proposed laying the foundation of commerce; a project worthy of the conqueror of the world.

AFTER the reduction of *Persia*, this monarch set on foot three designs, of the utmost consequence to his empire and glory; the first was the perfect discovery of the *Hyrceanian* or *Caspian* sea, the greatest part of its shore being hitherto unknown. The second was a project no less great and useful, the establishing a powerful maritime force in the *Indian* ocean; for which purpose he ordered forty-seven large ships to be built by the *Phœnicians*. With these he proposed examining the *Indian* coast more accurately than hitherto had been done: to take
d an account where convenient ports might be made: and lastly, to procure perfect intelligence as to the nature and value of *Indian* commodities. His third design was the conquest of *Arabia*, with the motives for which we have nothing to do. To these designs of this hero and statesman, the best geographers, the most accurate historians, and the ablest philosophers of antiquity, own themselves indebted for almost all their knowledge of this part of the world. However, of all his expeditions, the voyage of *Nearchus*, his admiral, from the mouth of the river *Indus*, above the coast of *Persia*, through the gulph, and to the mouth of the *Euphrates*, was the most remarkable and useful to the purposes of commerce and navigation (G). But the conqueror did not live to reap the fruits of these extended views, which were afterwards carefully pursued by some of his successors, especially the *Ptolemies*, who raised
e *Alexandria* to the highest pitch of commercial greatness (H).

THE wealth which this commerce drew into *Egypt*, and which, by means of this city, it continued to enjoy for ages, was at once the cause of its prosperity and ruin; the *Romans* being invited by the former to share in a trade which brought with it such immense treasures, and so great an augmentation of their maritime force. We may judge of the value the antients put on this trade, by the avidity with which they guarded it against all encroachments. The *Romans*, after numberless victories, and establishing the most universal empire mankind had ever seen, were for a time deterred from entering on the *Indian* commerce, by the frightful tales related by the *Arabian* merchants, at that time the carriers of this prodigious treasure; but at length the love of gold triumphed over every other passion, and *Augustus* made

^c Vide Anc. Hist. vol. i. D'HERBEL. Biblioth. orient. passim. HUET histoire du commerce et de la navigation des anciens, c. 55.

(G) This voyage *Nearchus* not only conducted in person, but also wrote a very accurate and distinct account of, which is in a great measure preserved by *Arrian*, in his history of *Alexander's* expedition. It is frequently quoted by *Strabo* and *Pliny*; and was indeed considered by the greatest writers of antiquity as the most authentic and curious piece of its kind then extant.

(H) Besides this, *Ptolemy Philadelphus* having considered the difficulties that attended the commerce of his subjects in *Arabia* and *India*, for want of proper ports in the *Arabian Gulph*, resolved to remove that inconvenience, by erecting a new city nearer the mouth of the

gulph, on the side of the isthmus or promontory that projects itself into the *Red Sea* (5). This turned out to be rather a fine city than a convenient port for trade; for the harbour, called *Myos Hormus*, was distant one thousand eight hundred stadia from the new city, called *Berenice*, from his mother. This wise prince directed likewise various towns to be built between *Berenice* and *Coptos*, upon the *Nile*, distant from it about 260 miles; but *Myos Hormus*, *Port of the mouse*, afterwards called the *Port of Venus*, was the staple of *Indian* merchandize, and from thence the trade was carried on to the *Indies* (6).

(5) *Ptolemy* places it in 23 degrees 50 minutes, Vide Tab.

(6) *Strabo*, lib. xvii. p. 815.

some attempts to open a communication with *India*. Neither the attempts of this prince, nor a of any of his successors, were successful, in establishing an immediate trade.

WHEN the *Romans* first became masters of *Egypt*, the navigation was prosecuted by sailing down the *Arabian Gulf* to a port near the promontory of *Siagrus*, which *Ptolemy* places in the latitude of fourteen degrees forty minutes. This, beyond controversy, is the point of the *Arabian* coast now called *Cape Fartak*, laid down by the best modern geographers in the same latitude. Hence they sailed to the mouth of the river *Indus*, that is, to the island of *Pattala*, so often mentioned by *Arrian*. Afterwards the navigation was changed, one *Hypalus* discovering a shorter route, under the reign of the emperor *Claudius*. This person, by observing when the trade wind blew, was enabled to pass at once through the straits, b and across the *Indian* ocean, directly to *Pattala*; which was deemed a navigation so extraordinary, that the south-west wind was afterwards called by his name*.

IN progress of time the *Romans* made still farther discoveries, in which, however, they met with perpetual interruptions, from the piracies of the *Arabians*, which obliged them, besides their ordinary complement of seamen, to carry a certain number of soldiers in each ship; a circumstance that greatly enhanced the charges of the voyage. At last the great profits it was observed this traffick might produce, if rightly cultivated, increasing the number of adventurers, all difficulties were surmounted, and an annual trade from *Alexandria* to the mouth of the *Indus* was established, by the following route. All merchandize intended for the *Indian* markets were shipped at the port of *Alexandria*, from whence they were carried to *Juliopolis*, two miles from thence, and so up the *Nile* to *Coptos*, in twenty-five deg. twenty c min. latitude, according to *Ptolemy's* tables, and 303 miles up the river. If the wind was fair, this voyage was commonly performed in twelve days. At *Coptos* the vessels were unloaded, and the goods transported on the backs of camels in eight days to *Berenice*, at the distance of 258 miles, where they remained in warehouses till the proper season of the year for continuing their voyages, which was about the rising of the dog-star; when the goods were embarked for the last time, the vessels steered directly for the *Arabian* coast, and in thirty days arrived at *Ocelis*, which *Ptolemy* the geographer places in twelve degrees, though probably that situation is greatly too far to the southward. Sometimes the fleet sailed to *Cana* or to *Mirza*, both of them ports on the opposite coasts of *Arabia*, though only frequented by the merchants of the country^d, who here bought frankincense, and took in exchange for this commodity arms, knives, and toys. *Ocelis* was however the principal port, because here they met with *Indian* merchants, and it lay commodiously for prosecuting their voyage to the continent of *India*, where they usually made the port of *Maziris* in forty days (I). This port being found inconvenient, from the depredations of certain pirates in its neighbourhood, they sought a better station, and with this view fixed upon the port of *Becaba*, whence with *Indian* proes they transported their goods up a navigable river, to a great trading town called *Madusa*. Having completed their affairs here, they seized the opportunity of the trade wind back, by the assistance of which they usually returned to *Alexandria* towards the end of *December* or beginning of *January*. The *Indian* commodities, thus brought into *Egypt*, were transported by land to *Coptos*, thence by the *Nile* to *Alexandria*, and thence e to *Rome*, by the annual fleet from *Alexandria*, which was first appointed by *Augustus*.

THE expence, or rather the stock annually invested by the *Romans* in the commodities fit for this commerce, amounted in *Pliny's* time to fifty millions of sesterces, or about four hundred and three thousand pounds sterling money; the profit on goods being *cent. per cent.* An immense stock and profit, considering the early period, and the strange expensive tract of this traffick.

THIS short recital of the commerce of the *Romans* with *India* we imagined would not be disagreeable to many of our readers, especially as it is but slightly touched upon by modern writers, and to be found only in a confused and scattered manner in the remains of antiquity. f

AFTER *Constantine* had translated the seat of empire to *Byzantium*, the eastern trade still subsisted; *Alexandria* continued to be the principal emporium; while *Seleucia* of *Syria* was the route of the more inland commerce: and the barbarians dwelling on the bleak borders of the *Euxine* sea felt the charms of the wealth that poured into the *Greek* empire through this chanel. At length commerce shared the fate of learning, arts, and government, and the provinces through which it flowed. The military genius of the *Arabs*, the successors of *Mohammed*, extinguished every spark of the spirit of commerce and science. Fury, mad zeal, ignorance, and barbarity, seemed to be let loose to waste every thing, to debase the human genius, and confound mankind in a cloud of impenetrable darkness and obscurity.

* *Plin.* nat. hist. l. vi. c. 23.

^d *Ibid.* c. xxiii. l. 6. Etiam *Peris* maris *Erythræi*, p. 14.

(I) If *Ptolemy's* tables have not received some alteration, this port stood in the latitude of fourteen degrees.

- a But no sooner had the grandson of that monarch, who dismembered *Africa* from the descendants of *Mohammed*, founded *Grand Cairo*, and furnished protection to the merchants, than the rich flow of eastern wealth once more returned to its ancient channel, and with it liberty, learning, science, arts, and every thing valuable and dear to men. The new-built city became at once the chief mart of the western world, rich, populous, and the seat of a new empire, of which we shall have occasion to treat in a particular manner in the ensuing volumes. The *Venetians*, *Genoese*, *Pisans*, *Florentines*, and some other free states of *Italy*, raised themselves on the ruins of the *Grecian* empire; and, profiting by the general confusion, seized part of its dismembered dominions; succeeding at the same time to the trade of the *Indies*, by the channel of *Egypt*: the commodities of which being distributed all over the north, were to them a mine of infinite wealth and power, that soon raised the *Venetians* in particular, from a mean despicable handful of refugees, to the most respectable state of all *Italy*, and the chief maritime power of *Europe*, perhaps of the whole world.

A P P E N D I X.

- T**HAT nothing in our power may be wanting to satisfy the curious reader in a point of so much consequence to every *Briton*, as the commerce of this nation to the *East Indies*, we shall here subjoin, by way of appendix to the foregoing history, some proposals of that sensible, though frequently ideal writer, Mr. *Malachy Postlethwayte* ^a.
- THIS ingenious gentleman gives it as his opinion, that, were the charter of the royal *African* company transferred to the *East India* company, that part relating to the slave trade only excepted, the traffick might, by this opulent corporation, be pushed to the very center of *Africa*, to powerful and rich countries now wholly unknown, and thence produce an afflux of wealth, and consumption of manufactures, of which at present we have no idea. It would besides increase the demand for *Indian* commodities, some of which are at present sent to our settlements on the *Gold Coast* and river *Gambia*; a circumstance that alone would induce them to cultivate this commerce to its highest pitch, and extend their discoveries as far as the manners of the people, the rights of other nations, and the nature of the country would permit. His words are, 'That whereas it is allowed, on all hands, that the inland trade to *Africa* hath hitherto been very negligently cultivated by any or all the *European* powers interested therein; and whereas the principal obstruction hereunto seems to be the great attention these powers have chose to give to that unnatural, unjust, cruel, and barbarous commerce, commonly called the slave trade, and the little regard that has been given to a just, humane, and civilized commerce with those people; and whereas the trade to *Africa*, with respect to these kingdoms, seems even yet to remain unsettled; it is humbly proposed, 1. That every branch of the trade to *Africa*, excepting that which is commonly called the slave trade, shall be given to the *East India* company by act of parliament, with an exclusive privilege for — years; with such other immunities and encouragements, as to the wisdom of the legislature shall seem meet. 2. That the forts and castles in *Africa*, and every thing thereto appertaining, which belong to the publick, be vested in the *East India* company; and the 10,000*l.* per ann. which is now allowed by parliament to the present *African* company, shall be granted to the *East India* company, in order the better to enable them to support and maintain these forts and castles, already erected in *Africa*. 3. That any one or more of these forts upon the coast of *Africa*, except *Cape Coast Castle* upon the *Gold Coast*, or *James Fort* on the river *Gambia*, be vested in the private and separate *British* traders, in order the better to accommodate them in their carrying on the slave trade; which forts shall be duly maintained and supported by the *East India* company, at the stated sum of 10,000*l.* 4. That the whole slave trade be left in the hands of the separate *British* traders; and that the *East India* company shall have no toleration whatsoever to interfere therein, with the interest of the separate *British* traders. 5. That every other branch of the *African* trade shall be solely under the controul, direction, and management, of the said *East India* company. 6. That the *East India* company, when possessed of these additional powers and privileges, shall be distinguished by the name of the *Royal East India and African company*, or by whatever other appellation the wisdom of parliament may judge the more eligible, 7. That one half of the commodities, *ad valorem*, to be vended in *Africa*, by the said royal *East India* company, shall consist of *British* produce and manufactures; and the other half of the produce and manufactures of the *East Indies*. 8. That the said royal *East India* and *African* company shall be obliged to erect — inland forts and factories at their own expence, in order to facilitate trade between the interior countries and the sea coasts.'

^a Dict. of trade and commerce, vid. *East Ind. comp.* t. i. p. 685.

To this scheme of Mr. *Possletwayte's* there can possibly be no other objections than the ^a injury the present proprietors in the *African* trade might receive from such a deprivation of their rights; the scruples which the *India* company might have to launch out in a new branch of commerce, at present incapable of supporting itself without the aid of parliament, altho' assisted by the slave trade, from which it is proposed they shall be excluded; and the clamours of the private traders, who might think themselves aggrieved by being confined to the slave trade alone. It would, however, be no difficult matter to remove all these objections, and prove the utility of the scheme, in a method both consistent with speculation and practice, were we at liberty to change the character of historians for that of projectors. At present we shall hint, that the present *African* company might be redressed, either by an ^b equivalent, or by incorporating them with the *East India* stocks, each proprietor holding a share proportioned to what he now enjoys, and receiving proportionable dividends, as we see has been done in the union of the two *English East India* companies, and as we shall have occasion to mention of the *French East* and *West India* companies. As to the scruples the *East India* company might have to accept of a coalition, or engage in a new branch of commerce, we imagine they might easily be surmounted, by shewing them, that it must necessarily open new markets for the reception of imported commodities from *India*, and likewise in a short time save the nation and them a great sum, now laid out in spices and some other commodities purchased from the *Dutch*, and by them only imported. The negroes are no less vain, fickle, and addicted to dress and fashion, than the *Europeans*. They are particularly fond of calicoes, chintzes, and other *Indian* cloths, which are indeed admirably adapted ^c to the climate, and might soon be brought universally to wear them, at least the women of kings, nobles, and other persons of distinction, which alone would occasion a prodigious consumption. Besides it is obvious, from the relations of voyagers, that pepper, nutmegs, and other spices, will grow in many latitudes of *Africa*; and, if such testimonies were wanting, reason dictates the probability of it, from the analogy between the soil and climate of these parts, and the countries where they are now produced. As to the cultivation of the sugar-cane, it may admit of some debate how far it might be pursued here, without injury to our *West India* colonies. Could the use of sugar and tea be introduced among the negroes, it is not possible to say how great the demand might be for both commodities, or what returns of gold, ivory, gums, &c. they might produce. Nay, it is even ^d probable, that the key to those gold mines, of which voyagers speak so much, and which the natives conceal so carefully, is the palate, for the sake of which a negro will sell his father, wife, or son. In a word, the greatest success might be expected from the influence of a wealthy body, strenuous in the pursuit of enlarging their sphere of commerce, capable of supporting their authority with dignity, of cajoling, soothing, and wheedling, the appetites of those barbarians, or, where necessity required it, of constraining them into obedience and submission. Lastly, to the grievances of the private merchant, confined solely to the slave trade, it may be a sufficient answer, that they gain more by the company's being excluded from this trade, than they lose by the restriction laid upon them. If this were insufficient, we might urge the old proverb, that of two evils the least is to be chosen; better the profits of the private trader should be diminished, than that the whole trade be lost, the government saddled with an unnecessary burden, and the *India* company deprived of a branch of commerce, which would soon render them the most powerful, wealthy, and respectable body of merchants in the universe. These arguments, which we have subjoined to Mr. *Possletwayte's* project for enlarging the *East India* commerce, the reader is at liberty to admit or reject: our endeavour is to improve his understanding, without laying any constraint on his judgment; but no one ought to entertain a prejudice against them, merely because they are new. If they are false, they will soon follow the ideal schemes of all the other projectors of the age. ^e

In vicum vendentem thus & odores.

C H A P. VII.

The conquests, settlements, and discoveries, of the Dutch in the East Indies, comprehending the history of the rise, progress, and successful establishment, of their East India company, the nature of their constitution, the extent of their dominions, the importance of their commerce, the form of rule established in their colonies, as also the domestic oeconomy of the company, and how they are subject to the states of the United Provinces.

S E C T. I.

The motives which induced the merchants in Holland to think of opening a trade to the East Indies. The project of discovering a new passage, by passing round the north-east of Europe and Asia. Three attempts made with this view, which prove all of them unsuccessful.

THE commerce, which the subjects of the States General of the United Provinces have carried on for about a century and a half in the *East Indies*, hath been so highly beneficial to them in every respect, hath brought such immense treasures into their country, has supplied such prodigious sums to their government, and hath contributed so much to that mighty naval power, to which this republic owes as well her domestic freedom, as the figure she has made in *Europe*, that a more noble or a more useful subject ^a can be hardly found, than to explain the rise, to trace the progress, and to set in a clear light, the present situation of that important trade of which they are in possession, and which it is both expedient and necessary, especially to the subjects of every maritime power, should be thoroughly understood ^b. A clear and candid representation of these points is what we shall endeavour in this chapter; and though it be true, that to handle them in their utmost extent would require a very large volume ^c, yet, by comprising matters of fact within as narrow a compass as possible, and interspersing our narrative with a few just and well-grounded observations, we hope to place this matter, and all its principal circumstances, in such a point of view, as that they may be thoroughly comprehended, and afford the reader all reasonable satisfaction.

The great importance of the Dutch commerce in the East Indies, and the scope of this chapter.

As the tyranny, which the *Spaniards* exercised over the inhabitants of the seven provinces while under their dominion, gave being to that republic; so the same arbitrary measures with regard to the inhabitants of the remaining part of the *Low Countries*, which still continued in subjection to the crown of *Spain*, was the real source of that wealth and power to which this new commonwealth rose in a manner so sudden, and so surprising to such as had not an opportunity of knowing, or a capacity of conceiving, how this extraordinary change was brought about ^d. Amongst other advantages, they furnished them with this of trading to the *East Indies* ^e. It is true, they meant nothing less; yet the methods they took were such as actually produced it; and tho' much may be attributed to the wisdom and spirit with which those intrusted with the administration in *Holland*, cherished, conducted, and protected this traffick in its infancy, yet still it must be allowed, that the foundation was laid by the mismanagements and mistakes of the *Spaniards*, without which the industry of the *Dutch* would have had nothing to work upon. So much of what is generally ascribed to human policy being in reality produced by the dispositions of Divine Providence ^f, which sometimes counteracts the best concerted projects, and crowns them at other times with more extensive success than those who formed them could either expect or foresee.

The true original of this trade.

The *Portuguese* had been near an hundred years in possession of the only direct correspondence with the east, which, together with the dominion of their country, was now transferred to the catholic king *Philip* the second ^g; and as his subjects of *Spain* and *Portugal* enjoyed the

Low Countries by severities.

exclusive trade of both the *Indies*, so his subjects in the *Low Countries* reaped the greatest part a of the profit, that arose from the disposition of their produce through the more distant parts of *Europe*^b. This had rendered *Bruges* and *Ghent* rich and populous; this had made *Antwerp* the great mart of *Europe*, had lodged her citizens in palaces, and filled her port with such incredible quantities of shipping, that it is reported four hundred vessels have come to an anchor there at one time^c. But as property begets the love of freedom, and furnishes also the means of resisting what may induce slavery, so the ministers of that great monarch very wisely informed him, that, to render these people obedient, their wealth must be diminished. These counsels, once received, were soon carried into execution; and, after *Antwerp* was reduced by force of arms, the inhabitants were so treated, that they chose rather to retire with what little they had left, than to remain in a place where they had no security of keeping it^d. The same b kind of usage had the very same effect upon the rich merchants and industrious manufacturers in the neighbouring cities; and, to avoid slavery and persecution, they fled wherever they had a reasonable prospect of living in peace, and worshipping God according to the dictates of their own consciences (A). Such were the effects of *Spanish* policy in the first instance!

Retire into the dominions of the states-general, and are there received, protected, and encouraged.

THE vicinity of the *United Provinces*, joined to the mildness of the government, freedom from impositions, and a general toleration, drew numbers of them thither, and of these many of the wealthiest and most experienced traders settled at *Amsterdam*, where the states gave them all imaginable encouragement, and shewed the greatest willingness to further any designs they might form for augmenting their fortunes^e. These knowing and industrious persons, well acquainted with each other, and having correspondence in most of the trading parts of *Europe*, c began to fit out ships, and to revive, as well as they were able, that general traffick which they had formerly carried on; but, as they found this impracticable without dealing in the commodities of *India*, they soon fell upon a method which answered that end tolerably well, by sending vessels, under neutral colours, to purchase those commodities in the port of *Lisbon*^f. It was not long before the *Spanish* ministers were made acquainted with this correspondence; and, persisting still in their former resolution of propagating poverty to the utmost extent of their power, they immediately resolved to put an end to what they called an illicit trade, without considering either the present consequence of depriving their master's subjects the *Portuguese* of a market for their goods; or, that which was more remote, the forcing those, that were now content to purchase them at *Lisbon*, to find a way of coming at them from the first d hand^g. Confiscating their ships, and imprisoning their flamen, quickly cured the merchants of *Amsterdam*, and thereby answered the end of the *Spanish* politicians, which was, preventing their acquisition of *Indian* commodities by that channel; which very naturally put them upon considering if they might not be obtained some other way, since, without them, experience had shewn their general assortments would be incomplete (B).

ONE would have imagined, that the shortest and most natural resolution, in this case, would have been fitting out ships for the *Indies*; and so, very probably, it was: but, upon a little

^f Sir WILLIAM MONSON's Naval tracts, in the third volume of Churchill's voyages ^g Avertissement à la tête de recueil des voyages qui ont servi à l'établissement & aux progrès de la Compagnie des Indes Orientales.

(A) We have this point very clearly stated by one of the ablest writers, as well as one of the greatest statesmen, that nation ever produced. He shews the reasons which induced the principal merchants of *Antwerp*, when they found themselves constrained to abandon their own country, rather to make choice of *Holland* than of *England*, *France*, or *Zeland*, for the place of their retreat; and rather of *Amsterdam* than of any other place in *Holland*, because there they might enjoy intire liberty of conscience, pay no higher duties than the natives, and be very conveniently situated both for receiving and distributing merchandize of all sorts from and to the most distant parts of *Europe* (1).

(B) The scheme of those great merchants, who had fixed themselves at *Amsterdam*, was, to revive there that very commerce which had rendered *Antwerp* so rich and so famous. The *Dutch* writers unanimously allow, that, in doing this, the *Spaniards* concurred, without designing it, to the very utmost of their abilities; which is no great wonder, since they had the same views with

the *Dutch*, tho' directed to different ends. They were afraid the trade of *Antwerp* should recover, and the citizens become insolent through prosperity; and, to prevent this, they never attempted to re-establish the navigation of the *Schelde*, which was precisely what the *Dutch* wanted. They were also desirous of humbling the *Portuguese*, which was one reason for their laying so many restraints on the port of *Lisbon*; and this was also favourable to the *Dutch* designs. With great reason, therefore, one of their own writers remarks, in reference to the pains taken to prevent the *Dutch* from trading to *Portugal*, that, if the *Spaniards* had not seized their ships, and exposed their persons to the rigour of the inquisition, probably they had never extended their navigation beyond the *Baltic Sea*, the northern countries, *England*, *France*, *Spain*, and its dependencies, the *Mediterranean*, and the *Levant* (2). But, finding this commerce not to be maintained without the commodities of the *Indies*, they were compelled to search out some way of obtaining them.

(1) De Witt's Maxims of Holland, P. i. ch. 12.

(2) Avertissement à la tête de recueil des voyages qui ont servi à l'établissement et aux progrès de la Compagnie des Indes Orientales.

a consideration, it appeared to the warmest, as well as the wariest of those able merchants, a very dangerous, if not impracticable scheme. In the first place, it was objected, that the passage was long, dangerous, and difficult, and they had no seamen that were acquainted with the coasts, or factor that understood the method of carrying on the trade: next, that their enemies had a vast naval force, which would be infallibly employed to intercept their ships; and that, if they were fortunate enough to reach the *Indies*, they would find the *Spaniards* and *Portuguese* stronger there than in *Europe*, and more capable of distressing and destroying them. Upon mature deliberation therefore, the setting out a few ships, at the expence of private men, to sail to the *Indies*, without any cover, commission, or protection, against those who were already possessed of a vast empire there, and were known to spare no pains to maintain and support it, was rejected as a thing well designed, but obstructed in its execution by insurmountable difficulties. This being admitted, the next point to be considered was, whether some other route might not be found, which might serve as effectually for supplanting the *Portuguese*, as that by the *Cape of Good Hope* had availed them in carrying away this lucrative trade from the *Venetians*; which, being a project free^o from those difficulties that embarrassed the former, appeared, in their judgment, to be infinitely more eligible, provided, upon experiment, it should be found practicable (C).

Desirous of opening a trade to the East Indies thro' the north-east passage.

c THE seamen and mathematicians, being called into this consultation, proposed attempting something, without delay, towards the discovery of a passage to *China* and *Japan* by the north-east; which appeared to them both probable and practicable, notwithstanding the disappointments the *English* had met with in their voyages on that side. The advantages that might be expected from this discovery were very obvious, as well as very great; it would shorten the time in going and returning to the *Indies* one half; the navigation would be much whollomer, and much easier for the seamen; they would by this means avoid all enemies in their passage; they would arrive first on those coasts which, to the *Portuguese*, were the most remote in the *Indies*, where they had the least strength, and from which, notwithstanding, they might bring the most valuable returns^p. All these particulars being considered, the expence of the trial not being very great, and the expedition requiring but a small space of time, it was agreed that no delay should be made in an undertaking of such importance. To say the truth, there is much more reason to wonder that they were so soon discouraged by their want of success in a very few attempts on that side, than that, all circumstances considered, they should venture upon an expedition which promised so fair, and the prevailing in which seemed to depend intirely upon the skill and courage of the persons employed, and this at a time when they wanted not for as able seamen as that age produced, as well foreigners as their own subjects^q.

Reasons which induced the merchants in Holland to look on the discovery as advantageous.

d A SUFFICIENT stock being raised by a small number of traders, *Balthazar Moucheron*, a *Zealander*, who was at the head of the company, petitioned prince *Maurice* and the states for leave to discover a passage to *China* by the north-east; which was readily granted him^r. Four vessels were immediately fitted out; and the chief direction was given to *William Barentz*, a very able pilot, a man of good sense, and great courage. He sailed with his small squadron e June the 5th, 1595, and proceeded to the latitude of seventy-eight degrees north; and then, not being able to prevail upon his company to continue any longer in those parts, returned to *Amsterdam* on the sixteenth of September^s. Though this voyage was unsuccessful, yet, upon the report of *Barentz*, and of others who accompanied him, the probability of discovering a passage through the *Streights of Wygatz* appeared so great, that the prince and the states ordered a fleet of six sail to be fitted out the succeeding year, with a bark to bring advice of their having

^s Discours preliminaire au recueil de voyages au nord, p. 23.

(C) It may not be amiss to observe here, that though the *Dutch* were driven to think of finding a passage by the north-east to the *Indies*, from the distress they were under, and the desire they had of sailing thither by such a way as to avoid meeting with the *Portuguese* or *Spaniards*, yet they were far from being the inventors of this design; since, so early as the reign of *Henry* the eighth, the *English* had in view the discovering a passage into the *South Sea* by the north-west, the sailing into the *Indian Ocean* from the north-east, or passing into either at their pleasure, through the open sea lying under the pole, as manifestly appears from Mr. *Thorn's* address (3)

to that monarch upon that subject. Besides, the famous *Sebastian Cabot* had, thirty years before the *Dutch* attempt, published his instructions for the discovery of the north east passage, which were delivered to Sir *Hugh Willoughby*, who perished in attempting to find it (4); which, however, did not hinder many other voyages for the same purpose (5), and from these the *Dutch* received their best, and indeed their only, lights. The single difference, in respect to the two nations, was this, that what the *English* did was from choice; and that the *Dutch* were driven to make this trial by necessity.

(5) See particularly those

passed the streights; which fleet, commanded by *James Heemskerck* and *William Barentz*, sailed ^a June the second, 1595; but this fleet, of which there were so great expectations, performed little or nothing, returning to *Holland* in less than five months, with an account that the savages had informed them, that there was a great sea to the eastward of *Tartary*, into which they might enter¹. This discouraged the States from attempting any thing farther at the public expence, and therefore they contented themselves with offering a reward of twenty-five thousand florins to any private persons that should attempt and make the discovery. Upon this the city of *Amsterdam* fitted out two vessels, in which *Heemskerck* and *Barentz* went, the former for the second, the latter for the third time, which sailed on the eighteenth of May, 1596. These were more unfortunate than the former, the biggest of the two ships being lost upon the coast of *Nova Zembla*, where the crew were obliged to winter, and consequently to endure prodigious hardships, by which many of them perished, and *Barentz* among the rest, who died, notwithstanding, in a full opinion that there was a passage. *Heemskerck* and the rest returned, in two shallops they had fitted up out of the wreck of their ship, in the month of October, 1597; and this put a stop for a time to all thoughts of prosecuting discoveries on this side² (D).

² SALLENGRE essai d'une histoire des

(D) The most extraordinary passage that happened in this unfortunate voyage was an astronomical discovery, which, being in itself very curious, and at the same time perfectly consistent with the modern accounts of the true form of the earth, it cannot but be agreeable to the reader to find it as recorded in their journal, written while they wintered in *Nova Zembla*. It runs thus (6):
 “ The 24th of January, 1597, was fine and clear; *Heemskerck*, *De Veer*, and another, took a walk along the shore, on the south side of *Nova Zembla*. *De Veer* perceiving one side of the globe of the sun, returned full of joy to bring these glad tidings to *Barentz* and the rest. *Barentz*, who was a skilful pilot, would not believe it, for, according to all computations, the sun could not be seen till a fortnight after. The rest assured him they saw it; and that dispute made them lay a wager they were right. On the 25th and 26th there was so great a fog that they could not see one another, so that those that laid the negative wager thought they had won; but the 27th, the weather being clear, the whole ship's company saw the intire circle of the sun upon the horizon; from whence it was concluded that they had seen a part of it the 24th of the same month. However, that discovery being contrary to the opinion of both ancient and modern writers, and, as some pretend, to the course of nature, and being inconsistent with the rotundity of the world, they thought many would be of the opinion that they were mistaken; alleging, that, since they had been so long without seeing day-light, they had not kept an exact account of the number of days, but had skipped over some in bed, or in their sleep; and, in fine, that by some accident or other there was absolutely an error in their calculation. But, being certain of what they had seen, to convince the world of it, they set down every thing in writing. They saw then the first time the sun in *Aquarius* in five degrees twenty-five minutes; and, according to their former computation, it should have been in sixteen degrees twenty-seven minutes, before it could appear

“ in the latitude of seventy-six degrees, where they were. However they studied to reconcile what appeared so contrary, and to discover the truth about the computation of time. They examined the ephemerides, or astronomical tables, of *Joseph Scala*, printed at *Venice*, which began in 1589, and continued to 1600, wherein they found, that, on the 24th of January, the same day they saw the sun, the moon and *Jupiter* were in conjunction at one of the clock in the morning at *Venice*. Upon this remark they were curious in observing what hour of the night these two planets should be in conjunction at the place where they then were; and found they were in conjunction five hours later than at *Venice*, that is to say, about six in the morning; and then were in conjunction, the one being directly above the other, in the sign *Taurus*. This conjunction was exactly, according to the compass, north-east, and the meridian of the compass was south-south-west, the moon being then eight days old: by which it appeared, that the sun and moon were eight rhumbs distant from one another. The difference, then, between the place where they were, and *Venice*, was five hours in longitude; and, supposing that, one may easily reckon how much further they were to the east than *Venice*, viz. five hours, every hour being fifteen degrees, which makes seventy-five degrees; whence it appeared they were not mistaken in their calculation; for, by these two planets, they found the true longitude, *Venice* lying in thirty-seven degrees twenty-one minutes longitude; and the declination being forty-six degrees five minutes, it followed that the hut in *Nova Zembla* was in one hundred and twelve degrees twenty-five minutes of longitude, and seventy-six degrees of latitude. All which circumstances were put down to convince the world there was no error in their calculation.” It appears from hence, that the difference between the computed and real difference of seeing the sun was a fortnight.

(6) Collection of Voyages undertaken by the Dutch East India Company, p. 38.

S E C T. II.

The accident by which they were first introduced into the Indies; the consequences of this introduction, and the vigour with which their merchants prosecuted this new trade.

- a** **W**HILE they were thus employed in *Holland* in concerting means to open a passage to the *East Indies*, which Providence did not favour, a new and unexpected accident fell out, which turned their thoughts quite another way. Amongst the *Dutch* seamen who were seized, as we have shewn, at *Lisbon*, in 1594, there was one *Cornelius Houtman*, who, with a sound head and stout heart, had a bold enterprising genius, which both inclined him to undertake great things, and enabled him to execute them. This man, having some liberty allowed him, employed it in conversing with the *Portuguese* seamen, making the best inquiry he could into the course they held in their *East India* voyages, the places to which they traded, and the manner of their dealing with the natives; in all which, by dint of his liberality, and that admiration which he expressed at all he heard, he procured much information before the government had any notion of what he was about; which they no sooner received, than they committed him to prison, and laid a heavy fine upon him for his pains ^{*}. *Houtman*, in these melancholy circumstances, applied himself to a company of merchants at *Amsterdam*, to whom he proposed, that, if they would pay his fine, and enable him to return home, he would communicate to them all that he had discovered. This offer, coming after the first disappointment in their endeavour to find a passage by the north-east, was very well received; and, after being thoroughly canvassed, they determined to close with him; and accordingly remitted a sum sufficient to pay his fine, and to bring him home ^{*}. It may be justly wondered, unless some indirect method was practised, that those, who were so quick in entertaining suspicions when they heard of *Houtman's* conversations with the seamen, and had recourse to precautions so proper upon that occasion, should yet entertain no jealousy upon his paying a large fine, but set him at liberty, as they did, and suffer him to return home, where he punctually discharged his promise ^{*}.

Cornelius Houtman, in the mean time, discovers the Portuguese route by the Cape of Good Hope.

- b** **A**FTER sufficiently considering what he had offered, they resolved to erect another company, called *the Company for remote Countries*; the directors of which were *Henry Hudden, Reiner Pauw, Peter Hasselaer*. &c. who, after mature deliberation, came to a resolution, *Anno Domini* 1595, to send four vessels to the *Indies* by the way of the *Cape of Good Hope*. *Houtman*, and some others, who had the command of the vessels in this expedition, were ordered to observe the coast they steered very exactly, and to settle with the *Indians* a commerce for spices, and other goods, especially in those countries where the *Portuguese* had no settlements ^{*}. These ships returned to *Holland* in two years and four months; and though they had made no great profit of the voyage, yet their success animated their owners, and several other merchants; to carry on the design with all imaginable vigour (E); and, a member of that company

A new company erected for carrying on this trade, with whom the merchants of Amsterdam likewise associate themselves.

^{*} Succinct Account of the Dutch Commerce in the East Indies, p. 35.

^{*} Voyages de la compagnie des Indes Orientales, tom. i. p. 265.

(E) The person chiefly intrusted in the management of this voyage was *Cornelius Houtman*, to whom they were under great obligations for the lights he had procured them, as well in respect to the course the vessels were to steer, as the manner in which their trade was to be managed in the *Indies* (7). In the execution, however, of this enterprise, his conduct was not altogether so laudable or so fortunate as might have been expected; for, by his rash discourse at *Bantam*, in the island of *Java*, he brought himself into confinement, and the whole squadron into great danger (8); and, in their return home, he was strongly suspected of poisoning the master of the ship on board which he sailed, and for which he was confined, but at length acquitted and released, though still held in great suspicion (9). If it had not been for these mistakes, and certain acts of extravagance committed by the seamen, that squadron might

have returned intire in less time, and with a better cargo. As it was, they sailed *April* the 2d, 1595, from the *Texel*, and returned *August* the 12th, 1597, having lost the *Amsterdam*, which they burnt, being leaky, and they not having men enough to navigate all the four vessels (10). It was the loss of this vessel that abated the value of the goods which they brought home, the most considerable of which were cloves, nutmegs, mace, and pepper. The last of these spices they purchased at *Bantam* from the natives, the rest they took from the *Portuguese* at the same place. The report they made was to this purpose: that the natives were every-where ready enough to trade; that the *Portuguese* and *Spaniards* were hated; and that there was no danger at all in going with a competent force to the *Moluccas*; which news, with the sight of the spices, raised the hopes of their countrymen prodigiously (11).

being dead, they presently put into his place *Gerard Bicker*, a very considerable merchant^a. Then they had advice that some other merchants of *Amsterdam* designed to set out ships for *India*; upon which, to avoid animosities, they thought it necessary to unite with those merchants; and accordingly the two fleets, consisting of eight vessels, joined under the command of *James Van Neck*, their admiral, and sailed from the *Texel* A. D. 1596^b.

The success of
their expedi-
tions encourage
other mer-
chants to form
new societies.

A DESIGN of the same nature was likewise set on foot in *Zealand*, where *Balthazar Moncheron*, before-mentioned, *Adrian Hendrickzen Haaf*, with some other partners, fitted out ships for the *Indies*. The inhabitants of *Rotterdam*, excited by such examples, formed a company also, and fitted out five ships, under the command of *James Mabv*, with orders to sail to the *Molucca Islands* by the *Streights of Magellan* and the *South Seas*^c. In the mean time the *Amsterdam* merchants grew more and more languine; and the company before-mentioned, without staying for the return of the fleet it had sent already, fitted out three ships more, which put to sea *May* the fourth, 1599, under the command of *Stephen Vander Hagan*^d. On the 8th of *July*, the same year, four of the eight ships that went out first arrived in the *Texel*; and, after they were unloaded, were immediately sent back again under the command of *James Willekens*^e. About this time also the merchants, who had retired from *Brabant* to *Amsterdam*, formed a new company upon the same design, and fitted out four vessels, which put to sea *December* 1599, together with four of the old company's ships^f. Two years after all these ships came home with rich cargoes. But, before their arrival, this new company had sent out two ships more, which were joined by six of the old company's, putting to sea A. D. 1600, under the command of *James Van Neck*; and in process of time all of them returned to their respective ports. Upon this happy success, more ships were fitted out from *Amsterdam*, *Zealand*, and elsewhere; among others, thirteen from *Amsterdam*, viz. four belonging to the old, and four to the new company, under the command of *James Heemskerck* and *James Grenier*; and five more of the old company, bound for the *Moluccas*, under the command of *Wolpbart Harmanfz*; all the thirteen sailed from the *Texel* *April* 1601^g.

Reason which
led the Dutch
merchants to
promote this
new trade
with such ve-
hement.

AN ardor like this could not fail of producing prodigious effects, and of diffusing itself daily amongst all the traders that had taken shelter in the dominions of the States, and even of attracting others to come and settle there likewise. They foresaw that all the commerce which enriched *Antwerp* must necessarily retire by degrees, and that no places bid so fair to engage it as *Amsterdam*, and the rest of the *Dutch* cities, more especially now they had gained the great point, and opened themselves a direct passage to the *Indies*. They comprehended also how much further this important trade might be improved in a free country, and under a mild government, than hitherto it had been under arbitrary monarchs, who valued it chiefly as furnishing the means of carrying their ambitious projects into execution, and grudged their subjects those little emoluments, which, with infinite toil and hazard, they procured by their own labour and industry. But what impelled them more than any other consideration, was, their desire of having an early share in the *Indian* commerce, before the value of it was universally understood; and such numbers interested therein, as greatly to diminish their profits. Some or all these motives operated on not a few; and their example with still greater force on many more, which increased the adventurers continually. The *Spaniards*, on receiving this news, were enraged with anger, partly from the affront in seeing such petty merchants as they stiled the *Dutch* compass their ends in spite of their power, and partly upon account of the loss they had already sustained, and were likely to sustain hereafter^h. To prevent which, they saw no better method than to employ a superior force to intercept their outward-bound fleets; with this view they fitted out a strong squadron, to surprise the next *Dutch* ships that should be sent to the *Indies*. This squadron, consisting of thirty men of war well manned, fell in with eight of the *Dutch* ships in the month of *May*, in the latitude of fourteen degrees. The *Dutch* perceived the inequality of their number and forces, notwithstanding that they had some soldiers aboard: however, they fought bravely; and the *Spanish* admiral was so warmly received, that he found it expedient to let them passⁱ (F).

(F) There is little reason to doubt that the wonderful activity and surprising success of the *Dutch* filled the *Spaniards* and *Portuguese*, at this time under the dominion of the same crown, with the strongest apprehensions, and put them upon contriving every method to free themselves from these new and dangerous rivals, who, in the

space of five years, had sent near forty ships into the *Indies*, and, of these, one squadron had passed by the *Streights of Magellan*, through the *South Seas*, had insulted the *Philippines*, and sunk a galleon that carried the king of *Spain's* flag as admiral, as the rest did by the *Cape of Good Hope*, but sooner and better equipped than the ships from *Portugal*

- a In the next year, which was 1602, three ships came from the *Indies* richly laden. They brought advice that the king of *Achen* had attempted to seize two of *Moucheron's* ships that sailed from *Holland* in 1599; and that *Cornelius Houtman*, the commander, had lost his life in the adventure; in which, however, the ships escaped, though some of the *Dutch* continued prisoners in the hands of that monarch^a. But, before this news arrived in *Holland*, *Paul Van Caerden*, having sailed for the *Indies* that same year, arrived at the port of *Achen*, without knowing what had passed, and was exposed to the like danger; for that king, being urged thereto by a *Franciscan* monk, who resided there in quality of the *Portuguese* envoy, and had come from the *Moluccas* on purpose to cajole him, set all instruments at work to seize *Caerden's* ship^b. But his attempts proved abortive; and the king, being reconciled, owned afterwards that he was seduced by the *Portuguese*, promising better usage for the future; and accordingly he gave a very good reception to the fleet commanded by *Laurence Bicker*, which had been fitted out from *Zealand* in 1601; and when that fleet had taken in its loading, which was very considerable, he sent some ambassadors on board it. This fleet, putting into *St. Helen's* to take in fresh water, happened to meet with a *Portuguese* carrack richly laden, which they took, and brought home with them. This same year also *George Spilbergen*, and the ships he commanded, coming to *Achen*, were by the same king as favourably treated^c (G).

- THE *Spaniards*, now finding themselves inferior in strength, endeavoured to ruin the *Dutch* by all manner of stratagems. They sent emissaries to all the *Indian* kings, to decry the new adventurers, and to represent them as pirates, and men of no faith, whom therefore they ought to distrust and destroy. The States General and Prince *Maurice*, having received advice of all this, resolved for the future to give commissions to the captains of all ships that sailed to the *Indies* (and indeed the commanders of those ships stood in very great need of them) to refute the many calumnies of their enemies^d. By these commissions they were empowered not only to defend themselves, but to attack all who should disturb their commerce. The valiant *James Heemskerk*, being vested with this authority, sailed with two ships from *Bantam*, in order to load at *Jabor*; and, falling in with a rich carrack, upon her return from *Macao*, with above seven hundred men on board, attacked, and forced the *Portuguese*, after a slender defence, to strike, and ask quarter, which was granted^e. This was a thing of great importance in itself, and rendered of still greater consequence by the skill and address of the *Dutch* admiral, who not only treated his prisoners well, but sent most of them, except the captain and the chaplain, without ransom, to the *Portuguese* governor in the *Indies*, foreseeing that this would naturally produce a letter of thanks and acknowledgements, to facilitate the deliverance of those two prisoners of rank. This had its effect; admiral *Heemskerk* received a couple of letters filled with compliments, which he produced in every port where-ever he came; and thereby wiped of the aspersions of pirates, and men without humanity or honour, for ever. Besides this, the cargo was immensely rich, consisting of the most valuable commodities from different parts of the *Indies*; and the papers on board gave them likewise more light into the nature of this commerce, than they had hitherto received^f.

Portugal (12). It is true, the first *Dutch* fleets made no establishment, neither did they concert their measures well together to prevent the natives from raising their prices upon them. However, their eagerness in trading enabled them to carry large cargoes home, which raised the credit of this new trade exceedingly; and their being very expert in the sea-service rendered them capable of making such resistance, as cured their enemies of the vain hope they had conceived of oppressing them at once by numbers; as the zeal and courage they expressed against the common enemy endeared them to the inhabitants of the *Moluccas*, and many other *Indian* nations (13).

(G) These facts are precisely set down from the *Dutch* historians; but, however, it is necessary to remark, that as the *Portuguese*, by their money and intrigues, prevailed upon the king of *Achen*, at *Sumatra*, to attempt seizing

the *Lion* and *Lioness*, two ships belonging to the *Zealand* company, and to detain *Cornelius Houtman*, who commanded them, prisoner; so it was very unbecoming in another *Dutch* officer, who came thither with a superior force, from the hopes of entertaining trade with the subjects of that perfidious prince, to put that unfortunate person again into his hands, when he had once made his escape, and by whom, after the departure of those *Dutch* ships, he was, with several others, basely murdered (14). It must be allowed that admiral *Spilberg* demanded ample satisfaction for this, but it is no less true that he was satisfied with fair words; and thus *Cornelius Houtman* lost his life unprotected and unrevenge, who first conducted the *Dutch* into the *Indies*, and whose last misfortune was intirely owing to an overforward diligence in the service of his country (15).

S E C T. III.

The causes which led the States to erect the present East India Company, the terms of their charter, the methods taken by them to establish themselves in the Indies, and their disputes with the Spaniards and Portuguese, who laboured their expulsion.

Occasion on which the present East India company was erected by the States General.

BUT, while they met with all this success in the *Indies*, their affairs at home were in great danger of taking a wrong turn, to which this success of theirs did not a little contribute. In short, the spirit of sending ships to the *Indies* grew so strong, and prevailed so generally, that new companies were formed every day. This at the beginning had a very good effect, both in *Holland* and in the *Indies*, as it occasioned the building a great many large ships, employing a vast number of industrious people, raising and hiring great numbers of seamen, and keeping such a force in that part of the world as prevented the *Spaniards* and *Portuguese* from oppressing this trade in its infancy, as they would otherwise have done. In process of time, however, these new companies, having no right understanding, fitted out many ships for the same port, which sunk the value of their goods, and produced other inconveniences ^a (H). The States General, being informed of this, exhorted these companies to unite, and promised them a charter, or, as it is stiled in *Holland*, an octroy. This was an affair of very great consequence, as well to the public as to the persons interested in the several companies; and therefore it took some time to settle matters, and bring them under a just regulation; which however was at length adjusted, to the general satisfaction of all concerned; and a charter granted for twenty-one years, to commence from the twentieth of *March* 1602; the capital to consist of six millions six hundred thousand florins, divided proportionably amongst the several chambers; which was a provision invented to satisfy those interested in the private companies that were now dissolved ^b. The rest of the subjects of the *United Provinces* were forbidden to send ships to the *Indies*, either by the route of the *Cape of Good Hope*, or the *Streights of Magellan*. The States had, by way of gratuity for this charter, twenty-five thousand florins in the new capital, and a duty of three *per cent.* upon all goods exported, bullion excepted; the number of directors, the method of managing, the times and places when and where general assemblies were to be held, the manner of making sales, and of stating general accounts, were all fixed in such methods as might best provide against frauds, and for the emolument of the proprietors; so that the capital was very soon full, and the spirit of adventuring rather increased than abated by this salutary establishment; which could not but give great pleasure to the States, more especially as they found that it attracted large sums of money, and brought many eminent merchants from the neighbouring countries to settle in their dominions ^c.

The first grand fleet fitted out by the new company, under admiral Wybrandt van Waerwyk.

UPON this bottom, the proprietors promised themselves still greater things than had been hitherto achieved; and fitted out a fleet of fourteen large ships, which put to sea in *June* 1602, under the command of admiral *Wybrandt van Waerwyk*. The next year, in the month of *February*, the yacht *Wachter* returned, with advice, that five of the other ships would very speedily arrive ^d. By this yacht an account was brought of what had passed before *Bantam*, between *Wolpbert Harmanfz.* and his vice-admiral *Boutwer*, on one side, and *Don Andreas Furtada de Mondoza* on the other, who had formed a design of no less consequence

^c Aver-

(H) There is no doubt that the starting up of so many companies was attended with various inconveniences, as well in *Europe* as in the *Indies*; and that there was great prudence and sagacity in the measure taken by the States to provide an effectual remedy for these mischiefs, by granting a charter to a single company. But, after all, one cannot help perceiving, that to this event, which some ascribe to chance, wiser people to that thirst of gain which success in every new commerce naturally excites, and the wisest of all to the secret workings of Providence, that the *Dutch* stand indebted for all that they possess in the *Indies*; since, if squadron after squadron had not followed in this manner, but the return of one waited for, before another was sent, the *Spania.* &c. had unquestionably crushed this trade at its very beginning; and, by destroy-

ing a few ships, and a small number of men, frightened private merchants, or it may be disabled them, from pursuing it any further (16). This is the more probable, since a great historian tells us, that the first ships were for the most part manned with vagabonds, malefactors, and desperate persons; for this plain reason, that none but such could be brought to run the hazard (17); which shews that nothing but the great success, owing, as we have said, to this accident, that, by bringing numbers of ships into different parts of the *Indies*, distracted the *Portuguese*; could have animated the *Dutch* merchants to subscribe, in the manner they did, to the first incorporated company; which enabled the directors to carry on their trade with a high hand and a great naval force, as well as with much prudence and dexterity.

(16) *Sallengre essai d'une Histoire des Provinces Unies*, p. 67, 68.

(17) *Grot. Annal. lib. xi.*

a than to drive the *Dutch* out of the *Indies* *. In effect, Don *Andreas* was beat, and the *Dutch* vessels pursuing their course for the *Moluccas*, arrived there at several times, one after the other. The same yacht brought the news of an engagement at the *Moluccas* between admiral *Van Neck* and three *Portuguese* ships, not at all to his advantage; for, after the loss of eight or nine men, and having some of the fingers of his own right-hand shot away, he was obliged to sheer off. Upon the arrival of this news, another fleet of thirteen ships was diligently fitted out, which sailed *December* the 18th, under the command of *Stephen Vander Hagen*, to prevent this profitable correspondence from being interrupted or lost †.

b In the year 1605, the king of *Spain* issued another vigorous declaration; in which, he prohibited the inhabitants of the *United Provinces* to trade to the dominions of *Spain*, or to the *East* and *West Indies*, under pain of corporal punishment. But the company was so far from being dejected by this edict, that it rather inspired them with fresh courage, and animated them to pursue their design with more spirit and diligence. They presently fitted out, as a proof of this, a fleet of eleven vessels, which were not only equipped for traffick, but for war, and gave the command of them to *Cornelius Matelief* ‡. This fleet had scarce put to sea, when the directors gave orders for preparing another squadron, of eight ships, which were manned not only with their full compliment of seamen, but with soldiers, that were engaged to stay, and keep garrison in the *Indies*, if occasion required. This third squadron was commanded by *Paul van Careden*. Soon after, two ships, of the first of these three squadrons, came home, with a rich cargo of cloves, and other spices. They brought advice that admiral *Vander Hagen* would follow very quickly; and accordingly he arrived in *July*, after taking several *Spanish* and *Portuguese* vessels, possessing himself of the fort of *Amboyna*, demolishing that of *Tidore*, and, in a great measure, dislodging those two nations out of the *Molucca* islands †. This expedition gave rise to a dispute between the *Dutch* and the *English*, upon account that the latter favoured the *Spaniards*, and, by supplying them with powder, enabled them to hold out longer. The next *October*, three other vessels arrived in *Holland*, with intelligence, that *Wybrandt van Waerwyk*, being homeward-bound, was obliged to put in at the island of *Maurice*, because his ship was leaky, and that he had taken a carrack at *Patana*. This admiral arrived in the spring of 1607; but, in the preceding winter, the company had sent two ships more, under the command of *John Jansz Moldie*, who soon reduced the fort of *Tidore*; the news of which gave the company, and indeed the whole *Dutch* nation, very high satisfaction; the monopoly of spices being a thing they had long had in view, and which they have at length compassed, by all sorts of means * (1).

At this time, a negotiation was set on foot for concluding a peace between the Republic and *Spain*, or, at least, a truce for a considerable number of years; which was become a thing equally necessary to both nations. Upon this occasion the *East India* company took a wise and vigorous step, equipping a fleet of thirteen large ships, at once, under the command of admiral *Verboeven*; that the world might take notice, the States did not mean to give up

¶ Voyages de la compagnie des Indes

(1) It was at this juncture that their affairs in the *Indies* were brought into a very critical situation, so that it seemed to depend upon a single action, whether they should be able to maintain themselves in the *Indies*, or not. This arose from *Cornelius Matelief's* being directed to besiege *Malacca*, which while he performed to no purpose, Don *Pedro d'Acuna*, in 1606, with a *Spanish* fleet from the *Philippines*, recovered the *Moluccas*. Which conquest, though it scarce lasted a year, gave occasion to *Argensola's* history; so much was that action esteemed and admired at *Madrid* (18). On the other hand, to so great a degree are the eyes of all mankind dazzled by success, that the *Dutch* affairs declining, the natives almost everywhere declared in favour of their old masters, and would have concurred very heartily in driving these new-comers as suddenly out as they came in, if victory had not once more declared on their side, and thereby occasioned an alteration in the sentiments of the *Indians* in their favour. Here, once for all, let us observe, that the ablest historians of all nations agree, that these sudden and singular revolutions were not so much brought about by the courage and conduct of any of the competitors, as by the

mistakes and bad management of them all. The *Portuguese* abhorring their subjection to the *Spaniards*, and, persuaded of their intention to deprive them of the *Moluccas*, under colour of protecting them, never concurred with them sincerely in their endeavours to preserve them (19). On the other hand, the *Spaniards*, in the *Philippines*, in *America*, and even in *Europe*, grudging the enormous expence to which they were put, for the defence of those islands from whence little or no profit resulted to them, slackened their endeavours precisely at the time they should have redoubled them; by which all the advantages Don *Pedro d'Acuna* had gained were speedily lost (20). Lastly, the *Dutch*, carried away by their too high sense of the good fortune they met with at the beginning, thought of nothing but extending their conquests and looking upon the *Moluccas* as their own, turned their views to the reduction of *Malacca*; but, being roused from this dream, by seeing themselves dispossessed of all they had acquired, they soon corrected their error, and in proportion as they subdued these islands, erected fortresses, introduced garrisons, and stationed ships, for their protection (21).

(21) Histoire de la conquête des Îles Moluques, tom. iii. p. 159.

interests in the this trade. The *Spanish* ministers were, however, very warm upon this head; and sometimes a negotiation for went so far, as to declare, that they could yield to nothing in this particular^a. On the other hand, the company presented several memorials to the States General; setting forth what numbers of persons of both sexes they employed, and maintained; what immense sums had been brought in by their sales; and how far a prospect they had of extending their commerce, and augmenting their profits: all which made such an impression on their High Mightinesses, that they promised never to abandon them. When therefore the negotiation was in danger of breaking upon this single point, the States proposed, that one of these three expedients might be accepted: first, to allow of a free trade, in general terms, under which this should be comprehended; secondly, to permit it for a stated number of years certain; and, lastly, to regulate things in *Europe*, and to leave matters beyond the tropic of *Cancer* to the decision of arms^b. The *Spaniards*, finding from hence that nothing was to be done, consented to a truce; and agreed not to disturb the *Dutch* trade in the *Indies* with other nations; excluding them, however, from all the ports in their possession^c.

A new attempt for the discovery of the north-east passage not at all more successful than the former.

In the mean time, the company went on, sending every year fresh squadrons to the *Indies*; and, before the news of a truce, which was sent by a bark, with a passport of the archduke's, reached that part of the world, they had made themselves masters of the island of *Macbaian*, and had dispossessed the *Spaniards* of all the *Molucca Islands*, except *Ternate*; yet, feeling some inconveniences from the great length of the voyage, they were still very desirous of finding some shorter passage to the *Indies*; in order to which, they contracted, in the year 1609, with a famous *English* pilot, *Henry Hudson*, who promised them great things in that respect; but performed nothing more than attempting a passage, first by the north-east, and then by the north-west, in one voyage, without success in either^d. This was the same person that, the year following, in the service of his own country, discovered that famous bay, which still bears his name, and in which, by the malice of some of his crew, he was exposed in an open boat, and was either swallowed by the waves, or perished by hunger. After which, it was a long time before the *Dutch* resumed the thoughts of attempting the search of any new passage; and at length came to change their sentiments as to its expediency^e (K).

Some alteration in the company's conduct in the management of their affairs in the *Indies*.

THE victories which had been obtained by the *Dutch* fleets in the *Indies*, had already altered their dispositions, and taught them to exchange that modesty and moderation, which had so highly recommended them to the potentates of the east, for that haughty air, and arbitrary temper, which had rendered the *Portuguese* insupportable. They had at this time fifty ships of the burden of eight hundred tons, or upwards, in this service, and were so secure of carrying all before them, that they gave out, that the war would be carried on in that part of the world, whatever might be stipulated in *Europe*. But things suddenly changed their face: Don *Juan de Sylva*, the *Spanish* governor of the *Philippines*, being informed that a *Dutch* squadron, after having sunk a rich ship upon the coast of *Cbina*, was cruising at some distance from *Manila*, in hopes of intercepting the homeward-bound fleet from *Japan*, fitted out immediately what vessels were in his port; and, having embarked the few regular troops under his command, sailed in quest of the *Dutch* squadron, which he attacked, and beat; admiral *Wittert*, who commanded it, having his head shot off in the beginning of the action, in which three ships out of four were taken, with a considerable number of prisoners, and plunder to the value of two hundred thousand crowns^f.

Don Juan de Sylva recovers the *Moluccas* from the *Dutch*.

DON *Juan* resolved to push his success to the utmost, and immediately attacked the *Moluccas*, where he met likewise with the same good fortune. And now the *Spaniards*, in their turns, pretended, that the peace was not to be observed on the other side the line. However, when a *Dutch* squadron of thirteen sail, commanded by admiral *Peter Borth*, arrived in those seas, things once more altered their aspect. The *English* also in *Ternate*, who had hitherto favoured the *Spaniards*, finding them very insolent upon this favourable turn of their fortune,

^f ARGENSOLA conquista de las Islas Malucas, l. xii.

(K) The conduct of the directors of the *Dutch East India* company, after it was once established by charter, was so prudent, and so well considered, that we may rest satisfied they undertook nothing but upon just and well-grounded motives. It is therefore reasonable to suppose, that, in fitting out *Hudson* for the discovery of a northern passage to the *East Indies*, they had chiefly in view the sending forces thither sooner, with greater safety, and in larger proportions, than their enemies; and if we consider, that they made their efforts at the very extremity of the *Indies*, and visibly aimed at the conquest of the *Philippines*, as well as the *Moluccas*, one

cannot help seeing, that the scheme was very well laid; for as their fleets, if they had found this passage, would have traversed the sea of *Japan*, and fallen upon the *Philippines* from that side, at the same time that they were pushed by what strength the *Dutch* had in the *Moluccas*, they must have been in great danger of being subdued; but when, in process of time, the *Dutch* began to extend their conquests, by rooting the *Portuguese* out of their settlements, the finding any such passage became less necessary, and, in the end, repugnant to their interests, as we have hinted elsewhere.

a quitted their party, and reconciled themselves to the *Dutch* ^s (L). An embassy was also sent, in the name of the prince of *Orange* and the states, to the emperor of *Japan*, where, through the folly of the *Spanish* management, rather than any great wisdom in their own, they procured all their requests to be granted; when the *Spanish* ambassador was allowed an audience only to affront him, and was sent away without any answer given to the proposals made by him, as they were, to speak impartially, equally impertinent and unreasonable ^b. Both parties being in this disposition, the reader will easily apprehend, that the truce was but ill observed on either side; the *Dutch* complaining of breach of faith in the *Spaniards*, and the *Spaniards* echoing the same complaint against the *Dutch*, with an equal degree of reason on both sides ^c. But it is now requisite to speak of their disputes with a third nation in the *Indies*.

(L) There is no great wonder that the *Spanish* historians are very loud in the praises of Don Juan de Sylva, since, if we except these political equivocations and intrigues, too frequently regarded by men of his rank as matters so to be treated, he was certainly an active and able officer (22); one who gained great reputation at the expence of the *Dutch*, by killing one of their admirals, and taking *Paul Caerden*, another of them, twice prisoner; but, for all this, he found it impracticable to perform the great things he had designed, in which he

was chiefly hindered by the *Portuguese*, who neglected those supplies they had promised; which had such an effect upon this great officer's temper, that he fell sick, and soon after died at *Malacca*; an accident not at all displeasing to the *Dutch*, to whom he was become very formidable, as well from the secrecy with which he projected his designs, as for the diligence with which he provided every thing that was requisite to carry them into execution (23).

S E C T. IV.

Project of establishing a South-Sea company by Isaac le Maire, and his associates; and how they came to fail. Disputes with the natives, and with the English, in the island of Java. The Dutch expelled from that island.

b THE directors of the *Dutch East India* company having still very much at heart the making an effectual voyage through the *Streights of Magellan* to the *East Indies*, they, in the spring of the year 1614, granted a commission for this purpose to *George Spilbergen*, a man of established reputation for his knowledge in maritime affairs, and ordered six ships to be equipped for that purpose; viz. the *Great Sun*, the *Full Moon*, the *Huntsman*, a yacht called the *Sea Mew*, all four from *Amsterdam*; the *Æolus*, of *Zealand*; and the *Morning Star*, of *Rotterdam*. They were all equipped in the best manner possible; and the admiral had, in a great measure, the choice of his own officers, which, in long voyages, is a thing of the utmost consequence, in order to prevent unnecessary disputes ^a. The ships were ready a little after *Midsummer*; but the admiral having declared his opinion, that they should, in case they sailed then, arrive at an improper season in the *Streights of Magellan*, the directors thought proper to postpone the voyage till the month of *August*; and on the 8th the fleet sailed out of the *Texel*, with a strong gale at south-east ^c. It was believed, that the states-general were also concerned in this expedition; the true design of which was, to examine, and, if a fair opportunity offered, to weaken, the strength of the *Spaniards* in the *South-Seas*, and to make some trial of the advantages, which many speculative people thought might result from taking this route to the *East Indies*. The fleet very happily passed the streights, engaged, defeated, and destroyed, the *Spanish* navy in the *South-Seas*; and, after a short and prosperous navigation, arrived on the coasts of *Java*, after visiting and supplying the *Dutch* settlements in the *Moluccas* ^d.

d A VERY little time after this fleet put to sea, a new project was formed in *Holland*, for sup-planting, in some measure, the *East India* company, at least so that company would have it understood, though the parties concerned affirmed the direct contrary. *Isaac le Maire*, a rich merchant, was the author of the project, and *William Cornelison Schouten*, an able and experienced seamen, who had made three voyages to the *Indies*, the person who undertook to carry it into execution ^a. Their true design was, to discover the unknown southern continents and islands by some other passage than that of the *Streights of Magellan*; believing, that as those streights were named in the *East India* company's charter, so, if they could find

^a SALLENGRE essai d'une hist. des Provinces Unies, p. 73.
tales, tom. viii. p. 1.
compagnie, p. 43.

^b Ibid. p. 109.

^c Voyages de la compagnie des Indes Orientales.
^d Avertissement à la tête de recueil des voyages de la

another passage into, and out of, the *South-Seas*, they should do an acceptable service to their country, without incurring any of the penalties threatened to such as should interfere with the trade granted to that company^o. Several rich merchants joined with them in this enterprize; and two ships being fitted out, the command was given to *Schouten*, and the direction of the trade to *James le Maire*, son to *Isaac*, who was a young man of great courage and capacity. They sailed from the *Texel* June the 24th 1615, passed through those streights between *Cape Horn* and *States Island*, which have since borne the name of *Le Maire*; and, after making many important discoveries, agreeable to their own project, found themselves under a necessity of returning by the *East Indies*; where, putting into a port of the island of *Java*, their vessel was confiscated by the *Dutch East India* company, and both *Schouten* and *Le Maire* sent home prisoners on board of the fleet of *George Spilbergen*; in which passage *James le Maire* died^p.

Strange infatuation in suffering the company to ruin and suppress this commerce.

It has been truly and justly observed upon this subject, that the treatment given to these adventurers has, in all probability, been sufficiently punished by its consequences; since all that rich trade that might have been derived from the discoveries, and the pursuit of the discoveries, of *Le Maire*, has been totally lost by neglect; which, perhaps, has done as much damage to the *Dutch*, as their *East India* company has done them good^q. Of this *John de Witt* was aware, and has very wisely remarked, that though the pursuit of such a commerce might have been beyond the strength and power of the *East India* company at that time, yet there was no good reason why the states should have abandoned it, or should not have encouraged the setting up a new company, in order to have made a trial of what this new trade would have produced; for, if new trades do not prosper, they occasion only a temporary loss to private persons, and none at all to the state; whereas if they thrive, and turn to good account, they not only produce immense riches to such as are concerned in them, but also prove a mighty advantage to the public^r; for new trades, especially under such a government as that of *Holland*, bring new people, and increase the subjects of the state that encourages them; for wealth is a powerful attractive, and where men are sure to be rich and free, there will never be any want of people (M).

Different success attending the company's affairs, and signal favours granted them by the states.

ABOUT this time the company sustained great losses, and their trade was much impaired, by means of some powders that were imported, and mixed with the spices, by the retail merchants, which lessened their consumption and value. This the company represented to the states; and thereupon a placard was issued forth, for preventing the like abuses for the future^s. The states also having perceived, that some neighbouring potentates, alarmed at the company's prosperity, did their utmost to oppose it, particularly by inveighing their best and most experienced seamen, and drawing them off from their service, published an edict, by which the desertion of seamen was prohibited under severe penalties^t. In the years 1618 and 1619 the company had very good fortune; for they received from the *Indies*, at several times, no fewer than ten ships, with rich cargoes, valued at six or seven millions. This new and extraordinary success inspired them with fresh courage, not only in resisting the attempts of the *Spaniards*, but in concerting their ruin, by way of reprisal; which was carried a great way by the diligence and resolution of *Laurence Reael*, a very knowing and prudent man, who served nine years in the *Indies*, where the company honoured him with the most considerable post, and then he returned to *Holland*^u. By this time, the abuses and unwarrantable practices relating to the sale of the company's stock began to revive; upon which the states found them-

(M) In a history of this kind, we do little or nothing, if we barely set down facts, without discovering to the reader their motives, and the consequences with which they were attended. In the histories of great monarchies this is frequently difficult, and almost always uncertain, which makes it in many cases excusable, and in some necessary, to omit them. In the history of commerce it is otherwise; because there a little industry will supply the materials, and the very design of such histories makes reflections requisite. It has been observed, that the very best reason in favour of an exclusive company, is also an unanswerable motive, in a trading country, for giving all possible encouragement to such as are willing to attempt new discoveries; for if it be a good ground to establish an exclusive trade, to prevent private merchants from overstocking distant countries with the commodities and manufactures of their own, it is still a stronger reason that new discoveries should be promoted, that those commodities and manufactures may be

taken off, which the exclusive grant would otherwise keep upon the nation's hands. It was therefore a sufficient favour that the *East India* company obtained, by its exclusive charter; and that company had no reason to expect, that the navigation through the *Streights of Magellan* to countries short of the *Indies*, should be prevented; because, at the same time it did their country great hurt, it did the company no good. This was justly observed then, and the observation retains the same propriety still: neither is the force of it restrained to *Holland*, but extends to every government that derives its whole, or its chief support, from commerce, in which the interests of companies are to be regarded only so far as they are consistent with those of the nation; and consequently those of the nation are never to be sacrificed to the interests, and much less to the whim, the humour, or the pride, of any company, how potent or how beneficial soever; which lesson, until it be sufficiently regarded, can never be too often repeated.

a selves obliged to renew the placard of 1610, with a few amendments, suitable to the circumstances of the time, and the artifices which, to elude former provisions, had been newly invented ^w.

It is easy to perceive from these particulars, which are all taken from *Dutch* authors, as indeed we have none but theirs to take them from, that the company had all the favour and countenance shewn them by the states-general that could be desired; so that whatever they asked was granted, whatever they called a grievance removed, and whatever narratives they published of their transactions in the *Indies* was received, and insisted upon as authentic; yet, from the time they became powerful in that part of the world, they had been continually picking quarrels with the *English*, notwithstanding the many obligations they owed them, and that the first pilots they carried out in these long voyages were *English* ^x. The captains, and other servants of the *English* company, employed their time chiefly in trade, and in procuring as quick loadings as might be for the ships of their masters; but the *Dutch*, following the example of the *Portuguese*, and, to speak the truth, being compelled thereto from their knowledge, that, if they did not fortify, their enemies would soon drive them out of the *Indies*, took pains to erect, in the most convenient places, strong fortresses, well furnished with cannon, military stores, and competent garrisons ^y. As their power increased, their pride augmented, and they could not bear to see the *English* beloved by the natives, and trading with them without making use of force; so that, prompted partly by avarice, partly by ambition, they often hindered, and sometimes oppressed them. The *English* company, as we have shewn in its proper place, applied to king *James* for redress; upon which, two treaties were set on foot in *Holland*, for compromising these differences; but without success: and tho' at length, in the year 1619, a treaty was concluded, by which the concerns both of the *English* and *Dutch* company were regulated, and certain measures agreed upon for preventing new disputes, yet this had very little effect ^z; the *Dutch* soon after making them sensible of their superiority, treating their complaints with contempt, and aggravating the sufferings of the company's servants, by telling them, they had better interest than they at the *English* court; and that, while they had plenty of money in *Holland*, they knew very well how to make or purchase friends in *England* ^a. What truth there was in this cannot, at so great a distance of time, be, with any degree of certainty, determined; but, from circumstances and succeeding events, it should seem, that these suggestions were not altogether void of foundation ^b. But, without dwelling longer upon so invidious a topic, let us proceed to shew, from the *Dutch* writers, how they became masters of one of the principal places in the large and fruitful island of *Java*; and how they laid there the basis of that great empire, which they at present enjoy, by founding that vast and famous city, which speedily became, and has ever since continued, the capital of their conquests and settlements in the *East Indies*; which if we relate more fully than any transaction we have hitherto mentioned, the nature and importance of the subject will justify us to the reader.

WHEN the *Dutch* first visited the coasts of *Java*, they found, on the north side, a commodious port, with a town adjacent, then called *Kalappa*; but, about the year 1607, the inhabitants changed that name for *Jacatra*. It was built, according to the manner of that country, with a pretty good wall, composed of rough, red, and durable stones, but indifferently put together; the houses were built with a sort of reeds, each surrounded with wooden pales. Though it was far from being large, and as far from being populous, yet it had a king, as well as the rest of the towns upon the coast. The palace of this monarch, none of the most splendid, and yet, the soil and climate considered, convenient enough, and not contemptible, was built of canes. His power was small, and his wealth not great; notwithstanding which, he endeavoured to make a figure in war, as well as trade. His maritime force consisted in four large galleys, in the bottom of which sat the rowers, and on the decks stood the soldiers: and as for his commerce, it consisted intirely in the sale of the little pepper his small territory produced ^c. The *East India* company contracted with him for the whole; but, either finding him guilty, or suspecting him of breach of faith, they thought proper to build a fort, to keep him in awe. This enterprize gave some umbrage to the *English*, who corresponded likewise with the people of *Jacatra*; and this jealousy between the two nations broke out, before it was long, into an open war ^d. Their fleets, to end the dispute, engaged at a small distance from the port, and fought gallantly for several hours, till at length the *Dutch*, who, as they say, were much inferior in force, were thoroughly beaten, retired to *Amboyna* in order to refit, and procure a reinforcement. Moved by this event, *Vidark Rama*, king of *Jacatra*, immediately renounced his treaty with the vanquished, and entered into a close and solemn alliance

Their jar: to the Indies with the servants of the English company, and consequences of these disputes.

A succinct account of that city, on the ruins of which Batavia was afterwards founded.

with the *English*: but our writers affirm, that he made a treaty with them long before that a with the *Dutch* ^c.

Upon the defeat of the Dutch by the English, the former retired to Amboyna.

At this time the *Dutch* had two fortresses in the neighbourhood of the town, one on the south side, called the *Lodge of Nassau*; the other on the north, which they called *Fort Maurice*, newly built, but not intirely finished. These were neither of them very strong; and the latter had but seven pieces of cannon, with a garrison of two hundred and forty men, fourscore of whom were negroes. On the other hand, the town of *Jacatra* was well provided; and, upon an eminence in the middle of it, the *English* had a magazine, tolerably well fortified, and with a considerable number of heavy cannon. These they employed to fire upon the *Dutch* forts; and the natives followed their example ^f. The *Dutch*, looking upon this as a declaration of war, made a vigorous sally, burnt the *Chinese* quarter, made themselves masters of the *English* post, and blew up their magazine. The *English* fleet, under the command of Sir Thomas Dale, coming at this juncture before *Jacatra*, John Peter Koen, the *Dutch* commodore, found it requisite to put to sea with seven sail of ships, which were all he had; whereas the *English* squadron was composed of eleven. They fired upon each other on *New-year's-day* 1619; but the *Dutch*, finding the dispute a little unequal, retired to *Amboyna*, leaving the *English* in the port of *Jacatra*; where they were joined by seven ships more, and by a body of four thousand auxiliaries from *Bantam*, which is but fifteen leagues distant ^g (N).

The Dutch governor of Fort Maurice trepanned by the king of Jacatra, and made prisoner.

By this time the *Dutch* fort *Maurice* was in a manner complete, with four good bastions, well supplied with artillery; so that Peter Vanden Broecke, who commanded in the absence of commodore Koen, though besieged by land and sea, thought himself in a condition to make a good resistance. He began with thundering upon the town of *Jacatra*; which had so good an effect, that the king immediately desired to treat, and at length agreed to pay eight thousand patacons, in order to purchase his peace; and this being concluded, he prevailed upon the *Dutch* governor to pay him a visit ^h. After a short conference, he seized, and threw him into prison, where he threatened him with death, if he did not order the fort to surrender. He went still farther: he carried him, with a cord about his neck, under the walls of the *Dutch* fort, and bid him give his orders; which he did to those who were within hearing, to defend themselves to the last man; upon which the king carried him back to prison. Sir Thomas Dale then entered into a treaty with the people of the fort; and they, being almost without powder, agreed upon a capitulation, by which the place, with the artillery and ammunition, was to be given up to the *English*, and all the merchandizes and effects therein to the king of *Jacatra* ⁱ. But, at the very instant that this should have been carried into execution, a new and very unexpected scene opened, which intirely changed the face of affairs.

A Javanese general from Bantam comes to Jacatra, and deposes the king, who flies.

The *Dutch* governor found means to send a messenger to *Bantam*; and representing to the governor of that place how advantageous it might be to him, if he became his, instead of remaining prisoner to the king of *Jacatra*, or the *English*, that proposition was accepted as soon as made, and an officer, with two thousand men, detached, to take Vanden Broecke out of the hands of king Rama. That officer coming to *Jacatra*, demanded audience of the king, when, without ceremony, he clapped a dagger to his throat, and bid him divest himself of all

(N) The *Dutch* have been much more careful, and, at the same time, much more successful, in preserving the memorials of their first expeditions into the *Indies*, and in their digesting them into proper order, than we, who, except a few rough relations, and some very succinct passages in our general histories, have scarce any thing remaining that relates to the original of our *East India* trade. The *Dutch* historians, if we could intirely rely upon them, have, in some measure, supplied this defect; but there is this one great misfortune attends their accounts, that they have not only a visible air of prejudice and partiality, but are also inconsistent in their substance. In the first place, they represent the *English* as acting towards the *Indian* nations with great haughtiness and arrogance, prescribing to them what laws they thought fit; chastising them for whatever wrongs they received with unrelenting severity; and behaving towards them, upon all occasions, rather as imperious masters, than as merchants who meant to treat with them in a friendly manner (24): yet they acknowledge, that the *English* made few or no settlements, contented them-

selves with slight factories, and never aimed, by erecting forts, to secure to themselves an exclusive trade (25). It is easy to discern, that these circumstances cannot agree; but, when they come to relate what they style the war of *Jacatra*, our nation is represented under a new character; they are said to have had the same design with the *Spaniards*, that is, of thrusting the *Dutch* intirely out of the *Moluccas*, and to have carried on this project with much greater address and abilities, drawing the emperor of *Java*, the king of *Jacatra*, and the governor of *Bantam*, all into their interest; by which they brought the *Dutch* within a finger's breadth of ruin (26). How can this be reconciled to their former accounts? The truth seems to be, that the *Dutch* first projected an exclusive trade in *Java*, which produced this war, to defeat that design; and there can be nothing more evident, even from their own account of the matter, than that the natives in general were much more inclined to the *English* than the *Dutch*, who, by a superior force, expelled the one, and subdued the other.

^a ensigns of royalty, if he desired to escape with life. The poor prince did as he was bid, fled, with his family, into the heart of the country, and getting from thence on the other side of the island, earned his bread as well as he could, for many years after, in the humble condition of a fisherman*. The *Bantamese* immediately quartered themselves about *Fort Maurice*, to which *Peter Vanden Broecke* returned, and the war broke out afresh; but, with the assistance of their new allies, the *Dutch* found they were in a condition to defend themselves till they could be relieved. *Vanden Broecke*, before he went to *Bantam*, which he was obliged to do in virtue of his promise, changed the name of the fortress to *Batavia*, which he inscribed over the gate¹.

Their affairs restored in Java. Foundation of the city of Batavia, which becomes the capital of their settlements. Cruel usage of the English at Amboyna. Batavia twice besieged, and gallantly defended; speedily repaired, vastly augmented, and rendered the fairest and strongest city in the Indies.

^b **O**N the twenty-fifth day of *March*, commodore *Koen* arrived in the road, with a fleet of seventeen sail, and a considerable body of troops on board. The next day he landed twelve hundred men, took, ravaged, and intirely destroyed, the town of *Jacatra*; and, at the same time, either disliking the liberty that *Vanden Broecke* had taken, or having already laid the plan of what he afterwards executed, he caused the word *Batavia* to be defaced. He next marched with all his forces to *Bantam*; and as soon as he came before the place, signified to the governor, that he expected that *Peter Vanden Broecke*, and seventy other prisoners, should be immediately set at liberty, which might induce him to forget some things that were past. The governor being in no condition to resist, thought it best to comply; and the *Dutch* commander, having done what he proposed, marched back again to *Fort Maurice*^m.

The Dutch affairs restored by John Peterfon Koen; and Jacatra subverted and destroyed.

^c The *English* had, by this time, reembarked their artillery, and were sailed away; and peace being concluded between the two companies, was proclaimed on the ninth of *June*.

^d THE very next day *Koen* ordered a new city to be laid out, much larger in extent than the old one, as comprehending within its bounds both the forts *Nassau* and *Maurice*. The streets were drawn strait, and very spacious, with commodious canals of running water, planted with trees, the shade of which might be enjoyed by those who passed backwards and forwards in boats; which advantage was derived from two fine rivers, one running through the city, and the other encompassing its walls. A strong citadel, being a square regularly fortified, was erected on the east, and a fifth bastion added, to cover the bridge that leads into the city. The place itself also was quickly put into a state of security, and, by degrees, environed with a thick brick wall, defended by eighteen bastions at proper distances. To this noble and commodious place *John Peterfon Koen*, by whose direction the foundations were laid, gave the name of *Batavia*, and declared it the capital of the *Dutch* settlements, though then very inconsiderable, in point of strength and beauty, to what it now is, as those settlements were in a manner nothing in comparison of what they now areⁿ. But his choice in this respect was so just, his plan so well contrived, and every thing throve so fast under his care, that future governors have only executed his project, and carried as well the city of *Batavia*, as the *Dutch* empire in the *Indies*, to that magnificence and extent, of which he seemed to have a previous conception when he disposed things as he did, since they could not be altered for the better. And thus, within the first term granted to the *East India* company, she saw the outlines drawn of that greatness, which has since astonished both *Asia* and *Europe*^o.

Immediately after which, the governor-general Koen lays out the new city of Batavia.

^e THE news of this establishment was very welcome to those who had the direction of the company's affairs in *Holland*, who were very desirous that some acquisitions might be made in the *Indies*, where they might raise magazines, keep up a constant military force, and the face of a regular civil government, without which they knew it was impossible they should supplant the *Portuguese* in those parts, since they were well assured, that the lustre of the viceroy's court, and the luxuries of the city of *Goa*, enchanted the oriental nations, and kept them in a constant state of dependence. They resolved, therefore, to improve this circumstance, and to raise *Batavia* to as high a degree of splendor as it was possible; but it was not only the

Policy of the East India company in Europe, as well as the Indies.

Chinese, the *Japoneſe*, and the *Indians*, they judged it neceſſary to amuſe; on the contrary, a they found playing off the ſame ſcheme very requiſite at home. They had before cauſed an ambaffador from the king of *Siam* to be introduced to the prince of *Orange* with great pomp and ceremony; and now they brought over five young princes, as they were ſtyled, to be educated in *Holland*. Of theſe Don *Andreas de Coſtano* was the ſon of the king of *Soyan*, and Don *Marcus* of the king of *Kielan*, both in the iſland of *Amboyna*; tho' ſome writers, either through ignorance, or, which is much more probable, with a deſign of magnifying the power of the company at this juncture, thought fit to ſtyle theſe the ſons of the kings of *Siam* and *Ceylon*. The other three were perſons of leſs conſideration^a. The two young princes brought each of them a letter from his father to prince *Maurice*; who received them very graciously, and ordered due care to be taken of their education. This artful management had a double effect; for as it recommended the intereſts of the company very ſtrongly to the prince, who, with many great virtues, had a tincture of vanity, ſo it ſerved to confirm in the *Indies* the notion they had ſpread of a king of *Holland*; which was very requiſite amongſt nations who had very high ſentiments of monarchy, and ſcarce any idea that there could be another ſort of government. By theſe methods they obtained from the States General edict after edict in their favour, and all the advantages and aſſiſtance they could deſire; which none knew better how to uſe than theſe directors, or how to deliver themſelves from the future neceſſity of ſo much as deſiring them^a.

By which they procure their charter to be renewed by the States General.

In the ſpring of the year 1622, there returned to *Holland* two ſhips richly laden, with news that the war was ſtill carried on in *Java*, as well as againſt the *Spaniards* in the *Moluccas* and in the *Manillas*; and that the iſland of *Banda* was again recovered, which had been taken from them by the laſt-mentioned nation; as alſo that the laſt fleet from *Holland* arrived there ſafely in four months and three days^c. This favourable intelligence came very ſeaſonably, as the company was now ſolliciting for a new charter. In this they met with ſome oppoſition; for, in the firſt place, the proprietors were diſſatisfied, as apprehending they had not a full ſhare of the profits; and, to ſtill this clamour, the directors were obliged to make a dividend in cloves of twenty-five *per cent*^d. On the other hand, there wanted not ſome who ſuggeſted, that the excluſive privilege they enjoyed was detrimental to the ſubjects of the republic in general; and that the commerce of the *Indies* would bring far more money into the *United Provinces* if it was laid open. In answer to this, the friends of the company alleged, that it was not only a very imprudent, but a very dangerous thing, to put conjectures in balance with facts; that the company, in the ſpace of twenty-one years, had divided four hundred and fifty *per cent*. upon their capital, which amounted to near thirty millions of florins, beſides the ſeamen and ſoldiers pay, merchandize which they exported, and other things almoſt beyond the reach of calculation^e; to which if they had added a clear account of the company's ſtock, it would have done much credit to their management: but this, for many reaſons, it was thought prudent to conceal. However, upon theſe allegations, in conſequence of their great credit with prince *Maurice* and the States, and reſpect being had to the war's breaking out again with *Spain*, their demand was complied with; and a new charter, dated *December* the twenty-second, 1622, was granted them for the further term of twenty-one years, to commence from the firſt day of the ſucceeding year^e (O).

(O) The arguments in favour of the company ſeem to be ſo very ſtrong, that it is requiſite the reader ſhould be made acquainted with the reaſons which induced one of the ſoundeſt ſtateſmen, and ſincereſt patriots, that republic has ever produced, to diſapprove this meaſure. His words are theſe (27): "It is certain that the firſt and chief reaſon of thoſe grants to them, was the war with the king of *Spain*; which ceaſing, and, in caſe of any new war againſt that people, they would no longer be formidable to us, but we to them, no conſequence for renewing their grants can be drawn from thence. Secondly, As it is well known that it was neceſſary at firſt to make ſome conqueſts amongſt the ſpice iſlands on the enemy, becauſe the more lands they conquered, the more right and greater capacity they would acquire to trade in thoſe parts; ſo it can-

" not be denied, that when thoſe neceſſary conqueſts are made, the grounds and maxims of the proſperity of the ſaid company begin to oppugn the general good of this country, which is manifeſtly known to conſiſt in a continual increaſe of manufactures, traffick, and freight-ſhips: whereas the intereſt of ſuch companies conſiſts in ſeeking the benefit of their own members only, and this even by dealing with ſtrangers, and in foreign as well as our own manufactures, and to the great prejudice of other inhabitants, by importing manufactures, and other mechanic works, into this country, and ſending them through *Europe*; and, in ſhort, by making the greateſt profit with the leaſt traffick and navigation. As it is acknowledged, that if the *East India* company can gain more by importing *Japan* wrought ſilks, *Indian* quilts and carpets, &c. than

- a By the next ships from the *Indies* they had a full account of what had been done at *Amboyna*; where, under pretence of a conspiracy against the *Dutch* government by Mr. *Gabriel Toverfon*, and others, they seized, tortured, and put them to death; which rigorous and extraordinary proceeding was not at first openly divulged in *Holland*, where it was only said, that there had been some commotions in *Amboyna*, which, by the vigilance and prudence of the governor, had been totally extinguished*. But when the whole affair began to take air, and make a noise in the world, they were forced to publish defences of their own conduct, in which they allege, that, the conspiracy being deep and dangerous, the governor of *Amboyna* was obliged to take the most expeditious and effectual methods, and after examining and convicting the criminals, as well by their own confession as by witnesses, to proceed to execution*.
- b But it was impossible to justify this fact to impartial inquirers, or even to palliate it, since it was self-evident, that the *Dutch* were very powerful in those parts, and the *English* very weak; so that there was no necessity for proceeding so hastily to the last extremities, and yet necessity was their only plea. It was inconsistent with the treaty concluded between the two companies, by which a joint council of defence was erected at *Batavia*, that ought to have had cognizance of this matter'. The same kind of arguments had been urged in support of former acts of violence; and yet, by the late treaty, they consented to pay a very large sum of money, which they never would have done in their own wrong; and, after doing this, in so short a space as four years, to commit a new act of violence, far exceeding all that was past, and to avail themselves of that act to dispossess the *English* intirely of their trade in the spice islands, to which they had as good a title as the *Dutch*, and for their own enjoyment of which the *Dutch* stood indebted to them for their assistance, was contrary to the rules of natural equity, and to the law of nations*. But, notwithstanding all this, what between the interest of the prince of *Orange* at the *English* court, the friends made there by the *Dutch East India* company, and the influence the States General had over some, who, at that juncture, took upon themselves the title of patriots*, this affair was for the present stifled, to the great dishonour of both nations, to the irreparable loss of the *English East India* company, and to the fatal overthrow of that sincere and cordial correspondence which had so long subsisted between the protestant and maritime powers (P).
- c

- d AFTER long and mature deliberation, the states-general determined to attempt another expedition into the *South-Seas* by the *Streights of Le Maire*, with an intention to make a settlement in *Chili* or *Peru*, or to strike such a blow, as should spread terror and confusion through the whole extent of the *Spanish* dominions in *America*; after which, their fleet might sail to the *East Indies*, and give such assistance to the company as the state of her affairs should demand. In order to execute their great views, the admiralties of *Amsterdam*, *Zealand*, *Holland*, and *West Friesland*, equipped a fleet of eleven sail of large ships, having upwards of one thousand mariners on board, besides six hundred regular troops, and carrying in the whole three hundred

The Nassau fleet sail first to the West, and then to the East Indies.

" than raw silk; or if the company, by causing a scarcity
 " of nutmegs, mace, cloves, cinnamon, &c. could so raise
 " the price, that they might gain as much by one hundred
 " last as by a thousand; we cannot certainly expect
 " that they should import those raw silks, and thereby
 " incur unnecessary and great disbursements; or, in
 " short, that, in their management, they should cause a
 " greater trade and navigation than those hundred last
 " would require; but that they would rather, to shun
 " greater traffick and navigation, destroy all the superfluity
 " that is beyond those hundred last which they have in the
 " *Indies*: and it can be as little denied of such companies, that the more
 " lands they conquer, the more of their stock they must necessarily
 " spend for the preservation and defence of such lands; and the more
 " dominion they have, the less are they able to mind and augment
 " their commerce: whereas, on the contrary, if these fortresses, cities,
 " and lands, were possessed by our subjects, they would have so much
 " the more conveniency and security to trade in the *Indies*."

(P) We are certainly much indebted to the *Dutch* historians for preserving to us many particulars in relation to the melancholy affair at *Amboyna*, which are intirely neglected and omitted by our own. Thus, they very

fairly acknowledge, that, admitting the truth of the conspiracy, for which they put Mr. *Toverfon*, and the rest of the *English*, to death, it was a fact, in which the *East India* company had not the least concern, and of which none of their superior officers had the slightest notice; so that there could be no foundation, even according to their own way of reasoning, for stripping the company of their trade and factories in that island, or of depriving them of *Poleeren*, one of the islands of *Banda*, the sovereignty of which had been yielded by the inhabitants, in the most solemn manner, to the crown of Great Britain (28). They likewise admit, that the *British* court, tho' they did not proceed to extremities, never quitted their pursuit of this affair, but pressed it continually for twenty years together; and that they were withheld from having recourse to arms by the assistance they expected from the *Dutch* in the affair of the palatinate. And they further confess, that at length, upon the motion of the *Dutch* themselves, the compromising this business was left at last to the two *East India* companies; in consequence of which, a much greater sum was stipulated to be paid to the *English* company, by way of satisfaction, than was afterwards obtained by *Cromwell*; but that the execution of this agreement was prevented by the breaking out of the civil war (29).

(29) Hist. de la conquête des Isles Moluques,

pieces of cannon^b. To the large expences which such an armament demanded, the company liberally contributed, as did prince *Maurice*, who was the great patron of the expedition, in honour of whom this is generally titled the *Nassau fleet*^c. April the twenty-ninth, 1623, this great force sailed under the command of *James Le Hermite*, entered the *Streights of Le Maire* on the second of February following; and, on the tenth of May, came before the port of *Lima*, which they attacked, and did incredible mischief to the *Spaniards*, tho' without any advantage to themselves; and much the same fate attended the rest of their attempts in the *South Seas*, where their admiral died; and these disappointments sharpened their resentments to such a degree, that, upon the *Spanish* viceroy's refusing to ransom their prisoners, they made no scruple of hanging them up at the yard-arm^d; an action deservedly condemned by all who mention it (Q). They proceeded next to *Acapulco*; from whence, towards the close of the year, they sailed for the *East Indies*; where, upon their arrival, the fleet separated, and did the company considerable service; tho' taking it all together, this business was very far from answering the great expectations which it had raised. By the help of so strong a reinforcement the company's affairs were very much mended, the *Portuguese* every-where distressed, and the communication between their colonies much interrupted; all which had a strong effect upon the minds of the *Indian* nations, and, as it was natural, taught them to slight the declining, and to court the rising power^e. To this they were the more inclined from the assurances given them, by the *Dutch*, of assistance and protection, from the most disinterested motives; but they quickly found these were but words of course, and that the whole of this revolution consisted not in the recovery of freedom, but barely in a change of masters, by which they were no great gainers.

Surprising success of the company, and immense profits accruing from thence.

By these wise and prudent measures, and by the perpetual attention of their directors to whatever might conduce to the company's advantage, their commerce at this time flourished so much, that they were obliged to enlarge the number of their ships every year; and the company, being sensible their prosperity was chiefly owing to the good conduct of their admirals and commanders in chief, solicited *John Peterfon Koen* to make a second voyage to the *Indies* in quality of governor-general; which he did, and put to sea in April 1627, soon after the *Rotterdam* came home; and was followed by four other vessels under the command of *John William Verschoer*. The rich cargo of these ships was scarce unloaded, when *Adrian Block Marten* was ready to sail with a squadron of eleven ships^f. He put to sea in October, and lost two of his ships in a storm, but saved the men and the cargoes. In the same month of October, *John Karstenz* of *Emden* brought with him safe into the *Texel* three ships laden at *Surat*; and, in his passage, had been obliged to put in at *Portsmouth*, where an embargo was laid upon his ships for some time. In June 1628 five other ships came home under the *Sieur Carpenter*, who had been the company's general in the *Indies*; and the cargoes of these ships were as valuable

^f Avertissement des voyages de la compagnie,

(Q) It seems to be but a point of justice, after mentioning an action of this nature, to give the reader an account of what is advanced in excuse of it in the journal of that voyage, which runs thus (30): "On the 13th of June 1624 the *Spanish* prisoners, having represented that the viceroy would be willing to treat for their ransom, it was resolved that a proposal of that sort should be made; and accordingly an officer was sent in a small vessel into the harbour with a flag of truce. As soon as the viceroy had notice of it, he sent directions that the seamen should have their hands tied, and their eyes covered, while they remained in the shallop, and that the officer who had the letter should be brought on shore. In the evening, however, the seamen were set at liberty; and the *Spaniards* took all imaginable pains to persuade them to remain where they were, and to enter into the service of the king of *Spain*; but this being found ineffectual, and not so much as a single man having listened to their proposals, an answer was given to the letter in these words: That the viceroy had nothing but powder and ball at the service of the *Dutch*; that he would not enter into any negotiation or treaty with them whatever for the ransom of prisoners; and that, if any presumed to enter the port of *Calao* again with a flag of peace, he would

"order them to be hanged up with the flag about their necks. On the 14th, when this answer was reported to the *Dutch*, they resolved in a council of war, to hang up all their prisoners. The reasons which induced them to so cruel a proceeding were these: They were themselves much streighted for provisions, and had scarce any water left; it was therefore impossible for them to maintain these people, if they meant to keep them; and at the same time they had no reason to keep them, since they were to expect no ransom. On the other hand, to set them at liberty was against the maxims of prudence, as well as the laws of war, since it could only serve to expose their weakness to the *Spaniards*, and thereby render them the scorn of their enemies. On the 15th in the morning they put this severe resolve of theirs in execution, and actually hanged twenty-one *Spaniards* at the yard-arm of the mizen-mast of their admiral, in the sight of an infinite number of people who were standing on the shore. Three old men they sent in a bark to *Calao*, with orders to tell the viceroy, that, since they had no quarter to expect from him, they were resolved to give none to such as fell into their hands, and that he ought to look upon this as the just effect of his own brutal message."

(30) Voyages de la compagnie des Indes Orientales, tom. ix. 73. 74.

as the former. Notwithstanding these unlucky adventures, the company were perplexed by some cross accidents, which were very detrimental to their affairs, occasioned by several political disputes in which the republic was engaged ^a.

THE *English* stopped their ships as often as they thought proper, and the *Dunkirk* privateers ^{Measures pursued to protect the homeward-bound squadrons.} never failed to give them chase. This obliged them to resolve upon fitting out a strong squadron every year, which was employed in the *German* ocean, to cruise for their homeward-bound ships, and conduct them safe to their ports. The first squadron thus stationed was commanded by *John Dierksz Lam*; and, upon his approach, the *Dunkirk* privateers retired ^b. Soon after a squadron of eleven ships sailed for *India* in *October*, under the command of *James Specks*, accompanied by *John Valbeck*, a famous mathematician. On the other hand, the company had, by the *Viana*, the unwelcome news that they sailed from *Batavia* the foregoing *January*, in hopes to pass the *Streights of Baby* in time; but, being disappointed, they ran ashore, in the latitude of twenty-one degrees, upon the south side of the *Terra Australis*, and were obliged to throw over-board a great quantity of their rich effects; and so got afloat again, yet not without great difficulty and danger (R). In their passage they fell in with *Block's* squadron, which had likewise met with very stormy weather. By this ship they had notice that the people of *Java* had formed a conspiracy to assassinate *John Peterson Koen*; which was discovered by a poor *Chinese* boy, and thereby the execution of that detestable design was intirely defeated, to which they owed the preservation of *Batavia* at that juncture ^c.

IT was within this period that most of those great discoveries were made by the *Dutch* officers on the southern continent, which are depicted in the stadthouse of *Amsterdam*. The large country of *Carpentaria*, now better known by the name of *New Holland*, was so called from general *Carpenter*, who discovered it in 1628. The western part of the same country, which lies to the south of *Java*, was discovered the same year, and, from the name of the commodore, was called *De Wit's Land*. But all the southern coasts, lying towards that sea which separates this continent from that close to the south pole, was discovered, in *January* 1627, by *Peter de Nuyts*, of whom we shall have occasion to speak at large, and who had thereby an opportunity of bestowing his name on one of the finest countries in the world ^d. All these discoveries, together with a just report of their affairs, the company received from general *Carpenter*; and upon his return it was that the directors resolved to send a squadron of eleven sail into those parts, under the command of commodore *Francis Pelsart* ^e (S). It may not be amiss to observe, that, while the company was doing all these great things, their own country was torn with civil dissensions; so that if the trade of the *Indies* had not been under a direction distinct from that of the civil government, it is simply impossible that they should have suc-

^a Avertissement à la tête de recueil des voyages de la compagnie, p. 50. ^b LE CLERC histoire des Provinces Unies, tom. ii. p. 110. ^c Avertissement à la tête de recueil des voyages de la compagnie, p. 50. ^d NEUVILLE hist. van Hollande, 1. vi. ^e HARRIS's voyages, vol. i. p. 320.

(R) It is very remarkable, that at this time all accidents that regarded discoveries were carefully recorded; whereas of late years, indeed for almost-a century past, we hear little or nothing of this kind. One cannot help, however, supposing, that the *Dutch East-India* company, who were so inquisitive then, are not altogether negligent now; but, on the contrary, have taken pains to inform themselves thoroughly of the nature of this great southern continent, of which the rest of the world has heard so much, and yet knows so little, while the true value, as well as the means of entering into it, remain only known to themselves. We have in the text endeavoured to give a succinct description of this southern continent, so far as we are able, from the voyages and maps that have been published, to judge of its situation; and, in the next note, we shall lay down the reasons from which it is concluded that their discoveries have been very important, notwithstanding they have been so industriously concealed.

(S) There is a fragment extant of this voyage of captain *Francis Pelsart*, in a very curious collection; from which it appears, that the ship called the *Batavia*, which he commanded, was wrecked, on the 4th of *June* 1629, upon the coast of *New Holland*, in the latitude of twenty-eight degrees south, of which he was able to make no farther discovery than that it was inhabited (31). But twelve years after, the company sent captain *Abel Jansen*

Tasman to take a survey of all the countries that are mentioned in the text; and it is from the extract of his journal (32), that we learn this southern country is a very large island, extending from the latitude of forty-three degrees south to the equator, and from the longitude of 123° to 190°. We may therefore with truth affirm it lies precisely in the richest climates of the world. If the islands of *Sumatra*, *Java*, and *Borneo*, abound in precious stones and other valuable commodities, and the *Moluccas* in spices; *New Guiney*, and the regions behind it, must, by a parity of reason, be as plentifully endowed by nature. If the island of *Madagascar* is so noble and plentiful a country as all authors speak it; and gold, ivory, and other commodities, are common in the southern part of *Africa*, from *Melinda* down to the *Cape of Good Hope*, and so up again to *Cape Gonfalon*, here are the same latitudes in *Carpentaria*, *New Holland*, and *New Zealand*; if *Pern* overflows with silver, if all the mountains of *Chili* are filled with gold, and this precious metal, and stones much more precious, are the product of *Brazil*, this continent enjoys the benefit of the same position, and therefore whoever perfectly discovers and settles it will become infallibly possessed of territories as rich, as fruitful, and as capable of improvement, as any that have been hitherto found out either in the *East Indies* or in the *West*.

(31) This voyage is printed in the first volume of *Thevenot's* collection of travels, and from thence taken into *Harris's* collection. (32) This voyage is in the second volume of *Thevenot's* collection, and was published in English by Dr. *Hook*; it is also in *Harris's* collection.

ceeded as they did, or brought such advantage to the *Dutch* nation, at least so their directors ^a insinuated when a renewal of their charter came to be solicited.

Batavia twice
besieged by the
emperor of
Java, and gal-
lantly defended
by general
Koen.

YET we are now advanced to a point of time, when, if there had been a force sufficient in the island of *Java*, the *Dutch* power had met with a severe shock. This was owing to the envy and resentment of the emperor of that island, who with indefatigable pains drew together an army of two hundred thousand men, which under the command of one of the principal lords of his court, he sent to invest *Batavia*. This siege, or rather blockade, continued some months; and, though the *Javaneſe* actually discovered great resolution, and exposed themselves as much as their officers could desire, yet it was to no purpose, for the *Dutch* works were too strong for them to make any impression upon; so that, after the loss of a vast number of men, they were obliged to retire ^m. The prince of *Madura*, which is a small island at a very little distance from *Java*, suggested to the emperor, that this disappointment must be owing to the bad behaviour of his general, who with a third less force might have easily reduced that place, if he had been a man of capacity. Upon this the emperor, resolving to put that to a trial, raised a fresh army of one hundred and fifty thousand men, of which he gave the prince of *Madura* the command, notwithstanding he went in person to the siege. They came before the citadel of *Batavia*, August the twenty-second 1629, and in the space of a month made several assaults, that served only to diminish their own forces; of which they lost so many, that their bodies choaked up and corrupted the river, and the stench spread an epidemic disease through the camp, and in the place. At length, finding his army almost dwindled to nothing in comparison of what it was, the emperor, having first massacred the prince of *Madura*, and about eight hundred of his men, raised the siege, on the second of October, with much greater loss, both in respect of honour and of his troops, than he had sustained in the former ⁿ. It was towards this close of the siege that the governor-general *John Pieterſon Koen*, who with great courage and conduct had defended the place, ended his life, and was interred with the greatest solemnity. *James Specks* was appointed provisionally governor, who caused the river and canals to be cleansed, and in a surprising short space of time restored every thing to its original condition; by which he did the company good service, and highly raised his own reputation ^o.

S E C T. VI.

The intercourse and disputes of the Dutch with the Japonese, to whom they are constrained to deliver up Peter Nuyts, their governor at Formosa. Unexpected good consequences of this act of submission, which enabled them to fix their commerce with that nation.

Some account
of the state of
their trade in
the Red Sea,
and the empire
of Japan.

IN the year 1630 *Peter Vander Broecke*, who had been long in *India*, and was the first who ^d carried the *Dutch* vessels into the *Red Sea*, and the adjacent countries, returned home; he sailed with seven ships, the cargoes of which were valued at eight millions, yet he brought home but six; one being lost by fire under the *Azores Islands*, and the other straggled from the fleet; however the last went round by *Ireland*, and at length came home safe. *Broecke* acquainted the company, that general *Koen* died suddenly two days before the arrival of *James Specks*, who acted as general by way of provision. *Anthony Van Diemen* returned in the year 1631, with seven vessels, which brought the company incredible treasures ^p. These mighty advantages enabled them to prosecute their designs to their utmost extent, to enlarge their commerce in the *Indies* by every method possible, sometimes making use of force, and sometimes of fair means, to compass their ends, and to secure to themselves the largest share of a trade, which, by experience, they found of such wonderful concern. They began likewise to entertain some hopes of engrossing intirely the lucrative trade of *Japan*; a notion which they had conceived from their first entrance into that empire, and with a view to which they had, from time to time, taken several steps to ingratiate themselves at the court of the emperor, and to persuade his ministers that they were an humble, peaceable, well-disposed people, who had nothing in view but disposing of their goods and manufactures, and who thought themselves obliged in gratitude, to promote the welfare and prosperity of a country, where they had been so kindly received and so well entertained; and for the government of which, on that account, they had the highest veneration and esteem. Professions which were so well received, that,

^p Avertissement à la tête de recueil des voyages de la compagnie, p. 53.

when

a when the *Portuguese* were shut up in that little island which the *Dutch* now inhabit, this last nation had the port of *Firando* given them, and were treated with very particular marks of confidence and favour; which induced them to have a good opinion of their own negotiations^a (*).

BEFORE we leave this place, it is necessary to give the reader an account of a very extraordinary transaction which happened at this time between the *Japonefe* and the *Dutch*; which, from its importance, from the extraordinary circumstances that attend it, and more especially as it affords us the best picture possible of both nations, claims a part in this history. Mr. *Peter Nuyts*, who came to *Batavia* from *Holland* in 1627, was appointed the same year, by the governor and council of *Batavia*, ambassador to the emperor of *Japan*^b. He arrived in that empire in 1628; and, being a man of a haughty disposition, and extremely vain, he believed it practicable to pass upon the natives for an ambassador from the king of *Holland*. Upon his assuming this title he was much more honourably received, caressed, and respected, than former ministers had been; which pleased him highly. But this did not last long; for he was soon detected, reprimanded and reproached in the severest manner, sent back to the port, and ordered to return to *Batavia* with all the circumstances of disgrace imaginable^c; notwithstanding which, his interest was so great, that, instead of being punished as he deserved, he was immediately afterwards promoted to the government of the island of *Formosa*; of which he took possession the year following^d (A).

He entered upon the administration of affairs in that island with the same disposition that he had shewn while ambassador, and with the most implacable resentment against the *Japonefe*; neither was it long before an opportunity offered, as he thought, of revenging himself to the full. Two large *Japonefe* ships, with upwards of five hundred men on board, came into the port; upon which he took it into his head to disarm and dismantle them, in the same manner that the *Dutch* vessels are treated at *Japan*. The *Japonefe* did all they could to defend themselves from this ill usage; but at last, for want of water, they were forced to submit; and their vessels, pursuant to the governor's order, were disarmed and dismantled with the utmost rigour, notwithstanding that they made a solemn protest against this ill treatment^e. Gover-

^e Recueil de voyages au nord, tom. iii. p. 224.

(*) The *Portuguese*, and indeed all the popish writers in general, labour to ascribe the exclusion of *Europeans*, and the extirpation of Christianity, in *Japan*, as intirely the effects of the *Dutch* intrigues; but they do not represent this matter fairly by any means. The *Spaniards* and *Portuguese*, who were established there, were beyond all doubt more solicitous to propagate Christianity than the *Dutch*; but they were not so very attentive to their spiritual concerns, but that they had their temporal views also as well as other people. With this design they presented a memorial to the emperor so early as the year 1613, in which they painted the *Dutch* in the blackest colours possible, in hopes of getting them excluded the empire. The answer they received was very remarkable; viz. that if the *Dutch* were as black as the devils that came out of hell, while they behaved honestly in their trade, and minded nothing but trade, they should be treated in *Japan* like angels come from paradise; for that the emperor was attentive only to the good of his own subjects, and did not trouble himself to inquire into the politics, disputes, good or bad qualities, of other nations, whose behaviour he would endeavour to regulate while they were in his dominions, and leave it to their own conduct elsewhere (33). This attempt provoked the *Dutch* to compose memorials against the *Spaniards* and *Portuguese* with better success; so that, in 1625, a resolution was taken to lay them under certain restrictions; and about the same time the *Chinese* and the *Coreans* were excluded from all commerce in *Japan* (34). After all, the principal motive that excited a general persecution against the Christians was the change that happened in the constitution of the empire; for, as there were always two great sovereigns, the one spiritual and the other temporal, in the island, so neither of these could be called absolute: for, tho' the former was treated with infinite

respect, yet his authority was not much felt or feared; and, tho' the latter received the homage of lesser princes, yet were they truly sovereigns within their own dominions. But the cubo-sama, or temporal emperor, then reigning, formed a scheme of making himself absolute (35); and the opposition he received therein from the the Christians induced him and his successors to consider our religion as a crime of state.

(A) It is highly probable that *Peter Nuyts* was tempted to lay aside his real character, and pretend to be an ambassador royal, from the accounts he received of the contemptible notions which the government in this island entertain of traders, in consequence of their being acquainted only with the shopkeepers of *Japan*; and that he might hope to impose on the *Japonefe*, as others had done on several eastern nations, by giving the title of king of *Holland* to the prince of *Orange*. At first this succeeded, because, tho' the *Japonefe* had often received ambassadors from the *Dutch East-India* company, yet they knew very well that they had sovereigns in *Europe*, and might therefore very well suppose that this ambassador came directly from *Holland*, which made them examine his credentials more strictly; and, as this happened before the *Portuguese* were excluded, they very quickly discovered the imposition, and sent him away as a cheat. It was inexcusable, after this, to put him at the head of any of the *Dutch* colonies, and still more so in an island which was the only one of those colonies where it was possible to have any dispute with the *Japonefe*. As this was intirely the fault of Mr. *Koen*, and the council of the *Indies*, so they smarted severely for it afterwards; and it afforded them, and other nations, a lesson that ought never to be forgot, that a man who once forfeits his character in a public employment ought never to be trusted with such an employment again (36).

(35) P.

nor *Nayts* went still farther; and, when they had finished their affairs at *Formosa*, and were a desirous of proceeding, according to their instructions, to *Cbina*, he put them off with fair words and fine promises till the monsoon was over. They began then to be very impatient, and desired to have their cannon and sails restored, that they might return home; but the governor had recourse to new artifices, and, by a series of false promises, endeavoured to hinder them from making use of the season proper for that voyage; and, though they had the assistance of friends, and offered large presents, it proved all in vain * (B).

The Japanese, at length borrowing courage from despair, resolved to lay hands on the governor in his palace.

At length, perceiving plainly his purpose, and more exasperated at the affront offered their country than the injury done to themselves, they resolved to risque all, and, by one bold attempt, either break through their captivity, or perish with honour. As no nation in the world possesses either a more active or a more determined courage than the *Japonefe*, so they concerted this enterprize as coolly as they executed it with spirit. They sent nine of the most considerable amongst them, with a reasonable number of attendants, to expostulate with the governor at his palace; and, having agreed upon the proper signals they were to make, divided the rest of their crew into several detachments, which moved at a certain distance, so as to come up in due time. Those who went to the palace made use of fair means at first; but, finding these utterly ineffectual, they seized the person of the governor, that of his son, and one of his counsellors, and then, making their signals, their several parties stormed the house, and massacred every creature that was in it. The garrison in the citadel, as soon as they were informed of what had happened, brought their artillery to bear upon the palace; which they might have easily beat to the ground, if the *Japonefe* had not compelled the governor to give his orders to desist from firing, which, out of respect to his danger, were obeyed * (C).

Force him, and one of his council, to sign a treaty, which afterwards is ratified by the whole council.

THIS transaction happened in the month of *July* 1630. The *Dutch* were very pressing to have ended the thing the same day, but the *Japonefe* were in no such haste. They fortified themselves in the palace; and the next morning produced a treaty to the governor, and the counsellor, consisting of a few articles for securing their liberty, free departure, and indemnity; which they told them they must sign if they expected to live; an argument of so much weight, that they subscribed without loss of time. They told the *Japonefe*, however, that

* P. CHARLEVOIX, tom. ii. p. 362.

* Recueil des voyages au nord, tom. iii. p. 231, 232.

(B) The capital trade which the *Japonefe* carried on was with *Cbina*; and the principal business of these ships was to obtain refreshments for pursuing their voyage, which they had been accustomed to receive at *Formosa*, where they were always well received by the *Dutch*, and never subjected to any such restrictions as this governor insisted upon. He was so conscious of the iniquity of his own proceeding, that he endeavoured to cover it by the most specious pretences. He told them, that it was a very dangerous voyage (tho' they made it every year); that he expected ships from *Batavia*, and orders by them to send those in the harbour to *Cbina*, and then they should sail under a strong escort. When the monsoon was passed, and they pressed to return home, he counterfeited the greatest concern: "What," said he, "would you go back to *Japan* without executing your orders, without disposing of your cargo, without gaining any thing by all your trouble and pains? By no means! Our ships will certainly come, or, if they should not, we will think of some method of making you an ample amends." The *Japonefe*, who were far from being the dupes of his fallacious harangues, told him roundly, that the season for going to *Cbina* was lost; that they were in danger of losing that in which they might return home; that they came for refreshments, and not to trade; that they had instructions which they were bound to pursue, and that therefore they desired to have their cannon, rudders, and sails, restored to them, that they might make the best of the little time they had left. He replied, in the same strain of dissimulation, that they must have a little patience; that he could not by any means grant their request, for fear any accident might befall them, and that this should be imputed to him, who had already been so unfortunate (which gave him the greatest concern) to offend the government of *Japan* (37).

(C) The method they concerted for their deliverance was this: Their nine chiefs had each a sword and dagger; they were followed by twenty-four of the bravest men

belonging to both crews, in the dress of servants, who were also privately armed. A party of fifty men, divided into five bands, followed half an hour after, and dropped by degrees into the court of the palace. Another detachment of one hundred men marched by two different routes, so as to come to the palace an hour after these. The nine deputies told the governor plainly, but with much submission, that they were content to forget all that was past; that, whatever his intentions were, they inclined to put the best construction upon them; that they had contracted the year before for five and twenty thousand pounds weight of silk at *Cbina*, for which they had already paid their owners, having taken up the money at interest; that their families must be grievously distressed during their absence; and that, in short, it was necessary for them to return, which they were resolved to do. The governor had recourse once more to his old dissembling stile; with which finding they could be no longer amused, he told them plainly it was his pleasure they should stay, and stay they must. They told him they had staid above a year already, which was long enough; then, looking upon one another, the chief gave the signal, and, with the assistance of two others, instantly seized the governor, and tied his hands behind his neck; three more did the same by the counsellor, a third took the child, and wrapped him up in his robe; while the other two, going out, gave the signal to their attendants, who were waiting for it; and, immediately drawing their swords, cried out, *Kill! Kill!* massacring in an instant the guards, several workmen, merchants, and domestics belonging to the company; after which they barricaded themselves in the palace as well as they could. Their whole number was one hundred eighty-three; the rest, between three and four hundred, were on board their ships, which they had provided with some old sails, and put into the best condition they could, that they might endeavour to get away if the people on shore perished in the attempt (38).

(37) P. Charlevoix *histoire du Japon*, tom. ii. p. 362.

(38) Recueil des voyages au nord, tom. iii. p. 227, 228.

- a this treaty would be of no use if it was not approved by the whole council, which, at his request, they permitted the governor to summon; and the members, considering that this affair might possibly prove the loss of that lucrative commerce which the company enjoyed with *Japan*, ratified the treaty, abject and scandalous as it was, when they found it impossible to engage the *Japoneſe* to vary ſo much as a ſingle letter ⁷ (D). Yet they wanted not ſtrength to have cut off theſe people to a ſingle man, as they had ſix hundred regular troops in the citadel and forts, and ſeven ſhips in the harbour, with as many men more on board them, which the *Japoneſe* very well knew, and from thence had taken their meaſures, from which they would not depart in the leaſt ⁸.

- b ACCORDING to the terms ſtipulated, five of the principal inhabitants of the iſland were delivered to the *Japoneſe* for hoſtages, with five thouſand pound weight of ſilk, the rudders and ſails of the *Dutch* ſhips brought on ſhore, the *Japoneſe* veſſels put into a condition of ſailing, victualled, and ſupplied with all neceſſaries; after which, having ſet the governor, the counſellor, and the boy, at liberty, the *Japoneſe* marched out of the palace, embarked, weighed anchor, and proſecuted their voyage happily to *Japan* ⁹. Immediately after their arrival they gave notice to the court of all that had happened; upon which all the *Dutch* effects were immediately ſeized, and the guards about their factory doubled, but without giving them the leaſt notice of the cauſe, or doing the ſmalleſt injury to their perſons. On the contrary, they were furniſhed more plentifully, uſed with more civility, and treated with greater reſpect, than ever. The *Dutch* chief and factory were notwithstanding in the utmoſt conſternation, preſenting c memorial after memorial, to know their offence; to which they were ſometimes answered, that the council had affairs of great importance upon their hands; at others, that the emperor was ill, and they muſt have patience ¹⁰ (E).

- By the help of the *Portugueſe* and *Cbineſe* ſhips they ſent advice to *Batavia* of their ſtrange ſituation, which alarmed the governor-general *Spex* and his council exceedingly, who at firſt knew not what to do, nor how to proceed. At length they reſolved to ſend a ſhip, in the name of a merchant of *Batavia*, with a cargo, in order to ſee what this would produce. The ſhip arrived, and petitioned, in the merchant's name, for leave to ſell their goods; which they were allowed to do, with all the kindneſs imaginable, permitted to embark the produce of their goods, and to return, but not a jot wiſer than they came ¹¹. The governor-general in the mean time d had been informed of what paſſed at *Formoſa*, and had ſent for *Peter Nuyts* priſoner, which hitherto had been all his puniſhment. Three years ran on in this manner, when *Anthony Van Diemen*, becoming governor-general, aſſembled the council; and prevailed upon them to take the only ſtep that was left, which was to deliver up *Peter Nuyts* to the *Japoneſe*, to do with him what they pleaſed. This ſentence being notified to the priſoner, he behaved like a man diſtracted; he proteſted againſt this judgment, he appealed to the people, he deſired to be tried there, and to ſuffer any kind of death. But it was all in vain; the council were deaf, the people ſaid it was his own fault; in ſhort, a new fleet was equipped in 1634, and *Peter Nuyts* ſent aboard it, with inſtructions to the chief to deliver him up as ſoon as he came ¹².

(D) This treaty, which they obliged the governor and council to ſign, was to the following effect: I. They acknowledged the whole enterprize to be juſt, lawful, and neceſſary, for the preſervation of thoſe concerned, and for vindicating the honour of the *Japoneſe*. II. That they ſhould be at liberty to return to *Japan* when they thought fit; and that every thing ſhould be reſtored that had been taken out of their ſhips. III. That, to prevent the *Dutch* ſhips from following, inſulting, or bringing them back, they ſhould bring on ſhore their rudders and ſails the evening before their departure, which they fixed for the firſt of *Auguſt*. IV. That, for their farther ſecurity, and that they might with ſafety reſcure their priſoners, they ſhould receive as hoſtages five of the principal *Dutch* inhabitants in the iſland. V. That as the uſage they had met with was unjuſtifiable and inexcusable, and by which they had loſt the opportunity of receiving twenty-five thouſand pounds weight of ſilk, which they had bought and paid for, they ſhould receive the like quantity out of the company's warehouse, of whatever kind they thought fit to chuſe. By this laſt article they indemnified themſelves for the

expences of the voyage; but at the ſame time they delivered the company's officers the *Cbineſe* merchants receipts, that they might be able to recover the like quantity the next year from their correſpondents (39).

(E) The five hoſtages from *Formoſa* were kept in priſon at the capital, ſo that the *Dutch* knew nothing of them till long afterwards. Amongſt other memorials preſented by the factory, one ſet forth, that they were in the utmoſt danger of being undone by the prohibition of trade, as a great part of the commodities in their magazines were perishable. Upon receiving this, the emperor ſent commiſſioners to inſpect a general ſale of all their commodities, to regiſter the ſums received, to ſee them ſecured in the reſpective warehouses out of which the goods were taken, and then to lock them up, and ſeal them as before. The *Dutch* had no reaſon to complain that they were prejudiced by this proceeding, ſince the whole amounted to above a million of crowns, all depoſited in their own magazines, without their having any trouble or expence in the diſpoſal of their goods (40).

Proceedings of
the court of
Japon, after
the delivering
up of Peter
Nuyts.

On the arrival of the vessel at *Firando*, the chief and his council, who had by this time procured from the court the cause of the interruption of their commerce, presented a fresh memorial; setting forth, that the person who had offended his imperial majesty was put into the hands of his officers; and therefore desired that they might be restored to his favour, and to their privileges of course. Upon the receiving of this memorial, commissaries were speedily dispatched to *Firando*, carrying with them some of the persons who were in the ship detained at *Formosa*, that they might see whether this man was the governor *Peter Nuyts*, or not. These people having certified that it was the governor, the commissaries received fresh instructions, by which they were directed to require from the *Dutch* factory an answer to the following questions: First, whether the governor came of his own accord, or whether he was sent by the governor-general at *Batavia*? Secondly, if *Peter Nuyts* came of his own accord, whether he intended to justify his own conduct, to charge the *Japoneſe* with any misbehaviour, and to bring the affair to a clear and open trial; or simply to confess his fault, to testify his repentance, and to implore the emperor's pardon? Lastly, if the chief and his council were content that the criminal should be broiled alive upon the coals, or nailed to a cross, if such should prove the sentence of the emperor and his council? To these questions they were to answer plainly and without reserve, and within the compass of three days. The *Japoneſe* commissaries left them, during that space, free liberty to confer amongst themselves, to send whom they pleased to *Peter Nuyts*; and to take any other steps that they thought convenient, in order to give that satisfaction upon which the government insisted.

Manner in
which the
Dutch chief
delivered up
Peter Nuyts
to the Japon-
eſe.

THE chief and his factory, after mature deliberation, resolved to stick precisely to the form prescribed by the governor-general and council at *Batavia*, notwithstanding they had received permission to make whatever alterations they should think necessary at the time of their delivering him up; but, as they saw no alteration of circumstances that required any such changes, and as the prescribed form seemed more suitable than any they could devise, they stuck to it closely. The substance of this form was, that the person now delivered up, *Peter Nuyts*, was the very person, who, five years before, being governor of *Formosa*, had incurred the displeasure of the emperor, to whom the general sent him to suffer whatever punishment he thought fit; that however the *Dutch* were fully persuaded of the equity of his imperial majesty, even in the exercise of justice; that he was far from adjudging people to sufferings without a thorough inquiry into the cause; so far from it, that, out of his natural clemency, he pardoned faults in his own subjects, whence they presumed to hope his indulgence towards a stranger, whose crime was in some measure qualified through ignorance, and who had no intention to give the least offence to his imperial majesty; that in this disposition they delivered the prisoner, desiring that, whatever became of the guilty, the innocent might no longer suffer; but that such as had been already detained five years might have leave to depart, together with the company's vessels and effects. The commissaries, having received the prisoner, and this answer, set out for the court. (F).

The court of
Japon, satis-
fied with this
submission, re-
move all the
restrictions
laid upon the
Dutch.

THE leaving *Peter Nuyts* to the emperor's discretion put an end to this affair, and gave the *Japoneſe* court intire satisfaction. The factory was immediately set at liberty, the emperor's seal upon their effects was removed, the guard upon their ships withdrawn, and the prohibition of commerce recalled. As for *Peter Nuyts*, after remaining a few days in prison, he was put under what the *Japoneſe* call a free custody; that is, he had a few guards, with whom he might go where he pleased, visit whom he pleased, and do what he pleased, provided he re-

† P. CHARLEVOIX histoire du Japon, tom. ii. p. 369. § Re-

(F) This history alone is sufficient to give us a true notion of the genius of the *Japoneſe* nation, the spirit of their court, and the situation of the *Dutch* in their country. It is impossible to conceive any thing better framed, or more exactly calculated, to justify their own behaviour, or to vindicate the honour of their country, than the treaty which the *Japoneſe* prescribed to the governor of *Formosa*. The same turn of mind is very conspicuous in the behaviour of the emperor and his ministers, upon their being informed of this insult; an exact retaliation of the ill usage, without any mixture of contumely or passion; a strict regard to justice, notwithstanding the dispute between the two nations; an imperial silence, more emphatic than the most laboured manifesto: it is impossible to consider all this without allowing the *Japoneſe* to be a great people, and their rulers a wise go-

vernment (41). The submission of the *Dutch* was founded in equity and justice, and their proceeding exactly agreeable to the law of nations. *Peter Nuyts* might consider it as a hardship; but he was no better a judge in his own cause than in that of other people. He was the sole author of all this mischief, and it was very fit he should be the sole sufferer by it. But, after all, it is not impossible, tho' hitherto it has not been remarked by any writer we have met with, that this transaction might be a strong inducement to the *Japoneſe* government to restrain their subjects from the exercise of foreign commerce, as being unwilling to hazard that point of honour, of which they are so jealous as a nation, for the sake of profit, which the *Japoneſe* government hath ever held in contempt.

(41) Chardin, Charlevoix, &c.

a maintained in their presence ; and this without being put to any expence, farther than he might be inclined to from their civility. He was therefore from this time secure from the fear of broiling or crucifixion, and had nothing farther to apprehend than passing the remainder of his days in *Japan*, in no very uneasy situation, being every-where very well received, and upon the whole very kindly treated. He bore this very patiently, as being infinitely better than he could expect, and looked on himself as a prisoner for life ^a.

b THE governor-general and council at *Batavia* were inexpressibly pleased at seeing their nine ships arrive safe from *Japan* with all their people on board, even the five hostages from *Formosa*, and an immense cargo ; which, from being so long detained, came to a much better market ; and, what was still more grateful, bringing also advice that the *Japanese* government was thoroughly pacified with respect to the company, the nation, and even the author of all this disturbance. As the company send annually presents to the emperor of *Japan*, so they very prudently resolved that those sent the next year should be richer than ordinary, the better to express the sense the company had of this favour. But however it is very certain, that this was their general intention, and that they had not at all in view that favourable circumstance which afterwards happened, and towards which indeed it was impossible, in the nature of things, they could have any foresight ^b.

c AMONGST these presents there was a chandelier of brass, of thirty branches, fourteen feet high, and exquisitely wrought ; it so fell out that this came just as they were about to solemnize at court the funeral of the emperor's father, for which prodigious preparations had been made ; notwithstanding which, the lustre of the ceremony was greatly heightened by the happy effect which this chandelier had when hung over the funeral trophy. His imperial majesty was prodigiously struck with it ; he declared he had never seen any thing like it ; asked from whence it came, and for what purpose it was intended ? A minister of his, who had taken the *Dutch* under his protection, answered of his own accord, and without the least instruction from them, " that it was sent by the *Dutch* on purpose to add to the magnificence of this ceremony, for which they were informed his imperial majesty was preparing." The emperor immediately added, Have they any request ? Is there any thing they want ? Can I do any thing to oblige them ? " Nothing," replied the minister, " unless your majesty would have the goodness to set at liberty a *Dutch* governor who is imprisoned here, not for any offence against your majesty's laws, but for an involuntary breach of the customs of *Japan*, with which he was not well acquainted." The emperor caused him to be set at liberty that moment ; and gave the company besides a very considerable sum in silver, as a mark of that kindness with which he received their present ; and farther permitted some valuable indulgences in sending abroad commodities for that year ^c (G).

d WHEN, after his release, *Peter Nuyts* came down to the factory, in order to prepare for his return to *Batavia*, the *Dutch* who were there could not help expressing their amazement ; and the rather, because they knew, that, according to the laws of *Japan*, a prisoner of state must be at least nine years in custody before any of the ministers dare intercede for him ; and therefore they had not so much as flattered themselves with the hopes of procuring this gentleman's release, who had not been in *Japan* above two. His arrival was no less welcome at *Batavia*, where having in a great measure forgot his offence, and the troubles which it had occasioned, they long before began to regret his misfortune ; and the rather, because they looked upon him as a man cut off from his country and relations, and who ought to esteem it a favour that he was suffered to wear out the remainder of his life in exile and imprisonment. The company, however, from this tedious transaction, which took up seven years in the whole, acquired two maxims with respect to their conduct towards the *Japanese*, which no doubt has gone a great way in protecting them from accidents of the like kind ever since. The first is, that it is a

^a Voyages de CHARDIN, tom. iii. p. 235. ^b P. CHARLEVOIX histoire du Japon, tom. ii. p. 396. ^c Recueil voyage au nord, tom. iii. p. 245.

(G) The name of the *Japanese* emperor, who governed at the time that *Peter Nuyts* seized the two ships in the island of *Formosa*, was *Fide Tadda*, who, if the *Japanese* chronicles that we have be right, died *Anno Lemini* 1630 ; and as this solemnity, in honour of his memory, was in 1636, a *French* writer has conjectured, not without a great shew of probability, that this was not his funeral, but his apotheosis (42) ; for it is usual in *Japan* to deify the deceased emperors, and to worship them as inferior divinities, or saints. It is one of the great

prerogatives of the *dairo*, who is the spiritual emperor or pope of *Japan*, to grant this posthumous honour, if he so pleases, to the deceased *cubo-sama*, or temporary emperor ; and, at the same time that he grants this favour, he gives the deity a new name ; which in this case was *Taito Komi*. As for the emperor to whom *Peter Nuyts* was sent, his name was *Jermitsko*, the very same who raised the last great persecution against the Christians (43).

(42) P. Charlevoix histoire du Japon, tom. ii. p. 370. tom. x. p. 179.

(43) Voyage de la compagnie des Indes Orientales,

good thing to have a friend at court, and therefore they never fail to have at least one of the *Japoneſe* a miniſters intirely in their intereſt, which they accompliſh by an affiduous application, by a ſtudious compliance with his deſires, and a conſtant intercourſe of preſents, by which however they are no loſers; for, excluſive of the benefits they receive from his intereſt, they ſeldom fail of meeting with ſuch returns, in things little regarded by him, and yet highly valuable to them, that more than compenſate the value of their preſents. The other is, to proceed roundly with the court upon any diſpute, and to give immediately ſuch ſatisfaction as is required; for the *Japoneſe* are a people of ſuch addreſs, of ſo lofty a temper, and ſo jealous in point of honour, that there is no way of overcoming their diſtaſte but by a quick and profound ſubmiſſion; a doctrine, which as they have firſt learned, ſo has it been confirmed to them by long experience, neither is it very probable that they will ever venture to deviate from it again ^b.

The true ſources of that ſubmiſſion which is ſtill paid by the Dutch company to the government of Japan.

We ſee from hence the true ſource of that ſuperiority with which the *Japoneſe* act towards this nation upon all occaſions. They are perfectly ſenſible of the advantages drawn from that limited commerce which is ſtill permitted, and which therefore they keep intirely in their own power. They have a juſt conception of the dangers to which their conſtitution muſt be inevitably expoſed by a conflux of ſtrangers to the ports of *Japan*; and therefore they admit none but ſuch as they can intirely controul, or ſuch as they abſolutely deſpiſe, keeping their own ſubjects at the ſame time under ſo ſtrict a diſcipline, as ſcarce leaves them the ſhadow of an apprehenſion of any new revolution ^c. It is from this exerciſe of abſolute authority that all thoſe machinations and intrigues, which diſtract and diſturb other nations in the eaſt, are here nipt in the bud, and ſtified in the birth; and conſequently no room is left for the *Dutch* factory to interfere, or to offer the countenance or aſſiſtance of the company, in ſupport either of one ſide or the other. If there was the leaſt room or opening for ſuch practices, there is little doubt that ſome attempts had been long ago made; but the reſtraints they are under in their converſations with the natives, the ſtrict eye that is kept upon them in their journeys to and from court, the quick penetration and inflexible ſteadineſs of the *Japoneſe*, the prodigious annual advantage even of their confined trade; and, above all, the example of the *Portugueſe*, expelled without mercy, and from whom no intreaties ſince could prevail; as well as that of the *Engliſh*, upon doubts which did not riſe quite ſo high as ſuſpicions; deter them from any thing of this kind ^d. Beſides, they are kept in ſuch ignorance of the domeſtic affairs of the empire, that if there be any jealousies, or factious cabals, amongſt the nobility, they ſeldom come to their notice; and the ſituation they are in is ſuch, that it would never incline the malecontents in that empire to dream of having recourſe to them for aſſiſtance; which excludes all hopes of the company's carrying things higher than their preſent ſtate, otherwiſe than by the help of a clandestine commerce, which, with that permitted, by any raſh procedure of this kind, they might eaſily loſe ^e (H).

(H) The *Dutch* chiefs and embaſſadors had before this time been a little inclined to teach the *Japoneſe* ſtateſmen politics, who with great prudence heard all they had to ſay, and made uſe of it, as occaſion ſerved, againſt themſelves; but from this time they kept a little more upon the reſerve, and ſeldom or never entered upon any diſcourſes relative to the affairs of *Europe*, unleſs they were called upon, and in ſome meaſure obliged to do it; for it was now become a thing pretty evident, that the *Japoneſe* underſtood the ſituation of *Europe* well enough to form a ſcheme for their own preſervation, in which theſe tutors of theirs were no more conſidered than was con-

venient. They had likewiſe ſhewn ſome diſadvantages that aroſe from tolerating an open trade with *China*; which ſuggeſtions were kindly received, but in proceſs of time were remembered to the prejudice of the *Dutch* themſelves; but this ſtroke opened their eyes ſufficiently as to the abilities of the *Japoneſe*, and the little need they had that others ſhould ſtrain their inventions for their ſervice, when at the bottom they underſtood their own intereſts to the full as well as any other nation, and were able to conduct them with ſuch ſecreſy, and ſuperiority of underſtanding, as deſerved to be admired, and could hardly be imitated (44).

(44) *Chardin, Charlevoix, Carrou*:

S E C T. VII.

The company, on paying a large fine, are indulged in a third charter; act with great address in the Indies, terminate their quarrels with the English by a treaty with the commonwealth, and apply themselves to overturn the Portuguese in all their settlements.

- a **I**F we may believe what most writers say, and indeed what some of the *Dutch* writers themselves confess, there was a great deal of this kind of policy practised in the management of their affairs throughout the *Indies*; for, by interfering in all their little quarrels, whether foreign or domestic, and furnishing them with assistance sometimes against their more potent neighbours, and at others against their subjects, when they had driven them into rebellion by oppression and ill usage, they screwed themselves into the favour of *Indian* princes; obtained liberties, first to establish factories, and then forts; after which they seldom made any more requests, but on the contrary gave laws; and those monarchs, whom they had before honoured with high titles, and much of that servile submission which is the common language in all oriental courts, found to their cost that their old friends were become their new masters^p.
- b This indeed was sometimes resented, and no endeavours spared to shake off the yoke; which however was very seldom to any purpose, for the company had such a superiority of power in respect to any of these princes, taken singly, and were so well skilled in the arts of dissolving and breaking alliances to pieces, that in the end they were always gainers by such disputes, though for a time their trade perhaps was interrupted, and they were put to the expence and trouble of a war^q. In excuse of these proceedings the company would sometimes plead, that it was only deceiving the deceivers; and that without the help of these arts it was simply impossible to manage their concerns, or to maintain their power, most of the *Indian* kings being equally cunning and faithless, and never letting slip any opportunity of gratifying their ambition or their avarice, tho' at the expence of treaties which they had themselves proposed,
- c and of the most solemn alliances; which in some cases, it is probable, might be true, but was certainly false in others (V).

As the company's charter drew towards an end, they did not fail to represent to the States General such arguments as they thought most likely to procure them another; and, as the directors of the company had a great interest, and some points of real merit to allege, such as assisting the public with money in its greatest exigencies, and supplying large quantities of salt-petre *gratis* for making gunpowder during the course of the war, their propositions met with attention and approbation^r. At the same time, however, they were given to understand, that the States were very sensible of the value of what they asked, and that therefore they were not

^p TAVERNIER voyages des Indes, P. ii. l. iii. c. 20. tom. iii. p. 349.

^q Histoire de la conquête des Isles Moluques, Dictionnaire de commerce, tom. ii. col. 1091.

(V) The truth of what is asserted in the text cannot be more fully proved, or better illustrated, than by citing a passage from that work, which we have so often quoted, of the pensionary *De Witt*; who, after observing that the islanders of *Banda* lived under a democratic form of government before the *Europeans* came into the *Indies*, proceeds in these words (45): "But when the *Portuguese* first navigated those seas, and attacked the people of *Banda*, the inhabitants were so terrified by these new people, and their unheard-of military art, that, conceiving themselves unable to withstand that formidable power, they rashly agreed to elect governors out of the most considerable persons for their better defence; and thereby immediately lost much of their freedom; and afterward they were, partly by the jealousy they had of each other, *viz.* of the free inhabitants against their respective heads, and of such superiors among themselves, and being in part likewise overcome by the *Portuguese*, they were at length forced to submit to that foreign yoke. And, lastly, there was some freedom still remaining in those islands when the *Netherlanders*, who were enemies to the *Portuguese*, began to frequent them; and these people of *Banda*, who greatly affect liberty, looked upon the

"*Dutch* as angels sent from heaven to defend them, and to deliver the other islands from the slavery of the *Portuguese*. For which end the natives entered into alliances with us for common defence, covenanting that we might not only build houses and warehouses, and dwell there, to trade in their spices, but expressly agreeing that they of *Banda* and *Amboyna* should sell their spices to no other people. Whence proceeded all that usually happens when weak states call in too powerful assistants; *viz.* that not only the *Portuguese* lost their power over these islands, but the natives lost their free government and trade, and are now under the dominion of the *Dutch East India* company. It is also very observable that the spices of those islands, when brought into *Europe* by way of *Portugal*, produced yearly to the king above two hundred thousand ducats. But these islands, being ruined by the forces of the *Portuguese* and those of the *Dutch East India* company, and the said company destroying their spices, which produced too great a quantity for them to vend, their plenty by degrees decayed, and their commerce is now mightily diminished, as we may understand by the histories of *India*, and from those that have been lately there."

(45) *Gronzen en maximen van de republiek van Hollandse*, 3 deel. cap. 3.

to expect the lease of their exclusive commerce for a new term without advancing a considerable sum by way of fine ; which, after mature deliberation, was fixed at one million six hundred thousand florins ; in consideration of which present their charter was renewed for twenty-one years, in 1644 *. It may not be amiss to observe here, that the dividends to the proprietors during this term, whilst their second charter lasted, were not so considerable as under their first, notwithstanding the prodigious returns that had been made from the *Indies*, and that apparent alteration there was in the power and grandeur of the company, as well as in the strength of their outward and homeward-bound squadrons †. The true reason of this, without doubt, was the vast augmentation of their expences, occasioned by their building fortresses, raising forces, and giving a great and splendid court to their governor-general at *Batavia*. Yet how much soever this might lessen the profit of the proprietors, it may admit of some doubt whether the public was injured by it or not ; that is to say, whether the *Dutch* nation might not derive at least as great advantage from the increase of the sums laid out by the company for the support of their settlements in the *Indies*, as if a larger sum had been paid in dividends ; since, if we consider that the increase of their trade was the plain effect of their extending their power and influence in those parts, it must follow, that how large soever their additional expences might be, they were defrayed from the consequences of those measures, in the execution of which they were employed ; and as this must on one hand have occasioned a quick circulation of money at home, so, on the other, as the company's officers grew rich abroad, they returned with or remitted their effects to *Holland* ‡. These, we need not question, were among the arguments urged in favour of the new term ; but as most of those, who have handled this subject, have, perhaps, out of a prejudice to monopolies, omitted them, it seemed the more requisite to give them a place here (X).

Advantages which, from the situation of things, they had over the Portuguese.

It might have been expected that the defection of *Portugal* from *Spain*, and the setting up the duke of *Bragança* for king, by the name of *John* the fourth, would have given a check to the *Dutch* conquests in the *East Indies*, inasmuch as they had no quarrel with the *Portuguese*, independent of their being subjects of his catholic majesty ; and, on the contrary, had great reason to acknowledge and assist the new king of *Portugal*, as the situation of his *European* dominions rendered him a natural and necessary ally. Yet it happened otherwise ; for though, soon after his succession, he sent *Don Tristan de Mendoza Hurtado* to the *Hague*, where he was owned by, and treated with, the States ; who, after a pretty long negociation, at length concluded with him a truce for ten years, during which both parties were to keep what they possessed in the *East Indies* and in the *West*, this had very little effect * : for, under pretence that in *Brazil* this truce was not over well kept by the *Portuguese*, and that in the island of *Ceylon* the spirit of it was not strictly complied with, the *Dutch East India* company went on in augmenting their dominions, without considering any thing so much as the favourable opportunity they had of doing it. This, it must be owned, was very inviting ; for as, under the *Spanish* government, the *Portuguese* settlements were but very ill provided, so, upon returning to the duty they owed to their natural prince, they not only lost the assistance which sometimes they received from the *Spaniards*, but had them also for their enemies, and this without acquiring so much as one friend. In so distressed a situation they could have little hopes of relief from home, where the king was obliged to employ his whole force in the defence of that crown which he had assumed ; no wonder therefore if the *Dutch East India* company, who knew all this perfectly well, and their own great superiority also, made use of it to aggrandize themselves, taking

(X) As the affairs of the company were never in a more prosperous state than at the time when they applied themselves to their High Mightinesses for obtaining a continuance of their charter, it is requisite to explain the true causes of that unwillingness expressed by the States upon that head. The *West India* company was at that juncture in a very untoward situation, the *Portuguese* having recovered themselves in some measure in *Brazil*, so that the company stood in great need of large supplies, which they knew not where to find, and were therefore very desirous of being incorporated into the *East India* company ; proposing, if that offer was accepted, to make a very large present to the republic ; tho' they confessed at the same time that they had not above a

thousand florins in cash, but should be able to raise that sum with ease upon the credit of such a conjunction (46). This was strongly pressed upon the *East India* company, but to no purpose ; for the directors positively asserted, that they had enough to do in managing the affairs already under their care, and that their capital would not be sufficient to answer the demands of so vast an establishment. After many delays the principal chambers declared roundly, that they would be concerned no longer if this union was forced upon them ; which declaration had its effect, the States renewed the charter of the *East India* company, but took care, as is observed in the text, not to lose the present offered by the other company to have obtained an incorporation (47).

a care at the same time to give the best colour they could to those actions which flowed, at the bottom, only from their avarice and ambition *. In a few years after the peace was made with Spain; in which such care was taken of the company's concerns, that they obtained, so far as that peace could give, as good a title to their possessions as the States themselves had to their independence and freedom †.

But it was not the Portuguese only who suffered in this juncture; it was no less unfortunate for the English. The civil war gave a fatal blow to their commercial interests in the Indies, which their neighbours did not fail to improve, by taking their ships upon frivolous pretences, and by plundering their factories under colour of their being at war with those in whose dominions they were settled. This is a point necessary to be touched on here, as it shews what a series of lucky circumstances concurred to give the Dutch East India company room to spread her power and influence in so sudden and surprising a manner as she did. But to examine these matters more minutely belongs to another part of our work; and therefore we shall content ourselves with adding here, that, on the treaty between the Protector Oliver and the States General, there was a commission settled for hearing and determining the disputes between the two East India companies, when, on the part of the English, there was brought in a long enumeration of their losses, to the amount, in the whole, of near two millions seven hundred thousand pounds ‡. The Dutch, on their side brought in a long account likewise, which they swelled to an immense sum; however, the arbitrators on both sides, by their final determination, dated August the 30th, 1654, awarded the sum of eighty-five thousand pounds to be paid to the English company, in full satisfaction for their losses; and the further sum of three thousand six hundred and fifteen pounds to be paid, in the proportions specified in that public act, to the representatives of the persons that were murdered thirty-two years before in Amboyna §. It was also stipulated in the treaty, that the island of Poleroon should be restored to the English; but, by the help of the same address which prevented an immediate inquiry into the barbarous expulsion of the English from the Moluccas, the restitution of this island was diverted and postponed; for Cromwell, having had the honour of inserting the article concerning it in the peace, suffered himself to be prevailed upon, by certain arguments, not to insist on the execution of it ¶. This, however it was brought about, was a prodigious advantage to the Dutch, as it prevented any diminution of their fame in the Indies, and left them in full possession of all that they had acquired by those practices for which they made a pecuniary satisfaction; which was in effect nothing, when compared with the reputation which naturally resulted from the methods in which they had manifested their superiority in those parts; to which no check either was or could be given at this time, though the naval power of England was actually superior to theirs in Europe † (Y).

In what manner disputes were terminated between the company and the commonwealth of England.

† NEUVILLE hist. van Holl. 1 deel. l. xi.

(Y) We meet with nothing precise or exact in our own histories upon this subject: some carry this point very high, and persuade us, that the protector prescribed harder terms to the Dutch republic, and in a more peremptory manner, than either of the preceding kings, or the parliament, by the dispersion of which he had acquired the supreme authority; and mention various points, as if they had been actually settled by the treaty (48). Others again deny this, on the behalf of the parliament, who, as they say and shew, prescribed harder terms, and much more explicit, than those of the protector: they farther add, that Cromwell suffered himself to be deluded by the Dutch, in referring the business of Amboyna to commissioners, after which he minded it no more (49). This comes nearer the truth, which is fairly represented in the text from the treaties and awards themselves. But the Dutch historians admit, that, notwithstanding the above-mentioned de-

cision, a dispute was raised about the forms of the releases, so that the money was not paid at the time, nor in more than six months after, which was the space allowed for the protestant cantons to decide as umpires; upon which a new act was drawn, dated the 9th of May 1655, and other commissioners appointed to decide upon fresh questions, with the like reservation to the protestant Swiss cantons (50). But, notwithstanding the English commissioners were named, yet for want of assigning them proper salaries, they never met; but at length the English company, desirous of touching the money, removed all difficulties; and so the point was adjusted after Cromwell's time, and without any restitution of the island of Poleroon, which, as they allege, was never properly insisted upon, and could not therefore be complied with (51).

S E C T. VIII.

The causes of the war off Ceylon, the progress of that war, the great success of the Dutch in that island, in which they not only render themselves superior to the Portuguese, but also force the natives to a submission, and absolutely defeat their whole force, when exerted to shake off the yoke.

A succinct history of the war in Ceylon, and the views on which it was undertaken by the Dutch.

THE benefits springing from these, and other transactions of a like nature, though considerable in themselves, were not however to be named with another vast acquisition^a that of the island of *Ceylon*, by which the *Dutch* added to the possession of the nutmeg, mace, and clove trade, already in their hands, that of cinnamon, whereby they obtained a complete monopoly of one of the most considerable branches of the *Indian* commerce, that of spices^d (Z). In bringing this about, they acted with very great prudence and address; and, though there is no room at all to doubt, that from the very first they had actually in view what in the end they so fully accomplished; yet their design was so well concealed, that the potent monarch they had to deal with, though one of the ablest and wisest princes in the east, did not discover it till it was too late; so that, notwithstanding he struggled for some time, yet that served only to weaken his power, and waste his forces, which made the *Dutch* so much the more secure in their conquests. It is true that the prosecution of this affair employed their counsels and their arms for many years, obliged them to be at the expence of fitting out squadron after squadron, with considerable numbers of regular troops on board; for which though they stipulated some kind of satisfaction with the monarch they pretended to assist, yet they never received it, or expected to receive it, but with great sagacity chose to be losers for a long time, and to be dupes in appearance to the treaties they had made, foreseeing that at last they should be paid for all, when, under various colours and pretences, they came to what they all along aimed at, having the power to pay themselves^e. It was with a view of treating this matter clearly, though concisely, all at once, that we omitted the mention of the first expeditions of the *Dutch* to the coasts of this island, from a persuasion that it would be more perspicuous, and consequently more pleasing to the reader, to consider these transactions in a short and continued relation, than to take up the broken threads in their chronological order, and so wind them up at last in the total reduction of all that the *Portuguese* possessed under the dominion of the *Dutch*^f.

The state of affairs in the island of Ceylon at the company began her operations.

RAJAH Singa was at this time king of *Candy*, or *Gandy*; and having been educated with his brother, the prince of *Uva*, amongst the *Portuguese*, had, as their own writers say, a great affection, as well as a high esteem, for their nation; but, not being able to bear the oppressions and insolences of the governor, he had been forced into a war, in which he obtained a great victory. But being informed, that the *Portuguese* had sent considerable succours from *Goa*, were taking all imaginable measures to carry on the war, and in the mean time burnt his towns, and plundered his subjects, under the protection of the fortresses they had built upon his frontiers, he resolved, as his last resource, to make an alliance with the

^e TAVERNIER *voyages des*

(Z) In the beginning of the seventeenth century captain *George Spilberg* visited this island, and was very well received by *Don John*, who at that time was acknowledged king of *Candy* and emperor of *Ceylon* (52). In 1603 *Sibald de Weert* came in quality of commodore of a *Dutch* squadron, upon the coast of that island, and promised assistance to the same emperor against the *Portuguese*. Upon some offence taken at his behaviour, which was very rough and unpolished, that monarch ordered him to be seized; and whether he made resistance, or that was only pretended, it so fell out, that he and all his attendants, except one boy, were cut to pieces (53). Notwithstanding this, which certainly was a fact that any other nation would have deeply resented, yet the *Dutch* passed it by, and entered into further negotiations with him, as will be seen in another place; but they came to nothing during this reign, and are only mentioned here

to shew how steadily they adhered to their interests, and with what a readiness they sacrificed such points as would have created endless quarrels with almost any other nation; and this, their own writers admit, was their established maxim, to which with great probability they ascribe the extraordinary progress of their power in the *Indies*; which kind of policy, however, they seem to have borrowed from the natives, who were very ready in making treaties, broke them with little scruple, and then entered into fresh engagements, as if nothing had happened (54). It must however be observed, that the *Dutch* followed this rule only to obtain the power of laying it aside, which, when they had once acquired, they soon made the natives sensible they knew how to revenge injuries as well as the rest of the *Europeans*, and perhaps better.

(53) *Basnoge description historique du gouvernement des Provinces Unies*, tom. iii. p. 147.

- a *Dutch*, and to drive this imperious nation out of the island *. Accordingly, in the month of *March* 1638, he sent two ambassadors to *Batavia*, who were received with all the respect imaginable; they declared to the general and council, in the name of the king their master, that the *Portuguese*, in direct violation of treaties, and without any just cause whatever, had attacked, and carried the flame of war into the very heart of his dominions, which he had no hopes of extinguishing by any measures he could possibly take, since the quiet of the island depended intirely on the caprices of the governors-general, who never wanted pretences, when they had a mind to disturb it, which induced the king to desire the assistance of the company against the common enemy. To this it was answered, that they were very well apprised of the truth of this representation in all its circumstances; that there was scarce a country
- b in *India* from which they had not received the same complaints; that the company took a pleasure in espousing the cause of injured nations; and that they were willing to exert their whole force for the assistance of his majesty of *Candy*, without any other view than that of doing him justice, and setting him free from the tyranny of their common enemy †. Upon this an alliance was concluded, by which the *Dutch* undertook to furnish an army and a fleet for the service of the king, to reduce the fortresses in the possession of the *Portuguese*, and, when dismantled, to put them into his hands, so that he might be at liberty to correspond and trade with whom he pleased. On the other hand it was stipulated, that the king should also bring as great a force as he was able into the field; that he should pay the *Dutch* the expence of their expedition, and for any losses they might sustain therein, according to certain rates that were
- c settled, and that they should be allowed to keep a single place for a secure retreat ‡ (A).

- IN consequence of this treaty they fitted out from *Batavia* a squadron of six men of war, with a body of land-forces on board; and in the month of *February* 1639, they made a descent on the west coast of the island of *Ceylon*, where they made themselves masters of the fortresses of *Battecolo* and *Triquinimala*, which, agreeable to their treaty, they demolished immediately, and put into the hands of the king, who was not a little pleased with their punctuality in performing their alliance. Somewhat earlier the next year the *Dutch* sent double the force; and, having landed upwards of three thousand men, and made themselves masters of *Negombo* and *Gallo*, places of great strength, and which might have made a considerable resistance if they had been tolerably well supplied, or if the *Portuguese* had not foolishly ventured an
- d engagement in the field, in which they lost the best part of their forces *. The *Portuguese*, extremely alarmed at this progress of the *Dutch*, sent over Don *Philip Mascarenbas*, with the title of governor, and a small reinforcement, in the autumn of the same year, who immediately besieged, and retook *Negombo* by capitulation, in which it was promised that the *Dutch* should have vessels given them, with every thing requisite, for transporting them to their own settlements, and they engaged not to land again on the island of *Ceylon*. But when they came to put to sea, the *Dutch* found the vessels that were given to them so leaky, that it was not without great difficulty they got into the port of *Gallo*. This the *Portuguese* resenting as a direct breach of faith, gave no quarter for the future; which proved of very bad consequence to themselves, as it served to justify all the severities which the *Dutch* afterwards exercised upon them. At this juncture, however, the former thought the war near an end, for they made no doubt of taking *Gallo* as easily as it had been taken from them; but they were quickly convinced of their mistake, the *Dutch* defended it with so much resolution, that after the loss of a great number of men in a siege of a considerable length, they were obliged to turn it into a blockade, which lasted two years †. At length there came advice of the revolution in *Portugal*, and of the truce made between king *John* and the republic of the United Provinces; upon which it was agreed that each should continue possessed in the *Indies* of what was actually in their power at the conclusion of this treaty. The *Dutch*, therefore, demanded that the district belonging to the fortress of *Gallo* should be left to them; which the *Portuguese* refused, pretending that they were entitled to no more of the country than was under the command of their artillery, which was in effect continuing the blockade in a time of peace; and, being infa-

(A) the *Dutch* give a different account of this treaty, if it be the same with that which was signed at *Battecolo*, May 23d, 1638, by the emperor on one side, and *Adam Westerwold*, counsellor of the *Indies*, and commodore of the *Dutch* squadron, and *William Jacob Koster*, vice-commodore on the part of the State, and the prince of *Orange*, on the other; and here, by the way, it may not

be amiss to take notice, that Mr. *Koster*, after exposing his life often, and performing many great services for the emperor of *Ceylon*, was notwithstanding in the end assassinated for some imprudent speeches, which the *Dutch* thought fit to dissemble upon the old principle, that the misfortunes of private persons should not be suffered to create any disturbance in public affairs (55).

The strange
conduct of the
Portuguese in
their defence of
that island.

tuated with their own notions of superiority, they would needs continue the war, which proved in the end, as it might have been easily foreseen it would, the total ruin of their affairs ^m (B).

BUT they were guilty of a far stranger act of infatuation; for the prince of *Uva*, brother to the king of *Candy*, who was always in their interests, and thereby provoked that monarch, who represented to him, that it was a folly to expect better usage from that nation than they had already received, carried things at last so far, that the king declared war against him; and, falling suddenly with a great army into his country, forced him to fly for succour to his friends the *Portuguese*. They received him indeed with all the honours imaginable, and had now an opportunity put into their hands of retrieving all they had lost by their past mistakes; for that prince was infinitely beloved by his brother's subjects as well as his own, and, as he was elder than *Rajah Singa*, who succeeded only by his father's will, had a fair pretension to the crown. All he desired was, an escort of one hundred and twenty *Portuguese* to the frontiers of his own country, where his subjects were ready to rise, and to receive him. This motion however was but coolly entertained; and when an old nobleman, who had been the prince's governor, expostulated the point a little warmly with an inferior officer in the troops of *Portugal*, he ordered his head to be cut off, which was done immediately, notwithstanding all his unfortunate master could do to save him. After this they seized upon the person of the prince, and sent him over to *Goa*, where he was converted to Christianity, and passed the remainder of his days in a prison; while the king of *Candy*, by the addition of his dominions, which consisted of some of the best provinces in the island, and by the assistance of his subjects who were the bravest and best soldiers in it, became so much the more powerful, and continued the war against them with indefatigable diligence, at the same time that he received and protected all who deserted from them, which, under a government so harsh and severe, to the natives more especially, was not a few. If this was related only by *Dutch* writers, we should have just cause to suspect, at least, if not to disbelieve it; but as we have the fact, with all its circumstances, from *Portuguese* authors, who very candidly acknowledge that nothing could be either more base or more weak, we cannot but afford it credit. This sending the prince of *Uva* to *Goa* happened before the news of the truce; and, in respect to their conduct upon both occasions, one cannot but acknowledge, that they seemed to take as much pains to lose this fine island as the *Dutch* did to obtain it, and therefore it is no great wonder that both completed their ends ^p.

Wise conduct of
the Dutch,
and extreme
vanity and
weakness of
the Portu-
guese.

THE *Dutch* commodore *Peter Borel*, who had been sent with a squadron to *Ceylon* to notify the truce, perceiving how little he was able to obtain from those who had the administration of the *Portuguese* affairs in that island, proceeded to *Goa*, in order to treat with the viceroy; and, finding exactly the same usage from him, contented himself with debarking five hundred men at *Ponte de Gallo*, with instructions to the *Dutch* governor to support and defend himself as well as he could. Upon this he marched part of his garrison out of the place, in order to cover such of his people as were employed in collecting provisions; which detachment, without any regard to the truce, the *Portuguese* attacked and defeated, and then turned their forces against the king of *Candy*, who continued to give them all the disturbance in his power. The *Dutch* general and council at *Batavia*, being well apprised of the situation things were in, and that the *Portuguese* had nothing less in view than driving them intirely out of the island, equipped a strong fleet, with a body of between three and four thousand men on board, which appeared before *Negombo* in the beginning of the month of *January* 1644. The *Portuguese*

(B) In this historical detail we follow chiefly the history written by captain *Ribeyro*, a *Portuguese*, who actually served therein from first to last, who very impartially censures the errors of his countrymen, and seems upon all occasions to speak with great candour as well of the natives as of the *Dutch*. We have the rather done this, because his history is very consistent and regular; whereas the method pursued by *Baldæus* (56) is embarrassed and perplexed, and in some passages not easy to be understood. Besides, the *French* translation of *Ribeyro's* history of *Ceylon*, by the Abbé *Le Grand*, is still more curious, and in some respects more valuable than the original. The author, captain *John Ribeyro*, wrote it with a design that the king of *Portugal* should be clearly informed as well of the value of what he had lost, as of

the manner in which it was lost. He resolved to deliver this work of his into the king's own hands, which he actually did in 1685, and would therefore insert nothing which did not consist with his own knowledge. But the Abbé *Le Grand* (57), being assisted with several curious manuscripts by a nobleman of *Portugal*, who put him upon this translation, and was perfectly well acquainted with the history of his own country and countrymen, he, from these authentic pieces, added a great variety of useful and important circumstances, which had been omitted by *Ribeyro*, not because he was unacquainted with them, but because he could not personally vouch them; yet these additions are not made by interpolating the original work, but either by way of notes, or supplements to each of the author's chapters.

(56) The description of the island of Ceylon by Philip Balde is inserted in Churchill's collection of voyages, vol. iii. p. 667. (57) The title of this piece is, Histoire de l'Isle de Ceylon, écrite par le Capitaine J. Ribeyro, et présentée au roi de Portugal, en 1685. Traduite du Portugais par M. l'Abbé le Grand.

- a army, which consisted of about five hundred of their own troops, besides the *Lascharins* or *Indian* soldiers in their pay, was in the neighbourhood of that place, under the command of Don Antonio Mascarenbas, brother to the governor; and, according to their usual vain and ridiculous custom, resolved to fight the enemy as soon as possible, let their force be what it would. On the fourth of that month, the *Dutch*, under their general Francis Caron, debarked their forces, which consisted of seven battalions, each as strong as the *Portuguese* army; and, as soon as they were disposed in proper order, marched to find out the enemy. Don Antonio, with his troops, was in full march towards them, and, finding their two first battalions embarrassed in their passage between two mountains, he briskly attacked and routed them; but continuing his pursuit into the plain, quickly found himself surrounded by the other five battalions.
- b Some of the *Lascharins*, who made less haste through the pass, escaped; but not a man of the *Portuguese*, either officer or soldier; so that nothing could be more decisive than this action; in consequence of which, *Negombo* fell immediately into their hands. But finding that the *Portuguese* had drawn their whole strength into *Columbo*, they contented themselves with leaving a strong garrison in their new conquest, and then reembarked their troops, and sailed back to *Batavia* *.

- c As soon as the *Dutch* were retired, the *Portuguese* general, having received a considerable reinforcement from *Goa*, invested *Negombo* in the month of *April*. He continued some time before the place, without making any great progress; at length he carried a fort, in which there were fifty men, by a storm, upon which he put them all to the sword. This made the garrison of the place desperate; so that, in two general assaults, the besiegers lost half their army, and were at length glad to retire with the rest to *Columbo* †. In the month of *December* the same year, arrived the *Dutch* general John Maatzuyker, with an order from the king of *Portugal* to put the *Dutch* immediately into possession of the districts belonging to the fortresses they then held, or which they had been in possession of a year before ‡ (C). This gave great distaste to the *Portuguese*, though without any reason; for they were now so weak, that the *Dutch* could easily deal with them.

- d As soon as the country was evacuated, the *Dutch* gave notice to the king of *Candy* of the treaty they had made, and that, by a clause therein, he might become a contracting party, if he would; which that prince readily accepted *. It seems, however, that he was far enough from being pleased at this transaction; conceiving, that if these two nations came to have a right understanding, the consequences could not be favourable to his interests, which made him study to renew the war. He acted, in this respect, like a great politician, encouraging such of the natives as were, by this treaty, become subjects to the *Dutch*, to desert their habitations, and retire into his dominions; to prevent which, the governor of *Ponte de Gallo* caused a small detachment to take post upon his frontiers, *Rajah Singa* pretended to take this extremely ill, and privately desired leave of the *Portuguese* to pass through their territories, in order to attack that detachment. This being readily granted, his troops, by a quick march, surrounded the *Dutch*, and made them prisoners, but without bloodshed. The governor of *Ponte de Gallo*, much surprised at this action, sent an officer to the king of *Candy*'s court, to reclaim the prisoners, whom he entertained with great civility and respect. When he opened to him the subject of his commission, the king told him frankly, that he had no design to prejudice the *Dutch*, but that he had a mind to see what the disposition of the *Portuguese* was, and how far he might trust to their new peace. He then gave him convincing proofs, that they had not only granted him a passage, but offered him their assistance, and, when he had done this, he set the *Dutch* at liberty, and sent them home †.

THE *Dutch* governor of *Ponte de Gallo* took care to let the king know how much he thought himself obliged to him in this transaction; by which he plainly discovered, that it never entered into his intention to betray them to the *Portuguese*. The governor likewise ordered all of that

(C) It appears clearly from the testimonies of the best writers, that John IV. king of *Portugal*, was a very wise and prudent prince, and very free from the vices and defects of his nation. He very well understood the state of his affairs in the *Indies*, as well as *Europe*. He saw the necessity of temporising in one part of the world, till his power was thoroughly established in the other. He was convinced of the naval power of the *Dutch*, by the fleet they sent to his assistance against the *Spaniards*; and therefore he sent his orders into the *Indies*, that, by making reasonable concessions, the truce might be firmly established in *Ceylon*, with instructions to his officers, to make

use of that interval to repair the losses they had sustained, to fortify the places that still remained in their hands, and to make a solid peace with the king of *Candy*; which directions, if they had been pursued, would certainly have preserved the best part of the island to the crown of *Portugal*, and, when a favourable opportunity offered, enabled them to recover the rest; but, through the pride, treachery, and negligence, of such as commanded in those parts, they were contemned; which gave the *Dutch* an opportunity of renewing the war, and of dispossessing them of all that they had still left (58).

The war immediately renewed, on the trace expiring, on which the Portuguese seize their government.

nation, who continued to live in the provinces yielded to the *Dutch*, to quit them without a delay; but, in other respects, observed the truce very punctually, making, however, the best preparation he could for renewing the war, as soon as it should be expired. The *Portuguese*, on the other hand, though they might have been easily informed of the *Dutch* preparations, were equally careless and inactive; so that, in the month of *October* 1652, when two *Dutch* officers arrived at *Columbo*, to acquaint the governor that he was no longer to consider them as friends, all things fell into confusion, and the people having no confidence in *Don Manuel Mascarenhas Homem*, who then enjoyed that post, they put him under an arrest, as a thing necessary to their safety⁷.

By their rashness lose a battle against the *Dutch*, by which their force is absolutely broken.

Don Gaspar Figueira was at the head of the troops, and he had the good luck to defeat a small detachment of the *Dutch*, and afterwards to beat the king of *Candy*, which raised their courage extremely. He was still more successful the next year, both against the *Dutch* and the king of *Candy*, whom he routed in a general engagement, in which there fell more of his subjects than in any dispute he ever had with the *Portuguese*⁸. The *Dutch* at *Batavia*, having a just sense of the importance of this war, sent *Gerard Hulst*, with a good fleet and army, to *Gallo*, and with an absolute power to act as he thought fit, in order to bring things to a conclusion as soon as possible. He arrived the last of *September* 1655, and found the *Dutch* army before *Calitura*, which surrendered on the 14th of *October*. Two days after, arrived *Don Gaspar Figueira*, with his small, but victorious army, who, forgetting that he had to do with *Europeans*, and regular troops, and not reflecting on what had happened to other officers of his nation, who had engaged rashly, gave the *Dutch* battle, though much inferior to them in all respects. General *Hulst* was surprised at the courage, or rather confidence, of this hero; but having sustained two attacks, in which the *Portuguese* lost the best part of their men, he soon dissipated the rest, and obliged the small remains of their army to take shelter in *Columbo*. That place was next attacked, and, partly by force, partly by famine, reduced, so that on the 10th of *May* it was surrendered⁹. The king of *Candy* assisted in person at this siege with an army of forty thousand men; and therefore insisted, that, pursuant to treaties, it should be put into his hands; which the *Dutch* positively refused; alleging, that he had not complied with the terms stipulated; and that there was a very large debt due to them, for which they meant to keep *Columbo* as a security¹⁰ (D).

The king of *Candy*, or emperor of *Ceylon*, breaks with the *Dutch*, to no purpose.

If the affairs of the crown of *Portugal* in this island had not been in a manner desperate, and their power in the *Indies* almost brought to nothing, they might now have had some chance for restoring them; since a war presently broke out between the king of *Candy* and the *Dutch*, in which there was much blood spilt on both sides. But a considerable reinforcement coming from *Batavia*, they first swept the places which the *Portuguese* had upon the coast of *Coromandel*; then made themselves masters of the island of *Manar*, between *Ceylon* and the main; and, at last, besieged the fortress of *Jafanapatan*, which, after holding out three months, surrendered *June* the 24th, 1658, and the garrison being made prisoners of war, were transported to *Batavia*¹¹. Thus the conquest of *Ceylon* was intirely finished; and the king of *Candy*, after having often hazarded his own person, and lost, in the space of twenty years, many thousands of his subjects, found, at length, that he had only fought to change his masters; and that the *Dutch*, by subduing the *Portuguese*, thought they had a good title to succeed to all their rights, which, whether it was so or not, they were resolved to maintain; and to which the king and his successors have been forced ever since to submit; though, as we shall see hereafter, they have shewn, that it is much against their will, and that they would be glad to employ any other *European* nation, to treat these new as they treated their old masters¹². But, as hitherto they have not been very successful in that respect, they have of late made a virtue of necessity, sent ambassadors occasionally to *Batavia*, and lived upon as good terms with the company as any of the princes of *India*; and yet it is very doubtful, whether they have altogether conquered that aversion which all men have, and princes more than any other men, to be kept in a state of abject slavery and dependence (E).

(D) This general *Gerard Hulst* was a person of invincible courage, strict honour, and of very polite behaviour, qualities that rendered him more acceptable to the emperor of *Ceylon* than any of his predecessors, as appeared by the reception he gave him, when he made him a visit in his camp, at which his imperial majesty took a ring from his own finger, and put it upon that of the general, and, at the same time, gave him a garter of gold, which

had been worn by the prince his son. On his return to the *Dutch* camp before *Columbo*, going into the trenches to visit them, he received a shot in the breast, of which he died the same evening, *April* 10th, 1656. He was succeeded by *Adrian Vander Meyden*, at that time governor of *Ponte de Gallo*, who had the honour of taking the place (59).

S E C T. IX.

Their conduct in respect of the Chinese, and other eastern nations. The war of Formosa; and the causes of the loss of that fruitful island, and important colony.

ALL the successes which the company had met with, some against, and many beyond, ^{The company resume their design of procuring an intercourse with China.} their expectations, could not make them forget their several disappointments in their attempts to settle or force a trade to *China*. They could not bear with patience, that, while they were esteemed and courted by all the other nations in the east, they should be neglected by the government of *China*, and even treated with apparent aversion; they could not see without concern the *Portuguese* in possession of *Macao*, or digest the affront they had received, when they attacked that place; and therefore, to overcome all these obstacles, the governor-general and council at *Batavia* resolved to send an embassy to the *Chinese* monarch, with magnificent presents, and with such plausible propositions, as they thought it impossible he should reject. At the head of this embassy were *Peter Boyer* and *James Keyser*, men of great parts, and long versed in business; who set out from *Batavia* in the month of *June* 1655, and arriving safely at *Canton*, communicated to the viceroy the subject of their commission, and desired they might be sent to the imperial residence. The emperor of *China* was then in the city of *Peking*, to whose presence, after a stay of eight or nine months, they were admitted; and, from the civility shewn at their first audience, had great hopes of success; but they soon discovered, that there were persons who traversed all their designs, and found means to misrepresent all the propositions they made.

THE chief of their enemies was Father *Adam Schaal*, a Jesuit, and a native of *Cologne* in Germany. He had resided in *China* upwards of five-and-thirty years, and had wrought himself so highly into the emperor's favour, that he raised him to a mandarin of the first rank, and placed him at the head of all the philosophers and mathematicians in the empire. This man, by his great interest and knowledge, baffled the designs of the *Dutch*; for he represented them as a people without any lands or settlements in *Europe*, who lived merely by peddling and piracy, and had, by treachery and cruelty, raised themselves a large empire in the *Indies*, at the expence of the natives, and more especially of such princes as, suffering themselves to be deceived by fair pretences, had admitted them into their dominions, and thereby afforded them an opportunity of distressing them and their subjects. The *Chinese*, naturally suspicious, having once these notions in their heads, began to put such questions to the *Dutch* ambassadors, as might best enable them to judge of the truth of what they had been told. Upon their asking, at how great a distance the seat of their government lay from *China*? they answered, about

* NEUVILLE hist. van Hollande, 11 deel. l. xi. c. 7.

true grounds of this monarch's dissatisfaction, and, at the same time, to shew, that these eastern princes are very far from being so barbarous, or so ignorant, as they are sometimes represented, the following letter is inserted, written by *Rajah Singa*, to the new *Dutch* general, upon the taking of *Columbo* (60).

"Our imperial majesty being very desirous to introduce the *Dutch* nation into our dominions, *Adam Wessels* came on the coast, with a squadron of ships, just as we had made ourselves masters of *Batavia*, when we thought fit to conclude a peace with him, which, being confirmed by oath, was but slenderly observed by some officers afterwards. As for instance, by captain *Burchart Kock*, and commissary *Peter Keyser*, who, being sent as plenipotentiaries to our court, did confirm the before-mentioned peace, by oath; pursuant to which, at their departure for *Galle*, they took along with them one of our principal officers, in order to deliver into his hands the country of *Matara*. But, at his coming there, they found means to render the same ineffectual, by alleging certain difficulties; which made the said officer return to our court without executing his commission, to our great dissatisfaction. It was about that time that our beloved director-general came into our dominions from *Holland*, with full power to act as he should find most suitable to our service, and to the establishment of a firm peace and friendship; pursuant to which, he desired us to bury all past miscarriages in oblivion, promising at the same time, in the name of the prince of *Orange*, and the *East India* company, full satisfaction for the same; as

"also, that the fortresses of *Negombo* and *Columbo*, when taken, should be delivered into the hands of our imperial majesty, and certain *Hollanders* to be established in the said places, for our service. It is upon this account, that we sent our auxiliaries to assist our dearly beloved *Hollanders* in the taking of *Columbo*; which being since taken, they are become forgetful of their promise, and even continue so to this day. Your excellency is left at your own liberty to do what you think fit, till notice of this proceeding can be given to the prince of *Orange*, and the honourable company. But I would have you consider, that such as do not remember and fear God, and keep their word, will, one time or other, be sensible of the ill consequences thereof."

By way of postscript, was written:

"Two letters have been dispatched from our imperial court. Your excellency has writ in *Dutch* to *George Blom*, but without mentioning any thing relating to our service. Your excellency may write such frivolous pretences as your last contained to whom you please, but ought not to impose them upon our imperial majesty, it being in vain to allege, that the director-general received his instructions from *Batavia*, whereas he brought his full powers along with him out of *Holland*. Such sinister dealings, as they create no small jealousy, so I can't see with what face you can expect any further credit from us. I have taken care to have this translated into *Dutch*, that you may have no reason to plead ignorance."

five thousand leagues. Being interrogated as to the power and strength of the colony at *Batavia*, they gave such answers as were true in themselves, and likely to create respect: but they were precisely things that turned most to their disadvantage; because they seemed exactly to agree with what father *Schaal* had laid down; so that, towards the latter end of the year 1657, the ambassadors quitted *China*, without being able to make any progress in the execution of their commission: so strong were the apprehensions the *Chinese* had of their danger, in case these strangers were admitted to trade in the ports of their empire^f (F).

Zachary Waghenier very successful in his embassy to the court of Japan.

But, if disappointed in their hopes from a negotiation in *China*, they had better success in *Japan*; to which country they sent *Zachary Waghenier*, with the title of ambassador, to the emperor, with orders to use his utmost endeavours to gain a perfect knowledge of the policy of that empire, and to make himself as agreeable as possible to the emperor and his ministers; which commission he was very capable of performing, being a man of deep reach, great experience, and extremely affable in his deportment. He had not been long, however, at *Jeddo*, before a sudden fire reduced that city to ashes; which occasioned such confusion at the court of *Japan*, as induced the *Dutch* ambassador to return home^g. He was scarce arrived at *Batavia*, before news came, that great disputes had arisen between the *Japanese* at *Nangasacki* and the *Dutch* settled in their factory there; which alarmed the general and council so much, that they obliged Mr. *Waghenier*, much against his will, to make a second voyage to *Japan*; where he did not arrive till the beginning of the month of *March* 1659. He found means to ingratiate himself with the emperor, and his chief minister; and, by promising two things on the part of the *Dutch*, obtained all that he could reasonably ask in their favour. The first was, that they should give early intelligence of any designs that might be formed in the *Philippines* to the prejudice of the empire. The second, that they should forbear taking *Chinese* ships upon the coast of *Japan*; because, the emperor allowing them to trade in his dominions, it was but reasonable he should protect them^h (G).

A fresh war breaks out in Java, in which Batavia is besieged by the king of Bantam.

WHILE these negotiations were carrying on in the most distant parts of the east, there arose a new war in *Java*, which threatened ruin to the *Dutch* affairs. We shall give a concise view of the whole matter from the *Dutch* histories. The island of *Java* had been antiently under the power of a single monarch, sometimes styled by the *Dutch* simply the emperor, and at others king of *Japara*, from whom the governor of *Bantam* revolted, assumed the title of king, and was supported, in this quality of an independent prince, by the *Dutch*. It was by a dextrous management of these divisions that they maintained their own power; for whenever the emperor of *Java* attempted any thing to the prejudice of *Batavia*, the king of *Bantam* was sure to take arms; as, on the other hand, whenever the king of *Bantam* marched forces against them, they never failed to have recourse to the emperor of *Java*ⁱ. But, in the year 1659, the emperor being much embarrassed at home, the king of *Bantam* laid hold of this

^f BASNAGE *Annales des Provinces Unies*, vol. i. p. 450, 451. p. 449. l. iii.

^h P. CHARLEVOIX *histoire du Japon*, tom. ii. ⁱ TAVERNIER *voyages des Indes*, P. ii.

(F) There is a very full relation of this embassy in Mr. *Thruener*'s collection, from whence it has been translated; and transferred to several books, in different languages, on account chiefly of the curious observations made by the ambassadors in their travels; which, at the time they were published, could not but be highly esteemed, as at that period there was scarce any tolerable account of this great empire extant. At the close of their relation, we find two things very remarkable. The first is, a distinct account of the expences of this whole affair (which, from the time of the ambassadors departure, to their return to *Batavia*, included the space of one year seven months and fourteen days) amounting to somewhat short of one hundred thousand florins, or ten thousand pounds sterling; which, if we consider the usefulness that it created, is a strong proof of the company's oeconomy. The other is, the emperor of *China*'s letter to the governor-general of *Batavia*; which is conceived in a style of cold civility, under which there seems to be a kind of concealed railery. He tells him, that his country being at such an extreme distance, he is much obliged to him for taking notice of him, and sending him presents: that, in return, he had sent him presents; but that, considering how far they lived asunder, he saw no occasion for a close correspondence between them; that, how-

ever, he might send vessels to trade in his dominions, provided they came once in eight years, which would be sufficient, and with a crew not exceeding one hundred men. Notwithstanding this, a small vessel was sent to the port of *Canton*, in order to try whether a private trade might not be admitted; but this attempt meeting with no greater success than the embassy, highly provoked the *Dutch* governor at *Batavia* (61).

(G) It appears by the instructions given to Mr. *Waghenier* upon his first embassy, that he was to make all imaginable submissions, and to do every thing that lay in his power, to gratify the pride, and to obtain thereby the favour of the *Japanese* court. There is little reason to doubt, that, in both his embassies, he went as far as he was able in this respect, which procured him a very good reception, and enabled him to obtain some favours. But, notwithstanding all this, the *Japanese* have ever since continued to prosecute their own notions, and to put the *Dutch*, from time to time, under fresh difficulties; so that if they were really instrumental, as it is generally presumed they were, to the total exclusion of all other *European* nations, they have been punished for it to almost as high a degree as their enemies could desire (62).

(61) *Ambassade des Hollandois à la Chine, ou voyage des ambassadeurs de la compagnie Hollandoise des Indes Orientales, vers le grand chan de Tartarie maintenant empereur de la Chine*. Paris, 1666. (62) P. Charlevoix *hist. du Japon*, vol. ii. p. 449.

a favourable opportunity to raise a great army, and to attack the *Dutch*; supposing, that, as they were now deprived of the emperor's assistance, he should soon be able to make himself master of *Batavia*, to which he laid siege. He found himself, however, mistaken, for the company was become so potent, that they were able to defend themselves by their own strength; which they did so effectually, that, after the loss of a great part of his forces, the king of *Bantam* was obliged to raise the siege, and even to retire precipitately into his own dominions*. The emperor of *Java*, or king of *Japara*, had still less success; for tho' he inherited, from his father, an invincible hatred to the company, yet they made him feel the effects of their power, and suffer severely for his obstinacy, tho' they were never able to conquer it, or to bring him, either by fair or foul means, to have any correspondence with them.

b THESE disturbances did not hinder the governor and council from engaging in a foreign war, for the support of one of their allies, the king of *Bengal*, who was in great danger of being dethroned by his brother. At first, the *Dutch* only furnished him with provisions and artillery, and offered him, in case he was expelled, a sanctuary at *Batavia*; but afterwards finding that a considerable part of his subjects adhered to him firmly, they sent over troops to his assistance, and not only delivered him from the immediate danger he was in, but restored him to his former dignity. In gratitude for this seasonable assistance, he gave them leave not only to erect a factory, but a fort, at *Hugbley*, well fortified, with twelve pieces of large cannon mounted, and a good ditch. It was by this means that they ruined the *English* trade there, and secured all the commerce of those parts to themselves, at least for some time¹.

c YET these remarkable instances of good fortune could not efface the remembrance of their miscarriage in *China*, much less incline them to forgive the jesuits, to whom they attributed the defeat of that embassy, which cost, in their opinion, an immense sum of money. To be revenged on the authors of this disgrace, they fitted out a fleet of thirty sail, with orders to proceed to the island of *Macassar*, and to attack the city of the same name, in the port of which they knew there was a *Portuguese* fleet, richly laden, wherein the jesuits were deeply concerned². On the seventh of *June* 1660, the *Dutch* attacked *Macassar* by land and sea; and though the *Indian* monarch defended his allies with his whole force, yet the *Dutch* obtained a complete victory, burnt three *Portuguese* ships, sunk two, and took one, so richly laden, that it sufficiently reimbursed the expence of the *Chinese* embassy, and of this expedition. What was still more honourable for the *Dutch*, the unfortunate king of *Macassar* was obliged to send a solemn embassy, at the head of which was the king of *Pope*, to *Batavia*, and to submit to such terms as the governor-general thought fit to prescribe; which were hard enough, since he was obliged not only to expel all the *Portuguese* settled in his dominions, but also to promise, that he would never admit them, or any *Europeans*, to reside in his territories, with the liberty of trading. The fortress and port of *Jompandam*, with the district of between three and four leagues round about it, were to remain in property to the *Dutch East India* company; the jesuits were to be expelled, their colleges razed, their churches beaten down, and their effects confiscated to the use of the company; and the king was to send an ambassador, with suitable presents, to the governor-general, to obtain the ratification of the treaty, even upon these disgraceful terms³ (H).

BUT, immediately after all this mighty success, the *Dutch* company received the severest check they ever met with since their establishment in the *Indies*. They had at this time a very fine settlement on the island of *Formosa*, one of the fairest and most fruitful countries in the east, abounding in all the necessaries of life, producing various rich commodities, and afford-

² TAVERNIER voyages des Indes, P. ii. l. iii. c. 19.

(H) In the only history we have of this kingdom, the *Dutch* are represented as having begun and prosecuted this war in a most extraordinary manner. It is alleged that they sent over, for ten years before, and while they were carrying on a peaceable trade with this monarch's subjects, a great number of their own countrymen, who settled in different parts of his dominions, and who, when they thought themselves strong enough, excited a rebellion, marching with a numerous army to attack the king suddenly in his capital, expecting to have been supported in this attempt by a fleet and army from *Batavia*; which not arriving so soon as they expected, the king's forces, tho' in a manner surprised, behaved so vigorously, that they were in great danger of being totally destroy-

ed; but being encamped on one side of the river, and the king's army on the other, they observed, that, at a certain hour in the night, the soldiers went down to drink; upon which, they found means to poison the waters, and thereby destroyed multitudes. By this they secured themselves till the succours arrived, and, by one of the articles of the peace, procured an indemnity for all they had done, as well as the intire restitution of their estates and effects, which had been confiscated. However, as this book was dedicated to father *De la Chaise*, a jesuit, and confessor to *Louis* the fourteenth, the credit of it is not extremely clear, of which it is but just to give the reader notice (63).

ing an opportunity thereby of carrying on a vast commerce. They had built, for the protection of their colony, a square fort, with large bastions; and below these, towards the sea, they had another fortification, which covered the palace of their governor, consisting of two regular bastions, an excellent covered-way, and four half-moons; the whole united to the fort by very strong walls, defended by a great number of cannon, and constantly supplied with a numerous garrison. The town was long and large, extremely well peopled; and the inhabitants, from seven years old and upwards, being charged with a poll-tax at the rate of half a guilder a head, produced a revenue more than sufficient to defray the expences necessary for the maintenance of this important colony. Such indeed it might be well styled, since, by its situation, at the distance only of twenty-four leagues from the coast of *China*, and one hundred and fifty from *Japan*, it afforded the means of carrying on, with the greatest ease, a trade to both, that was inexpressibly beneficial * (I). The *Chinese*, in the year 1653, had laid a very deep design for the destruction of the *Dutch* in this island, by an universal conspiracy amongst the natives; which, however, had not the desired effect, for, being discovered in time, it was absolutely defeated. This piece of good fortune made those, who were intrusted with the care of the company's affairs at *Batavia*, in regard to this settlement, much more remiss than is usual with this nation; insomuch that they neglected the fortifications, and suffered their magazines to become exhausted, while, by a steady and undiverted application to trade, they were labouring to advance their private fortunes † (K).

A taylor of
Formosa,
whose name
was Iquon,
revolts from
the Tartars,
and beats the
Chinese.

At the time the *Tartars* made their last conquest of *China*, there dwelt in the *Dutch* town upon this island a taylor, whose name, in their language, was *Chinchilung*, but by the *Dutch* and other *Europeans* he was called *Iquon*. This man had a vast capacity, a courage stubborn and enterprising, and, from an unconquerable aversion to the *Tartars*, got together a few men, two or three small barks, and with this force turned pirate, or privateer, which you will please to call him. In a short space of time his power increased to such a degree, that he became extremely formidable to the *Tartar* emperor; who, finding that his foible was ambition, offered to make him king of the two great provinces of *Canton* and *Fokien*, and sent for him to *Focken*, where he promised to give him the investiture of his new dignity; but, instead of

† NEUVILLE hist. van Hollande,

(I) It is a very difficult point to afford the reader, within that narrow compass to which we are restrained, such an account of this island, the *Dutch* settlement thereon, and the loss of it, as may be intelligible and satisfactory. But, notwithstanding this, it is necessary to endeavour it, because there is no point either more perplexed, or of greater importance, in this chapter of our history. The *Dutch*, following the *Portuguese*, bestowed the name of *Formosa* on that part of the island where they established themselves, upon account of the fine climate, delightful prospects, and great fertility of the country (64). The *Chinese* bestowed the name of *Tai-ovan* upon the whole island, which signifies, in their language, the first or chief of ten thousand, being, perhaps, a kind of hyperbolical allusion to the small islands in its neighbourhood (65). The only commodious port lay on the south-west side of the island, the mouth of which was covered by a small island, which thereby afforded two entrances, the one for large, the other for small ships. Upon this island the *Dutch* erected their first fortress, and applied thereto the *Chinese* name of *Tai-ovan* (66); which occasions great obscurity in the relations, which we have endeavoured to remove by this account. Another thing to be observed is, that, for the sake of dealing with them, availing themselves of their industry, and raising a large and constant revenue out of the tribute imposed upon them, the *Dutch* tolerated many thousands of *Chinese* inhabitants, who fled thither after the last *Tartar* invasion, had their dwellings round the *Dutch* fortress, and carried on a prodigious commerce with their countrymen on the continent. They had likewise a great number of the natives in subjection, whom they found, and their writers acknowledge to have been, an honest, faithful, and brave people; which dis-

tinction of characters will enable the reader, if he casts his eyes upon *Dutch* books, to distinguish which of these two nations are meant, when mentioned, as they very frequently are, under the common name of the inhabitants of *Formosa* (67).

(K) The *Dutch* governor of *Formosa*, when these conspiracies and insurrections happened, was *Nicolas Warburgh*, who, considering the connection the *Chinese* in the island had with such of their countrymen as were in arms against the *Tartars*, and knowing that the former, without any foreign assistance, were between twenty and thirty thousand men, thought himself obliged, in order to render himself and his garrison secure, to proceed against such as were either in arms, or embarked in illicit correspondence, with the utmost severity; and therefore cut numbers of the former to pieces, and exposed many of the latter to cruel deaths, and exquisite tortures. By this behaviour he made all the *Chinese* to a man determined enemies to the company, and exposed the settlement, over which he presided, to much greater hazards than if he had acted with temper and moderation; yet this very man, when he returned to *Batavia*, and was promoted to the post of counsellor of the *Indies*, treated all the letters of his successor, expressing his apprehensions of the *Chinese*, as mean pusillanimous complaints; asserting, that he had strength enough to resist any attack that could be made upon him, and to crush any conspiracy that might be formed against him; by which he deluded the governor-general and council, hindered them from sending the supplies they ought to have done, and even prevailed upon them to diminish the ordinary allowances for the support of the fortifications, magazines, and garrison (68).

a keeping his word, he caused him to be seized, and conducted to *Peking*, where he was soon after poisoned¹. This taylor, who was so near being a king, had a son, whose name was *Coxima*, or *Coxenga*, and who had been taylor to Mr. *Puttman*, governor of *Fort Zeeland*, and who, on his father's imprisonment, took upon him the command of the fleet. He first demanded succours from the *Dutch*, and promised them great advantages, if he was successful against the *Tartars*; which they refused: and this provoked him to such a degree, that he resolved to turn his whole force against *Formosa*; the rather because he had good intelligence within the *Dutch* town, and knew that their affairs were in a very bad condition². He assembled, with this view, a fleet of six hundred sail, most of them frigates of small force, but near one hundred were stout men of war, of forty guns and upwards. The news of these great preparations reaching the ears of the *Dutch* governor, who was at that time Mr. *Frederick Cojet*, successor to *Cornelius Keiser*, he dispatched advice to *Batavia*, and demanded speedy succours; and also to *Japan*, for the assistance of such *Dutch* ships as happened to be there. All, however, was to no purpose; for, before any relief could come, *Coxenga* sent his fleet, under the command of his uncle *Souja*, which appeared before the place in the month of *March* 1. 51³ (L).

b The *Dutch* governor sent a detachment of three hundred and fifty men to prevent the debark- His son, after ing of their troops, who behaved as well as men could do; but to little purpose, since the his father's misfortune, *Chinese* landed forty thousand men. They soon cut off the communication between the town and the island; and, having made themselves masters of the adjacent country, *Coxenga* treated resolves to re- c all who had joined the *Dutch* in the same manner that *Nicholas Werburgh*, who was governor cover For- in 1653. did such as were concerned in the rebellion; that is to say, he put them to death, mosa, and at- with all the marks of shame and cruelty he could invent, and without the least regard to age, tacks it. sex, or quality. After this, he attacked all the outworks at the same time, which prevented the *Dutch* from succouring each other; so that these places were very soon carried, tho' with a vast effusion of blood, and the governor was forced to retire into *Fort Zeeland*⁴. The conqueror, considering the great strength of the place, and how unfit his army was to undertake sieges, made choice of Mr. *Anthony Hancbroeck*, the eldest of the *Dutch* clergymen, and sent with him his brethren, two or three schoolmasters, and some of the gravest men among his prisoners, to persuade the governor to surrender; declaring that he was content they should d retire in safety, and that he would not touch the hair of a *Dutchman's* head, or one farthing's worth of their goods; but, if they refused this proposition, he would put them all to the sword without mercy. The governor told those who brought him this message, that he had all the sorrow and concern in the world for their misfortune; but, at the same time, that there was

¹ DAPPER tweede Gezantschap naar Sina, fol. 52. ² Voyages de la compagnie des Indes Orientales, tom. x. p. 214, 215. ³ BASNAGE annales des Provinces Unies, tom. i. p. 670, 671. ⁴ NEUVILLE hist. van Hoil. 2 deel. l. xi. c. 13.

(L) As there interfered a space of more than seven years between the forming and the execution of this design, the *Dutch East India* company had time and force enough to have prevented it; but what ought, in the nature of things, to have contributed most to their advantage, became the chief cause of their misfortune. The governor of *Fort Zeeland* informed them, from time to time, of the intrigues that were carrying on amongst the *Chinese*; of the difficulties under which he laboured; and of the certain intelligence he had received of *Coxenga's* preparations. His dispatches were very unwelcome at *Batavia*, more especially when he insisted, that their fortifications, tho' strong in themselves, were very irregular, and very injudiciously placed; by which the company was put to a needless and useless expence, and himself and his garrison to unsurmountable difficulties. All his apprehensions met with very little credit from his superiors, some of whom were the very persons that, by undertaking things they did not understand, had squandered away the company's money upon useless doubts, that served only to divide, and consequently to weaken, the force of the garrison (69). However, not to be wanting to themselves, they sent a strong squadron, under the command of commodore *John Vander Laan*, to *Formosa*, with full power to act as he thought fit, and to proceed from thence, if he found it expedient, and reduce the city of *Macao*. If this officer had been a man of abilities, he had certainly saved *Formosa*; but having

small parts, and much vanity, he ruined it: for, by boasting of his interest with, and knowledge of, the council at *Batavia*, he raised a faction in the garrison against the governor; procured from the officers, when drunk, a remonstrance against him, which though they refused to sign when they were sober, yet he made the same use of it as if it had been signed; and, though he returned without doing any thing, prevailed upon the governor-general and council to send letters to *Formosa*, disapproving in the strongest terms all that had been done, depriving the governor of his command, and directing him to repair to *Batavia*, in order to stand a trial (70). But receiving, in less than a month, certain intelligence of *Coxenga's* expedition, they sent other letters, restoring the governor to his command, applauding his precautions, and giving him solemn thanks for those things, which a month before they had voted to be high crimes. The soldiers and seamen discovered their sense of the matter, by bestowing upon the commodore the name of *John without brains*; by which he was distinguished to the day of his death. By the help of these remarks, the reader may form a just notion of the true sources from whence all these mischiefs flowed, and the reasons which induced the council to revenge their own bad conduct upon a governor, to whom, in truth, they could impute nothing more than that he had the ill luck to be the victim of it (71).

(69) *Formose negligée*, p. 15. (70) *Basnage annales des Provinces Unies*, tom. i. p. 671. (71) *Formose negligée*, p. 177.

nothing could induce him to betray his trust, or to give up the place he commanded into the hands of the enemy. With this answer they returned to *Coxenga*; who, as soon as he heard it, caused all his prisoners to be put to death, men, women, and children^a.

Succours from
Batavia at-
tempt to re-
lieve the
place; but are
repell'd, and
obliged to re-
turn.

When this was done, he embarked the best part of his army on board three hundred junks, a very light sort of vessels, with which he blocked up the port, while he fired upon the fortress from two batteries of twelve pieces of cannon each. Things were in this situation, when there arrived from *Batavia* a stout squadron of nine men of war, commanded by commodore *Cuven*, who immediately made the best disposition he could for the relief of the place. He landed, for this purpose, all the troops he had on board, and, being joined by a part of the garrison, marched to attack six thousand *Chinese*, that were covered by a redoubt not yet mounted with cannon. These troops, being well armed, and completely disciplined, received them in order of battle; and, though the *Dutch* fought with great resolution, and renewed the attack several times, they were at length obliged to retire, with the loss of four hundred men^b. The commodore then ordered his ships to force a passage into the port; but the junks, drawing very little water, kept close under the shore, where the great ships durst not follow them; and, in this attempt, the *Dutch* lost two of their best men of war, of which one run on shore, and had all their crew, to the number of three hundred and eighty, killed by the *Chinese*; the other was blown up by a shot fired into her powder-room. Commodore *Cuven*, perceiving that it was impossible for him to do any thing more, detached two of his ships to *Japan*; and, having taken on board two hundred women and children that were in the fort, he sailed back to *Batavia*, with the five ships remaining of his squadron, and made an exact report to the governor, and the council, of the miserable state of their affairs in *Formosa*^c.

Flagrant
treachery
of the
governor
in
surrendering
the place
to the
Chinese
in fight.

The news was received there with deep concern; and a resolution was immediately taken, to send an embassy to the emperor of the *Tartars* in *China*, to inform him, that they were in danger of losing *Formosa*, on account of refusing to assist a *Chinese* in his rebellion; but, not depending altogether on the success of this embassy, they ordered five ships of war to be equipped, and to sail forthwith to the relief of the place. The governor *Cojet* made so obstinate a defence, that old *Souja*, the uncle of *Coxenga*, resolved to raise the siege, without the knowledge of his nephew, with at least that part of the army which he commanded: but, tho' he managed this design with the utmost secrecy, yet *Coxenga* came to have a suspicion thereof; d upon which, forgetting the nearness of his relation, he caused old *Souja* to be arrested, and put in irons. After which, notwithstanding he had the plague and famine in his camp, he pushed on the siege so vigorously, that the governor found himself obliged to surrender, tho' the succours he had expected were in sight^e. Accordingly, the place being given up to the *Chinese*, he marched out with the remains of his garrison; and being taken on board the squadron, he returned to *Batavia*, where, instead of receiving the thanks, as he might reasonably have expected, of the governor-general and council, he was committed to prison, and kept there a long time, under pretence that he had given up the place too soon, because the *Dutch* squadron was in sight. This misfortune, however, great as it was, brought about a correspondence with the *Chinese* emperor, who consented to give them his assistance to restrain the power of *Coxenga*, to hinder him from pirating in those seas, and disturbing the commerce between *China* and *Japan*: points of very high consequence to his subjects, and of no less concern to the *Dutch*, who saw the face of their affairs extremely altered by the loss of this important settlement; since, instead of having the *Spanish*, *Portuguese*, and *Chinese* commerce at their mercy, they were no longer able to send their own annual ships to *Japan*^f, but with great difficulty and danger. It is necessary now that we should take some notice of affairs in *Europe*, in order to shew how far they influenced those in this part of the world, and what led the *Dutch* company to push their conquests, on the coasts of *Coromandel* and *Malabar*, to that extent in which they still remain, and by which they completed the ruin of the *Portuguese*.

The nature of that policy, by which they totally ruined the power of the Portuguese. The causes and nature of their connections with the Tartars in China. The war of Macassar, which ends in the total reduction of that potent monarch, and his subjects; who endeavour to shake off the Dutch yoke, but without effect, though the bravest and best disciplined people in the Indies.

- a** **I**N a short space after the restoration of *Charles* the second, a negotiation was set on foot, ^{While the Dutch are treating with the Portuguese in Europe, the company reduce the coast of Malabar.} under his mediation, between the crown of *Portugal* and the States General, the war being, upon the whole, equally grievous to both parties; inasmuch as, besides the loss of *Brazil*, the subjects of the States found themselves terribly incommoded in their trade by privateers under *Portuguese* colours: but, notwithstanding this, the treaty went on but slowly; of which it was resolved to take advantage in the *East Indies*, where the company, as if they had been sovereigns within the bounds of their charter, prosecuted the war with more vigour than ever; so that, in 1663, they attacked *Coulam* on the coast of *Malabar*, and having reduced it, they next attacked *Cananor* on the same coast, of which, though with some difficulty, they became masters; and though their design was to have demolished the place, and to have established only a factory, yet, when they came to consider the conveniency and importance of its situation, they determined to repair the fortifications, and keep it as a settlement of their own. They next proceeded to *Cochin*, a city of still greater force, and greater consequence, as being a bishop's see, and a place of great trade. Commodore *Goens* met here with much more resistance than he expected, and, during a siege of some continuance, lost a considerable number of his people; but, being resolved to become master of the city, he prosecuted his attempt with such obstinacy, that at last he prevailed, and the *Portuguese* were constrained to surrender*. When possessed of it, however, he scarce knew how to act, because he saw the preservation of it was a thing of great consequence, and yet that it would require a very numerous garrison, and a great expence to put the fortifications into repair.
- b** He applied himself, therefore, to the general and council at *Batavia*, who sent him orders ^{By a steady and vigorous pursuit of this conduct, the peace comes too late for the Portuguese.} not to spare either men or money, but to push his fortune to the utmost; and at the same time sent likewise a fresh squadron, and a considerable body of troops on board it. This so encouraged commodore *Goens*, that he marched by land to attack the city of *Porca*, which was the capital of a little *rajah*, or *Indian* prince, who had been subject to the *Portuguese*. But he, not caring to dispute with those who had beat his masters, offered to become their tributary, and to pay them the same obedience which he had formerly done to the crown of *Portugal*; and this, being as readily accepted as offered, put an end to the war on that side. The city of *Cranganor*, between *Calicut* and *Cochin*, fell next into his hands, without a blow; and thus, in the space of a single year, the *Dutch* expelled the *Portuguese* out of almost all the places they held on the coast of *Malabar*, and acquired a territory of one hundred and fifty leagues in length, with all the trade belonging to it, and which the *Portuguese* had enjoyed, without interruption, from the time of their first settlement in *India*. They likewise contracted an alliance with the samorin of *Calicut*, the king of *Cochin*, and other *Indian* princes^b.
- c** By the accession of *Aurengzebe* to the empire of the *Indies*, the *Dutch* had an opportunity of complimenting him; which they did by a splendid embassy, that made the power and the influence of the company known to the great monarch of *Indostan*. As they carried magnificent presents, had nothing but general favours to ask, and expressed themselves in terms full of deference and respect, that prince, who had made his way to the throne by measures not the most conformable to laws human or divine, was extremely well pleased with this application, granted their demands, and assured the company of his favour and protection^c. The king of *Siam*, who, in the company's sentiments, lay under great obligations to them, having ^{The company send a solemn embassy to the Mogul, and renew their correspondence with Siam.} in some respects deceived their expectations, they, without farther ceremony, withdrew their factories out of his dominions. The king, justly alarmed at this, and well knowing that it was impossible he should escape the weight of their resentment, who were themselves so powerful, and who had such an influence upon all his neighbours, sent immediately his ambassadors to *Batavia*, where they were treated very respectfully; and, upon the king's promising them that no cause of offence should be given them for the future, their factories were immediately

re-established^a. It was by these political contrivances, intermixed with reasonable acts of severity upon their own people, when, either through insolence or drunkenness, they committed outrages upon the subjects of potent princes, that they raised their reputation to a great height, and prevailed upon many of the *Indian* princes to send their children to *Batavia* for education, where they were sometimes entertained at the expence of the company, and all imaginable pains taken to infuse into their minds an high idea of their naval power, and of their capacity to maintain that superiority which they had so manifestly acquired^b (M).

An embassy
and fleet sent
to the assistance
of the
Chinese
against Cox-
enga and his
party.

BUT these, and other affairs of equal consequence, did not hinder the governor-general and council from paying a proper attention to the loss of *Formosa*, or the overtures made by the emperor of the *Tartars* in *China*, for restoring to them that place. There was the greater reason to expect that this monarch would act sincerely, because *Coxenga*, not satisfied with *Formosa* and its dependencies, had made himself master of several islands between that country and *China*, and actually seized some towns upon the continent. On the assurances, therefore, given them by Mr. *Borel*, their ambassador to the emperor, they fitted out a great fleet of seventeen large ships, under the command of *Balibasar Borth*, with orders to join the *Tartars*, and to act with the utmost vigour against *Coxenga*^c. On his arrival on the coast of *China*, he found that conqueror in possession of the island of *Quemoy*, which the *Tartars*, with all their force, were not able to take from him. The *Dutch* commodore, observing that the principal fortress in this island stood upon the sea-coast, resolved to try whether it was not possible to take it by assault, supposing that this would strike a terror into the enemy, and raise the credit of the *Dutch* army with the *Tartars*: but he quickly found, that the soldiers of *Coxenga* did not at all resemble the *Chinese*; for they gave him so warm a reception, that he was soon obliged to abandon the design. He next determined to attack their fleet, while the general of the *Tartars* engaged their forces on shore; to which the latter consented^d.

The Tartar-
Chinese be-
have exceed-
ingly ill to
their new al-
lies the Dutch.

THIS fleet of *Coxenga's* consisted of four score large junks, and twenty-seven small ones, all full of soldiers and seamen, and very well furnished with brass cannon. The battle was very obstinate and bloody; and *Coxenga* distinguished himself as a gallant soldier, an experienced seaman, and a great captain: but the *Dutch* large ships tore his junks to pieces; so that, after an engagement which lasted for several hours, he was forced to retire; but did it in order, and with a good countenance. The *Tartar* general, before the battle, began to draw up his forces in a regular line, and all the time it lasted looked on very quietly. After all was over, the *Dutch* commodore expostulated this matter a little warmly; but the *Tartar* general answered, that he could not prevail upon his men to fight; but, in case the *Dutch* attacked the enemy a second time, he believed they would behave better^e.

Who trust
them again in
another en-
gagement, and
are deceived
by them.

THE commodore took his word, and attacked *Coxenga* a second time, and routed him intirely; but the *Tartar* general was as calm a spectator as before. This victory, however, was of greater consequence than the former, since it not only cost *Coxenga* all his new conquests, but his life. The *Tartars* laid hold of this opportunity to demolish the fortresses they had raised as fast as they left them; and the *Dutch* were very brisk in carrying off whatever was valuable. After this, they made themselves masters of the island of *Amoy*, and the recovery of *Formosa* was looked upon as certain; yet, when they came to attempt it, they were strangely disappointed; for old *Souja*, who had now recovered his liberty, drew together the

(M) It is believed, and upon good grounds, that this part of the *Dutch* policy, as we have hinted before, is copied from the *Portuguese*, who, in the time of their grandeur, practised the like at *Goa*, but with less dexterity as well as success. The *Portuguese* were wont to dazzle the eyes of the young *Indian* princes with magnificence, to caress and indulge them in their pleasures, and to bestow upon them *Portuguese* names, as if they meant to naturalize them. All these arts, as they grew up, they easily saw through, and, when they came to the possession of their dominions, were very often the bitterest enemies the *Portuguese* had. They behave in quite another manner towards them at *Batavia*; they are never admitted to the presence of the governor-general, but in ceremony; and upon solemn occasions they are treated with great respect; and, under this pretence, they have little liberty, converse with none but such as are appointed to instruct and entertain them, and carried to the reviews of the company's forces, bear also a part in all public spectacles and shews, and no pains are spared to

insil into their minds political maxims, that seem intirely calculated for their advantage, which, at the bottom, turn however to the company's benefit; for they are given to understand, that, from the natural laziness, perfidy, and fickleness of their own subject, they are in continual danger; but that, while they adhere steadily to their alliances, they may command all the power of the *Dutch*, which seldom fails of making a great impression upon their minds; and as it is the company's interest to keep these promises, so they very seldom fail of gaining their end, which is in effect to render these princes their viceroys. By this method also they come at a perfect knowledge of the temper, genius, and capacity of these princes; so that they are ever afterwards able to deal with them without any danger of being deceived or betrayed; or, if ever this happens, they know how to raise up competitors, who, by their assistance, may supplant such monarchs as endeavour to emancipate themselves from that yoke which they endeavour to impose.

a fleet and army of his nephew, and disposed them in such a manner, that there was nothing to be done but by force; and even of doing any thing that way there was a great uncertainty. The old *Chinese*, however, being a man of great wisdom and experience, was not willing to risque all, if all might be saved without running any hazard, and therefore had a mind to make peace with the *Tartars*, and to grant the *Dutch* a settlement, and a free trade; which he thought might content both ¹.

THE son of *Coxenga*, however, whom the *Chinese* call *Tching-king-may*, having discovered the design, defeated it; and, procuring himself to be elected general, seized the old man, and sent him a second time to prison, where, in a fit of melancholy, he dispatched himself with his own hands. This young officer inherited all the spirit and all the abilities of his family, and managed his affairs with such courage and conduct, that the admiral soon found himself obliged to return to *Batavia*, without being able to execute the commission he had received; which was the reason that he met no extraordinary welcome ².

It was not long after this victory that *Tching king-may* departed this life, and left the island of *Formosa* to his son *Tching-ke-san*, who was, at the time of his father's demise, a child. Public affairs were indifferently well managed by his guardians till he grew up to man's estate; when proving of a mild and melancholy disposition, and perceiving that the *Tartars* had not only reduced, but put to death, the king of *Fo-kien*, his principal ally, he resolved to prevent all danger of suffering in the like manner, by a voluntary surrender of his dominions, to which, though against his will, he was constrained to add also that of his person. He came to *Peking*, in the quality of an abdicated prince, in the summer of 1683, had a small pension given him, and, in other respects, was treated with kindness and civility. Thus the island of *Formosa*, or at least that part of it which belonged to the *Dutch*, became re-united to the *Chinese* empire, and has continued so ever since, there being always a body of twelve thousand regular troops maintained therein; but both officers and soldiers are changed once in three years, and sometimes oftener, in order to prevent all possibility of revolting ³ (N).

THE first war between the maritime powers after the restoration did not much affect the *Dutch* affairs in the *East Indies*; and therefore we need say nothing of it here, but proceed rather to their war against the king of *Macassar*, one of the most vigorous, and at the same time one of the most important, in which they had been engaged from the time of their first establishment. This kingdom, which comprehends the best part of the island of *Celebes*, was then inhabited by a brave and numerous people, whose monarchs, as they had never submitted to the *Portuguese*, had of course a strong aversion to the yoke of the *Dutch*, with whom they were never upon good terms, on account of the intercourse they preserved with the *Moluccas*, and the protection they gave the *Portuguese* who had taken shelter amongst them; yet there was not a word said of either of these causes in their manifestoes. On the contrary, they complained in these of the depredations committed by the king of *Macassar*, as their

¹ NEUVILLE hist. van. Hollande, 2 deel. l. xii. c. 4. p. 704.

² BASNAGE annales des Provinces Unies, tom. i.

³ DU HALDE description de l'empire du Chine, tom. i. p. 179. 482.

(N) This was the last sovereignty in the hands of the *Chinese*; and, by the reduction of this island, the *Tartars* rendered their conquest of the empire complete. The reader will easily perceive, that an apprehension of the *Dutch* reviving their claim to their old settlement, may be one reason of the great care that is expressed for the safe custody and preservation of the west part of this island; for, as to the east, it remains still in the hands of the natives, who are not in any danger of being conquered by the *Tartars*. It is proper, however, to observe, that the *Dutch* have no longer any great motive to undertake the recovery of what they formerly possessed, since the principal entry into the port, which we have before described, is now choaked up with sand to such a degree, that ships of any considerable burden cannot pass; and as the most important point in reference to the *Dutch*, was the having a good haven to receive their vessels, either outward or homeward-bound to and from *Japan*, this being out of the case, renders *Formosa* of far less consequence than formerly it was (72). As we shall not have occasion to resume this subject any more, let us add the following passage from a modern writer (73): "The natives," says he, "differ much from the neighbouring people of *China* and *Luconia*,

"both in physiognomy and make. They are of a low stature, with a large head and forehead, hollow-eyed, and the cheek-bones very high, a large mouth, and a short flat chin, with little or no beard on it, long jaw'd, and a small long neck, their body short and square, their arms and legs long, small, and ill-shaped, their feet long, and broad at the toes, and generally they are very weak in the knees." One would imagine from hence, that they descended from the *Tartars* inhabiting the most northern parts of *Asia*, and that they came hither from *Corea*; for this must be understood of the original natives of this island, who remain still free and unconquered, not the *Chinese* who have settled there since the *Dutch*. If it was not from the want of ports, there seems to be no doubt that this pleasant and plentiful island would merit the attention of the *Europeans* more than it has done for above a century past. However, considering that eagerness which the northern nations have expressed for acquiring a share in the *Chinese* trade, it is not at all improbable, or at least impossible, that they may entertain thoughts of fixing a new colony in *Formosa*, and this too, perhaps, with the permission of the *Chinese*, under certain restrictions, like those which have been imposed on the *Portuguese* at *Macao* (74).

(72) Du Halde description de l'empire de la Chine, vol. i. p. 180. Indies, vol. ii. p. 295, 296.

(74) Du Halde, *ubi sup.* p. 178, 179.

(73) Hamilton's account of the East

writers report ; for his subjects had murdered some of the *Dutch* that had landed in his dominions, and had likewise plundered several ships that run ashore upon the coasts ; but, before any hostilities were committed, a treaty was set on foot, by which the king promised to make full satisfaction for the injuries done, as also to make such submission as they should require from him on account of these disorders. The company, however, having some diffidence as to the king's promises, thought proper to send their admiral, *Cornelius Speelman*, who had been governor of the coast of *Coromandel*, with a squadron of thirteen men of war, and a certain number of transports having eight hundred soldiers on board, with orders to see the late treaty executed according to the letter in every article ; who, with this naval force, arrived before *Macassar* on the nineteenth of *Decem̃er* 1666 ^a.

But this giving satisfaction to neither party, they at last have recourse to arms.

THE next morning came two deputies from the king, and brought with them a thousand and sixty-six ingots of gold, which had been promised in satisfaction for the murder of the *Dutch*, and also the sum of one thousand four hundred and thirty rixdollars in satisfaction for the vessels that had been plundered ; but at the same time they declared in the name of the king, that the submissions required were inconsistent with his dignity, and therefore such as he could not comply with. As this was what the company expected, and as they were also informed that the king of *Macassar* had sent a large fleet to attack the island of *Bouton*, admiral *Speelman* immediately declared war ; and, having made two descents upon the country, carried off an incredible quantity of plunder, burnt fifty villages to the ground, and about an hundred ships in several ports, the king not suspecting such a visit. The admiral sailed, when this was over, to relieve the island of *Bouton*, which was hard pressed by the fleet and army the king of *Macassar* had sent against it. Admiral *Speelman* arrived before the place on *New-year's-day* 1667, forced a passage with his small vessels into the haven of *Pouton*, and then proceeded to the relief of the city, which was besieged by the king of *Macassar's* general, at the head of ten thousand men. But the *Dutch*, attacking them in their intrenchments, and finding means to set their magazines on fire, forced them to raise the siege ; which was followed by such a prodigious desertion of their army, that the generals of the king of *Macassar* found themselves obliged to enter into a treaty with the *Dutch* admiral ; and, being able to obtain no better terms, surrendered at discretion ^c. The first thing they did was, to disarm their prisoners, of whom they sent five thousand five hundred to people a desert island not far from *Bouton* ; four hundred of them they kept for slaves ; and five thousand *Bongies*, or auxiliaries of different nations, they delivered up to the king of *Palacca*, who had been their faithful ally during the war. They restored to the king of *Bouton* three hundred vessels, together with whatever plunder had been taken from his subjects by the enemy, and could be found after their defeat ; the rest of the king of *Macassar's* junks they incorporated with their own fleet of transports ; and, with an hundred and ninety-five standards, and all the arms and ammunition of the enemy, with the principal officers of their army, whom they kept prisoners, admiral *Speelman* returned in triumph to *Batavia*, where he was received with universal applause, as indeed his conduct well deserved ^d.

The king of *Macassar* thinks once more of throwing off the company's yoke.

BUT the company, as the *Dutch* writers affirm, still entertained great jealousies of this monarch, to whom they were so lately reconciled ; which seem to have proceeded from the knowledge they had of his genius, and maxims of government. It soon appeared that he had negotiated only to gain time, since he began to intrigue afresh with all the neighbouring princes ; to whom he represented, that nothing could save them from becoming downright subjects to the company, but entering into a close alliance with each other, and employing the whole of their forces against the common enemy. He laboured to make them comprehend, that what was every one's particular interest might be considered and adjusted, when they were free from those apprehensions by which they were all so justly alarmed ; whereas endeavouring to provide for those interests by separate treaties with the company, was like mice making terms to come within the cat's reach, when they could only be safe by keeping out of it. He intimated farther, that as they fought for a free trade, which was the interest of all the other *European* nations as well as theirs, it was not unreasonable to expect private assistance at least, and in time, perhaps, auxiliary squadrons. He closed all by insinuating, that, how hazardous soever the war might be, they could not well be in a worse condition than that into which they were put by the late peace, which, if it continued long, the company would certainly improve by sowing jealousies amongst them, which would afford a fair opportunity of subduing them all one after another ; whereas a strict union would at least give them a chance for freedom ^e. These arguments had their weight with most of his neighbours, for they were sensible enough that all he advanced was agreeable to truth ; and therefore not only readily en-

^c Relation de la guerre de la compagnie des
BASNAGE annales des Provinces Unies, tom. ii. p. 92.

a tered into an alliance, but exerted themselves to the utmost in raising their respective quotas ; so that the king of *Macassar*, as the head of the league, quickly appeared a more formidable enemy than ever ; and so much the more so, as it was evident that nothing could divert him from his purpose, and that he must be absolutely crushed before he could be brought into a state of dependence or compliance¹.

WHILE he was making these preparations, the *Dutch East India* company were not either uninformed or negligent ; on the contrary, they equipped a stout squadron of their own, on board which they embarked a considerable number of regular forces, at the same time that they pressed their *Indian* allies to put to sea as many vessels as they were able, and to furnish as many land troops as were in their power ; which, whether out of regard to treaties, through their fear of the company, or to gratify their private resentments, they did, though it was visibly against their natural interest, for which the king of *Macassar* and his allies fought as much as for their own². Yet so it was, that, in compliance with the orders they had received, they armed with all imaginable diligence, and repaired to the place of rendezvous as they were directed ; so that admiral *Speelman*, on the eighth of *June*, sailed from *Ambon* with sixteen vessels and fourteen shallops, on board of which were the succours furnished by the king of *Palacca* and *Ternate* ; arriving, on the nineteenth of *July* in the morning, on the coast, he attempted to force a passage into the port of *Macassar*, but was warmly repulsed ; for the king having erected a fort for the defence of the place, the *Dutch*, after twenty-four hours cannonading, were forced to retire. A few days after the admiral was joined by a part of the fleet which had been separated from him by a storm ; and on the second of *August* he made a descent with his whole force at a place called *Gliffon*. His army at this time consisted of six hundred *Dutch* troops, three hundred disciplined *Indians* in the company's pay, three thousand from *Ternate* and *Bouton*, seven thousand *Bougies*, eight hundred *leamen*, and two independent companies under the command of the captains *Joncker* and *Stryker*. But the forces of the enemy were incomparably greater ; for they amounted to at least twenty thousand men, under the command of all the little kings and princes that the monarch of *Macassar* had drawn over to his party. Admiral *Speelman* kept the main body near his fleet, and detached one hundred men to attack the castle of *Gliffon* in the night. The king of *Palacca*, who was intrusted with the management of this affair, executed it with such conduct, that by three in the morning he became master of the place ; of which he gave notice to the *Dutch* admiral, who immediately sent him such reinforcements and supplies as were requisite to preserve it³.

THIS was a dreadful blow to the enemy ; and, as the admiral very justly foresaw, the first thing they did was, to attempt the recovery of it ; in which they were so far from succeeding, that after three general assaults, in each of which they lost a great number of men, they were forced to give over that design : neither was this all ; for, taking advantage of the situation of this fortress, such multitudes of bombs and red-hot bullets were fired from thence into the enemy's camp, as threw them into the utmost consternation ; which opportunity was not let slip by the *Dutch* general, who attacked the entrenchments, at the same time that a vigorous sally was made from the castle, which obliged the enemy to quit all their posts. General *Speelman* soon after embarked his forces, and transported them to another part of the island, where he destroyed a multitude of villages. As this war was attended with great losses and inconveniencies on both sides, a negotiation was set on foot, to try what could be done towards settling a peace. The king of *Macassar* was very unwilling to let these deliberations be spun out, because he found his *Indian* allies deserting him by degrees, and making peace for themselves ; which example of theirs he resolved to follow, by submitting to such terms as he could get, which were indeed none of the most reasonable ; and so the treaty was concluded on the eighteenth of *November* 1667 ; in consequence of which the regents of the island, and all the neighbouring princes, as well as the king of *Macassar*, sent a numerous and solemn embassy to the governor-general *John Maalsnyker* at *Batavia*, to make their submission to the company for their past conduct⁴.

THE *Dutch* army and fleet continued in the island ; and, the rainy season coming on, there ensued such a mortality among them as induced the *Indians* to hope they might gain some advantages ; by which they were tempted to break the peace, by massacring a great number of the dying soldiers, and two of the captains ; upon which the war broke out again, and continued with as great violence as ever for two years ; in which time the success of admiral *Speelman* was so great, and the calamities brought upon the natives of *Macassar* were so many and so heavy, that at last they were forced, in order to obtain a peace, to send a new ambassador to *Batavia*, and to make all the submissions the company could require ; and, after all, they

were left to the mercy of *Speelman*, who by a new treaty, concluded on the fifteenth of *June* 1669, not only renewed the treaties of the nineteenth of *August* 1660 and the eighteenth of *November* 1667, but also imposed upon them other conditions still more grievous and more intolerable^a. This put an end in a manner to all open and avowed opposition to the company, who from this time have considered all disputes rather as insurrections and rebellions, than wars with equal and free powers (O). This fixed the trade of spices intirely, and without controul, in the hands of the company; for, before, both the *Portuguese* and the *English*, as we have already mentioned, found means to purchase them in *Celebes*, that is to say, nutmegs, mace, and cloves, which were carried thither from the *Moluccas*, and it may be from other countries with which the *Europeans* have now no correspondence. As for cinnamon, not content with possessing all the true spice in the island of *Ceylon*, they pushed their conquests on the continent of *Malabar*, as has been before shewn; with this view, amongst others, that they might destroy the bastard or wild cinnamon which grew about *Cochin*, and in which the *Portuguese* drove a considerable trade when they were no longer masters of better^b.

^a See the treaties at the end of the relation before cited, and which are also inserted in the *Corps Diplomatique*.
^b *Memoires sur le commerce des Hollandois*, p. 148.

(O) In speaking of the former war between the *Dutch East India* company and this monarch, we took notice of some passages reported by an author of suspicious authority; but, in reference to what is said in the text of this last war, we may venture to affirm, that we cannot go well upon securer grounds, since what is said therein is taken from a narrative printed by authority at *Batavia*, together with the articles of peace; and, amongst them, the sixth begins thus (75): "All the *Portuguese* that can be found, without exception, shall be obliged to retire out of *Maccassar*, and all the countries dependent on that crown; and, because we are obliged to believe that the *English* are great makers of mischief, and the authors of the breach of former treaties,

"the regents of *Maccassar* oblige themselves to take the first occasion to compel them to retire out of all their territories, without ever permitting any of those two nations, or their creatures, to come and trade, or to transact any business whatever, within the extent of the country of *Maccassar*, or even so much as to continue therein after a certain day; and the said regents shall not at any time hereafter permit any other *European* nations, or any on their behalf, to come and settle within their jurisdiction on the score of traffick, or any other pretence, of what nation soever they be, or what name soever they may assume, without any exception." The rest of the articles are of a like tendency, and are drawn up in the same strict terms.

S E C T. XI.

The East India company's fourth charter. Manage their affairs with equal discretion and success. Disappoint the French in their attempts to fix themselves in the island of Ceylon, and prosecute their opposition to that nation with signal advantage.

The Dutch East India company obtain, tho' with some difficulty, a further term in their commerce.

BUT let us now turn our eyes a little to *Europe*, where we shall find that the *East India* company had worn out their third charter, and consequently found themselves under the necessity of procuring a new term, in which they met with some difficulty. The concerns of the republic were then managed by the *De Witts* and their faction, who, we are sure, were no friends to any monopoly, and had in particular no great veneration for this. The pensionary *John De Witt* thought that companies might be necessary when new trades were to be opened, and new establishments made: he thought the acquisition of the *Moluccas* necessary, and that of *Batavia* expedient; but, as to the great power that the company afterwards assumed, he judged it not at all beneficial to the *Dutch* nation. He saw, and he made no scruple of declaring it, that as to the *Dutch* employed in the *East India* settlements, they were for the most part, to use his own expression, the very scum of the people, debauched, necessitous, without principles, rapacious, and profligate; all which he conceived arose from the strict and slavish terms put upon them by the company, to which none would submit who could possibly live at home, or knew how to get abroad at their own expence, whence he apprehended that there was not that solid strength in their establishments which was commonly imagined. He believed that so severe an administration could never be beloved, but must depend chiefly on the military and mercenary force maintained for its support; and at the same time he was convinced, that, to alter these maxims, or to relax any thing of this severity, was not to be expected^a. For these reasons, therefore, he regretted that this trade was not in some measure laid open, which, from the hopes of thriving, would naturally have drawn a better sort of people to the *Indies*, who would have gradually raised colonies of another kind, more defensible, in

^a *GRONDEN en maximen van de republieck van Hollande*, 1 deel. cap. 26.

- a case of a general war, than those funded by the company would in all probability prove (P). Yet, in spite of all this, a new charter was procured, by the help of what procures all things, a large sum of ready money, which the circumstances of the state at that time made very convenient, and in consideration of which they had a grant of twenty-one years, to be reckoned from the beginning of 1666^y.

- It is, however, worthy of remark, that, within this last period of which we have been speaking, the company, notwithstanding the prodigious expences to which she stood exposed, and the great interruption of her trade during two wars with *England*, when whole fleets were requisite to escort her outward and her homeward-bound ships, several of which were however taken, notwithstanding the long wars maintained in the *Indies* against the *Chinese* taylor and his descendants in *Formosa*, the *Portuguese* in *Ceylon* and *Malabar*, and the king of *Macassar* and his allies; and notwithstanding the augmentation of the company's civil list, if I may be allowed to use that expression, which, as the reader will hereafter see, was in itself become a prodigious thing, and equal to more than the whole profits of the company's trade during their first term; yet, notwithstanding all these, the directors divided four hundred and fifty *per cent.* upon their capital, which was about forty *per cent.* more than they divided in the preceding term from 1622 to 1642^z. We may from hence discern how well, in respect to their immediate profit, the pains they had taken to root out all competition at the markets to which they traded had answered, and how great a gainer the company was become, by dint of the power and influence which they had acquired, notwithstanding the prodigious sums expended, and which they continued to expend: from all which we may collect how great the losses must have been which the *English* and *Portuguese* sustained, from whom this additional commerce was taken; and how all things were understood by their respective governments at home, when they were content to pass by such losses for the sake of a precarious peace, or, which was worse, to accept of a paltry satisfaction, and thereby bar their own right to reprisals when the alteration of affairs, or the favour of Providence, should put it in their power to make them^a. At the same time this shews the wisdom of the *Dutch* company, that never stinted money when negotiations were upon the carpet, but, by applying dexterously, and paying handsomely, procured good clauses to be inserted for them, of which their advocates knew how to make the best use, when, on the breaking out of fresh disturbances, old clamours were revived against them, which might, by a little industry, or a lucky turn of fortune, have been converted into well grounded claims, but for these prudent precautions^b.

THE great prudence and admirable address of those who managed the company's affairs, were as conspicuous in their domestic transactions with the States General as in their conduct in the *Indies*; for, when the person intrusted with the command of their homeward-bound fleet went, according to custom, to pay his respects to the States, he was instructed to make such a

Remark, that the grandeur of the company has procured an additional benefit to the proprietors.

With what prudence the directors managed the private as well as public affairs of the company.

^a FICHARD'S history of England, p. 841.

^b See the several treaties of peace company.

(P) The grand pensionary wrote his book, or at least published the 1st. edition of it, after this charter was for the first time renewed; which was certainly contrary to his judgment, as appears from what he delivers upon the subject of scouring the seas, a service for which immense sums were levied in the infancy of the republic, and of which, as he suggests, the stadtholders availed themselves by putting it in charge, notwithstanding, upon the *East India*, *West India*, and the *Greenland* companies (75). "So," says he, the States General and the admiralties charged themselves of scouring the seas, as far as concerned *Asia*, *Africa*, and *America*; and the traffick of those parts, together with the northern whale-fishing, upon supposition that all those respective companies were sufficient to drive on their trade without convoys from the state, and to take care of their own affairs. But, on the contrary, they found that the trade of these societies was carried on with so great prejudice to the rest of the people, who were excluded, that if our governors had then, or should now deal in the same manner with the trade of *Europe*, by erecting companies exclusive of all others; for example, one company for the dealer in the *Mediterranean*, a second for the *French* and *Spanish* merchants, a third for the eastern and northern merchants, a fourth for the

British and *Irish* traders, a fifth for the haddock, cod, and herring fisheries; I say, if they had done this, one tenth part of the inhabitants would not have been able to live and earn their bread; so that *Holland* would soon have been ruined, even though the trade of those companies had been carried on with so great industry, that, notwithstanding any resolutions taken by *France*, *England*, *Sweden*, and the states of *Italy*, to disturb, prohibit, and prevent, foreign manufactures, and consequently those of *Holland*, to be brought into their countries; yet each of those companies, in the small compass of our *Europe*, had driven a greater trade than the whole *East India* company now drives, to the incomparably greater, mightier, and richer *Asia*, both in goods and money; for it cannot be denied, that the free eastern trade alone, the herring fishing alone, and the *French* trade alone, produce ten times more profit to the state and the commonalty of *Holland*, than twelve or sixteen ships which yearly sail from *Holland* to the *East Indies* do now yield to the state and the inhabitants." This passage is very remarkable, contains a variety of facts equally curious and important, deserves to be read with the greatest care, and to be weighed and examined with the utmost attention.

^c Gronden en maximen van republieck van Hollande, 2 deel. cap. i.

representation of their affairs as might serve to show how beneficial this commerce was to the public, what difficulties the company had to struggle with, and what a singular degree of patriotism was evident in the whole administration of her dominions and commerce. We learn the truth of this from a memorial presented to their High Mightinesses, in the name of the directors of the *East India* company, in 1664, upon the death of commodore *Steur*, who died in his voyage. They represent, in this short piece, the losses and the uncertainty with which their traffick was attended; the vast expences of their civil, ecclesiastical, and military government, which they computed at two millions a year; the frequent disappointments they met with from a variety of causes, such as bad seasons, by which they had suffered so much at *Amboyna*, that they did not send home that year so much as a single pound of cloves; the perfidiousness of some *Indian* nations, and the art and cunning of others; so that they protest, upon the whole, that, notwithstanding what they sent home produced eleven millions for less than three that they carried out, yet had they much trouble on their hands to bring all things round, and that the company might with more reason be said to be managed for the benefit of the republic, than for the emolument of private persons; so far the gain resulting to the nation exceeded the profits that accrued to the proprietors. All this was very properly calculated to smooth the way for the renewing of their charter; which was brought about the next year, but not without paying a round sum to the treasury of the union, as has been already observed (Q).

A succinct account of the country of Tonquin, previous to the relation of the company's trade.

ABOUT this time things began to take a wrong turn in the kingdom of *Tonquin*, where hitherto they had carried on a very lucrative commerce for above thirty years; and, as there was something very singular in the commencement of that trade, the reader will no doubt be pleased with some account of it. This country was in ancient times a province to, or at least a kingdom dependent upon, the empire of *Cbina*, from which it is divided on the north by a large ridge of mountains, as on the east it is bounded by the sea. There are few countries in *Asia* more plentiful, in respect to the necessities of life, than this; neither is it deficient in some very valuable commodities, more especially silk of an admirable quality, sweet-scented woods much esteemed in all the other countries of the east, and several kinds of drugs. The government, like that of *Cbina*, is monarchical, and the customs and dispositions of the people alike in many respects; in one, however, they differ extremely, the people of *Tonquin* being as much celebrated for their candour, integrity, and fair dealing, as the *Chinese* are derided for the want of those good qualities. The situation of the country, the power of its monarch, and the obstinate attachment of his subjects to their own manner of living, prevented the *Portuguese* from settling amongst them, even when their power was at its height in the east; and what might perhaps farther contribute to give them a distaste to this country, was, the aversion testified by its inhabitants upon all occasions to the Christian religion.

Rise, progress, and decay of this commerce.

SOME of the *Dutch* factory in *Japan* being informed that a small squadron went annually from thence to *Tonquin*, and that a considerable trade was also carried on thither from *Cbina*, one Mr. *Charles Hartfink* proposed to the *Dutch* chief to send a vessel from *Japan* to *Tonquin*, by which there was a probability of opening a new trade. His scheme was accepted; and he sent thither on board a vessel, freighted not only with all the commodities usually carried thither from *Japan*, but those of *Europe* besides, together with various curiosities that it was supposed might prove acceptable presents to the king of *Tonquin*; for there is no country in the *Indies* where any favour can be obtained, or the least degree of credit acquired, without the interposition of presents. By the help of them, and his own insinuating address, Mr. *Hartfink* was as well received as he could desire; and disposed of all his commodities at a high price, and in a very short time carried a valuable cargo to *Batavia*. General *Van Diemen*, who then presided over the *Dutch* affairs, commended him highly for his care and diligence, resolved to settle a factory at *Tonquin* without delay, of which, as he well deserved, Mr. *Charles Hartfink* had the

(Q) These reports, which are and have been always constantly made, may be justly considered as the most authentic, as well as the most curious, pieces that are to be met with in respect to the history of the *Dutch East India* company, inasmuch as they comprehend a succinct and perspicuous detail not only of the general state of the company's affairs, but of each particular colony, from the time that the former account was stated and delivered. It falls out, however, unluckily, that a few, and but a very few, of such reports can be obtained; and even with respect to these, there is one thing that must be always

remembered, which is, that it is not barely intelligence, but intelligence under the direction of the company, that furnishes these representations; so that, when all is done, though these are the best materials that can be had towards framing a history of this nature, yet they are to be used with the greatest caution, and care must be taken to compare them with the histories and memoirs of those times, and, above all, with the public acts and memorials of other nations, in which there is any notice taken of the matters which they contain.

direction;

- a direction; but though this was a very considerable preferment in itself, yet it was scarce any thing in comparison of what he obtained in that country, where the king, to manifest his esteem for him, took him into his councils, bestowed on him the highest titles of honour; and at length, as if he had nothing more to give, by a solemn instrument in writing, adopted him for his son ^f. Under his management, and that of some succeeding chiefs, all things went on as prosperously as the company could desire; but at length jealousies and discontents arose, which, though pacified for a time, broke out afresh, and, by their consequences, lessened the trade to such a degree, that at length the company thought fit to withdraw their factory, tho' their ships sometimes visit the coasts of *Tonquin* occasionally, and, like other *Europeans*, are permitted to trade freely, but without receiving such encouragement as to excite any desire of
- b resettling in the same manner as formerly ^g (R).

The desire of embellishing *Batavia*, and augmenting the conveniencies the company have there, beyond those of any of the *European* settlements in *India*, though remarkable enough in all who have been honoured with the post of governor-general, yet was in none more conspicuous than in *John Maatzuyker*; who, as he enjoyed that office many years, so he left behind him various monuments of his attention to the public service. In his time were erected those vast magazines for spices, and other rich goods, that are at this day one of the great ornaments of that rich and beautiful city; and, in the construction of them, care was taken to provide a magnificent apartment for the receiver-general, who resides there with all the officers under his inspection; and who is obliged every morning, at half an hour after ten, to repair to the governor's closet, where he makes a report of the passages of the preceding day, and of ships entered and cleared, and of the sums received for the company's use ^h. Near his apartment there is another for the principal surgeon, his assistants and servants, together with all conveniencies for preparing medicines of every kind: these buildings were finished in the year 1670. About the same time also the great dock and yards in the island of *Onroost* were also completed, where every thing necessary to building, equipping, and preserving, the company's ships, is provided in such abundance, and furnished with such readiness, under the direction of an officer who is stiled equipage-master, that the company can build, repair, and refit, their vessels, without the least loss of time, and in the most complete manner imaginable ⁱ. It was likewise during his administration that the hall of mechanic arts was erected, one of the noblest, and at the same time one of the most useful, foundations that the wit or industry of man could contrive. In this the painters, engravers, sculptors, armourers, potters, carvers, &c. in the company's service, have their separate dwellings and workshops, where they execute the orders they receive with the utmost punctuality, under the inspection of the city architect, who has a grand apartment there, and a salary proportioned to his abilities and services ^k.

- In the second *Dutch* war, in the reign of king *Charles* the second, the *Dutch* were so fortunate as to make themselves masters of the island of *St. Helena*, a conquest of no great importance to them, considering its vicinity to the *Cape of Good Hope*; but of infinite detriment to the *English*, who therefore spared no pains to recover it, and were no less successful, as we have shewn in another place ^l: but their disputes with our nation, during that war, were nothing in comparison of the disturbance given them by the *French*, which struck at the very heart of their empire in the *Indies*. This was owing to one Mr. *Carron*, whom we shall have occasion to mention when we come to speak of the *Dutch* trade in *Japan*. He had been many years in the *Dutch East India* company's service, was a man of quick parts and enterprising genius, and equally hasty and determined in his resentments. He was either slighted or suspected at *Batavia*; which made such an impression upon his spirit, as induced him, upon his

(R) The trade between the *Tonquinese* and the *Dutch* was first interrupted in the year 1654, and their factories withdrawn, but settled again at the request of the king; and were continued, though not without some disputes between the two nations, for about forty years, when they were intirely withdrawn, and the trade carried on only by ships sent thither occasionally, as is mentioned in the text. Yet, while a good intelligence continued, this commerce must have been very profitable, since, in the capital city of *Catebro*, some very valuable commodities were purchased at very low rates. As for instance, excellent

musk, far superior to, that is, much less adulterated than, that of *China*, for three gilders an ounce; silk of several kinds, and very good, for two gilders a pound; and the most beautiful tortoise-shell in the *Indies*; of all which commodities there was such abundance, that any quantity might be had without danger of raising the price. The *Tonquinese* are also said to have been a very friendly, open, and honest people; so that it is more than probable the *Dutch* were in the fault as to those points on which they differed (77).

(77) Memoires de Dr. GARCIN. Memoires sur le commerce des Hollandois, p. 201. Hamilton's account of the East Indies, vol. ii. p. 212.

return to *Europe*, to make a tender of his services to the *French* court, where he was well received on account of his perfect acquaintance with the commerce of the *Indies*, which, as we shall see in the next chapter, was amongst the favourite designs of one of the greatest and ablest ministers that nation ever produced^a. While *Carron's* proposals, in relation to *Japan*, were under consideration, the war broke out, which gave a new turn to affairs, and enabled him, and another person in much the same circumstances, to offer a plan for attacking the *Dutch* in the *Indies*; which, as in itself very plausibly contrived, was highly relished by a minister at that time intent upon humbling, perhaps we should not go too far in saying upon destroying, the republic; towards which nothing could contribute more than attacking them at the same time both in *Europe* and in the *Indies*. We shall have occasion to speak more largely of this expedition in the course of this work; and shall therefore content ourselves at present with shewing how this dangerous design was, by the forces of the *East India* company, under the conduct of a very able and gallant commander, intirely defeated, notwithstanding that the great expectations raised by this expedition met at first with some kind of success^b.

Circumstances
serving to
heighten the
desire of the
French mi-
nistry to make
an impression
in the *Indies*.

THE plan proposed to the *French* court by Mr. *Carron* and Mr. *Martin*, who had been likewise in the *Dutch East India* company's service, and was well acquainted with their affairs, was, to make a descent upon the island of *Ceylon*, and to reduce the fortress of *Ponte de Gallo*, which they judged would prove an advantageous settlement, might be preserved against the whole power of the *East India* company, till supplies arrived from *France*; and, with what other conquests they could make, consigned to the *French* crown by such a treaty of peace, as, if the republic should sustain herself against that war, might be prescribed by a victorious monarch^c. While this mischief was meditating, the *Dutch East India* fleet arrived safe in *Holland*, after the breaking out of the war in 1672, with a cargo valued at upwards of sixteen millions of guilders; a circumstance, which, however happy both for the company and commonwealth^d, could not fail of raising the envy of her neighbours, and of stimulating the *French* ministry to neglect nothing that promised the diminution of a commerce so beneficial to a republic that gave umbrage to a prince too ambitious to endure the prosperity of a free government, bound by interest, as well as ready from inclination, to prescribe limits to his rapid conquests. The fleet employed in this expedition consisted of sixteen sail, well manned, and thoroughly provided with every thing necessary to put their design in execution. The *Sieur de la Haye*, who had the supreme command, had quitted a very beneficial civil employment on purpose to gratify his natural propensity to a military life, for which he had shewn himself fully qualified by a series of actions, that might be regarded as so many testimonies both of his conduct and his courage, though some have suggested that this was superior to his abilities, and that he failed for want of a capacity equal in all respects to the conquest committed to his care^e.

Disappoint-
ment of that
project, and
its causes very
differently re-
ported by
writers of
different na-
tions.

THIS squadron arrived in the proper season upon the coast of *Ceylon*, where, agreeable to their instructions, they made an attempt upon *Ponte de Gallo*, but without success; concerning which, however, there is some variety of opinions. The *French* writers pass this matter over in general terms; the *Dutch* say the fortress was in a good condition, and the governor made a gallant defence; so that the *French*, despairing of success, thought it wisest to withdraw^f. But a countryman of our own, who was remarkably well versed in the secret history of the *Indies*, has perhaps given us the true reason of his first disappointment. He says, that Mr. *Martin* flattered himself all along, that he should have the government of the place; but finding, in his passage, that this command was otherwise disposed of, he gave things such a turn, as made the taking, or even the attacking, that fortress, altogether impracticable^g. The *Sieur de la Haye* proceeded then to *Trinquemala Bay*, where he succeeded better, reducing the fortress, after a little cannonading, into which he put a good garrison, and landed for their use one hundred and two pieces of cannon. The joy conceived upon this conquest lasted not long; for the *Dutch* commodore, *Ryckloff van Goens*, coming with a fleet of equal strength upon the coast, the *French* were glad to retire, nor were they able to do that without loss^h. However, when they came upon the opposite coast of *Coromandel*, the *Sieur de la Haye* formed a project for surprising the town of *St. Thomas*, a place remarkably well fortified by the *Portuguese* in the time of their prosperity, and of which they had been dispossessed by the *Dutch* about twelve years before. The place was very large, in tolerable good condition, and with magazines well provided; notwithstanding which the *French* officer took his measures so well, as to carry his point with the loss of five men only. He left a strong garrison of six hundred men, with every thing necessary; and, knowing that he was not in a condition to perform any

a thing more, resolved to return into *Europe* *. In the mean time commodore *Goens* had retaken *Trinquemala*, made the garrison prisoners of war; and then, passing over to the *Coromandel* coast, made the *French* feel the weight of their own cannon; so that the *Sieur de la Hays*, who came into those parts as a conqueror, left them but by permission; and, in his return, one of his vessels being shipwrecked in the sight of the port of *Lisbon*, the famous Mr. *Carron*, through the malice of his pilot, was, with two captains, and some other officers, drowned; so that this squadron, of which such exalted hopes were conceived, answered them in the event but very indifferently * (S).

WHEN the *Dutch* had time to reflect upon what had happened, and to consider how dangerous a thing, in respect to the whole system of their commerce in the *Indies*, a *French* settlement at *Trinquemala* would have been, they came to have a true notion of the service done them by commodore *Van Goens*, whom the company soon after rewarded with the highest preferment they had to bestow *. Yet the possession of *St. Thomas*, though at a considerable distance from them, and by which they were very little incommoded, kept them still in some pain: they knew that the *French* were apt to be disgusted when projects were unlucky, and that at this time they had many irons in the fire; but they foresaw, that, if this place continued long in their hands, the ministry would become sensible of its importance, and perhaps incline to take such measures for its preservation as might render it difficult, if not impracticable, to wrest it out of their hands †.

THEY thought proper, therefore, in the year 1674, to stir up the jealousy of the king of *Golconda* against these new comers; and, having engaged him to besiege the place by land, they sent a considerable fleet to assist in the reduction of it by sea; in which, however, they were not very fortunate; for the *French* governor, having a good garrison, and, as we said before, being well provided with necessaries, made a much better and more vigorous defence than was expected; insomuch that the *Dutch* fleet found it requisite to retire to an adjacent port, where they landed a considerable body of men, who joined the king's army; which determined them to continue the siege, till at length, by dint as well of famine as force, they brought the garrison to surrender, though upon honourable terms; and thus, as the *Dutch* imagined, the *French* thorn was finally extracted, and they like to hear little more of them in *India* *. In this, however, they were, as sometimes happens to the very best politicians, not a little mistaken; for, from the miserable remains of this garrison, by the prudence and sagacity of the officer who commanded them, a new settlement arose at *Pondichery*; upon which, tho' the *Dutch* kept their eye, and, as we shall shew hereafter, reduced it once under their power, yet even this proved to their own prejudice; so that, from an expedition so long and to so great a degree unsuccessful, the *French* owe all that they enjoy at this day (which however is not a great deal) of the commerce of the *Indies* †.

(S) Tho' the *Dutch* company suffered severely by this Mr. *Carron*, and also by some other deserters, yet, upon the whole, they have got much more than they ever lost by entertaining strangers in their service; but in this they are very cautious and circumspect, of late years more especially, and very rarely prefer foreigners, natives of the country, or even the children of *Dutch* parents born in the *Indies*, to offices of high rank or great trust; and indeed their tenderness in this point is not only grounded

in reason, but warranted from experience, so that it is not like to wear out in haste; but, notwithstanding this policy, protestants of all nations are received and encouraged; and, if they marry and settle, at the *Cape*, *Batavia*, or in any other of their plantations, soon find a way to make their fortunes; and, if their own ill conduct does not create it, are less the objects of envy than they would be amongst almost any other nation whatever (78).

(78) *Journal du voyage des grandes Indes, par l'abbé de Choisy*, p. 86.

S E C T. XII.

This conduct of the company intitles them to great favour at home. The nature and success of their policy in the isle of Java. Resolve to drive the French out of the Indies; in consequence of which they attack, and render themselves masters of Pondichery. The famous secular medal struck in honour of the company, after its subsisting with honour, and accumulating such dominions, forces, and wealth, in the space of a century.

The company, in consideration of many services, obtain certain indulgences at home.

Methods by which they secure to themselves the commerce of the Indies.

Disposed to render themselves independent and secure in the island of Java.

THE share the company took in this war, the great expences they were at upon these and other occasions, the heavy losses they sustained by their ships taken at *St. Helen's*, and elsewhere, by the *English*, the advanced price of whatever supplies were sent them, and it may be some contributions, which, in regard to the distressed condition of the commonwealth, they furnished at home, gave them an opportunity of asking and obtaining a very favourable composition in respect to the duties upon their importations, in which they were to have a stated abatement; and in regard to their exportations, for which they were to pay an annual subsidy of sixteen thousand florins, in full satisfaction; which contract freed them as well from frequent disputes, as from many other inconveniences ^a.

AFTER the peace of *Nimeguen*, when they were free from any apprehension of seeing hostile squadrons in the *Indies*, they renewed their negotiations with several of the little princes, in order to secure the monopoly of the trade in their dominions. This in most places they might have commanded, as the *Portuguese* actually did on account of their superior force; but they rather made choice of this method than that, for the following reason: They were apprehensive that, in case they had restrained the commerce of other nations, in the ports of these princes, by open force, their behaviour in the *Indies* might have been questioned in *Europe*, and the States General obliged to interpose in a case that might have been construed a violation of treaties; whereas by making alliances with these petty princes, in which they stipulated to vend their staple commodities to the company only, they made this denial of trade to other nations to be the act of those princes, for which therefore neither the company nor the States General were answerable by the law of nations ^c. It may be proper, upon this occasion, to observe, that we do not take so remarkable a fact upon trust from the writings of any private person; but speak from the authority of such alliances, and of a representation grounded upon them from the company to the States; so that this maxim of their policy, which we shall again have occasion to mention, is as well supported as can be desired (T).

THEY were no less assiduous in contriving to free themselves from those dangers to which they were continually exposed in their capital settlement upon the island of *Java*; and from which though they had hitherto defended themselves in some measure by force, but much more by their constant vigilance, and numerous precautions, yet were they never without apprehensions, and those too not arising from slight suspicions, but from causes that were but too well founded, and which therefore, for the sake of domestic peace and settled security, they held themselves obliged to try every method to remove.

^c Corps universelle diplomatique, tom. vi. part ii. p. 454. tom.

(T) We have already given the reader an article from a treaty concluded between the company and the king of *Macassar*, by which the *English* were for ever excluded out of his dominions by the mere will and pleasure of the *Dutch*; we will now give another from the representation of the company to the States in 1664, in which having related the success of their arms in reducing the little *Indian* prince of *Porca* upon the coast of *Malabar*, that representation proceeds thus (79): "Tho' the *English* have been exhorted, as well by the king of *Cochin* as by the Raga, to retire from *Porca*, they have not yet thought fit to do so; but still continue there, and this without our pressing them at all to retire, though we have good right, and also the power of doing it, since it might be effected by only

" hinting our desire to the king of *Cochin*; nay, not content with this, they have come a second time into the road of *Porca* with their ship the *Noupa il*, notwithstanding there was nothing there to be sold, and that we ourselves had not purchased so much as a grain of pepper; so that they were forced to depart empty, which, according to their custom, they would place to our account, and have drawn a florid protest to that purpose, tho' we did nothing to them, nor give them the least hindrance, which will appear by attestations confirmed upon oath; neither then, nor when the ship the *Leopard* came before *Cochin*, with a design to proceed from thence to *Porca*, tho' there was not a single pound of pepper there in the magazines: upon which they have made a second protestation."

(79) *Report que les directeurs de la compagnie des Indes Orientales fait à le H. P. O. 22. 1664.*

- a** THESE powers were the king of *Materan*, or, as he stiled himself, the emperor of *Java*, *A view of the political mo-
tours, and
many obstacles
in the way of
these projects.* and the king of *Bantam*, now an independent prince, though his predecessors were only governors of that city and province for the emperor. The *Dutch* had done their business by playing these monarchs against each other, which though they had hitherto managed with much dexterity, and with incredible success, yet they doubted, and with reason, whether this could be done for ever, and therefore they thought it much more expedient for them to bring both under their power, not in the way of an absolute conquest, for that was impossible, but by having the persons of these monarchs in their hands, and thereby as absolute a direction of their affairs as of any of the little princes before-mentioned; a scheme strange and difficult, more especially as both princes were jealous and diffident of them to the highest degree, and yet a scheme which, in the space of a few years, they actually accomplished; and though it be true that they have not ever since been able to keep the emperors of *Java* in a constant and strict submission, and though it is no less true that they are at all times under a necessity of treating both monarchs with all the exterior marks of deference and respect imaginable, yet for all that it is very certain they have no longer those apprehensions from the emperor's power they formerly had; and that, as for the king of *Bantam*, he is almost as much at their devotion as the company's king of the *Hottentots* at the *Cape of Good Hope* ⁴. The shewing how this scheme was brought about is a very necessary and useful part of our business, and will serve to give the reader a true idea of the deep reach, and refined policy, of the *Dutch* statesmen in the *Indies*. But, previous to this, it will be necessary to shew what kind of a monarch this emperor of *Java* is, in what manner he keeps his court, and something of the temper and disposition of his subjects, without which our succinct relation would be, in a great measure at least, unintelligible.

- b** THIS prince, in point of religion, is a *Mohammedan*; and, according to the practice of most eastern monarchs, constantly served by women, of whom he takes as many as he pleases as wives or concubines. Some of his priests are obliged to go every year in pilgrimage to *Mecca*, to make vows there for the safety and prosperity of the king and royal family. His subjects are extremely faithful, and to the last degree devoted to his service. The principal persons in his court are obliged, at every audience, to approach him creeping on their knees; only in time of war this slavish custom is dispensed with. Such as commit the slightest fault are poniarded on the spot with a little dagger called a *Krid*; and as this is the only punishment in use, so the slightest as well as the greatest faults are among these people capital. The natives of this country are, for the most part, of a brown complexion, tolerably well shaped, and have long black hair, which however they often cut. Their noses flat and broad, and their teeth excessively bad, which is supposed to be owing to their *Betel* and *Fausel*, which they chew continually ⁵. The *Fausel* is a kind of nut something smaller than the nutmeg, without taste, and yielding, when chewed, a red juice. It is this juice that the *Indians* make use of in painting the chintses which we admire so much in *Europe*. The tree from whence they gather this nut is very strait, and resembles in its leaves the cocoa-tree. The *Betel* is a plant which produces long rank leaves, in their shape resembling those of a citron; in taste they are of an agreeable bitter. The fruit grows in the shape of a lizard's tail, about two fingers breadth, very long, of an aromatic flavour, and in its smell extremely grateful. The *Indians* carry with them continually the leaves of *Betel* at all visits; they are presented in ceremony, and they are almost perpetually chewing them. As the taste is very bitter, they for the most part qualify them with *Araca Fausel*, or the powder of calcined oyster-shells. Thus prepared, they have a very agreeable flavour. After they have chewed the juice out of them, they spit forth the dry mass. There are some who mix their *Betel* leaves with lime, amber, and cardamom seeds; others with *China* tobacco. Abundance of *Europeans* are got into the way of chewing it to such a degree that they cannot leave it off, though it has been very fatal to some of them, since the *Indians* are so very skilful in preparing *Betel*, that it shall do a man's business as effectually as a pistol or dagger. But this and other ill customs came in by degrees, and were not at all in use among those, who, by their wisdom and courage, triumphed over the natives ⁶.

c THE emperor of *Java*, though he leads an inactive life, in a great measure surrounded by women, and diverted daily by their pantomime entertainments, in which, if we may believe the *Dutch*, they excel both antients and moderns, and explain their passions by their gestures as easily and as effectually as others by their speech; is nevertheless a very powerful monarch; that is to say, he holds all the east and south countries of the island of *Java* under his dominion, which is a vast extent of territory, and exceedingly well peopled; but a dispute arising in reference to the succession, divided the princes into factions, and armed all the people of *Java* against each other. The *Dutch* took this advantage; raised one brother to the imperial throne, *But, in the midst of his lewd and luxurious life, is a very powerful and formidable monarch.*

⁵ Histoire de l'expédition de trois
Relacion de la ville de Batavia, par NICOLAS DE GRAAF.

or at least kept him upon it by their assistance, and drove two other princes into the mountains ; a it is very probable they might have ended the war, but that was not their interest. They persuaded the reigning monarch in 1677 to remove from his own seat at *Materan* to *Kattasura*, which was a point of great consequence to them. There, for his farther security, they got leave to erect a fort, in which they kept a strong garrison, and have likewise a court of guard in his very palace, placed there out of pure tenderneis and respect for his person, and that he may never be at a loss for his faithful defenders either against open enemies, or secret traitors ; and under this pretence they keep a constant watch over his actions, while he possesses in his own imagination a power as arbitrary and unrestrained as ever ; with the additional advantage of having *Europeans* at his command, in case that, by any of those violent acts of power which are ever frequent enough in such courts, he should provoke any of his princes, whom in their language they stile *Pangarangs*, to conspire against him ^b. The whole of this new regulation was brought to bear about the year 1680 ; and, as far as any authentic relations that we have met with reach, still subsists ; though the company have sometimes differences with him, and are constantly obliged to cajole him by splendid embassies, and costly presents ; but, in return, as will be seen hereafter, they are in possession of the trade of his whole dominions ; and all his subjects, or, to speak with greater propriety, his slaves, are employed in working to supply the luxury of the emperor's court, and the *Dutch* magazines with a variety of valuable commodities and manufactures, which they in part consume, and partly export into other countries. Thus the first part of their grand scheme was completely executed ^h (U).

State of the king of Bantam's dominions, and an account of the nations trading thither.

It was not long before an opportunity offered for carrying the other part of their plan into execution likewise, by bringing the king of *Bantam* as much or more under their power than the emperor of *Java*. The city of *Bantam* was a place of very great consequence before the *Europeans* found a passage into the *Indies* ; for the *Arabs*, the *Turks*, the *Moors*, the *Chinese*, and almost all the nations in the east, resorted to that port ; and even after the *Portuguese* became very powerful, they were contented to trade there without making any settlement. The *English* were the first who had any factory there ; after them the *Dutch* and the *Danes* carried on a great trade. The king of *Bantam*'s territories were not very large ; but their happy situation made them very considerable, as the capital is seated upon and commands the *Streights of Sunda*, the opposite coast of the island of *Sumatra* being subject to the king of *Bantam* ; this, and its nearness to *Batavia*, from which it is not distant full sixty miles, will d easily convey to the reader's apprehension a true notion of the importance of this place to the *Dutch*, who were not more jealous of the natural power of that king, if he had known how to manage it, than they were uneasy at the sight of vessels of all countries trafficking in his port, where daily experience convinced them that themselves were the least beloved by his subjects of any ⁱ. It was no wonder, therefore, that they were extremely attentive to every thing that passed in this country, or eagerly desirous of interposing upon any occasion that promised an alteration in their favour, or could lead to such a change of affairs as might correspond with their interests, and put him as much in their power as they could wish ; more especially after some checks they had received from the reigning king of *Bantam*, who was much in the interest of the *English*, and had actually sent a solemn embassy to the court of king *Charles* the second ; e which was considered as one great reason why they looked upon him as a prince by no means fit for their purpose, and to the perplexing of whose affairs they were ready to contribute by

^z Histoire de l'expédition de trois vaisseaux, vol. ii. p. 192. 193. Mémoires de Dr. GARCIN. ^h Voyages de NICOLAS GRAAF aux Indes Orientales, p. 217. ⁱ NIEUHOFF, TAVERNIER, FRIER, Abbé CHOISY.

(U) This is one of those great events, the real importance of which is not to be apprehended by a bare perusal, but requires to be long and attentively considered. The emperor, or, as he is called in the language of the country, *Sunjunan* of *Java*, is an hereditary monarch, whose dominions are very extensive, and who exercises a despotic power through their whole extent (80). The general and the council of the *Indies* were but representatives of the *Dutch East India* company, administering their affairs in subordination to the directors, and all subjects of the States General of the *United Provinces*. They were strangers, occupying but a small part of one of the greatest islands in the world, charged with a multitude of other affairs, and under a necessity of attending to them, as well as to the war in *Java*. He was at home, had thousands, and even some hundreds of

thousands, at his devotion, without any other point of view than that of maintaining his authority. The design of the general and council was rendered extremely difficult by its being of a complicated nature, requiring an equal degree of art and of force to maintain as well as to execute it. His, on the other hand, was as simple and plain as a thing could be, to support his own interest and authority, and to prevent laws being given by those who were the servants of servants, subject to a republic that had not the tenth part of his people (81). Yet the general and council at *Batavia* carried their point ; and, which is still more extraordinary, have maintained it from that time to this. There is nothing in ancient history that can with any shadow of reason be called a parallel to this transaction, considered in its full extent, and all its circumstances duly examined.

(80) Journal du voyage de Siam, par l'abbé de Choisy, p. 182. Voyage de Gautier Schouten aux Indes Orientales, vol. ii. p. 361. Mémoires du commerce des Hollandois, p. 211, 212. (81) L'expédition de trois vaisseaux, vol. ii. p. 35, 36. Mémoires de Dr. GARCIN.

a countenancing those intrigues, to which these eastern courts, wild and barbarous as they appear, are to the full as much exposed as those of the politeſt nations ^k (X).

THE old king of *Bantam*, whom ſome *Dutch* writers call Sultan *Agan*, and others Sultan *Nangbi*, worn out with age and infirmities, and being willing to ſee his favourite ſon placed upon the throne in his life-time, reſigned the government to Sultan *Agni*, or, as other writers ſtile him, Sultan *Haafi*, who had not held it long before he rendered himſelf univerſally odious, and that ſo deſervedly, as that the old king his father, in pity to his people, as well as for the preſervation of himſelf and his two ſons, the *Pangerangs Parbaya* and *Sakbi*, took up arms; and, with a body of thirty thouſand men, beſieged Sultan *Haafi*, in the fortrefs of *Bantam* ¹. The young king, deſerted and abandoned by every body, except the instruments of his cruelty, and the companions of his debauches, diſpatched immediately ſome of his favourites to *Batavia*, to deſire the interpoſition of the *Dutch* in his favour. This was pre- ciſely what they wanted and deſired; and therefore, without any ſcrupulous inquiries into the merits of the cauſe, they ſent an army of three thouſand regular troops, under the command of the *Sieur Martin*, to his relief ^m. He made a deſcent upon the coaſt of *Bantam* with his forces; and, in a general engagement, defeated the old king's army, after a long and obſtinate diſpute. The loſs of the battle was not the greateſt miſfortune which he ſuffered; for, ſoon after, he was taken priſoner, kept under a ſtrict guard, and very indifferently treated by his ſon. As for the two young princes, having made their eſcape from the field of battle, and retired with their wives and children into the mountains in the ſouth-eaſt part of the iſland, the *Dutch* ſent detachments in purſuit of them, who followed them ſo cloſe, that, having loſt all his effects, the eldeſt of them, *Parbaya*, came and ſurrendered himſelf to the company, who aſſigned him a penſion, and a place to live in near *Batavia*. And thus the war ended in the eſta bliſhment of the young prince upon the throne ⁿ.

HE had not, however, all things conſidered, any great reaſon to rejoice in this victory; for the *Dutch*, in conſequence of it, made themſelves maſters of the fortrefs of *Bantam*, and of his perſon; the *European* factories were plundered, particularly that of the *Engliſh*, in which they found gold, jewels, and rich goods, to an immense value; and every thing was diſpoſed of in ſuch a manner as ſuited beſt with the views of the king's good allies, who had fixed him upon the throne ^o. In order to manage Sultan *Haafi* the better, he was provided with a *Dutch* favourite, one *Henry van Steenwyk*, who, after he was promoted to the dignity of a prince, aſſumed the title of *Pangerang Wieragouna*, and made it his buſineſs to keep his maſter ſteady to the intereſts of his countrymen; ſo that, though every thing was tranſacted in the king's name, yet nothing was done without the advice of the *Dutch* favourite. Theſe troubles began about the year 1680, and the *Engliſh* and *Danes* were conſtrained to quit *Bantam* in 1683; which produced loud complaints in *Europe*, and a warm paper war between the *Engliſh* and the *Dutch Eaſt India* companies ^p; and, in ſhort, every thing, except the reſtitution of the *Engliſh* to their factory, and the right of trading in the capital and dominions of the king of *Bantam*, from which, with all other *European* nations, they have been precluded ever ſince; ſo that the whole produce of this country in pepper, which amounts to about ten thouſand tons a year, is intirely in the hands of the king's allies, who purchaſe it at what rates they pleaſe ^q.

BUT we muſt not ſuppoſe, that the people ſubmitted with as much alacrity as their prince; for things happened quite contrary, they ſtudied continually, and, notwithstanding many diſ- appointments, made repeated efforts to reſtore the old king, and to drive out the *Dutch*;

Juſtification of the *Dutch Eaſt India* company, printed at the end of it. ^q HAMILTON's account of the Eaſt Indies, vol. ii. p. 127.

(X) It is no difficult matter to conceive how the courts of all theſe princes are kept in a manner in a continual ſtate of confuſion, more eſpecially when this comes to be the intereſt of powerful, ambitious, and intriguing neighbours. We ſee viſibly that the paſſions and humours of mankind are in general much the ſame throughout the world, ſo that they only receive different colours from cuſtom and education. In the courts of *Indian* princes, power and pleaſure intirely occupy the minds of perſons of all ages, ranks, and ſexes; their having many wives, and children by ſeveral of them, is a grand ſource of intrigues; the ambition of their *Pangerangs*, or governors of towns and provinces, is another no leſs dangerous; to

which if we add the reſentment that is frequently inſpired by thoſe acts of wanton cruelty which abſolute princes are naturally apt to commit, we may eaſily diſcern that almoſt at any time malecontents enough are to be found in ſuch a government, who, when ſure of being ſupported, will contribute all in their power to trouble and overturn it (82). We have in the text ſufficiently explained the end aimed at by the *Dutch* in bringing about this revolution; all that we intend in this note is, to ſhew what were the means, and how much they have theſe always in their power, in caſe the reigning monarch ſhould at any time provoke thoſe who adminiſter the affairs of the company to employ it.

(82) Voyages de Nicolas Graaf aux Indes Orientales, p. 217. Tavernier, Le Brun.

hence became
disaffected to
their sovereign.

which, instead of contributing to shake of the yoke, made the weight of it the more uneasy. ^a
The *Pangerang Wieragouna* persuaded the king, that the safety of his person depended intirely upon the having a considerable body of the *Dutch* troops at *Bantam*; and as he could not but be sensible of the risk they ran, in remaining there without some place of strength for their retreat, he prevailed to have a residence assigned them, within a pistol-shot of the fortrefs; which was at first composed of canes, in the form of a lozenge, surrounded by a strong palisado, which continued till the year 1686. About that time a great insurrection happened at *Bantam*, in which the people endeavoured to make themselves masters of the *Dutch* posts; but Sultan *Haafi* had early intelligence of it, sallied out with his guards, and provided for the safety of his allies, at the expence of his subjects. This attempt, though it miscarried, made such an impression upon the king's mind, that he sent his father, and one of the oldest and most considerable of their nobility, to *Batavia*, ^b that they might be the more safely kept; and expressed his desire, that the *Dutch* would provide better for their own safety; and they, without many intreaties, erected a square stone fort, called *Steelwyk*, within pistol-shot of the fortrefs of *Bantam*; which, having always a strong garrison, and being well supplied with cannon, commands at once both the port and the town, keeps strangers out of the former, and prevents any insurrection in the latter; to the mutual satisfaction of the luxurious and insatuated monarch, as well as of the *Dutch* company (Y).

The methods by
which this
monarchy is
rendered
wholly depend-
ent on the ad-
ministration at
Batavia.

By these steps, this other great power in the island of *Java* was brought into their tutelage, though not under their subjection; for they abridged the king in none of his prerogatives, and left him in the full possession of his revenues; were caressing him continually with ambassies, ^c and loading him with presents; giving him, according to the custom of the east, the most lofty titles; and professing, upon all occasions, their inviolable friendship, and profound respect, for his majesty; to prevent his ever suspecting, that he was, at the bottom, no better than their vassal. In this state of seeming authority, and real dependence; but in the full possession of a numerous seraglio; a treasury full of precious stones, which he much admired; diverted with costly spectacles, and surrounded with clouds of rich perfume; he wasted his days to an extreme old age, and then died, little considered by his allies, and less by his subjects, who hated him for depriving them of their commerce, though they were never any great gainers by it; but they were better pleased to have variety of purchasers for their pepper, than a single nation, whom, of all others, they least affected. It does not, however, appear, ^d that he ever disliked that change which had been introduced in his reign; but, on the contrary, persisted in the firm persuasion, that he owed the possession of his dominions, and the tranquillity of his government, to the succours furnished him from *Batavia*; and therefore recommended to his son and successor the maintaining a close correspondence with the company, as a great secret of state, and the most effectual means of preserving his absolute authority.

Some circum-
stances relat-
ing to the son
and successor
of this Banta-
nese monarch.

THIS son of his was alive in 1722, and seems to have inherited his father's qualities, as well as his dominions. Before his accession to the throne, he had diverted himself by committing acts of piracy at sea, and lived afterwards in a manner not only unworthy of his rank, but scandalous to him as a rational creature. He had in his seraglio five hundred wives and concubines, and yet was guilty of the blackest incest. Those who were then intrusted with ^e the administration of affairs for the *Dutch East India* company, took the liberty of directing their ambassadors to admonish him gently as to his course of life, from the great odium it raised. He defended himself by a kind of plausible sophistry, with which vicious men delude themselves, and then hope to delude others; but, in the end, told them plainly, that he was born to give, and not to receive laws; that he lived in such a manner as he liked best; and that if his friends had any objections to the women about him, they should send him some

^c Journal du voyage de Siam, par l'abbé DE CHOISY,
^d L'expédition de

(Y) The author, upon whose credit we report these facts, is *Claus van Graaf*, or, as his *French* translator styles him, *Nicholas de Graef*. He was by profession a surgeon, and made five voyages to the *Indies*, between the years 1639 and 1687, and of these he has published an account, written with all the plainness and punctuality that might be expected from a man of his profession, not totally a stranger to letters, but unacquainted with the arts of writing, and therefore the less likely to impose upon his readers. We learn from him, that the king of *Bantam's* *Dutch* favourite was a mason by trade, a very shrewd sensible fellow, and one who first rendered himself acceptable to that prince, by building him a new stone

palace, where he might live more at his ease, and with less apprehension of being rendered the victim of some sudden conspiracy. This palace, as our author tells us, was at the same time a kind of fortrefs, of its builder's invention, being a long square, with bastions at each angle, and a half moon in the middle of each of the long curtains, the rampart being well supplied with brass cannon, which, for that purpose, were purchased from the *English* and *Danes*. We are likewise told by him that this *Dutchman*, to obtain the honour of being made a prince, actually turned *Mohammedan*, was circumcised, and, the better to make his court to the king, made an effectual display of his zeal for the king's religion (83).

(83) Voyages aux Indes Orientales, et en d'autres lieux de l'Asie, p. 211.

- a from their own country *. The author, upon whose credit we take this, was an eye-witness of what he wrote, and had several conversations with his majesty of *Bantam*, whom he represents as agreeable in his person, affable in his behaviour, pleasant in his discourse; but, withal, very artful, and execrably wicked. In his father's time the *Dutch* durst not stir singly without their fortifications; but in his reign, small detachments were not secure; so that, upon the cutting off a lieutenant with twenty men, the regency at *Batavia* were obliged to reinforce their garrison considerably *. This monarch died as he lived, suddenly, and without shewing the least remorse for the many abominable actions of which he had been guilty *. Thus we have shewn how the *Dutch*, who, though in comparison of the *Europeans* in other settlements, are wonderfully strong, and yet but weak in comparison of the natives, preserve their territories in the island of *Java*, make its natural sovereigns believe themselves indebted to the company for protection, and make use of absolute power in those monarchs, to bend their people to such a subjection, as not only they want force, but the whole strength of the republic, whose sovereignty they own, would never be able to compel, to what, from the artful management of their influence, they procured (Z).
- b

- UPON the breaking out of the next general war in *Europe*, the *Dutch* found their affairs in the *Indies* in so prosperous a condition, and were so well apprised of the employment given to the *French* fleet, that they were under no apprehensions of meeting with any other disturbance, than that of cruising for their outward and homeward-bound ships, against which they knew the States General would make the best provision in their power; and therefore, the general and council at *Batavia* applied their thoughts intirely to the making use of so favourable an opportunity for absolutely expelling the *French* out of the *Indies* *. This could not proceed from any great detriment they received from their commerce, which was so inconsiderable, that it neither brought them much profit, nor could raise any degree of envy in the nations already established in the *Indies*. But the swelling title of the royal *East India* company of *France*, the dexterity with which Mr. *Francis Martin* had established himself at *Pondicherry*, where he had raised a tolerable fortress, and a small town under its protection; his insinuating manner of treating with the *Indian* princes, whose countenance and favour he had obtained in a high degree; and the convenient situation of the place, which, except the *English* settlement at *Madras*, was preferable to any upon the coast of *Coromandel*; was what made them uneasy *. They foresaw, that, some time or other, this would turn to account, and that the *French* would be convinced, that a trade to the *Indies* was practicable, from seeing this settlement subsist and improve, with very little encouragement, and scarce any supplies from *Europe*. They determined therefore to nip it in the bud, and to rid themselves of all their fears, by dispossessing their enemies, while in so weak a condition as not to be able to make any great resistance. Their first project of exciting an *Indian* war, and making others act as the instruments of their resentment, did not take effect, by which much time, and perhaps some money, was lost; so that at length they determined to do their business themselves, and to do it effectually b.
- c
- d

- MR. *Laurence Pitt* was at that time their director on the coast of *Coromandel*, to whom the management of this expedition was committed; and accordingly he came before the place in the latter end of *August* 1693, with a force sufficient to have reduced any fortress in the *Indies*. His squadron consisted of nineteen sail, exclusive of transports and small vessels, from which he landed fifteen hundred men, all regular troops, commanded by experienced officers, and two thousand more, composed of seamen formed into companies, and *Indian* troops in *Dutch* pay, such as *Bougies*, *Macassars*, and *Cbingueleys*, fifteen or sixteen brass cannon for battery, six mortars, and a train of twenty-four field pieces; besides, they had also one of the princes of the country, with his troops, in their pay, from whom they purchased a right to the place for fifty thousand pagoda's c. When the forces were once landed, they lost no time, but pushed the siege with such vigour, that, on the sixth of *September*, the *French* governor was obliged to beat the chamade; and on the eighth the capitulation was signed, consisting of thirteen articles; by which it was stipulated, That the place should be given up to the *Dutch East India* company; the garrison to march out with all marks of honour; the *Indian* soldiers allowed

(Z) This gentleman, who published an account of commodore *Roggeveen's* voyage through the *South-Sea* to the *East Indies*, was a native of the duchy of *Mecklenburgh* in *Germany*, one who embarked in several expeditions, and in that particularly, merely from the love of travelling, and seeing strange countries. His accounts

are short, but very clear, written with singular vivacity, and with an air of sincerity, that has recommended his performance very much to the best judges. We may with reason therefore look upon the transactions above-mentioned as facts that can never be controverted.

to retire where they please; and the *French* to be sent home, either at the close of that year, or at the beginning of the next ^a.

Become masters of the place; fortify it, at a vast expence; and are obliged to give it up at the peace. THE *Dutch* being thus become masters of *Pondicherry*, not only repaired and fortified this settlement, but, in the space of six years that it remained in their hands, augmented the fortification very considerably, and made it one of the fairest and strongest places upon the coast; supposing that they should have had the same good fortune with respect to that, as had attended the like conduct in regard to their conquests from the *Portuguese*; but in this they were much mistaken. When the peace of *Ryswick* was signed, *September* 20th, 1697, there was a general clause for the restitution of all places taken on both sides, from the beginning of the war, either in or out of *Europe*; and, at the close of that general clause, the fortrefs of *Pondicherry* was particularly mentioned; with a provision, that it should not be demolished, but be delivered up in its present condition; and Mr. *Martin*, who was again made governor by a particular treaty with the *Dutch* director, consented to pay sixteen thousand pagoda's, in consideration of what had been expended: so that the *French* were really great gainers by this short interruption of their possession ^b (A).

A curious singular medal struck, upon the company's entering on a new century.

WHILE this war continued, the company thought fit to treat with the States General for the new term, as that of which they were possessed was to determine on the last day of the year 1700; and it is said, that this renewal of their charter, which was completed on the 11th of *August* 1698, and by which all their rights and privileges were extended to the close of the year 1740, cost them several millions; which, however, were very well bestowed, considering the great length of time which they obtained, and that, in the space of thirty years before, they had divided to their proprietors upwards of six hundred and forty *per cent.* on their original capital; which gave the government in *Holland* just reason to expect, that the state should receive a large fine, upon renewing so beneficial a grant; and the rather, because that their finances were pretty much exhausted, by a long, expensive, and not over-prosperous, war; during which, the company had made great profits; and it was very remarkable, that, notwithstanding so large a disbursement in ready money, they were able next year to make two dividends to their proprietors; one in the month of *June*, of twenty *per cent.* and another in *December*, of fifteen *per cent.* and this though they had likewise made two dividends the year before ^c (B).

We

^c JANSON etat present de la republique des Provinces Unies, tom. i. p. 316, 317. Dictionnaire de commerce, tom. ii. col. 1091.

(A) This treaty of peace was signed by plenipotentiaries on the part of his most Christian majesty, and the States General of the United Provinces, *September* the 20th, 1697; and the eighth article runs in the following words (84): "All the countries, cities, places, domains, forts, isles, and seignories, as well within as without the bounds of *Europe*, which may have been seized and occupied since the commencement of the present war, shall be restored on each side, in the same state they were in, with respect to their fortifications, at the time of their being taken, and with regard to other edifices, in the condition they now are, without being at liberty to demolish or hurt any thing whatever, as also without any pretensions to satisfaction for what might be formerly demolished; and particularly, the fort and habitation of *Pondicherry*, shall be restored, agreeable to the before-mentioned conditions, unto the *East India* company established in *France*; and as to the artillery which may have been brought thither by the *Dutch East India* company, it shall remain to her, as well as the magazines of military stores and provisions, slaves, and all other effects, to be disposed of at pleasure, together with the domains, rights, and privileges, which she has acquired from the prince, or from the inhabitants, of the country." Thus the reader sees how much care was taken to procure the restitution of a single fortrefs to a low and still declining company, and will, in a succeeding chapter, see of how great consequence this restitution proved.

(B) In order to avoid breaking the thread of our history, it was necessary to refer an event too remarkable

to be omitted, though in some measure personal, to the bottom of the page (85). Amongst the superior officers in the company's service, there was one Mr. *Hans van Hertog*, who rose, by his faithful discharge of his duty in several inferior stations, to the post of governor of *Japara*, upon the east coast of the island of *Java*, a place of great consequence in point of situation, but the trade of which had been hitherto so managed, as not to produce any considerable profit. Yet, while this gentleman was in the office, the trade answered so abundantly, that several millions came into the coffers of the society. The directors, to whom all accounts are annually transmitted, were so thoroughly apprised of the difference between his, and those they had formerly received from the same place, that they wrote to the council in the *Indies*, extolling his fidelity, and desiring, that very particular regard should be shewn to his merit. But, it seems, it was a merit, of which, in the *Indies*, they had no conception; and therefore, notwithstanding this recommendation, they laid him aside, and took every opportunity to cross and perplex him. This usage Mr. *Hertog* bore for some years, with a degree of patience equal to that of his probity; but, tired out at length, he desired leave to return to *Europe*. This proposition was so agreeable to those in the administration, that they not only granted it, but gave him the command of the last fleet that returned in 1689, which consisted of five sail richly laden. At the *Cape of Good Hope*, the war being just broke out, he seized two *French* ships, that were worth half his fleet, and took care that no part of his rich prizes should be embezzled. He did not, however, live to revisit his na-

(84) Corps universelle diplomatique, tom. vii. P. ii. p. 382. Histoire des Indes Orientales, par l'abbé Guyon, tom. iii. p. 344. Histoire de la compagnie des Indes, p. 75.

- a We may from hence discern at least in part, the motives which induced that prudent, as well as potent society, though it did not appear till four years after, to cause a most noble medal to be struck upon this occasion; on one side of which, the company was represented under the figure of a beautiful woman, in the flower of her age, seated at her ease, having on her head a naval crown, holding in her right hand a drawn sword, with a wreath of laurel on the point, which is the arms of *Batavia*, her right foot resting on a tortoise, her left arm is reclined upon a table, and in the hand hanging down the charter appears half open, with the seal of the generality. At her feet lie several horns of abundance, signifying the many advantages arising from the wise conduct of her commerce, to which the bird of *Pallas* standing by alludes. On the upper part of a pedestal, against which she leans, appear the arms of the States General; and on the base, there is a large C; intimating, that the company had now subsisted one hundred years; more clearly explained in the device, IN ALTERA SEcula PERGO; that is, "Through ages yet to come I urge my way." In the exergue, is marked the year MDCCII. On the reverse, appears a ship, or rather galley, under sail, beyond the columns of *Hercules*, which she seems to have left behind, her passage facilitated by six rowers, having before them the arms of the six chambers, of which the company of the *Indies* is composed. At a distance appears a setting sun, the course of which the vessel follows, to meet him rising in the east. *Neptune* appears as pilot at the helm, to signify the company's dominion over the sea. And in the exergue are these words: INVIA NULLA VIA FAVENTE DEO; that is, "No way impassable, if God assist" (C).
- b

c Histoire metallique des Pays Bas par GERARD VAN LOON, tom. iv. p. 359.

tive country, himself and his wife expiring on board the fleet, when in sight of the coast of *Holland*. The directors, however, very wisely and honourably determined to give a singular mark of their esteem, for such uncommon fidelity, and therefore ordered a gold medal, weighing a pound, to be struck, with the figure of the ship in which he came home on one side, and with a suitable inscription on the other, to be presented, after a public and pompous funeral, to his father, who was an eminent merchant of *Rotterdam*.

what is said of this medal in the text, but it may not be amiss to add a circumstance or two more, in relation to this secular medallion, which are worthy of being preserved. The directors of the company appointed a committee, consisting of one member from each of their chambers, to inspect this business. Some of the medals were of gold, and of the value of two hundred and fifty florins, the rest of silver. There were enough struck for every director, advocate, and principal proprietor, to have one of each metal he pleased, but at his own expence; after which, the die was broke (86).

(C) We have cited the proper authorities, to support

The causes and consequences of the company's long war in Java, which, however, did not hinder their making great improvements in their several settlements in that island. The grand conspiracy of the natives, for the extirpation of the Dutch. The manner in which it was discovered, prevented, and punished; with the copies of some records, in regard to this singular event, which afford the clearest evidence of the spirit both of the natives and the Dutch.

- c AFTER all the precautions that could be taken, a new war broke out in *Java*, in the year 1704, occasioned by the death of the emperor, and the disputes which arose about the succession; an affair of too great consequence to the company for her to remain unconcerned. The part she took was that of the deceased emperor's brother; whereas the *Javaneese*, or at least a great party among them, espoused that of the late emperor's son. This war was more obstinate, and of longer continuance, than could have been expected; which was occasioned by the young emperor's taking into his service many of the *Indian* soldiers, that, in a time of full peace, had been disbanded by the *Dutch*, and who, being acquainted with the *European* discipline, proved very formidable enemies; for, in the course of the war, it clearly appeared, that, in point of sagacity and stratagem, they were not at all inferior to the best officers in the *Dutch* army; and, from their great activity in marching, and their perfect knowledge of the country, they gained frequent advantages^a. But the company, by the help of fortresses and magazines, being able to keep their armies longer in the field, and being also able to transport on board their fleets their troops, when and where-ever it was necessary, the *Javaneese*, in their turn, found themselves grievously distressed; so that at length both sides being equally tired of what produced nothing but mischief and bloodshed to either, things were at
- d

^a HAMILTON'S account of the East Indies, vol. ii. p. 133.

last composed¹. But, in the midst of these troubles, the governor-general *John van Horon* ^a had the courage to undertake the rebuilding of the town-house, in 1706. It had been built about fifty-four years, and, being composed of brick and wood, began to decay; but might have been easily, and at a small expence, repaired, if that had not been considered as unworthy the magnificence of *Batavia*. The new stadthouse shews to what a degree this notion was carried, since it is reputed the most superb structure that has been erected by the *Europeans* since they came into the *Indies*. In this noble pile of building the council or college of justice assembles; in it are also apartments for many inferior courts, so that all the public business of the colony is transacted there, and this too with all imaginable convenience².

How this war convinced the Dutch, that there are gold mines of considerable value in Java.

It is reported, that, from the consequences of this war, the administration in *Batavia* were convinced that the natives had some secret resources, which, with all their industry, they have ^b never yet been able to discover; for, in places which had been destroyed and plundered more than once in the war, and where the inhabitants were reduced to the utmost misery, they were in a short time in as good a condition as ever, and had all their bracelets, and other little ornaments of gold as before³. It is indeed certain, that not in *Java*, only, but through all the *Indies*, the natives are wonderfully suspicious of the *Europeans*, and conceal with the utmost care the places, and the means of procuring either gold-dust or precious stones; which may be reasonably supposed to arise from the fear of being reduced to the most abject slavery, and forced to work in the mines, which, in those warm countries, may be well accounted the most dreadful of all punishments⁴. This circumspection is said to appear even in the *Hottentots*, who are represented as the most stupid of mankind; for they sometimes bring small parcels of gold-^c dust to purchase necessaries, but are very studious in concealing how they came by it; and not many years ago some *Dutchmen* having formed a design of following a parcel of *Hottentots*, whom they judged to be gone in search of that precious metal, those savages, perceiving their design, turned suddenly back upon them, surrounded and killed them all⁵ (D).

The introduction and progress of the great improvement made by planting coffee in this island.

It may not be amiss to observe here, that about the year 1719 they began to cultivate coffee in *Java*, not as a curiosity, but as a commodity; and it is worth our notice, how many years passed before this improvement came to be thought practicable. A notion a long time prevailed, that the *Arabs* were as jealous and circumspect in regard to this plant as the *Indians* about their gold-dust; and that, to prevent its being cultivated in other countries, they never suffered so much as a bean to pass out of their hands, till so long dried in the oven as to deprive ^d it of the power of vegetation; but in all probability this was no better than a fable⁶: for, about the year 1690, some coffee-shrubs in pots were transported in *Batavia*, and, being there transplanted, grew very well. In 1697, from the pestilential fumes that succeeded a great earthquake, most of the gardens belonging to that colony suffered severely, and most of their curious plants were killed; a few coffee-shrubs, however, escaped; and, in 1706, they began to plant them again in many places, and particularly in the garden of the governor-general, where in a few years they came to great perfection⁷. At length, therefore, it was resolved to try whether the coffee they produced might not be roasted and drank. Since that time coffee is become a great commodity in *Java*, as also in the island of *Ceylon*, with the soil of which it is pretended the plant agrees better than with that of *Arabia*; for whereas about *Mocha* ^e the coffee-bushes seldom rise higher than six, or at most ten or twelve feet, in *Java* and *Ceylon* they grow commonly to twenty or thirty, and rise even to forty, feet high. In consequence of this they have much greater quantities than in *Arabia*, where one tree with another seldom yields above five pounds of berries in a year⁸. But, in these new plantations, fifteen or twenty pounds are not thought very extraordinary; but the doubt is, whether the flavour of the *Java* and *Ceylon* coffee comes up to that of *Arabia*, which at first it was universally acknowledged it

⁸ Origine & usage

(D) The *Chinese*, as well as the *Dutch*, failed in their attempts to discover the gold mines in *Formosa*; and yet it is certain that the natives have a great deal of that precious metal (87). Before the *Europeans* penetrated so far as the *Moluccas*, the king of *Ternate* exacted an annual (88) tribute in gold from the inhabitants of *New Guiney*; but the *Dutch* will not acknowledge that they are able to obtain any from thence, either by commerce, or any other way. In *Celebes* it is very certain there are very rich mines of gold; but it is no less certain that the *Dutch* are not masters of them; nor, with all their search, have they been able to discover those in *Java*; in *Sumatra*,

(89) however, they have been more fortunate. Without doubt there must be a vast quantity of gold found in *Asia*, since the price of silver is still kept up, notwithstanding the large quantities that have been carried thither by the several nations of *Europe*; and this consideration, to those who have a thorough insight into points of this nature, will convince them, that, if sublunary affairs were not directed by an over-ruling Providence, things would be otherwise circumstanced than they are in this respect, by which the commerce between *Europe* and the *Indies* must of necessity be interrupted.

a did not; but in process of time the former grew more into esteem, and the *Dutch* now persuade themselves that it is little, if at all, inferior to that of *Mocha*. Be that as it will, there is nothing more certain than that vast quantities are imported in every *East India* fleet from these two islands; so that this new commodity turns to a vast account, which may be probably the reason that it has been raised at *Surinam* in the *West Indies*, from whence the *French* have carried it into their islands of *Cayen* and *Martinico*, and the *English* likewise cultivate it in *Jamaica* (E).

b THE war in *Java* broke out a fresh in 1719, and continued between four and five years, by *War in Java* which the company were put to a great deal of trouble; and were taught, by experience, a *breaks out a-* maxim long ago laid down by great masters in the art of war, that it is by no means pru- *fresh; and,* dent to employ regular troops for many years together against a barbarous nation, because, *tho' at length* however they may be beaten, they are at last beaten both into courage and discipline; the *ended, proves* former being acquired by habit as well as the latter, and, when it is acquired, it is a great *the cause of a* chance if they do not beat their masters. In this, however, the *Dutch* acted against their *dangerous in-* will, as being thoroughly sensible that the war was against their interest; but they were unwilling to sacrifice the advantages they had so long enjoyed, or to end the war upon worse terms than they began. At length, however, things were adjusted, and the peace of the island restored; which had not happened long before a discovery was made of a very deep and dangerous design, the aim of which was no less than the intire subversion of the government at *Batavia*, by the destruction of all the *Dutch* inhabitants and of the Christians of every deno- *trigue.* mination that lived under their protection. This discovery was made just time enough to prevent it, that is, on the last day of the year 1721, but how, or by whom, is a secret with which the world is not yet acquainted, at least with any degree of certainty. Some have ascribed it to the sagacity of the council of the *Indies*; others are of opinion that some of the accomplices, being diffident of the event, secured themselves by betraying their confederates. Mr. *Van Bosch*, the *Dutch* minister at *Macassar*, intimated that the company stood indebted for her safety to the friendship of a great monarch; which is a point that shall be explained hereafter.

c BUT, however the discovery was made, the principal conspirators were arrested without *A succinct* noise, and their whole design defeated; three months after which they were brought to their *view of the* trials, and convicted; from the record of which conviction we shall give a succinct account of *conspiracy.* this desperate undertaking, little inferior, either in its nature, or management, to *Catiline's* plot for overturning the *Roman* republic. The original author of this dark design was a *Javanese*, whose name was *Catadia*, a native of the royal city of *Kattasura*, who had spent four years in establishing secret correspondences over a great part of the island, before he disclosed it to the person that he afterwards put at the head of the design, and who had been embarked in it about two years. This chief was one *Peter Erberfeldt*, burgessof *Batavia*, whose father had been a member of the provincial college, and a captain of horse, but his mother a *Moor*. He was near sixty years of age; and there appears no other motive for his entering into this cabal, than the ambition of making himself sovereign of *Batavia*. *Maja* *Praja*, sergeant of a *Javanese* company in the *Dutch* service, and who had formerly lived with the major of *Batavia*, was another conspirator, who, from his knowlege of the strength and disposition of the company's forces, gave them such lights as they could not otherwise have procured. There were, besides these, eight or ten more of different ranks and nations, yet all of them but mean people, that were embarked in this design, and that for many months together were employed in taking measures for carrying it into execution.

f IT is very strange that in all this time, and where so many were intrusted, nothing should be divulged; and it would appear more strange, that, when the conspirators knew their *How this de-* own force, they were so dilatory; if it had not been discovered, from there own confessions, *sign came to* that they waited to see what turn the war of *Java* would take, in which there is reason to sus- *excite appre-* pect that *Peter Erberfeldt* thought the emperor wanting in somewhat that they expected from *hensions in the* him; for, applying himself afterwards to the king of *Bantam*, with whose character the reader *king of Ban-* it was com- *tam, to whom* *municated.*

* See this point treated at large under the article of Coffee in Dr. JAMES's Medicinal Dictionary. * *Memoires*
de Dr. GARCIN. * HAMILTON's account of the East Indies, vol. ii. p. 133, 134. L'expédition de trois
vaisseaux, tom. ii. p. 82. * Sentence contre Pierre Erberfeldt & ses complices prononcée à Batavia
en 1722.

(E) It is very remarkable that the *Arabians* themselves, who were so long in possession of the coffee trade, in exclusion of all other nations, very fairly acknowledge that it is not a native of their country; but that it was brought thither from *Abyssinia*, or the *Higher Ethiopia*, together with another shrub called *Kat* (90). The leaves and berries of this last mentioned bush were looked upon as specifics against the plague, and are still considered as such

by the inhabitants of *Yemen*. As to coffee, they attribute no virtue to it at all, except this that the *Kat* could not grow but in its neighbourhood. However, in process of time they discovered the utility of the coffee-berries, the use of which was soon communicated to the inhabitants of the opposite country of *Egypt*, and from thence spread over all *Europe* (91).

(90) *Origine & usage du café*, p. 9.

is already acquainted, and giving him an exact account of the posture that things were in a little before the time fixed for the insurrection, he intimated, that, as soon as he was thoroughly settled in his new monarchy, he intended to attack the emperor, not doubting but he should be able to make a great party amongst his subjects. It was this last piece of intelligence that alarmed his majesty of *Bantam*, who, considering the daring spirit of the man, and the amazing secrecy with which he had managed for so long a time so dangerous an undertaking, began to apprehend that he might have a worse neighbour of him than of the company; and being at that time upon so bad terms with his own subjects, as not to dare to stir out of his fortress but with *Dutch* guards, he judged it most for his interest to make his court to the general and council at *Batavia*, by imparting to them what he knew of the conspiracy; by which they were enabled, without making any stir, to seize those who had been most active in this business, and to take the necessary precautions, in case of a commotion, to render it abortive; for there was just reason to fear, that those, who had engaged to assist *Erberfeldt* and his confederates, might have either taken arms to rescue them, or to protect themselves; but they were so much surprised at seeing the thing discovered, that either they were afraid to stir, or thought that by remaining quiet the regency at *Batavia* might consult the tranquillity of the colony, and dissemble the informations they had of their being privy to the plot; and, if they acted upon this motive, they were certainly right, for the general and council, notwithstanding the severity with which they proceeded against the traitors in their hands, very prudently declined any thing that might render these people desperate, which could have only ended in a rebellion^w; the consequence of which might have been very dangerous: yet it is more than probable that this moderation had no great effect upon the minds of the natives, further than to render them more cautious in their intrigues, as succeeding events have demonstrated. But to proceed with our present history.

Method which was to be pursued in carrying this scheme into execution.

The plan of the conspirators was, to surprise the city, and to put all who were not of their party to death; after which they took it for granted that the mixed multitude of different nations inhabiting the low countries would either willingly join them, or have submitted through fear. The great object of their councils, therefore, was, to bring this point of the surprise to bear. In the action, *Peter Erberfeldt* was to have commanded, and given orders in quality of chief; and *Catadia* was to act as his lieutenant, or person next to him in power; and, to acquire the greater respect, the former was immediately to have assumed the title of *Ihowang-gusti*, which is Great Lord, or Supreme Governor; and the latter the name of *Rading*, which implies the same with Prince. This whole transaction was concerted in the house of *Erberfeldt*, situated without the city, at that corner of the road to *Jacatra* which turns off to the *Portuguese* church. The conspirators likewise met often at a country-house of his situated on the *Sunder*, from whence they carried on a correspondence with several *Mohammedan* princes, and chiefs of the *Indian* nations, whom they had found means to draw over to their party. The letters upon this subject were written by *Catadia*, *Maja Praja*, *de Chias*, &c. who also read those they received in answer, because *Peter Erberfeldt* was not able to write or read the languages of which they made use; and it was the same persons who were charged with delivering those letters, or causing them to be delivered, to those to whom they were addressed, and receiving their answers. The better to promote their purpose, some of them dispersed themselves through different quarters of the flat country, in order to sell amongst the inhabitants a kind of *Diemats*, or little stamps, marked with certain characters, which were to secure those who carried them about them from musket-shots, wounds from guns, swords or other weapons. The conspirators had agreed that the first attack should be made on the houses of the governor-general, the council, and other magistrates in the citadel and in the city, so as to massacre all the principal persons of the government; which, had it been effected, would certainly have contributed very much to the success of their enterprise, not only by spreading general confusion, but by removing those who alone were capable of redressing it (F).

PETER

^w L'expedition de trois vaisseaux, tom. ii. p. 104, 105.]

(F) In order to judge fairly and impartially of this conspiracy, and of the ensuing insurrection, the reader may be pleased to recollect what has been said of the attempts of the *Chinese* traders against the *Spaniards* in the *Manillas*, and this plainly against their own interests, since their trade thither is more lucrative than any other, except that to *Japan*; yet there they not only entered into a secret contrivance for the total destruction of their benefactors, but were encouraged and excited thereto by

the promise of assistance from *China*, which was actually intended; but, either through accident or cowardice, deferred from time to time till it became too late (92). The secret intrigues, and open tumults, in *Formosa*, seven years before *Coxenga's* invasion, discovers also that deceitful, dangerous, and insolent disposition, which lurks under that veil of submission and politeness which these people constantly wear both at home and abroad (93). Yet, on the other side, it must be confessed, that the *Ea-*

(92) *Relac. de las Islas Filipinas y Malucas, por Hernan de los Rios Coronel. Brun.*

(93) *Nieuboght, Tavernier, Le*

- a PETER Erberfeldt, Catadia, otherwise called Rading, Javan de Cartasaura, and Maja Praja, ^{What posts were assigned to be several chief actors in this conspiracy.} were to have had the command in the attack of the citadel; Sana Suta, Anga Tsitra de Bagall, and Layech de Sumbowen, that of the town. The attack was to be made on New-year's day, as soon as ever the gates were open. The last rendezvous of the conspirators was fixed for the evening that should have preceded the attack, at an house of the principal conspirator Erberfeldt, to confer together, and to slide away from thence, some into the citadel, and some into the town. To prevent all mis-intelligence among themselves, they agreed before-hand on this regulation; viz. that Peter Erberfeldt, as soon as the massacre was over, should assume the title of Gusti, or king, as well in the city as in the citadel; and that Catadia should have the title of Rading, or prince, in the low country, without the city, quite to the mountains. As to the rest, they were to have the title of Pangerangs, or princes, and established Mantrins, or chiefs, and counsellors to the king: they were also to execute, in their several districts, the function of Tummagums, or generals, in conjunction with Singa Patria, who had been actually established, by the company's authority, chief of Sikias.

- b THE conspirators had further agreed, that, after the execution of their design, Peter Erberfeldt was to constitute a college or board of twelve young men, each of the age of twenty, or thereabouts, to be drawn out of the families of the principal conspirators, which twelve persons were to have been sent to the princes and chiefs of the Mohammedans, in order to have settled the duties and customs they were for the future to pay at Batavia, and afterwards to act as ministers. Conformable to this plan the conspirators had taken sufficient precaution for securing means necessary to assist and support them, after the massacre was begun by a body of seventeen thousand men drawn from several places in the neighbourhood of Batavia, and for the most part named by the prisoners. According to their scheme this body was to have been divided into several detachments, all of which were to have been ready to march at a time appointed. The signal being given, each of these detachments was to have put itself in motion; and by the high roads, as well as by private ways, to have advanced and taken possession of all the gates, to hinder so much as a single person's escaping, that the news of this bloody action might be the longer before it reached Holland. With this view, and for the better execution of their project, the conspirators had already secured, by the distribution of the Diemates before-mentioned, one thousand men. Maja Praja had undertaken to send as many; and two thousand had orders to descend from the mountains of the south, and to join those who were hidden in the neighbourhood, in order to the perpetration of this horrible design *.

- c THREE days before the intended massacre the whole scheme was intirely settled; and Peter Erberfeldt had disposed all things, and given his orders for the execution of it in the following manner; viz. Eight hundred men were to have posted themselves at Crolot, on the Mill River, beyond the advanced guard of the fort Ryswyk; two thousand men were to have marched into the country of the chief, Peter d'Alida, particularly to Grogol, and the places in its neighbourhood; and another body of one thousand men was to have defiled to Mangadova, Piesang, Batu, and the places in that neighbourhood. To these several bodies it was agreed that all the rest of the conspirators should have joined themselves, from the different retreats in which they were concealed, in places adjacent to Batavia, that, by the junction of so great a force, they might have executed their schemes in their full extent, and maintained themselves in possession. In case they had succeeded in their design, they were to have been, as their own letters shewed, supported and sustained by another body of upwards of ten thousand Baleyans, whom they had engaged to pass the mountains on the side of Cadiri, by Maturin on the south-side, and by Campongbaru, in order to have taken post on the mountain of Guru. In case it happened that the inhabitants of Campongbaru had refused to submit, the Baleyans had orders to put them all to the sword, and to march immediately towards the city, to massacre all such as should have opposed them, and totally to have exterminated the Christians; that the company might not

* If the reader will consider this plan, and compare it with that which was said to be formed by the Chinese when they meditated a like massacre, he cannot fail of observing such a similitude between them, as will induce his belief that one conspiracy was a copy of the other.

Europeans settled in the Indies are in various particulars to be condemned, since they are exceedingly apt to stir these people to resentment by the most flagrant acts of injustice, cruelty, and oppression. They likewise give them bad examples, with respect to fidelity in public as well as private concerns, as if they meant to teach them by their practice, that interest ought to be the sole guide of human actions, and that any conduct may be sanctified by having superior power on its side. Lastly, it is but too common for them to sink into the same corruption, and to fall

gradually into that course of life for which the Asiatics in general are justly despised, that is, delivering themselves up to the government of their passions, and debasing their faculties by an immoderate and almost continual use of sensual delights; as if the doctrines they pretend to believe filled their heads only, without making the least impression on their hearts; and as if God had led them into the Indies as well to imitate as to chastise the vices of their original inhabitants (94).

only have been deprived of their dominions, but prevented from ever recovering them, or carrying on the smallest commerce in these parts.

Copy of the sentence pronounced against the conspirators which was afterwards executed.

In order to keep this curious and extraordinary piece of history as much as possible within bounds, and at the same time to demonstrate its authenticity, we will next transcribe the sentence passed by the council of justice at *Batavia* upon the conspirators, which was conceived in the following terms: "We the judges, having heard and examined the information preferred, *ex officio*, by *Henry van Steel Drossard*, of the low country, against the criminals *Peter Erberfeldt*, *Catadia*, otherwise called *Rading*, *Javan de Cartasaura*, *Maja Praja*, *Sana Suta*, *Anga Tristra de Bagall*, *Layeb de Sumbowen*, *Jap Kiko*, *Cartanaja*, *Anga Sarana*, *Cakita Sihia*, *Singa Ira*, *Marengie*, *Sarapaca*, *Maja Diaga*, *Wambsa Dita*, *Wieca Susa*, *Canta Wangsa*, *Baspa*, and *Singa Patria*, chief of *Sikias*, who have confessed the whole, and submitted themselves voluntarily; it is therefore concluded, regard being had to their crimes, and all circumstances relating to them, and we hereby conclude and decree, in justice, in the name and on the part of their High Mightinesses the States General of the United Provinces, That we condemn the prisoners, with the approbation of the governor-general, *Mt. Swaardekrone*, and of the counsellors of the *Indies*, to be transported to the place before the citadel, where it is usual to execute criminals, there to be delivered into the hands of the hangman, to receive their respective punishments in the manner following: The two criminals, *Erberfeldt* and *Catadia*, otherwise styled *Rading*, shall be extended and bound each of them on a cross, where they shall have their hands cut off, and their arms, legs, and breasts, pinched with red-hot pincers, till pieces of the flesh are torn away. They shall then have their bellies ripped from bottom to top, and their hearts thrown in their faces; after which their heads shall be cut off, and fixed upon a post; and their bodies, torn in pieces, shall be exposed to the fowls of the air without the city, in whatever place the government shall please to direct. The other four criminals *Maja Praja*, *Sana Suta*, otherwise *Wangsa Suta*, *Tristra*, and *Layeb*, are to be each of them bound upon a cross, and have their respective right-hands cut off, their arms, thighs, and breasts pinched, their bellies ripped, and their hearts thrown in their faces, and their limbs exposed upon a wheel in the usual places, there to become a prey to birds. The other ten criminals shall be each tied upon a cross on the scaffold, and, in case there be no room on the scaffold itself, on a place near it, where they shall be broken alive, without receiving the coup-de-grace. They shall be afterwards carried to the ordinary place of execution, and there exposed on a wheel, and guarded so long as they shall live there; and, after they shall expire, be left a prey to the birds. The other three, *Tamboem*, *Grambick*, and *Mitas*, are condemned to be each of them tied to a stake and strangled; their bodies shall be then carried to the common place of execution, and there exposed on wheels for the nourishment of the birds. We likewise further condemn the said criminals to the costs and expences of justice, and to the confiscation of half their estates: these being paid, renouncing all farther pretensions. Done and decreed, in the assembly of my lords the counsellors of justice, this *Wednesday* the eighth of *April*, all the judges except *Cratoanger* being present."

A pillar of infamy erected on the spot where the house of *Peter Erberfeldt* stood

The severity of this sentence could be only justified by its motives, which were, the imminence and extent of the danger, which was prevented but by a few hours from subverting the whole of what they had acquired in *Java* for the space of one hundred years; the custom of the country, where tortures are common, and where a violent death, unaccompanied by extraordinary circumstances, is not regarded; and, lastly, the necessity of imprinting terror, even upon such hardened minds, upon which the future safety of the *Europeans* was to depend. Harsh and terrible as it was, yet on the twenty-second of *April* it was executed without the least mitigation; and the lights received from the confessions of the criminals being pursued, many others were afterwards brought to justice for the share they had in this conspiracy; and the memory of this singular transaction might be preserved, the house of the principal criminal, *Peter Erberfeldt*, was demolished, and a column of infamy erected upon the spot, with an inscription in the *Dutch*, *Portuguese*, *Malayan*, *Javanese*, and *Chinese* languages, placed thereon, containing the following words:

"In this place heretofore stood the house of that unworthy traitor *Peter Erberfeldt*, on which spot no other house shall stand henceforth for evermore."

As the pillar fronts the road, and most of the people who pass by understand some or other of these tongues, it may be presumed that this answers the end of the government in the *Indies*. But it is very remarkable, that little or no notice was taken of so extraordinary an event in any of the accounts transmitted to *Europe*; which is sufficient to convince the reader of the usefulness of this historical detail, in which we have drawn together, in as regular a

- a series of time as was possible, the principal transactions of this potent society, scattered through a variety of books of voyages and travels, and of many of which there are no traces to be found either in general or particular histories.

S E C T. XIV.

The insurrection, or, as others call it, the massacre of the Chinese. Different relations of that terrible affair; and remarks upon the conduct of the Dutch therein, and its consequences.

- b **T**HE situation of affairs in *Europe*, which encouraged several nations to bend their inclinations more to commerce than in former times, the great efforts made in *France* to revive the credit of their company, and other motives of a more private nature, induced the *East India* directors in *Holland* to labour the renewing their charter, or obtaining an additional term before the old was expired, which they attempted in 1717, but without success^b. The States General, though they did not think fit to grant them at that juncture this request, published, however, a placard in support of their privileges, forbidding any of their subjects to trade within the bounds assigned to that company, or to be concerned in any of the new undertakings for carrying on a trade in those parts; and afterwards, in concurrence with *France* and *Great Britain*, engaged in a warm opposition to the establishment of the imperial company at *Osford*. The disputes raised upon that head, and other political affairs of great importance, so occupied their attention, that the company were not able to gain their great point, even to the very year in which their charter was to expire^c. This, in all probability, was owing to the company's not coming up to the terms that were expected from them, and which, it may be, were regulated rather according to the necessities of the state, which were then very pressing, and the supposed great wealth of that body, than the precedents of former times. However that might be, all that they could procure or purchase was, a prolongation of their term for a single year, to commence from the first of *January* 1741; which at the time occasioned many speculations^d.

- d **W**HILE the directors were sufficiently employed in concerting ways and means for overcoming those difficulties that obstructed their obtaining a fresh term, they received the news of the greatest shock their affairs had ever met with from *Batavia*. We intimated before, that, by the execution of *Peter Erberfeldt* and his accomplices, the growth of the treason only was stopped, but that the roots still remained, of which, eight years afterwards, the Dutch were made thoroughly sensible. Amongst the different accounts that came to *Europe*, it was very hard to discover the truth: some there were who suggested, that the governor-general, that he might the sooner amass a large fortune, kept a less severe hand over the *Chinese* than any of his predecessors, by which their numbers were increased prodigiously, and consequently their insolence. They had been formerly allowed, in consideration of a large sum of money, to celebrate, at a certain season of the year, the feast of their grand idol, called the *Jooftje de Batavia*, which, in plain *English*, was keeping a festival in honour of the devil, whose image they openly avowed this to be (G). But, as they were particularly mischievous at this season, and

^b Dictionnaire de commerce, tom. ii. col. 1091.

^d Dictionnaire de commerce, ubi sup.

(G) We must consider, that the *Chinese* who are settled at *Batavia*, and such as come thither annually in their junks from *China*, are of the meanest of the people, and consequently more ignorant and vicious, and more universally so, than at *Amy*, *Canton*, or almost any other place in that great empire. It is commonly agreed, that, in respect to their religious notions, most of the people of learning and quality in *China* have so refined their sentiments, that they border nearly upon atheism; while the populace are for the most part idolaters, and worship demons, that is to say, powers which, in their apprehension, are of an evil disposition, and inclined to do mischief; to prevent which, they would sooth them with shows and sacrifices, and give a loose to their own follies and vices, under colour of pleasing these malevolent beings, and thereby escaping the effects of their resentment (95). It is from this principle that the chief of these spirits is worshipped in almost every *Chinese*

house, under the figure of a gigantic colossus sitting cross-legged, with an enormous belly hanging over his knees. Before this image they burn a lamp continually, make their offerings, and implore his assistance. These idols the *English* seamen call *Josi*, and the *Dutch* *Jooft*; and the greatest of these, which is carried under a canopy at funerals and public solemnities, and to which they were wont to celebrate an annual feast with infinite scandal and extravagancy, was styled *Jooftje de Batavia* (96). It was therefore intirely inconsistent with the principles of morality and sound policy, as well as directly contrary to those of true religion, to permit these riotous assemblies, that were always attended with danger and disturbance, and had no beneficial consequence but to the governor, who pocketed a round sum of money for the toleration of these diabolical excesses, equally odious to God and good men (97).

presuming upon the licence they had bought, expected whatever wild things they did should meet with impunity, this custom had, for many years, been abolished; but the *Cbinese*, conceiving that money would in this age effect any thing, petitioned for the revival of this feast, and, it is said, by offering a large present, obtained it; after which, they were never quiet till they brought upon themselves that destruction, which to succeeding times will appear incredible*.

Other circumstances reported by different authors concerning this revolt.

SOME again report, that a *Cbinese* of great quality, retiring from his own country, came on board one of their junks, with a *Cbinese* fleet, to *Batavia*, and, withdrawing from thence into the mountains, spirited up a rebellion, and at the same time entered into an intrigue with the *Cbinese* captain or chief to raise an insurrection in the city, and to attack the *Dutch* within, while he fell upon them without. On the other hand, there wanted not a third party, who, suspecting the truth of the whole story, ascribed all that happened to the avarice of the *Dutch* governor, supported by such as were indebted to the *Cbinese*, and thought, that cutting their throats would be the easiest and most expeditious method of settling accounts†. As there was no care taken to discredit these rumours, by publishing a just and authentic relation of what passed in the *Indies*, we need not wonder that these tales, however improbable, were not wholly disbelieved. The clearest and most circumstantial narrative of this dismal scene, which appeared after the coming in of the *India* fleet in the month of *July* 1741, is to the following effect‡. And, as to the probability or improbability of the facts contained therein, they must be intirely submitted to the judgment of the candid reader.

Substance of the relation of this event, which the Dutch thought proper to make public.

“THE number of *Cbinese* in the city and suburbs at the time of this conspiracy, according to a very moderate computation, amounted to ninety thousand men; and the end they had in view was, to massacre all the *Europeans*, by which they thought to become masters of whatever the company possessed in the island of *Java*. Full of these ambitious notions, numbers of them began to retire into the mountains, where they pillaged, burnt, and murdered, without mercy, and without pretending to assign any reason for their behaviour. The country people, subjects to the company, took many of them prisoners, and sent them to *Batavia*, to the number, in the whole, of between four and five hundred men, of whom one half appearing to be desperate and beggarly fellows, and unskilled in any employment by which they might get their bread, were banished to *Ceylon*; and the rest, having been admonished to behave better for the future, were dismissed, and permitted to return to their relations. This lenity, however, was very far from having a good effect; on the contrary, the rebels in the mountains grew daily stronger, and did more and more mischief. At length the regency thought fit to send the counsellors *Imboff* and *Van Aerden*, with a body of eight hundred men, into the mountains, to reduce these people; who, in the space of a few days, came up with, defeated, and dispersed them. In the mean time, five of the *Cbinese* came of their own accord to the general and council, discovered the whole design in which their nation was embarked, and towards the execution of which they had already provided cannon made of several sorts of hard wood, together with great quantities of ammunition, which they had privately lodged in their houses as well within the city as without. They had likewise sunk mines in several places, which were actually filled with powder. Upon receiving these informations, all imaginable precautions were taken; the guards doubled at all the gates of the city; the forts, and other ports without, reinforced; and all the officers ordered to join their respective corps immediately, under the severest penalties: yet, notwithstanding all this, the regency could not believe that the danger was so great, or the defection so universal, as it was represented to them by the five persons before-mentioned; and therefore, satisfied with acting on the defensive, they began to deliberate on the means of extinguishing these jealousies, and of reducing the *Cbinese* to their senses and their duty; but they were quickly made sensible of their mistake, and that things were gone too far to admit of any such palliative remedies, the *Cbinese* relying so much on their superiority of number, that, instead of being struck with these dispositions, and endeavouring to make their peace, they threw off the mask, and recurred to open force.”

“On *Saturday* the eighth of *October*, the *Cbinese* attacked one of the posts without the town, called *Quale*, near the island of *Onroost*; where they murdered all that they met with, and set fire to the houses. Upon this, the regency immediately issued their orders, that no *Cbinese* should stir out of his house, or have any light within it, upon pain of death. About seven the same evening, while the council was assembled, the *Cbinese* set fire to the suburb without the gate of *Utrecht*, supposing that the gates would have been immediately opened, to afford people a passage to assist in putting out the fire, when they intended to have attacked the town on one side, while those within the city, laying hold of this opportunity,

* *Mercuré historique et politique*, tom. cxi. p. 116.
were sent at that time as well from *Holland* as the *East Indies*.
le mois d'*Octobre* 1740.

† Collected from the several private relations that
‡ *Relation des troubles arrivées à Batavia dans*

- a " might rise, and fall upon the *Dutch* behind. This scheme, though well laid, did not suc-
 " ceed ; the gates were kept fast shut, and the guards doubled. At eight o'clock, two coun-
 " seillers went to each of the gates, in order to give directions. About nine, the *Cbinese*, who
 " were now increased to between forty and fifty thousand men, advanced with trumpets,
 " drums, and brass basons, with which they made a most terrible noise, in order to excite
 " their countrymen to exert themselves within ; which if they had done, it is not easy to con-
 " ceive how the *Dutch* could have defended the place, since their whole force consisted but of
 " three thousand men ; but, as they were well armed and disciplined, the *Cbinese* within were
 " so dispirited, that they kept their houses, and did nothing. Those without carried two
 " advanced posts, and slaughtered all that were in them : they likewise attacked a third with-
 " out the gate of *Utrecht*, which was defended by sixty men, who made a very gallant resist-
 b " ance ; and the *Cbinese*, in attacking, being exposed to the artillery of the town, which made
 " a continual fire, they were at length obliged to desist. The *Dutch* then made a sally with
 " one hundred and sixty men, to relieve and strengthen the advanced posts ; and tho' this was
 " hazarding that handful of people, yet they durst not employ a greater number, for fear of
 " what might happen within. Such were the operations of that fatal night, which the *Cbinese*
 " had fixed for a general massacre, and in which, by the vigilance and valour of the inhabit-
 " ants, they were disappointed."
- " About day-break the *Cbinese* abandoned the suburbs ; and then, the council assembling,
 " an order was published for putting the *Cbinese* within the city to the sword, women and
 " children excepted, as the only means left to secure the public safety. Upon this order their
 c " houses were broke open, the men killed without distinction, and the women and children
 " conveyed to the *Cbinese* hospital. In a small space of time the streets, the rivers, and canals,
 " were covered with dead bodies, and in several places the blood ran over people's shoes,
 " affording in all respects the most dismal and horrible spectacle imaginable. It was next found
 " requisite to erect a battery on the other side the *Rocmalake*, to fire upon the *Cbinese* captain's
 " house, in which there were about eight hundred men. When a sufficient breach was made,
 " they attacked and carried it by assault, when about thirty women came running out, upon
 " promise of having their lives spared ; and amongst them the *Cbinese* captain, being disco-
 " vered in female apparel, was seized, and sent to the citadel. About noon the counsellors
 " *Imboff* and *Aerdens* returned into the city, with the detachment under their command. The
 d " people then began to breathe a little, and to console themselves with the hopes that the dan-
 " ger was now over : but the *Cbinese*, being now driven to a state of despair, barricadoed their
 " houses, and then set fire to them ; so that, about two o'clock, the city was in flames in dif-
 " ferent places, by which the greatest part of it, and more especially the *Cbinese* quarter, which
 " was the most populous, was reduced to ashes. It is impossible to express the consternation
 " this occasioned, when numbers of women were seen running to the citadel for shelter ; while
 " the men, their constancy overcome by the torments they endured, jumped also into the
 " streets, where they were shot or cut to pieces by the soldiers ; and with this bloody scene,
 " and the putting to death six hundred thirty-five prisoners that were in the citadel, the horrors
 " of the day ended. During the whole time it lasted, the riches of these people, which were
 e " immense, were abandoned as a prey to those who would take them ; and some there were,
 " among the sailors more especially, who got nine or ten thousand crowns to their share. In
 " the course of this dismal tragedy there fell, according to the confession of the *Dutch*, no
 " fewer than twelve thousand *Cbinese* of all ranks and ages, while the whole of their loss did
 " not exceed one hundred men."
- " THE *Cbinese* themselves confessed (at least it was so given out), that they meant to have
 " made their captain governor of the town ; and that they intended to have preserved the
 " *Dutch* governor and director-general to have carried umbrellas over their governor's and
 " governess's heads when they went abroad. All the counsellors of the *Indies* they meant to
 " impale alive, except Mr. *Imboff* and Mr. *Tedens*, whom they regarded as their capital ene-
 f " mies, and of these they were to have made minced meat, and eat them. The old men they
 " would have burnt the next morning, and the old women in the evening ; the young women
 " were to have attended the governess, and the rest of the *Cbinese* ladies ; and such of the young
 " men as escaped the massacre were to have been made slaves. Amongst the plunder there
 " were five standards taken. On the first was written, in *Cbinese* characters, *October the second*,
 " *in honour of Joostje* ; on the second, *For our antient liberty* ; on the third, *For the deliver-*
 " *ance of the oppressed* ; on the other two, *GOD shall be our aid*. As soon as things were a
 " little settled in the city (for the *Cbinese* continued to waste with fire and sword whatever
 " they met with in the mountains), the governor-general set a price upon the heads of the two
 g " chiefs of five hundred crowns, for bringing either of them in dead, and a thousand to take
 " them alive ; two hundred for killing any *Cbinese*, and five hundred for bringing him in alive ;
 " but with a general pardon to all who should submit, and return before the twenty-second
 " of *November* : upon which, notwithstanding all that had passed, multitudes came in, and

“accepted of the terms offered.” This, as has been before observed, was the best account ^a given of this extraordinary transaction; in which though it was confessed that many particulars were omitted, and a more distinct relation promised, yet no such relation ever appeared.

The choice of a new governor held the first and most effectual expedient for restoring tranquillity.

This intelligence was brought to *Holland* in the month of *July* 1741, and, as may be reasonably supposed, raised a general apprehension of the consequences. Towards the close of the year, baron *Gustavus William d'Imboff*, who had been formerly governor of *Ceylon*, and, in that high employment, had acquired a great reputation, was by the *East India* company declared governor-general ^b; and, in the spring of the year 1742, embarked on board a vessel built by his own direction, and proceeded to *Batavia*, to which place the former governor was sent back from the *Cape of Good Hope*, where he arrived in one of the company's ships, that he might abide a trial in the place where he was accused of having, in many instances, ^b most shamefully abused his authority, and where he remained a prisoner ¹ to his death (H). Great expectations were raised of the administration of baron *Imboff*, from his known character for prudence, moderation, and courage; and though he found things still in great confusion when he arrived, yet, by his wise and firm management, he quickly brought them into order, provided for the rebuilding of the city, the repressing the mutineers in the mountains, and restoring the tranquillity and commerce of the island, where he administered the supreme authority to the time of his demise, *November* 1, 1750, with universal applause ².

^a *Mercurie historique et politique*, tom. cxiii. p. 355.
^b *Annals of Europe* for the year 1743, p. 555.

¹ These facts are taken chiefly from private information since that time.

(H) In some accounts that were published about that time, it was said, that the governor's effects, that were seized on board the homeward bound fleet, consisting of nineteen sail, amounted to five millions of florins, or half a million sterling; and that not only himself, but two of the counsellors of the *Indies*, who had concurred with him, together with the fiscal, or attorney-general, were deprived of their offices, and imprisoned (98). Instead of explaining, these circumstances serve only to cloud, and render still more obscure, a transaction dark and ambiguous, and which, it is to be feared, will never be brought to the public view in its true colours. This apprehension appears still to be better grounded, when we consider, that the *Dutch* have allowed the *Chinese* to settle again at *Batavia*, and did this even when the disturbances, occasioned by the massacre, were far enough from being suppressed; a circumstance that does not seem to speak such a dread and apprehension of these subtil, plotting, and vindictive people, as they had heretofore expressed. Secondly, the *Chinese* themselves have resorted thither

again, and settled there in great numbers, notwithstanding all the outcries they made of violence and cruelty, and notwithstanding the hardships they are put under for the security of those, who, after what has happened, cannot but be very diffident of their conduct (99). These are facts that cannot be disputed, and which, if they prove nothing else, will at least prove this, that the thirst of gain is the ruling passion in some nations, both in *Europe* and *Asia*. It will be proper likewise to observe in this place, that a person was sent in a public character from the company, to apologize for this conduct to the *Chinese*; which commission was executed with as much success as could well be expected, the court of *China* having but little regard for those people, who forsake their country from the desire of acquiring riches, and put themselves under the protection of a foreign power; so that, contrary to what might have been looked for, this melancholy event produced very little interruption in the correspondence between the *Dutch East India* company and the people of *China* (100).

(98) *Annals of Europe*, 1743, p. 555.
 since.

(99) From the information of persons who have been at *Batavia* since.

(100) These facts are also grounded on particular informations.

S E C T. XV.

Description of the great government of Batavia, the city which is the capital of the Dutch Indies, the countries adjacent, together with their produce. An account of the natives that are subjects to the company; and of the Chinese, and other foreign nations, under her protection; concluding with a sketch of the extent of her dominions.

The next branch of this chapter is the description of the countries in the possession of, or in a settled correspondence with, the Dutch East India company.

AS we have now brought down the history of the *Dutch East India* company, with as much ^c perspicuity as was in our power, to the present time, it is next incumbent upon us to describe the dominions of which she is in possession; to shew the manner in which they are governed, the principal commodities she draws from them, and the number of inhabitants that are settled in the places under her obedience; which will abundantly justify our occasional remarks in the course of this history, and afford the reader a comprehensive view of the noblest empire that ever arose on the basis of commerce, or that ever was acquired and maintained by maritime power. Let us then, without further introduction, proceed to the execution of this necessary part of our task; and begin with that great city which is the capital of her dominions, and which, as we have shewn, has been so lately rescued from the hands of her enemies, and risen, like a phoenix, with fresh strength and beauty, out of her ruins; a city of the highest utility, from its happy situation in the center of the countries which it commands; a city

a city that does honour not to the company only, but to the *Dutch* nation, by its magnificence; and a city distinguished in all other respects from many cities by a variety of circumstances.

THE noble mart of *Batavia*, in the island of *Java*, lies in the latitude of six degrees south, ^{The situation and outworks of Batavia, the capital of the Dutch Indies.} and is the capital of the vast dominions belonging to the *Dutch East India* company. It serves also for the emporium, where all the merchandize and riches that great company possesses are laid up (1). It is surrounded by a rampart of one-and twenty feet thick, covered on the outside with stone, and fortified with twenty-two bastions. This rampart is invironed by a ditch about forty-five yards over, and full of water, especially when the tides are high in the spring *. The avenues to the town are defended by several forts, each of which is well furnished with excellent brass cannon. Among these forts there are six which deserve to be particularly mentioned; viz. those of *Ansool*, *Anke*, *Jacatra*, *Ryswyck*, *Noordwyck*, and *Vytbock*. The fort of *Ansool* is seated on a river of the same name, eastward from the sea, and at the distance of about twelve hundred yards from the city: it is built intirely of square stone, and has a strong garrison. The fort of *Anke* is on a river of the same name, to the westward of the coast, and distant from the city about five hundred yards; built, like the former, intirely of square stone. The fort of *Jacatra* lies also on a river of the same name, is exactly like the other two forts, and lies also at the distance of about five hundred paces from the city. The road thither is between two rows of very fine trees regularly planted, with very beautiful country-houses, and gardens on each side. The other three forts are built in the same manner, and of the same materials, lying all on the land-side of the town, and at a very small distance from it *. By this disposition, the two first serve to secure the city on the side of the sea; and the other four defend its entrances on the land-side, and at the same time protect the houses, plantations, and gardens, of the inhabitants. In virtue of these prudent measures, it is easy to comprehend, that no enemy can ever surprise this city, because, on which ever side they should endeavour to attack it, they would be sure to meet with a strong resistance. They take, besides, another precaution, which is, the not suffering any person to go beyond these forts without a passport c.

THE river, which preserves still its antient name of *Jacatra*, passes through the midst of the town, and forms fifteen canals of running water, all faced with free-stone, and adorned with trees that are ever-green, and which consequently afford a most charming prospect. Over these canals there are fifty six bridges, besides those which lie without the town. The streets are all of them perfectly strait, and each of them, generally speaking, thirty feet broad. The houses are built of stone, after the manner of those in *Holland*, and are most of them very high, because the place has not, at least of late years, been exposed to hurricanes *. The city is about a league and an half in circumference: it is surrounded with a vast number of houses; so that there are ten times the number without that there are within it; and therefore, strictly speaking, they ought to be regarded as its suburbs. This city has five gates, including that of the port; near to which there is a barrier, regularly shut at nine o'clock in the evening, and at which there is posted, night and day, a strong guard of soldiers. There were formerly six gates, the last being called *Speelman's Gate*, because built by governor *Speelman*, who died *January* the eleventh, 1684, has been walled up since *. There is a very fine townhouse, and four churches for the use of those of the reformed religion, that is to say, the *Calvinists*. The first of these was built in the year 1640, and is called *Kruisbikirk*, i. e. *Cross-church*. The second was built in 1670. In both these they preach in *Dutch*. The third belongs to the Protestant *Portuguese*; and the fourth to the *Malayans*. Besides these churches, there are abundance of other places of worship for all sorts of religions. They have likewise in this city a *spin bays*,

e L'expédition de trois vaisseaux, cap. xxi.

(1) One great advantage that this city possesses, and without which indeed she could hardly subsist, is that large and commodious bay, in the bosom of which she may be said to lie. There are seventeen or eighteen islands scattered along the mouth of the harbour, some within and some without it, by which the violence of the wind is so checked, and the force of the waves so broken, that it may be considered not only as one of the safest harbours in the *Indies*, but in the world; and so capacious, that it is thought a thousand sail of ships might be sheltered there (1). As for small vessels, they may lie close under the banks of the river, upon a bed of

soft mud. The sides of the river, as far as the boom, are faced with free-stone; and all the boats that pass up the river, pay a duty to the government, if loaded with salt, of one real; if loaded with stones, twice as much (2). It is inconceivable what great pains are taken here, and indeed in all the havens in the possession of the *Dutch*, to have the greatest plenty of naval stores, and materials for ship-building, as well as conveniences for repairing and careening all sorts of vessels, which greatly facilitates the trade of the company, and turns highly to the advantage of the inhabitants (3).

or an house of correction, in which women who behave loosely are confined; an orphan-house, a magazine of sea-stores, several for spices, wharfs, cord manufactures, and many other public buildings' (K).

Strength of
the garrison,
citadel, num-
ber of inha-
bitants, and
other particu-
lars.

THE garrison consists commonly of between two and three thousand men. Besides the great number of forts before spoken of, there is the famous citadel of *Batavia*, which is a very fine regular fortification, situated at the mouth of the river facing the city, and flanked with four bastions, two of which command the sea, and the other two the town. This citadel hath two great gates, the one called *The Company's Gate*, which was built in 1636, with a bridge of square stone, consisting of fourteen arches, each twenty-six yards long, and ten feet broad; the other called *The Water Gate*, built in 1630^a. All the keepers of the magazines have their lodgings in the citadel, along both sides of the curtain. There are besides, two posterns, one in the east curtain, the other in the west, which are never opened but for the service of the garrison. It is in this citadel that the governor-general of the *Indies* has his palace, which is built of brick, two stories high, with a most noble front after the *Italian* manner. Over-against this palace is that of the director-general, who is the next person to the governor. The counsellors, and other principal officers of the company, have also their apartments there, as have likewise the physician, the surgeon, and the apothecary. There is a little church, which was built in 1664, remarkably neat and light. There are, besides, in the citadel, arsenals, and magazines furnished with ammunition for many years. In a word, this citadel is the general factory where all the archives are kept, and where all the affairs of the company are transacted^b. The city of *Batavia* is not only inhabited by *Dutch*, but also by a vast number of *Indians* of different nations. The former, that is to say, the *Dutch*, are all of them either free burghesses, or in the service of the company. There are likewise abundance of *Portuguese*, *French*, and other *Europeans*, established here on account of trade. These *Portuguese* are, for the most part, descendants of those who lived here formerly, or at *Goa*, and who, finding their account in settling under so mild a government, did not think fit to remove, when the sea-coasts of the island of *Java* were reduced under the dominion of the *East India* company (L). They are at present, at least a far greater part of them, of the established, that is to say, of the Protestant reformed religion. As for the *Indian* inhabitants, they are *Javanese*, or natives of the country, *Chinese*, *Malayans*, *Negroes*, *Amboyne*, *Armenians*, natives of the isle of *Bali*, *Mardykens*, *Macassars*, *Timors*, *Bougis*, &c^c.

The state and
employments
of all the In-
dian nations
which live
there under
the Dutch.

THERE cannot be any thing more curious, or any spectacle more entertaining, than to see, in so large a city, such a multitude of different nations living all of them at their own dwellings, after their own manner. One sees every moment new customs, strange manners, variety of habits, and faces of different colours, viz. black, white, brown, olive-coloured. Every one lives as he pleases; every one speaks his own tongue. Notwithstanding such a variety of customs, so opposite to each other, one observes an union very surprising among these citizens, which is purely the effect of commerce, the common soul that actuates this great body of people; so that they move uniformly and harmoniously in every respect, and live easily and happily under the gentle and prudent laws established by the *East India* company. With regard to liberty of conscience, all the inhabitants of this city enjoy it, let them be of what sect they will; only they have not the public exercise of their worship^d. It is not permitted here, more than in the *United Provinces*, that priests or monks should walk the streets in the habits of their respective orders; yet all are allowed to live there in peace, except the jesuits, and they are excluded, not on account of their religion, but for fear of their intrigues, and their

(K) The wisdom and public spirit of the *Dutch* is not more conspicuous in any thing than in the choice of proper places for their public buildings, the great neatness and beauty of those structures, the skill with which they are adjusted to their respective uses, the revenues appropriated for their maintenance, and the pains taken to prevent any corruption or negligence in the conduct of those establishments to which they are destined. As this contributes greatly to the splendor, so it is of no less consequence to the safety and prosperity, of *Batavia*, where, if things were not regulated in this manner, and a wise order not only settled, but steadily maintained, there could be no defence against the inveterate malice of foreign enemies, or to resist the force of that propen-

sity to luxury, which is naturally produced by the immense estates which private persons quickly raise upon their extensive trade (4).

(L) As these descendants of the *Portuguese* are become Protestants, and have consequently the same common interest with the *Dutch*, so they are treated in all respects in the same manner as if they were of that nation; and have shewn, by their unalterable fidelity, that they have merited this confidence. There are amongst them some that are very rich, and many in good circumstances, which they derived from their great application to trade, there being very few that apply themselves to any other profession excepting such as desire to qualify themselves for the service of the church (5).

(4) Relation de la ville de Batavia. Tavernier. Le Brun.

(5) Voyages de François Leguat, vol. ii. p. 82.

exciting troubles and disturbances here, as they have done in most places where they are already established. As for the *Chinese*, as their religion is an abomination, they are not allowed a pagoda in the city; but they have one at a place about a league off, where they likewise bury their dead¹. Every *Indian* nation at *Batavia* has its head, or chief, who takes care of its interests; but he has not the power of deciding any thing that is considerable, and his function, properly speaking, regards only the affairs of their religion, and any slight controversies that may arise among his countrymen². In order to give a clear idea of the manner in which these people live at *Batavia*, it will be proper to say somewhat of each of these *Indian* nations, and of their different manners of employing themselves.

THE Javanese addict themselves chiefly to agriculture, fishing, and ship-building. They commonly wear no other habit than a kind of short petticoat reaching to their knees; all the rest of their bodies naked: they have likewise across their shoulders a sort of sash, or scarf, in which hangs a little short sword: on their heads they wear a little bonnet. Their cabins are remarkably neater than those of other *Indian* nations, built of split bamboos, with a large spreading roof which hangs over the house, and under which they sit and take the air. Temper, customs, and manners, of such of the Javanese as remain at Batavia.

THE Chinese inhabitants are very numerous; it is reckoned, that, in the city and suburbs, they are at least fifty thousand³. These people seem naturally born for trade, enemies to idleness, and who think nothing hard or laborious, if doing it is attended with a certainty of gain. They can live upon very little, are bold, enterprising, have a great deal of address, and are indefatigably industrious. They have a penetration and subtilty very extraordinary, inso-
much that they seem to make good their own saying, that *the Dutch have one eye, and they have two*⁴; but, with all this, they are deceitful to the last degree, take a pride in imposing upon those who deal with them, and boast of that cunning of which they ought to be ashamed. In husbandry and navigation they very far surpass all other *Indian* nations. Most of the sugar-mills in *Batavia* belong to them; and the distillery of arrack is intirely in their hands⁵. They are the carriers of *Asia*; and the *East India* company itself frequently makes use of their vessels⁶. They keep all the shops, and most of the inns, in the city; and are likewise the farmers of the duties, excises, and customs⁷. An account of the Chinese who live at Batavia, and elsewhere, in the territories of the company.

THE Chinese are, generally speaking, well-made men, of an olive complexion, their heads very round, their eyes small, and their noses short and flat. They do not cut their hair, as those who remain in *Cbina* are obliged to do since the *Tartars* became masters of their country. As often as any come from *Cbina*, they immediately suffer their hair to grow, as a token of their freedom, and curl and dress it to great advantage, their priests only excepted, whose heads are always close shaved. These people are always bare-headed, with an umbrella in their hands to keep off the sun. They likewise suffer their nails to grow to an immoderate length, which gives them prodigious dexterity in flight of hand, an art of great extent, and of considerable consequence, as it is managed by these people. Their dress differs pretty much here from what they wear in their own country: their robes are very ample, and their sleeves, which are of cotton cloth, very large; underneath they have a pair of breeches, which reach to their ancles; they wear no shoes, but a kind of little slippers, and go without stockings intirely. Their women also wear very long cotton robes, are brisk and lively, very impudent, and extravagantly debauched⁸. The *Chinese* in general have not the least notion of any distinction of meats; on the contrary, they eat, without ceremony, the flesh of any animal that comes to hand, let it be dog, cat, rat, or what it will. The *Chinese*, like the *Javanese*, are extravagantly addicted to gaming; and this humour drives them sometimes, especially at the cock-matches on the new-year's feast, into downright madness. They will then not only lose all their money, houses, and goods, but will stake their wives and children; and, after these are lost, their beards, their nails, and the winds; that is to say, they bind themselves not to shave their beards, cut their nails, or to go on board of any ship to trade, till they have paid what they have lost. They become by these follies the most miserable creatures in the world; and, when in this condition, are forced to let themselves out as the slaves of some *Chinese*. Under such misfortunes they have but one resource, which is, that some of their relations either here or in *Cbina*, will, out of mere tenderness and compassion, pay what they have lost⁹ (M). Description of their persons, manners, habits, pastimes, vices, and extravagances.

(M) It is a very difficult matter to give the reader a

distinct notion of these eastern nations, as they inhabit

among the *Dutch*, because different writers speak in very

different terms of them, and more especially of the *Chi-*

nese. It may, however, be affirmed upon the whole,

that they are equally distinguished by good and bad qua-

lities,

*See account of
the Malayan,
Negroes, and
Amboynele,
which are set-
tled at Bata-
via.*

THE *Malayans*, who live at *Batavia*, employ themselves chiefly in fishing: their vessels are very neat and shewy, and their sails very ingeniously made of straw. They are a most wicked and profligate people, and often commit murders for very trifling gains. They profess the *Mohammedan* religion, but are absolutely void of morals; so that, instead of having any scruple, they make a merit of cheating Christians. The habits they wear are either silk, or cotton stuff: the men wear a piece of cotton cloth about their heads, with their black hair tied up in a knot behind *. The negroes who live at *Batavia* are most of them *Mohammedans*. They come from the coast of *Bengal*, dress in the same manner as the *Malayans*, and live also in the same quarter; some of them work at trades; others are a kind of pedlars. The most considerable of them trade in stone for building, which they bring from the neighbouring islands. The *Amboynele* addict themselves to building of houses with bamboos, the windows of which are made of split cane, neatly wrought in different figures. They are a very bold, boisterous people, and so turbulent, that they are not suffered to live in the city, but have their quarter near the *Chinese* burying-ground *. They have a chief, to whom they pay the greatest submission, and he has a very magnificent house in their quarter, and well furnished after their manner. Their arms are, for the most part, large sabres, and long bucklers. The men wear a piece of cotton cloth round their heads, letting the two corners of it hang behind; and adorn this kind of turban with abundance of flowers *. The women wear a sort of habit close to their body, wrapping a cotton mantle round their shoulders, which leaves their arms naked. Their houses are built of boards covered with leaves, two or three stories high, and the ground-floors particularly divided into several apartments.

*Of the Mar-
dykers, or
Topasses,
their employ-
ments, reli-
gion, customs,
&c.*

THE *Mardykers*, or *Topasses*, are idolaters composed of divers nations of *Indians*, and are of different trades and professions: their merchants carry on a great commerce in all the neighbouring islands: some of them are gardeners, others breed cattle, and some fowls. The men generally dress after the *Dutch* fashion; but the women go like other *Indians* *. They dwell both in the city and country. Their houses are much better built than those of the rest of the *Indians*, being, generally speaking, either of stone or brick, several stories high, and very neat * (N).

*Macassars,
Armenians,
and other orien-
tal nations, in
the company's
district.*

THERE are also at *Batavia* some of the *Macassars*, famous for their little poisoned arrows, which they blow through a trunk. This poison is made of the juice of a certain tree, which grows in that part of the island of *Celebes* called *Macassar*, and also in the *Bougie* islands: they dip the points of their arrows in this juice, and then let them dry: the wound they give is absolutely mortal. The *Bougies* are the inhabitants of three or four islands near that of *Macassar*; and, since the conquest of this last island, have settled themselves at *Batavia*. They are very hardy, bold fellows, for which reason the company use them as soldiers: their arms are bows and arrows, sabres and bucklers *. The *Armenians*, and some other *Asiatics* who reside in *Batavia*, come thither purely on the score of trade, and stay no longer than their occasions call them. The natives of the country who are established in the neighbourhood of *Batavia*, and for a tract of about forty leagues along the mountains of the country of *Bantam*, are immediately subject to the governor-general. The company sends *drossards*, or commissaries, amongst them, who administer justice, and take care of the public revenues. The principal men amongst these people resort at certain times to *Batavia*, in order to give an account how these commis-

* Relation de la ville de Batavia, par NICOLAS DE GRAAF. L'expédition de trois vaisseaux, tom. ii. p. 66.
* JANIÇON état présent de la république des Provinces Unies, tom. i. p. 352, 353. * L'expédition de trois vaisseaux, tom. ii. p. 68. * JANIÇON, ubi sup. p. 353. * L'expédition de trois vaisseaux, tom. ii. p. 69.
* NIEUHOFF's voyages, p. 316.

lities; the former strangely cried up by some, and the latter as odiously represented by others. It is, however, on all hands agreed, that, without the help of these people in their different capacities, the *Dutch* could hardly support themselves, much less manage that extensive commerce, from which they are become so amazingly rich at *Batavia*. On this account they favoured them formerly very much, not from tenderness to them, but for their own sakes; for, at the same time, they impose on them excessive taxes, such as a capitation of a dollar per head a month; and, if they will wear gold pins in their hair (a vanity to which they are much inclined), they must pay another dollar for every pin; but notwithstanding these, and some less considerable duties, they find so many ways to get money, that the bulk of them are, generally speaking, excessively rich; and such as are not so are relieved by their own people (6).

(N) As these people are not only common here, but

over all the *East Indies*, it is necessary to observe, that they derive the name of *Topasses*, not, as some have imagined, from the precious stone of the same name, but from a verb in the *Malayan* language, which signifies to imitate the manners, and to accommodate one's self to the dress and customs of other people (7). In short, the *Topasses* are of different nations, various complexions, and several religions, being Pagans, *Mohammedans*, and Christians; but they all agree in this circumstance of imitating the dress, and, as far as they can, the manners and inclinations of the *Europeans*, amongst whom they live, or to whom they are subject. Thus, at *Batavia* they wear jackets and trunk breeches, speak broken *Dutch*, and are either soldiers, servants to the merchants, or pedlars on their own account. At *Goa* they look like the *Portuguese*; and at *Fort St. George*, and other *English* settlements, they endeavour to resemble us as much as is in their power (8).

(6) Nieuhoff's voyages, p. 314. Relation de la ville de Batavia, par Nicolas de Graaf. Janiçon état présent de la république des Provinces Unies, vol. i. p. 336. (7) Nieuhoff's voyages, p. 316. (8) Janiçon, ubi sup. p. 353. Hamilton's account of the East Indies, vol. i. p. 377.

- a saries behave with respect to what they call the low country, which is immediately about the city, where those in the government, and rich merchants, have their country-houses. It is inexpressibly beautiful; and one may without exaggeration affirm, that art and nature seem to contend which shall adorn it most. The air is temperate and sweet, the soil rich and fruitful, pleasantly diversified with hills and dales, and wonderfully delighting the eye with its perpetual verdure^b. On the other hand, that excess of moisture, which formerly nourished useless woods, from whence arose infectious exhalations, is now diverted into canals, that serve at once for profit and pleasure. Rich and regular plantations appear on every side, to most of which belong mansion-houses, that fall little short of palaces; and every thing is kept in so good order, as to do honour to their possessors^c (O). The company's territories are not however
- b confined within these narrow bounds; her authority extends itself into different parts of the island, and therefore, to form a just notion of it, we must look abroad through its whole extent.

THE island of *Java* may be about three hundred leagues in circumference, divided into abundance of kingdoms and principalities, all of them dependent on the emperor, who resides at *Kattasura*. We must however except out of the number of these tributary princes the kings of *Bantam* and *Japara*, who do not acknowledge his authority. The country produces not only all things necessary for the subsistence of man, but large proportions of those valuable effects which form the commerce of the country. It is divided by many rivers, woods, and mountains, in all of which nature has very bountifully bestowed her treasures^d. It is certain, that in some

c parts of the island there are gold mines. The regency at *Batavia*, in hopes of profiting by them, wrought for some years the mountains of *Parang*; but it fell out that the marcasites were not full ripened, so that the company were at the expence of a million to no purpose. Such as had the direction of this enterprise, were very much censured, and the works have been long since discontinued. There are people who are, notwithstanding, thoroughly persuaded that the natives of the country find, in many places, considerable quantities of gold; which places, however, they carefully conceal from the *Europeans*. During the war in *Java*, which lasted from the year 1716 to 1721, the inhabitants of some parts of the country were so often and so miserably plundered, that they were reduced to absolute beggary; yet it was observed, that in the space of one year's peace these very people grew excessively rich, and had

d not only great quantities of gold in dust, but also in ingots^e. The mountains are many of them so high, as to be seen at the distance of three or four leagues. That which is called the *Blue Mountain* is by far the highest of them all, and seen the farthest off at sea. They have frequent and very terrible earthquakes in this country, which shake the city and places adjacent to such a degree, that the fall of the houses is expected every moment. The waters in the road are excessively agitated, insomuch that their motion resembles that of a boiling-pot; and in some places the earth opens, which affords a strange and terrible spectacle^f.

THE inhabitants are of opinion that these earthquakes proceed from the mountain *Parang*, which is full of sulphur, salt-petre, and bitumen, all which, taking fire, cause a prodigious struggle in the bowels of the earth, and of consequence an earthquake; and they assure us, that

e it is very common, after such an accident, to see a large cloud of smoke hanging over the top of the mountain^g. Many years ago General *Ribeck*, who then commanded in the island, went with a considerable number of attendants to the top of that mountain. On his arrival there he perceived a large cavity, into which he caused a man to be let down, that he might examine the inside. The man, when he returned, reported that the mountain was hollow within; that he had heard a most frightful noise of torrents of water on every side, and that here and there he had seen flames burst out, so that he was absolutely afraid of going far, from an apprehension of being either stifled by the vapours, or of falling through some of the

(O) If the reader is inclined to be farther informed upon this subject, he may easily gratify his inclinations by consulting and comparing *Nieuboff*, *Le Brun*, *Graaf*, and others who have visited this celebrated island. It may not be amiss to add such lights as may be received from *English* and *French* writers, because they are apt to mention many things, that, from being familiar to the *Dutch*, find no place in their writings (9). It will be proper also to consider, that though two authors contradict each other flatly, yet neither of them may be absolutely

mistaken, because there are few countries in the world that have suffered greater alterations than this, or where art has made more encroachments upon nature; so that it is no wonder at all if writers at a considerable distance of time differ widely from each other, and yet without any disregard to truth. In reference, however, to the fruits and other natural productions of the *Dutch* territories in the island of *Java*, *Nieuboff*, allowing for the time in which he was there, is the most copious and the most exact writer.

(9) *Atlas géographique*, vol. iii. p. 795.

many chimms. It is certain, that the waters in the neighbourhood of this mountain are very far from being wholesome; and that even those that come to *Batavia* are impregnated with sulphur. Such as drink much of them contract various distempers, but chiefly a dysentery; yet this water, when boiled, does no sort of hurt, though drank ever so copiously.^a

Of the fruits, anim. &c. in this noble island of Java, as improved by the Dutch.

THE fruits and plants in this island are all, in their respective kinds, excellent, and almost out of number. There are abundance of forests scattered over the island, in which are all kinds of wild beasts, such as buffaloes, tygers, rhinoceroses, and wild horses, with an infinite variety of serpents, some of them of an enormous size. Crocodiles are prodigiously large in *Java*, and are found chiefly in the mouths of rivers; for, being amphibious animals, they delight most in marshes and savannahs. This creature, like the tortoise, lays its eggs in the hot sands, without taking any farther care of them, and the sun hatches them at the proper season, when they run instantly into the water. There is, in short, no kind of animal wanting here: fowls they have of all sorts, and exquisitely good, especially peacocks, partridges, pheasants, wood-pigeons; and, for curiosity, they have the *Indian* bat, which differs little in form from ours, but its wings, when extended, measure a full yard, and the body of it is of the size of a rat. They have fish in great plenty, of different sorts, and very good; so that for the value of three pence, there may be enough bought to dine six or seven men. They have likewise a multitude of tortoises, the flesh of which is very little inferior to veal, and there are many who think it better. As the flat country abounds in this manner with all sorts of provision, there are daily great quantities brought to *Batavia*; and to prevent any danger of scarcity, the vessels belonging to the company are continually employed in bringing, from the most distant parts of the island, provisions, spices, and other necessaries, such as indigo, rice, pepper, cardamoms, coffee, &c. There are also laid up in the magazines at *Batavia*, all the various kinds of rich and valuable commodities, not of *Java* only, but of all the *Indies*, ready to be transported thence, either to other ports of the company's dominions, or in the ships that in great fleets return annually to *Holland** (P).^b

A general view of the state, fertility, and populousness, of the whole island.

UPON the whole, if we may depend on the concurring testimony of the *Dutch* writers, and more especially such as have visited the *Indies*, and resided in the city of *Batavia*, we must believe, that the company have fixed the seat of their empire not only on the spot most commodious for their commerce, but in one of the fairest, most fruitful, and best peopled countries in the universe. This will sufficiently appear, from what has been already said, as well as from the following facts, which they affirm from their own knowledge; viz. that there are in *Java* upwards of forty great towns, which, for the number of their inhabitants, would, in any other part of the world, merit the title of cities, and more than four thousand five hundred villages, besides hamlets and straggling houses lying very near each other, upon the sea-coast, and in the neighbourhood of great towns: so that, upon a fair and moderate calculation,

^b Voyages de FRANÇOIS LEGUAT, tom. ii. p. 86. L'expédition de trois vaisseaux, tom. ii. p. 117. NIEUHOFF'S voyages, p. 321—363. Voyages de FRANÇOIS LEGUAT, tom. ii. p. 88—97. ^c JANISON état présent de la république des Provinces Unies, tom. i. p. 339, 340, 341. L'expédition de trois vaisseaux, tom. ii. p. 121, 122, 123.

(P) One would be tempted to think, that the affairs of a government so mixed and complicated in the very nature of its constitution, and swelled to so great a height, as well as embarrassed with such a variety of circumstances, must be liable to much confusion, and that it would be a thing impossible to keep them in any tolerable degree of order, much less in that exact and accurate method that is the source of reputation and prosperity in the management of a private estate. But, if we reflect a little, we shall find, that if this was not done, the administration of the company's affairs would become impracticable, and the government be dissolved. The truth of the matter is, as, from the very singular circumstances attending it, will hereafter appear, that the whole secret of this stupendous direction consists in suffering nothing to run into arrear (10). The general and the particular plan of government is exactly the same. Every officer in the company's service has his particular function, which he is obliged to execute in person; and, of the discharge of this he gives an account, from day to day, to his superior, who does the like; and, at certain periods, these journals and accounts are transmitted to *Batavia*; where they are inspected, comptrolled, and reported to the council of the *Indies*, with the same punctuality.

It must, indeed, be allowed, that this requires a most fatiguing attention, more especially from the superior officers: yet, what from a zeal for the service, a long continued habit, a natural passion for superior power, and the desire of rising to a state of honour and independence, after a temporary scene of labour and application, it has been hitherto so well performed, that scarce any apparent disorder has ever appeared. It may, perhaps, seem a paradox, but it is certainly true, that the extraordinary difficulties with which this administration is pressed, have contributed more than any thing else to that success which has been so visible in its execution; for where men have little leisure, they are least inclined to pleasure; and where they are sensible, that one day lost can never be recovered, they are sure not to lose a day (11). The smallest irregularity would be productive of such consequences as could be hardly remedied; and the fear of this has hitherto impressed such an attention, as to prevent the slightest relaxation in a discipline, which, if experience did not demonstrate the contrary, we could scarce expect should subsist for any time; and which, as it has now subsisted so long, leaves no just apprehensions of its suffering any check, unless from unforeseen causes in time to come.

(11) Voyages de Nicolas Graaf

there

a there are within the bounds of the whole island, taking in persons of both sexes, and of all ranks and ages, more than thirty millions of souls: so that it is thrice as populous as *France*, which, though twice as big, is not reputed to have more than twenty millions of inhabitants. How surprising soever this may seem, yet, if we consider it attentively, it agrees very well with the accounts given us of the wonderful fertility of *Java*, and of the numerous armies that have been set on foot by princes that had but parts of it under their jurisdiction ¹ (Q).

But, after all, what most astonishes wise men is, that the *Dutch* company should be able, ^{By what a sudden and surprising growth the Dutch company rose, from being subjects, to the rank of sovereigns over the Javaneſe.} in so short a space of time as sixteen years from her first incorporation, to establish a settlement on the ruins of a royal city, and, in the space of a few years, afterwards defend that settlement against the united force of this whole island. It is very true, that not less than forty years were spent in bringing the city of *Batavia*, and all its fortresses, to perfection; and yet, during this space, the company undertook, and effected, very great designs, conquered vast countries by their arms, and obliged many rich and potent princes not only to court her favour, but to place their safety in seeking her protection ². We have shewn, in the foregoing history, though in the most succinct manner we could, how all these wonders were achieved, sometimes by art, sometimes by dint of alliances, sometimes by plain force, in maintaining numerous armies, and equipping great fleets, year after year, at an immense expence of blood and treasure. This, without all doubt, must have greatly lessened the profits of their trade, and must have laid them open to very severe reflections, not only from such as smarted under the weight of their power, or envied their constant prosperity, but from those upright and unbiassed patriots who considered things only as they were useful or prejudicial to the interests of their mother-country (R).

NOTWITHSTANDING all this, and notwithstanding that many things in their conduct may not be reconcileable to the nice rules of equity, or the maxims of strict justice; for when did great fortune arise from a close attention to those rules and maxims? In what age, in what country, have there arisen statesmen without vices, or heroes without crimes? Did *Rome*, did *Carthage*, nay, did *Sparta*, grow to be great and famous without censure, without blemish? Notwithstanding therefore all that may be justly said, and all that has, whether right or wrong, been imputed to the *Dutch* company, as flowing from a spirit of ambition, tyranny, and oppression, this must be allowed, that she has no parallel in ancient or in modern

¹ *Memoires de Dr. Garçin.*

² *NIEUHOFF's voyages*, p. 320.

(Q) As the best *Dutch* writers are unanimous in their reports upon this head, it deserves so much the more credit, especially when we consider, that the emperors of *Java* have been consulted upon this subject, who never fail to be well acquainted with the exact number of their subjects, receiving distinct accounts from all the pangarangs, or governors of provinces, of which there are seven maritime, and five inland (12). An instance of this may be acceptable to the reader (13). About the year 1664, the reigning emperor found some *Mohammedan* priests were engaged in a conspiracy against him, and not being thoroughly acquainted how many of them might have embarked in this intrigue, he thought it safest, as knowing well their interest among the people, to be rid of them all; and therefore gave private orders, to have a list made of every priest in his dominions; which was accordingly done; and he found them upwards of six thousand; all of which, upon the firing of a cannon from the palace, which was repeated from fortress to fortress, were put to death, as it were in an instant. It is not easy to say, whether, since the *Dutch* have settled in that island, the number of people therein has increased or decreased; but the former seems to be more probable, since, for near a century past, wars have been far less frequent; and though it be true, that the naval power of the *Javaneſe* was much greater when they first settled at *Batavia*, than in succeeding times, yet it is universally allowed, that they have still a great quantity of shipping; and that, in all their great towns and villages, they have a prodigious number of shops, in which all sorts of commodities are sold; and that industry has been rather promoted than lessened, by the settling so many *Dutch* factories, as, in their proper places, the reader will be informed, still subsist in different parts of the island (14).

(R) What is said in the text will convince the reader, that the affairs of the *Dutch East India* company are here very candidly represented, and serve, at the same time, to reconcile certain passages that might seem otherwise a little discordant. We are far from pretending to decide the dispute between those great men, who think that this commerce with the *Indies* might have been carried on more to the advantage of the subjects of the States General, if it had not been intrusted in the hands of an exclusive company; though we take occasion sometimes to state their sentiments, and at others, to mention what has been or may be alleged in favour of the company. But whatever becomes of this dispute, that is, on which side soever truth lies, the progress of the company, in point both of commerce and power, is certainly very extraordinary, and even amazing. Yet, though we grant and explain this, we are far from denying, that this commerce has been sometimes extended, and this power sometimes exerted, to the prejudice of their neighbours; neither have we dissembled our sentiments in particular cases, where the thread of our history obliged us to disclose them (15). There is a wide difference between admiration and adulation; and we may consider, with some degree of astonishment, how this company has grown, in a manner imperceptible, to such a height, as to form the single exception to that otherwise general rule, that the current cannot rise higher than the source; whereas the chief governors of this company, who are but subjects in *Europe*, and receive with submission the orders of the States General, exercise an absolute sovereignty in the *Indies*, and have several considerable princes for their tributaries and vassals.

history. Her glory is as singular as her influence is extensive; and such a succession of wise managers at home, and of gallant and great officers abroad, is to be found only in the records of her rise and progress, which cannot be transcribed without exciting reverence, or be read but with amazement*. All this may be collected from what is past, from tracing the efforts of this company from its infancy to the present times, relating the difficulties it has overcome, and the acquisitions it has made. Yet, to gain a clear conception of it really is, to frame a true notion of its dominion and power, to know what countries are in its possession, what trade it carries on, and how such a mixed and mighty empire is managed, requires much more to be said, and, indeed, a new field to be opened. We must, to make ourselves masters of this, be content to inquire diligently into the scheme of her foreign policy, and to collect carefully what has been written concerning her governments, directions, commanderies, establishments, and factories; for without doing this, we can have only superficial and confused sentiments of that grandeur, which, as it arose from, and is maintained by, naval power, ought (for our own sakes) to be clearly and particularly understood.

The only probable method of doing this, which is also pursued thro' the remaining part of this chapter, and is taken from the most authentic writers.

We will therefore try what may be done towards attaining a short and true description of the rest of those provinces, which, with *Batavia*, make up the eight great governments that belong to the company, in each of which they are, in some measure, sovereigns, as having at least the executive power in their hands, without controul; for the company give the title of governor only to him who administers justice to their own subjects, in countries where no other European nation has either settlement or trade, but by their permission. After this, we will run through the lesser jurisdictions, some of which, however, are of very great consequence; and, after having thus represented to the reader's view a kind of political map of the company's territories, we will next, as far as we are able, explore her general system of government, by which these parts are connected, and her civil, ecclesiastical, and military establishments, so balanced as to contribute to the preservation of the whole; and lastly, we will add a brief detail of the correspondence between the government in *India*, and the directors of the *East India* company in the United Provinces, who are, and have been always, the first movers in this great machine, giving weight, imparting vigour, and deriving motion to the whole. These points being examined, in a manner as full as the bounds to which we are confined will admit, may contribute to set this subject, at least in some degree, in such a light as it deserves, and in such a light as will effectually demonstrate, that nothing we have advanced has any tincture of exaggeration, but proceeds entirely from the impression made by the contemplation of what this society has achieved, as it arose in compiling and digesting the materials requisite to the composition of this chapter. An undertaking so much the more necessary, as those succinct and imperfect representations that are commonly met with, contribute very little to fill the mind with any just notion of so wonderful a power as this is, and which, for many reasons that need not be enumerated here, deserves to be so distinctly described, as that we may clearly and perfectly comprehend the whole system, without which, it is impossible to have an adequate conception of any particular branch of its œconomy.

S E C T. XVI.

A view of the government of Ceylon. Some attempts of the Dutch governors to render themselves independent. The profits accruing to the company from their possession of the coasts of this valuable country; and their singular precaution in excluding all other nations.

Ceylon, or Ceilan, the first government after Batavia; and has peculiar prerogatives.

THE first and best government after *Batavia*, is that of the island of *Ceylon*. The governor is usually one of the council of the *Indies*, and has council appointed to assist him, framed in the same manner with that of *Batavia*, only the latter are not quite so great men as the former. Though the governor of *Ceylon* is dependent on the council at *Batavia*, he is at liberty to write immediately to the directors in *Holland*, without asking the permission of the governor-general, or without giving an account of his conduct in that respect*. This singular prerogative has had bad effects; because it has tempted the governors of *Ceylon* to withdraw

* BASNAGE description historique du gouvernement des Provinces Unies, c. 37. L'expédition de trois vaisseaux, tom. ii. p. 124, 125. Mémoires de Dr. GARCIN.

their

a their obedience, in order to become absolute sovereigns of the island (S). There have been several examples of this kind ; but it will be sufficient to dwell here on the two last, which have made so much noise in *Europe*. These *Indian* commotions were owing to the tyranny of two governors, who immediately succeeded each other, the one named *Vuist*, and the other *Versluys*. The whole transaction fell out thus :

As soon as Mr. *Rumpf* left his government of *Ceylon*, Mr. *Vuist*, his successor, began to act the barbarian towards all who were not in his good graces. He persecuted the *Europeans* as well as the *Indians* ; and having, from the beginning, this project in his head, he pursued it steadily, and by methods that were fittest for accomplishing his purpose. In the first place, he thought it necessary to rid himself of the richest persons in the island, and of such as were of reputation for experience and penetration. In order to save appearances, he thought it requisite to forge a plot, and caused informations to be preferred against such as he intended to ruin, for a conspiracy to betray and deliver up the principal fortresses in the island to some foreign power ; which scheme served him doubly ; for, first, it seemed to manifest a great zeal for the company's service, and next, it gave him an opportunity to convict those he hated of high treason, which deprived them at once of life and fortune. To manage this more effectually, he thought fit to change his council, and bring into it such as he could depend on. The confiscation of the estates and effects of a number of innocent persons he condemned, and murdered, under colour of his attention to the public welfare, put it in his power to oblige many, and to raise a vast number of creatures. This modern *Cataline* was born in the *Indies*, of *Dutch* parents, had naturally a strong capacity, which he had improved by an assiduous application. His dark brow, and cloudy air, sufficiently shewed the cruelty of his disposition, and that flintiness of heart, which distinguished him from other men. He loved and protected the *Indians*, either from natural inclination, as they were his countrymen, or because he thought them less capable of penetrating, and less willing to traverse, his designs. In order to gain them intirely to his devotion, he preferred them as often as any vacancies fell in his government, and this in direct opposition to the repeated instructions of the company, directing him to bestow the principal posts in the island on *Dutchmen*, or other *Europeans*. He carried on his designs for a long time with the greatest dexterity, acquiring, by gifts, and other artifices, a prodigious number of dependents, who were ready to support him even in the blackest designs ^P.

THIS, however, he could not do, without giving umbrage to some of the company's faithful servants, who sent over to *Holland* such clear and perfect informations of his behaviour, as gave sufficient light into his real intentions, in spite of all the arts he made use of to conceal them. At last, therefore, the company sent Mr. *Versluys* directly to *Ceylon*, to succeed him, with orders to send *Vuist* prisoner to *Batavia*, where he was called to an account for his conduct. As soon as he came thither, abundance of informations were preferred against him, for a variety of crimes, of a private as well as public nature ; into all which, the council of justice caused the strictest inquisition to be made, and took care to be furnished with every kind of proof. In fine, after abundance of examinations, he freely confessed, that he had caused nineteen innocent persons to be most cruelly put to death ; adding, that as he had, to keep up a shew of justice, put them all to the torture, so, by the severity of this proceeding, he had extorted from every one of them a confession of crimes, none of which had ever so much as entered into their heads. Such flagrant offences certainly deserved the severest punishment the laws could inflict ! The sentence passed upon him was to this effect ; That he should be broken alive upon the wheel, his body immediately quartered, and those quarters burnt upon a pile of

^P L'expedition de trois vaisseaux, tom. ii. p. 126, 127.

(S) This noble island enjoys so many prerogatives from nature, is of such prodigious consequence to the power, as well as the commerce, of the *East India* company, and is so much the object of envy to the rest of the *European* nations, that there is no wonder to be made at the singular concern expressed for the security of so valuable a country. In this respect all imaginable precautions have been taken to enlarge the governor's power in regard to what concerns his correspondence with the directors at home ; and to circumscribe it, on the other hand, in reference to the places which lie within his government, so that he may be influenced both by hope and fear to the due performance of so great a charge, which commonly recommends him to the post of general of the *Indies* (16). At all events a governor has it

in his power to raise a prodigious fortune in a very short space, and this without running any risque or hazard ; which circumstance will certainly have a great effect on the mind of any man who is desirous of returning home, and spending the latter part of his days in *Holland* ; but cannot have so great an effect, or at least will not operate in the same manner, upon one who has never been, and who has no desire ever to be, in *Europe* (17). Such a one will consider all things in a different light, and must have a strong repugnance to part with that splendor and authority with which he has been once clothed ; and therefore it is not at all strange if he contrives how to keep them ; for wheret the treasure is, there will the heart be also (18).

(17) *L'expedition de trois vaisseaux*, vol. ii. p. 127.

wood; after which, the ashes were to be put in a cask, and thrown into the sea, as unworthy of any other interment. Which sentence, without the least mitigation, was put in execution, within a few days after it was pronounced ^a.

Mr. Versluys, who succeeded him in the government, embarks also in pernicious designs. As Mr. *Versluys* succeeded *Vuist* in his government, so he imitated him also in his behaviour, instigated, however, by avarice rather than ambition. This man had by no means the cruelty of *Vuist*, and therefore he shed no blood, but acted as despotically as the other. The great point he aimed at was not the possession of the country, but the possession of all that was valuable in it. As soon as he was settled in his post, he raised the price of rice, which is the bread of that country, to such an extravagant height, that, in a very short time, the people were not able to purchase it, so that they were, by degrees, reduced to starving. Their humble representations of the misery which reigned among all ranks of people, throughout the whole island, made no manner of impression upon him; but things went on from bad to worse, till an account of his conduct was sent over to *Holland*. The States General were no sooner informed of the distress of the inhabitants of *Ceylon*, than they appointed a new governor, one Mr. *Doembourg*, and gave him particular instructions to repair past errors, and to treat the subjects of the *East-India* company with all the tenderness and indulgence possible, that they might be convinced their grievances proceeded from the wickedness of particular men, and not from any disposition in their sovereigns to oppression.

The States General interpose and send over a new governor, who seizes Versluys. ON the arrival of Mr. *Doembourg*, things assumed a new and unexpected face; for *Versluys* took it into his head that they would defend him against his masters, and therefore refused to surrender the government, and even had the insolence to fire upon the company's ships, as they lay in the road of *Columbo*. But all this signified nothing; Mr. *Doembourg* landed; his authority was immediately acknowledged by all in the company's service, and by the people. He caused *Versluys* to be arrested and sent prisoner to *Batavia*, where a long criminal prosecution was carried on against him, but with indifferent success; for he had taken care to cover himself so effectually, that it was found impossible to obtain other than circumstantial proofs. At last he thought proper to lay down a very large sum of money, to attend the event of the suit; and was set at liberty, that he might be the more able to defend himself. This was certainly a better escape than he deserved; and these instances sufficiently prove the truth of *John de Witt's* observation, that the settlements, by being absolutely under the power of the company, are continually exposed to the greatest dangers, from which their escaping so frequently is at once a mark of their good fortune and their insecurity, since the seeds of this mischief can never be removed ^d.

A short account of the condition of this island, as divided between the natives and the Dutch. THE island of *Ceylon* is justly esteemed one of the fairest and richest in the world, and, for that reason, is considered with jealous eyes by its possessors, as well as with envy by their neighbours. The principal places therein are *Jasanapatam*, *Trinkenemale*, *Materolo*, *Punta de Galo*, *Columbo*, *Nijombo*, *Scitavaca*, and *Candy*. The *East India* company are possessed of the island, of the country, ten or twelve leagues within land; and of most of the towns before-mentioned. The *Portuguese*, who were formerly established here, built abundance of forts for their own security, so that it was a very difficult matter to dislodge them; but when once the *Dutch* had contracted a secret alliance with the king of *Candy*, who was sovereign of the best part of the island, they suddenly found themselves attacked on all sides by land and sea; and were, as has been related, by degrees driven totally out of all their possessions. As the *Dutch* have ever since taken great pains to keep up a good correspondence with that monarch, they have obtained from him almost whatever they demanded ^e.

Instances of the good correspondence between the emperor of Ceylon and the Dutch East India company. THE company send every year an ambassador to him, with various presents; in return for which his majesty sends the company a cabinet of jewels, of so great value, that the vessel which carries it home is looked upon to be worth half the fleet. The governor-general takes care himself to have it so packed among the rest of the merchandize, that not only none of the ship's company, but even the captain of the vessel that carries it, knows not whether it be on board his ship; which shews the immense wealth the company draws from her dominions in the *Indies*, and at the same time the wise and prudent measures she employs to secure the riches she obtains. The two principal Places in this Island are *Punta de Galo* and *Columbo*. This last place is the residence of the governor and his council; and the other is properly no more than the port of that city. The air of *Ceylon*, though very hot, is notwithstanding esteemed to be tolerably wholesome. The country abounds with most excellent fruits of all kinds. They have likewise great plenty of rivers, of sea-fish of various sorts, fowls wild and tame, as also animals, particularly elephants, much larger than in any other country of the ^f

^a BASNAGE description historique du gouvernement des Provinces Unies, c. 37. L'expédition de trois vaisseaux, tom. ii. p. 128, 129. ^f Ibid. p. 130, 131. ^e Ibid. p. 131, 132. ^d GRONDEN en maximen van de republiek van Holland, 1 deel, cap. xxvi. ^e JANIGON état de la republique des Provinces Unies, tom. i. p. 369. ^f Memoires de Dr. GARCIN. ^e L'expédition de trois vaisseaux, tom. ii. p. 139. ^f Voyages de NICOLAS GRAAF, p. 113.

a *Indies*, tygers, bears, civet-cats, apes, &c. Such is the dominion of the company in this important island, abounding with all good things, but abounding to them only ^a (T).

But that for which this island is most famous, is its cinnamon, esteemed by far the best in all *Asia*. Cinnamon is, properly speaking, the inner bark of a tree which is not unlike that which bears oranges; the flowers differ but little from those of the laurel-tree in their size and figure. There are three sorts of cinnamon, the finest, which is taken from young trees; a coarser sort, taken from the old ones; and wild cinnamon, which grows not only here, but in *Malabar*, *China*, and of late years in *Brazil* ^a (U). The company likewise drives a great trade in the oil which is drawn from this spice, and which is of very great value; and gains also very considerable by the precious stones that are found in this island, which are rubies, **b** sapphires, white and blue topazes, &c. ^b (X). There is likewise between *Manar* and *Tutocorin*, on the coast of *Coromandel*, a fine pearl-fishery, which brings in a prodigious profit. This is let

The vast riches of this island, in cinnamon, precious stones, and pearls.

^a *Memoires sur le commerce des Hollandois*, p. 207. *JANISON etat present de la republique des Provinces Unies*, tom. i. p. 371. ^a *Histoire de Ceylon*, par RIBEYRO, p. 10, 11. ^b *Dictionnaire de commerce*, tom. ii. p. 852.

(T) The emperor of *Ceylon* still remains in all respects a very powerful prince, his territories being of a vast extent, his revenue immense, his court splendid, and his subjects so numerous, that he can bring two hundred thousand fighting men into the field; and though his credit may be in some measure hurt, by being so much as he is under the influence of the *Dutch*, yet his authority is better supported, and his revenue not at all the less for what they possess in this island (19). On the other hand, they are pretty secure, and have no reason to apprehend any sudden danger from so powerful a neighbour, since they have so many excellent fortresses on all sides of the island. That of *Jafanapatam* lies in the north, where the land is broke into several islands; and, as the *Dutch* fancy that the whole country resembles a ham, so this must pass for the knuckle of it, and thence they give it the name of *Hambeel*. To this fortress, one of the best and most regular in the island, all the adjacent country and little islands are subject, and are all of them well inhabited (20). *Columbo* stands on the west-side of the island, looking towards *Cape Commorin*, on the side of a bay into which small vessels may enter, but cannot ride with any great safety, because it lies exposed to the north wind (21). The city was very large and beautiful when in the hands of the *Portuguese*; at present smaller in compass, but neater and stronger, being still the capital or place where the *Dutch* governor resides. *Ponte de Gallo* is seated on the south-west of the island, which is the best port, and in that respect esteemed the most important place of all; and therefore, as the reader will see hereafter, is in some measure exempted from the jurisdiction of the governor. The town stands on an eminence, surrounded with a deep fosse well fortified, and commanding the port, which is capable of receiving the largest vessels (22). *Trinquimala* is on the east side of the island, and has a safe and spacious port. The *Dutch* when they first drove out the *Portuguese*, put it into the hands of the emperor; but they have now a triangular fort, and a good garrison, for the defence of that part of the country. In these places they have good garrisons, composed of regular troops, magazines well supplied, and no want of artillery. In case of a civil war, they could bring many thousands of their Christian subjects into the field, as brave troops, and better disciplined than those of the emperor; and, as to the attempts of other *European* nations, they are in too good a posture of defence to entertain any apprehensions at present; and in case of any danger, they might be speedily supplied with necessary reinforcements of all kinds from *Batavia* (23).

(U) The cinnamon-trees do not grow all over the island of *Ceylon*, or at least not in any great plenty, or

of the best sort. The natives, it is said, distinguish nine or ten different kinds; but, since the *Dutch* have been masters here, they propagate only the best sort, and prohibit the rest. The woods that furnish this precious spice lie mostly to the north of *Columbo*; and it is the importance of this commerce that has preserved to that place the residence of the governor, as well under the *Dutch* as the *Portuguese*. According to the common opinion, after these trees are barked, they, in the space of a few years, recover that injury, and are in a condition to be barked again: but the best writers affirm quite the contrary; and that when a tree is once barked, it is cut down to the root, from whence in a few years rise one or more stems that are fit to bark again (24). These trees are likewise propagated by the fruit; and, as they grow both ways with very little cultivation, so the cinnamon plantations might be vastly extended, if the company did not find it more for their interest to keep these woods within bounds. The management of the cinnamon is entirely in the hands of a particular race of people called *Chialias*, who are subdivided again into four different casts or tribes: the first of these are the *Coronde-Hutais*, who are, properly speaking, the cinnamon-barkers, that is, they take off the inner bark from the branches of the tree, and spread it in the air, that it may dry and curl. The next are the *Coulis*, who are, properly speaking, the porters; who, after they have made up the cinnamon, carry it in bundles to the sea-side, from whence it is transported to *Negambo*, and laid up in the magazines, after it has been tied up in faggots, and weighed. The *Lascarins* are the soldiers who guard the workmen while they are employed; and the *Ilandarias* sort and tie up the cinnamon, and perform other offices in the management of this spice. All these people serve under their proper officers, subject to the direction of a *Dutch* commander in chief; and each family have a house and lands, which they hold by rendering this service to the company. The cinnamon harvest is sometimes in the months of *June*, *July*, or *August*, according as the season is more or less favourable, and lasts commonly three weeks or a month. It is computed in round numbers, that this harvest amounts, one year with another, to a million of pounds weight (25).

(X) If we may rely upon the concurrent accounts of several persons of great veracity, who have lived long in, and were perfectly acquainted with the product of, this island, there is no country in the world that surpasses it in point of natural riches. There are mines of several metals; and, in a mountain not far from the capital, there is one of gold, which the emperor will not suffer to be wrought. As for precious stones they are found sometimes in the earth, but more frequently in the rivers

let twice to farm to certain negro merchants. The oysters, in which the pearls are found, lie at the bottom of the sea. This fishery is carried on only in fair weather, and when the sea is extremely calm. The diver has a cord which passes under his arms, and is fastened to the boat; he has a large stone fixed to his feet, that he may descend the quicker; and a sack or bag about his waist, into which he puts his oysters as fast as he finds them. As soon as he is at the bottom of the sea, he takes up as many as lie within his reach, and puts them into his bag as fast as possible. In order to ascend, he pulls strongly a different cord from that which is tied about his body; upon which signal those left in the boat draw him up as fast as they can, while he endeavours to rid himself of the stone at his feet, that he may rise the faster. When these boats are full of oysters, the negro merchants carry them all over the coasts, and sell them at so much an hundred. This kind of trade is very hazardous for those who purchase the oysters, since sometimes they find pearls of great price, and sometimes none at all, or such as are but of little value ^c.

Prudence and policy of the Dutch in their conduct towards the natives.

THE company draws also a considerable profit from the manufactures of muslin, chintz, and other cotton cloths; yet the greatest part of the muslins sent into *Europe* come not from hence, but from the coast of *Malabar*. The *Chingulays*, or native inhabitants of the island of *Ceylon*, are generally speaking very tall, of a very dark complexion, their ears excessive large, which is owing to the large and heavy ornaments which they wear in them. They are men of great courage, live very hard, and therefore make good soldiers; generally speaking, of the *Mohammedan* religion, but there are also amongst them idolaters, who worship cows and calves. They do not pay much respect to the *Dutch*; but treat them rather with contempt, and scornfully stile them their *Coast-keepers*. But the *Dutch* do not trouble themselves much about this; but, like good politicians, take all the care in the world to keep up a perfect correspondence with the king of *Candy*, that he may never be tempted to quarrel with, and refuse them his assistance, which would effectually destroy the most valuable part of their commerce. This, however, that monarch might do if he thought fit, without being under any great apprehensions from their power; since his dominions are separated from theirs by a large rapid river, and by forests so thick, that it is simply impossible to penetrate them ^d.

The remains of the Portuguese, and Chingulays by them converted, very numerous in Ceylon.

His subjects are particularly remarkable for their great skill in taming elephants, which they use as beasts of burden in time of peace, and in time of war make them very serviceable against their enemies. They are also of great value, considered as commodities; since the *Mogul*, the kings of *Pegu* and *Siam*, and indeed all the eastern princes in general, are willing to purchase them almost at any rate. It seems there are still remaining in this island, as well as in the countries possessed by the king of *Candy*, or, as it is frequently spelt, *Gandy*, as in the territories of the *Dutch*, numbers of the descendants from the *Portuguese*; since we find, that so lately as the treaty of *Utrecht*, a very warm application was made to the States General, by the *Portuguese* ambassador, that they might have leave either to assemble for the celebration of divine service in private houses, or be allowed to resort to the churches in the frontier villages belonging to that prince; which, notwithstanding all the services rendered by the king of *Portugal* to the maritime powers in the preceeding war, was in very rough terms absolutely refused ^e.

and rivulets, that roll with great rapidity down the sides of the mountains, in the centre of the island; of these there are four sorts, excellent in their kind, and of great value. First, rubies, which are found no-where else in the *Indies*, except in the kingdom of *Pegu*, which some very able judges prefer to those of *Ceylon*, while others of equal skill affirm those of *Ceylon*, to be superior to the rubies at *Pegu*. Upon a strict examination, it will be found that they are both in the right; for the rubies of *Pegu* are in general brighter, and more perfect, than those of *Ceylon*; but then they are much smaller; and, amongst the larger rubies found in this island, there are some as bright and perfect as those of *Pegu*, and consequently of a much greater value (26). The second are sapphires, white as well as blue; some large, without veins, and exceedingly hard, which are of great value. Topazes are the third kind of precious stones, and those of *Ceylon*

are the fairest and finest in the *Indies*. The fourth are cats-eyes, wonderfully beautiful, and very much esteemed for that surprising mixture of vivid colours which they derive from nature, and exhibit to the eye without the assistance of cutting or polishing (27). To these some good authors have added diamonds, but they were mistaken; for the truth of the matter is, that the natives are rather better acquainted with precious stones than the *Europeans*, and have an art of despoiling both sapphires and topazes of their colour, which they frequently sell to strangers, who are not so good judges as themselves, for diamonds. It is said the emperor prohibits his subjects from selling any of these precious stones to the *Dutch*; notwithstanding which, they find ways and means of procuring them in considerable quantities; and amongst these, there are some of very great price (28).

S E C T. XVII.

Nature and consequences of the Clove trade, and the manner in which it has been translated to Amboyna from the Proper Moluccas, and the motives which induced the company to take this method, as the most effectual for preserving this valuable branch of trade.

- a** **T**HE second government is that of *Amboyna*, one of the *Moluccas*. This island was formerly the seat of the governor-general, before the building of *Batavia*, which was transferred to that city on account of its advantageous situation in the midst of all the company's settlements; whereas *Amboyna* lies too far to the east. This island, however, is one of the biggest of the *Moluccas*. It is situated in the archipelago of *St. Lazarus*, between the third and fourth degrees of south latitude, one hundred forty-five degrees of longitude from the *Canary Islands*, and one hundred and twenty leagues to the eastward of *Batavia*. The fort here was taken from the *Portuguese* by the *Dutch* in 1605; but they did not render themselves entirely masters of *Amboyna*, and the adjacent countries, till the year 1627, when they had ridded themselves of the *English* also (Y). This conquest put the clove trade wholly into their hands: whence the *Moluccas* are stiled the gold mine of the company; and so they have proved, if we consider the profit they draw from them, and how little fear there is of their being ever exhausted^f. In order to convince the reader of this, we need only observe, that a pound-weight of nutmegs, or of cloves, costs the company not above an halfpenny, and every body knows at what rate they are sold in *Europe*.

Amboyna the second government under the Dutch East India company.

- b** This island of *Amboyna* is the centre of this rich commerce; and, to keep it more effectually in her hands, the company takes care to have all the clove-trees in the adjacent islands grubbed up and destroyed; and sometimes, when the harvest is very large in *Amboyna*, part of the produce there is burnt likewise. A few days after the fruit is gathered from the tree, they collect the cloves together, and dry them before the fire on hurdles, by which means they lose the beautiful red colour they derive from nature, and change into a deep purple, or rather black, which is perhaps occasioned by their being sprinkled with water. It is pretended that this sprinkling is necessary to hinder the worm from getting into the fruit; but it is thought a better reason may be assigned for it, which is, adding weight to the cloves^g.

The manner in which cloves are gathered, collected, and cured, in Amboyna.

^f ARGENSOLA, NIEUHOFF, SCHOUTEN, HAMILTON, DU BOIS. *dition de trois vaisseaux, tom. ii. p. 145, 146, 147.*

^g Memoires de Dr. GARÇIN. *L'expédition de trois vaisseaux, tom. ii. p. 145, 146, 147.*

(Y) The islands that are in the neighbourhood of *Amboyna*, and are distinguished by particular names, are seven; viz. *Oma*, *Uleaster*, *Nojlaru*, *Onime*, *Maffalon*, *Mulana*, and *Ostava*, according to some memoirs, which is the reason that we have placed them here in a note (29). But, in reality, the islands which are under the *Dutch* governor of *Amboyna* are ten, taking in the extent of about five degrees of longitude, that of *Amboyna* being farthest to the south; we shall give the names of these likewise in their order. 1. *Ceram* which is the largest in the whole government, indeed larger than all the rest, taking *Amboyna* into the number. 2. *Ceram-Lavut*, a small island four leagues to the east of the former. 3. *Bouro*, the largest next to *Ceram*, and which lies west of all the rest. 4. *Amblau*, which is the smallest, and three leagues from *Bouro*. 5. *Manipa*, between *Bouro* and *Ceram*. 6. *Kelang*, two leagues to the north-east of *Manipa*. 7. *Bonoa*, still farther north. 8. *Orna*, lying east from *Amboyna*, at the distance of two leagues. 9. *Honimoa*, a league to the east of *Orna*. 10. *Noussa-Laout*, a league south-east from the last mentioned island (30). These three islands, *Orna*, *Honimoa*, and *Noussa-Laout*, are stiled all together *Ulaassers*, which was formerly mistaken by *French* writers for the name of a particular island. It is in *Amboyna*, and in these three islands only, that cloves are now cul-

tivated; whereas formerly they grew in all the islands, more especially in *Ceram*. These are the islands the circuit of which the governor of *Amboyna* makes once in three years, in order to see that the company's injunctions are complied with, and that no cloves are suffered to grow (31). The island of *Amboyna* is divided into two parts, that is, a lesser and a greater peninsula. The former is called *Hitou*, twelve leagues in length, and two and a half broad: In this the *Dutch* have no less than five forts, or rather strong redoubts, mounted with cannon; the other is called *Leytimor*, five leagues in length, and one and a half broad, which is the southern part of the island; on this stands the fort of *Victoria*, which is the residence of the governor and his council, composed of fifteen gentlemen, or merchants. The fortress is a square, the ramparts mounted with sixty pieces of brass cannon, and the garrison usually composed of six hundred men (32). The inhabitants of *Amboyna* are computed at seventy or eighty thousand, of which but a small number are *Dutch*; and this obliges them to be continually upon their guard, and to keep a competent number of troops in each of their forts, particularly in that of *Middleburgh*, which stands upon the isthmus that connects these peninsulas (33). There are also redoubts and garrisons in all the other islands of this government.

(33) *Memoires sur le commerce des Hollandois*, p. 193. *Dictionnaire de commerce*, vol. ii. col. 887.

Very difficult to gain a distinct account of these matters, which are also liable to alterations.

It is very difficult, even with the greatest care, and after comparing the best memoirs that are to be met with upon this subject, to speak of it with that certainty and precision we could wish; because these accounts frequently contradict each other, and it is very difficult to distinguish where the truth lies. Besides, the *Dutch* are continually making alterations in their methods of managing the spice trade, so that the most exact account of it becomes in the space of a few years very imperfect. One ought to attribute to this a great many things set down by writers of credit, which are not at all agreeable to truth at this day. As for instance, that the cloves are shaken or beaten off the trees, whereas they are gathered very carefully with the hand; and it, by chance, any of the twigs are broken, it is no small prejudice to the tree. It has been said by some, that cloves are gathered but once in several years; by others, that they are gathered several times in one year. Both may be true if spoken of different places, and in different periods of time: at present there is but one great harvest, which is between the middle of *October* and the middle of *December*, sometimes sooner, sometimes later, according as the fruit comes to its maturity. Some years the produce is four, five, or six times as much as in others; but taking it at a medium for seven years, and it may be well fixed at a million of pounds; and it is computed, that, one with another, this is four pounds from every bearing tree ^a.

Method taken to destroy all the clove-trees in the Moluccas by the East India company.

THERE is a vulgar error prevails in respect to the hot nature of this plant, which is reported to be so great, that it suffers nothing to grow under it. The fact is, that nothing is permitted to grow under or about it, which is one great point in its cultivation. The *East India* company have published a long ordinance for the improvement and security of the clove plantations, which are divided into five districts, through all which the people are obliged to comply, under severe penalties, with what is directed in that order. The wild clove is larger, and more spongy; the cultivated clove less, harder, and much more aromatic in smell and taste. It is out of question that the *Dutch* have been at very great pains to extirpate the cloves in all the ten isles dependent upon that of *Amboyna*; and even in *Ceram*, where formerly the best cloves grew; and it is now highly penal for any to be found out of those districts which have been before mentioned. To prevent this, the governor of *Amboyna* makes the tour of his government with a fleet of curricuries, consisting sometimes of twenty, and at others of thirty, forty, or fifty sail; which expedition is made with all the pomp imaginable, in order to gratify the pride and folly of the *Indian* chiefs. The true reason of their taking all this pains is, because experience has shewn, that no contracts, however solemn, could restrain the inhabitants of those islands from selling their cloves to strangers; and even now frauds are so frequently practised by the *Dutch* themselves, though the company is inexorable in punishing them, that the common people call them *Galken-kruid*, that is, the gallows-spice ^b.

The strength of the company in Amboyna, and the additional advantages of that establishment.

As to the force the company has in *Amboyna*, it consists in the garrison in their great fort, which is very numerous, seldom less than six hundred, composed of their best troops, and kept constantly in excellent order. The fort itself, called *Victoria*, is so strong from art and nature, that it is in a manner impregnable; and so effectually commands the harbour, that it is impossible for a vessel to go in or out without being sunk by the cannon of the fort, if the governor give orders for that purpose. One would imagine, that so rich a commerce as that of cloves might be a sufficient return for the expence the company is at about this island. But such is their care to improve every thing to the utmost advantage, that of late years they have caused coffee to be planted, which is like to turn to great account ^c. Under the government of Mr. *Barnard*, however, there was a discovery made of a commodity still more valuable than coffee or cloves; for, through his vigilance, it was found that in some of the mountains there were considerable quantities of gold-dust washed down by the torrents; and this discovery he pursued with such effect, as at last to find out the mine; so that the wealth of these *Indian* countries is ever increasing when in the hands of those who know how to make the best use of every thing ^d. There is one thing more of which we must take notice, before we leave *Amboyna*, and that is, a kind of red wood which grows in this island, that, besides the beauty of its colour, is exceedingly firm and durable; and, which is still more extraordinary, is naturally embellished in its grain with abundance of beautiful figures. Of this wood they make tables, cabinets, escritaires, and other pieces of furniture, for the principal persons in the government, and the rest is sold all over the *Inaies*, at a very extravagant rate; so that this article is to be added to those already mentioned, of the riches in *Amboyna* ^e (Z).

L'expedition de trois

(Z) If we may yield intire credit to those who have taken pains to examine most closely into the affairs of the *Dutch East India* company upon the spot, and while in their service, we must believe that things are every day

day improving in that part of the world, where their governors are become now quite another sort of men than they were; and, instead of following the barbarous practice of the natives, or paying any deference to antique notions, or vulgar superstitions, they prefer the dictates of good sense, and the lights of experience, by which they have entirely changed the face of things, produce many more trees upon a less spot of ground, collect from them much greater quantities of spice, and that spice better in its nature, better cured, and better

packed, than formerly. Amongst other governors, Mr. *Schaghen*, who had the direction of affairs in the *Moluccas* from 1691 to 1696, when he was removed by death, is still famous for the improvement which he introduced in the culture and curing of cloves. His example has been followed by succeeding governors; and these plantations are now so regular, so beautiful, and the air so odoriferous and wholesome, that they contribute no less to the health and pleasure of the inhabitants than to the profit of the company (34).

(34) *Memoires de Dr. Gargin.*

S E C T. XVIII.

The government of the islands of Banda; state of the nutmeg trade; precautions taken to secure the monopoly of spices in the Indies, as well as in Europe; how far this hath hitherto succeeded.

- a** **T**HE next government is that of the isles of *Banda*, which are in number six, lying in the latitude of four degrees thirty minutes south, and at the distance of about four hundred and fifty leagues from *Batavia*. The first of these was called by its inhabitants *Bandan*; but, when the *Dutch* came thither, they established their factory at a place called *Lonthor*; and though that has been long ago destroyed, yet the island bears its name still, and is the largest of the isles of *Banda*, and produces most nutmegsⁿ. The island of *Neira* is next in size, where the *Dutch* have two forts; that of *Nassau*, which commands the narrow strait between this island and *Lonthor*, and the other *Belgica*, on the top of a hill in the midst of the island. The governor commonly resides in this island, and for the most part in *Fort Nassau*. *Gounong-api*, that is to say, the mountain of fire, in the *Malayan* language, lies to the west of *Neira*, with a very narrow chanel between them. It derives this name from a large burning hill, which throws out from time to time vast quantities of ashes, and has thereby corrupted not only the air of that island, but of all in its neighbourhood, to such a degree, that scarce any will inhabit them that are at full liberty, and have it in their power to subsist any-where else^o. *Poulo-ay* is a small island to the west of the three former; but the soil and climate are better than any of them; and in it the company has a good fort. *Poulo rhon* is that island about which they have had so many disputes with the crown of *England*, under the name of *Poleron*; and perhaps it may not be amiss to observe, that the word *Poulo*, in the *Malayan* language, signifies an island^p. This, of which we are speaking, is very small, barren, and almost destitute of inhabitants: and this description may likewise serve for the remaining island of *Rosingein*; so that they are no otherwise considerable than by their situation, which has induced the *Dutch* to erect a blockhouse on each of them, where they keep a serjeant's guard, in order to prevent the few miserable inhabitants there are, from having any intercourse with their neighbours or strangers^q (A).

Of the government of Banda, and the islands dependent on the government.

THIS is a true and fair representation of the state of these islands at this day; notwithstanding which they are of infinite consequence to the *Dutch*, and not inferior in value to *Amboyna*, into which, through policy, they have crouded all the wealth of the *Moluccas*. This arises from the important commerce in nutmegs, which grow there in such prodigious quantities, as to

The nature, culture, and advantages, of the nutmeg plantations in these isles.

ⁿ *Memoires sur le commerce des Hollandois*, p. 190, 191.

^o *Histoire de la conquête des Isles Moluques*, tom. iii. p. 274, 277, 278, 279.

^p *Dictionary de commerce*, tom. ii. col. 877, 878.

^q *L'expédition de trois vaisseaux*, tom. ii. p.

(A) The reader may perhaps receive some satisfaction from being made acquainted with the true state of things in these islands, and knowing the exact distribution of the nutmeg parks in each of them. The island of *Lonthor*, which is the biggest, contains twenty-five parks, some larger and some less; but which, all together, are thought to comprehend about seventy thousand toises square. The island of *Neira* is the next in size, as has been observed in the text; yet in this there are but two nutmeg parks, containing five thousand four hundred

toises square. The island of *Poulo-ay* is very small, but exceedingly fruitful, containing no less than six nutmeg parks, comprehending more than one hundred and forty thousand toises square. It is also generally observed, that both the mace and nutmegs produced in this island are preferable to those of the other two, which is entirely owing to the richness of the soil; for as to the air, it is just as bad here as in any of the adjacent isles, of which there has been enough said in the text (35).

(35) *Dictionary de commerce*, vol. ii. col. 878, 879, 880.

enable the *Dutch* to supply all the markets in *Europe*. The tree, which produces this excellent fruit, in size very much resembles a pear-tree; but its leaves are like those of a peach, except that they are larger. The nutmeg, when ripe, is pretty near the size of a walnut; and is covered with two skins, or shells, the first is very tough, and of the thickness of a man's finger, which falls off of itself as the fruit ripens. When it is candied, it has a very fine taste. The second is of a red colour, and has a very odoriferous smell. On the opening of this, the fruit appears with a little flower at the top, which is very beautiful, and in its form resembles the lily of the valley. They gather the nuts, and dry them; but, in the first place, they are thrown into quick lime, for otherwise worms would breed in and destroy them.

Fast pains
taken by the
company's or-
ders to prevent
the propagat-
ing nutmegs
elsewhere.

THERE are, besides those above-mentioned, several islands in the neighbourhood of *Banda*, in which nutmegs would grow, if the company did not take care to have them destroyed every year; which at first sight may seem extraordinary, since one would imagine, that their being thoroughly rooted out once might prevent their growing again. But this difficulty is easily solved, when it is known that the birds carry them annually into all these islands; whence the *Dutch* call them properly enough the gardeners of the spice-trees. It is not agreed how this is performed by the birds, though almost all travellers allow that it is performed by them. Mr. *Tavernier* tells us, that the nutmeg being ripe, several birds come from the islands towards the south, and devour it whole, but are forced to throw it up again before it be digested. That the nutmeg, then besmeared with a viscous matter, falling to the ground, takes root, and produces a tree, which would never thrive if it was otherwise planted. Mr. *Thevenot* again informs us, that the tree is produced after this manner: There are, says he, a kind of birds in the island, that, having picked off the green husk, swallow the nuts, which, having been some time in their stomachs, they void by the ordinary way; and they fail not to take root in the place where they fall, and in time grow up to a tree. This bird is shaped like a cuckoo; and the *Dutch* did formerly, as we are told, prohibit their subjects, under pain of death, to kill them * (B).

The manner of
the Dutch
plantations
more largely
described.

IN a long series of time the servants of the company have discovered in respect to this, as well as in regard to cinnamon and cloves, the best methods of cultivating and improving nutmegs, which we shall represent to the reader's view as concisely as it is possible. They grow now only in the three first islands; and, being very tender and delicate, are planted in parks, some larger, and some less. These are so called, not because of their being inclosed by walls or pallisades, but from their being fenced with other trees, taller and stouter than the nutmeg, in order to cover and protect the plantation from the winds to which those islands are subject. In these parks a great many slaves are constantly employed in weeding and keeping the ground clear, and in picking up the fruit that falls of itself, which is commonly the most perfect and valuable. The great harvest is in the months of *June* and *August*, which being the rainy season in those countries, accompanied also with strong gusts of wind, is frequently attended with great disasters, such as beating down and bruising the fruit green and ripe, before it can be gathered; which, however, is not lost, but is preserved in sugar, and becomes, either wet or dry, an excellent sweetmeat.

Account of the
nutmeg bar-
vests, and
some guess at
the produce
and value of
this spice.

IN the month of *November* there is a kind of latter harvest, or gleaning, consisting only of such fruit as was left to ripen; but in the month of *April* they visit the trees again; and, tho' the nutmegs gathered at this time be very few, yet they are by far the finest, as the fruit at that time hangs but thin, and has not been exposed to any bad weather. One year with another, it is computed that in these three islands there grow eight hundred thousand pounds weight of nutmegs; and, if the common opinion be right, about a fourth part of the same quantity of mace, in the following proportions: The island of *Lontor* produces six hundred

(B) It is a little difficult to say whether there might not be some truth in these accounts formerly, that is, in respect to the kindness shewn for these spice-planting birds, but at present they are in a quite different situation (36). There are in the islands of *Banda*, and at *Amboyna*, several sorts of birds, but more especially a kind of turtle-doves or pigeons, that, by swallowing cloves and nutmegs, and voiding them again, propagate wild trees over all these islands, which the company

oblige the inhabitants to pull up and destroy; and the birds also have no quarter given them in the plantations (37). As to the silly notion that these trees will grow no other way than by this kind of plantation, it has been long ago banished from all rational heads; for the fact is, that these trees are but too easily propagated, and it is this circumstance alone that makes the *Dutch* so jealous and uneasy about them (38).

a thousand; the island of *Neira* eighty thousand; the island of *Poulo-ay* one hundred and twenty thousand: the slaves that are employed in attending the trees, and curing the fruit, are between two and three thousand ^a. There is a wild nutmeg, as well as wild cinnamon and wild cloves, but of very little value, and easily distinguished from the genuine spice, which is long like a small egg. Wild nutmegs are very seldom, if ever, brought into *Europe*, because they will not keep, the worm breeding in them, either from their natural moisture, or from their not being treated in a proper manner at their being first gathered, in which it is said some niceties are observed, that the company's servants keep very secret. It is allowed, that, when ripe, the taste of this fruit, that is to say, of the pulp between the two outer coats, is harsh, rough, hot, and, upon the whole, disagreeable; and yet nothing more pleasant, when either pickled or candied. There are, among the inhabitants of this island, a sort of burgesies, who have the sole right to keep parks for the cultivation of nutmegs, for which they receive a very moderate gratification, and yet live at their ease. There grows here, as well as at *Ambony*, a sort of tree called *Caliputte*, from whence they draw a very rich and salutary oil, which is sold at a very high price ^a (C).

THE castles and blockhouses in the islands of *Banda* are exceedingly well fortified; yet, to prevent any accident that might happen in case an enemy should get into the port under *Dutch* colours, there is always a squadron of small vessels plying round the coast, which, upon the first appearance of a strange ship, immediately surround her, and examine whence she comes, whither bound, and of what strength. The garrison is numerous, but in a much worse condition than any other in the company's service; which arises from the want of victuals, the islands being in general of a barren, sandy soil, producing very little food of any sort, which is the reason that the soldiers eat cats, dogs, and any other animals that come to hand ^b. The rest of their provisions is tortoise, of which they have a reasonable plenty for about six months in the year; and, after this, they think themselves very happy if they are now-and-then able to get a little sorry fish. They make their bread of the juice of a tree, which resembles, when first drawn, the grounds of beer, but, when dried, it grows as hard as a stone; yet, when put into water, it swells and ferments, and so becomes fit to eat, that is, in a country where there is nothing else. As for butter, rice, dried fish, and other eatables, they are all sent thither from *Batavia*, and come much too dear for the soldiers to have any plenty of them. To speak the truth, as the inhabitants are none of the happiest, so they may be said to live full as well as they deserve, since there hardly ever was an honest man upon these islands ^c.

THE natives were such a race of cruel, perfidious, and untractable people (at least as the *Dutch* say), that the company was forced to root them out for their own security, and to send a *Dutch* colony into the islands; but then it is such a colony as hath not much mended the matter, being composed intirely of a worthless rascally people, that, not being able to live any-where else, were content to come, or were otherwise sentenced to be sent to starve here. The best is, that their misery is of no long date; for in a very short time they are destroyed by the dry gripes, or twisting of the guts, which is the epidemic distemper of the country. It is for this reason, and because young fellows that are wild are sometimes sent thither by their relations, that the *Dutch* at *Batavia*, generally speaking, call *Lontor*, or *Bandan*, the *Island of Correction* ^d. The only people who live tolerably there are the negroes, who were settled in it before the *Dutch* conquest, and have lived quietly ever since in their mountains. Some

^c L'expedition de trois vaisseaux, tom. ii. p. 157, 158.

(C) It is not a little strange, that before the coming of the *Europeans* into these countries, the natives themselves made no use of spices in the manner we do; but endeavoured to extract from them oils or balsams, which they held very salutary in pains in the head, gripings in the stomach, or numbness in the limbs (39). The emperor of *Ceylon* causes the flowers of cinnamon to be boiled, and, the oil being skimmed off the water, and suffered to dry in the shade, becomes white and hard, of which candles are made, that are burnt only in his presence (40). His subjects, however, are allowed to extract an oil from the tree mentioned in the text, which they burn in lamps, and use also externally with great success (41). What is stiled *Oleum Malabarabri* is an oil

drawn from the leaves of the cinnamon-tree, which is thick and bitter, and tastes very like the oil of cloves mixed with a small quantity of the true oil of cinnamon, and then it serves both for external and internal uses (42). In *Ambony* the natives use the oil of cloves in the same manner, but chiefly against cold diseases; they sometimes mingled a little powder of cloves with their tobacco, but, as this exceedingly disturbed the head, it was rarely practised. In the islands of *Banda* oil of nutmegs was used in case of cramps or numbness after sleeping in the open air; an accident common in all these countries (43). By degrees the oil mentioned in the text, being cheaper, and full as odoriferous, is grown more into use than any, or indeed all the rest (44).

of the latest accounts from this part of the world inform us, that the company have begun to make trials at *Amboyna*, whether nutmegs might not be cultivated there to a degree of perfection, with a design, it is believed, of transferring that spice thither intirely, as they have done the clove, as the eruptions of the vulcano before-mentioned become more and more frequent, and consequently the climate of the isles of *Banda* grows worse and worse.

* Dictionnaire de commerce, tom. ii. col. 838.

S E C T. XIX.

Account of two great governments; of Macassar in the island of Celebes, and of the Molucca Islands, out of which the cloves are extirpated, though in most geographical descriptions these are still called the spice islands.

City and fortrefs of Macassar, the fourth government in the company's dominions.

TH E city and fortrefs of *Macassar*, in the island of *Celebes*, is considered as the fourth government in the *East India* company's disposal. This island lies between *Borneo* and the *Moluccas*, at the distance of about one hundred and sixty leagues from *Batavia*. Its form is in a manner circular, and its diameter about one hundred and thirty leagues. It is called, and with good reason, the key of the spice islands. The form of government here is pretty much the same as in the other islands. Since the time the *Dutch* drove out the *Portuguese*, they have taken care to fortify themselves effectually on the sea-coast, and have always a very numerous garrison in the fort of *Macassar*, where the governor resides; which is so much the more necessary, because this island is very populous, and the people are beyond comparison the bravest and best soldiers in the *East Indies*. This nation, as we have already shewn, for a long time gave the *Dutch* inexpressible trouble, and rendered their commerce very precarious. Yet at last they were totally subdued; and, in consequence of the measures taken since the last treaty, stand at present as much in fear of the company as any other nation in that part of the world. The expence, however, of maintaining the troops, and the other charges of the government, are so large, that, till very lately, the company were no great gainers by their conquests, though the slave trade is here very beneficial. The reason that the company laid out such large sums, and took so much pains, to possess themselves of this island, was, in order to render it a bulwark to the *Moluccas*: for, before the last war of *Macassar*, which ended in the complete ruin of the power of the prince of that country, he found means to procure great quantities of mace, nutmegs, and cloves, which he sold to the *English*, and other nations, at a much more reasonable rate than the *Dutch* company; and therefore, as we hinted, they ought, in good policy, to have supported him (D).

Products and importance of this part of the noble island of Celebes.

TH E island is very fruitful, especially in rice, which is a commodity of great value in the *Indies*. The inhabitants are of a middle stature, of a yellow complexion, but good features, and are extremely brisk and active. They are said to be naturally thieves, traitors, and murderers; and that to such a degree, that it is not safe for any Christian to venture, after it is dark, without the wall of the *Dutch* forts, or to travel at any time far into the country, for fear of being robbed and murdered, than which nothing is more common. Yet there live under the protection of the *Dutch* forts abundance of the natives, who are free burgessees, and carry on a considerable trade; as do also the *Chinese*, who sail from hence in their own vessels into all the ports of the company's dominions, deriving immense wealth from their extensive

^f L'expédition de trois vaisseaux, vol. ii. p. 160, 161.

^h HAMILTON's account of the East Indies, tom. ii. p. 153.

^g Memoires sur le commerce des Hollandois, p.

(D) It is universally agreed by all who have visited the *Indies*, that the *Macassars* are in all respects much superior to the inhabitants of the other islands. Their complexions are of a light olive, their features regular and agreeable. They are, generally speaking, a middle-sized people, active, brave, ingenious, courteous, and well disposed to strangers. If well used, there are no people more faithful, or more obedient; but, if ill treated, they are very revengeful, and very seldom discover their resentment but by its effects (45). It is from this island that the *Dutch* company draw their best sol-

diers, who, as we have before observed, use little poisoned arrows, which they blow through a trunk. Since the *Dutch* became masters here, other nations, instead of repairing to *Celebes*, go to *Gilolo*, where they sometimes get considerable quantities of cloves and nutmegs; but, whether they grow in that country, or are smuggled thither from *Amboyna* and *Banda*, is more than these adventurers themselves pretend to determine (46). The *Dutch* are indefatigable in their endeavours to prevent this clandestine trade.

(45) Nieuboff, Tavernier, Graaf, &c.

(46) Hamilton's account of the East Indies, vol. ii. p. 142, 143.

a commerce, which they manage with a dexterity peculiar to themselves. The inland country is under the dominion of three different monarchs, who, very happily for the company, live in a constant bad intelligence with each other; and, if it were not for this, they might at any time drive the *Dutch* out of the island ¹.

ONE of these princes is also stiled the company's king, because he lives in a good correspondence with them, and promotes their interest as far as lies in his power. They make him from time to time presents of gold chains, coronets of gold set with precious stones, and other things of value, in order to keep him steady to his alliance, and prevent his inclining to a good understanding with the other two monarchs, which might be attended with consequences very fatal to their power and commerce ². About the year 1720 there happened an extraordinary event, which, it was thought, would have given a great turn to the company's affairs, and this was, the discovery of a rich gold mine, conceived then to be of so great consequence, that not only a great number of workmen, but a director, was also sent from *Batavia*, to carry on the work there ³. How far this has been attended with success, we are not able to say, and perhaps it is a secret that never will be known in its full extent, since it is a maxim with the *Dutch East India* company never to boast of her power or riches, but rather to lessen both in representations she makes from time to time to the States General; which is a caution very necessary to be remembered, in order to have a just notion of those accounts, in which they do not state the affairs of the company as they really are, but as they would have them understood to be, the better to intitle themselves to the favour and protection of the state ⁴.

c THE fifth of the company's great governments is that of the *Moluccas*, or, as it is generally called, from the governor's residence in that island, the government of *Ternate*. The very mention of this is sufficient to shew us, that there is nothing so fluctuating as power. This very island, which makes now but a part of a single government, bestowed by the directors of a trading company, was once the mistress of many nations; and its monarch boasted of having seventy two, or, as others affirm, ninety-two, tributary princes, who were at the same time sovereigns of as many islands ⁵. There is still a king, who has the honour to be stiled the chief ally; which is only a civil expression for the first subject of the *Dutch East India* company. It is true that the force of this island was in some measure exhausted before the *Dutch* arrived in these parts; first, by the revolt of several of those tributary princes, and afterwards by the long and bloody wars they maintained against the *Portuguese*, who sometimes held them in subjection. Neither did they tamely submit to the *Dutch* company, but defended themselves as well and as long as they could, till, by a conjunction of arts and arms, or, in plainer *English*, by force in some measure, and in some measure by fraud, they were compelled to submit, and, by the treaty of 1638, engaged to have no commerce with any other nation, or even with any *Dutch* ships that did not come with a passport from the governor and council at *Batavia* ⁶ (E).

BUT it is not only the power of the king, and the condition of his subjects, but the very state of the country, that is altered, and that in the highest degree. We have seen in the foregoing sections, that the *Moluccas*, strictly taken, that is, the five islands of *Ternate*, *Tidore*, *Bachian*, *Motir*, and *Makian*, which are precisely the places within the extent of this government, were the great objects of the *Portuguese* ambition, when they began to erect their empire in the east. We have seen what a high dispute was raised about them between the crowns of *Spain* and *Portugal*; we have seen what prodigious efforts the united forces of those two crowns made to preserve them from the *Dutch*; and we have also seen with what pains, with what expence, with what danger, and with what difficulty, the *Dutch* carried their point at last, so

¹ L'expédition de trois vaisseaux, tom. ii. p. 162, 163.

⁵ Dictionnaire de commerce, tom. ii. col. 875. Histoire de la conquête des Isles Moluques, tom. iii. p. 20.

⁶ Dictionnaire de commerce, tom. ii. p. 876.

(E) The king of *Ternate* was a Christian in 1722, and in all probability his successors will follow his example; but the kings of *Tidore* and *Bachian*, as well as all their subjects, are *Mohammedans* (47). The reader will not be displeased if we inform him that these three monarchs are fully persuaded, that it was their predecessors who went to visit our Saviour, upon the appearing of the star in the east; and it is very remarkable, that the *Mohammedans* are as warm in support of this fact as the Christians;

affirming, that an account of this transaction is preserved in an ancient oriental chronicle still remaining at *Mecca*. However this matter may be, the *Dutch* sailors, upon the feast of *Epiphany*, find their account in carrying painted stars, which they present to each of these monarchs, and are handsomely rewarded; that feast being celebrated with much solemnity, and a little too much superstition, both by *Mohammedans* and Christians (48).

(47) Histoire de la conquête des Isles Moluques, tom. iii. p. 351. p. 18, 19.

(48) L'expédition de trois vaisseaux, vol. ii.

as to become absolutely masters of them^p. Let us now inquire to what end? These five a little islands were esteemed the most valuable possession in the world, because in them, and in them only, grew cloves, and this it was that made such a stir about them. But, after the Dutch had held them about twenty-six years, they conceived it for their interest that cloves should grow no longer there. Accordingly by a treaty made in 1638 with the king of *Ternate*, and the other petty princes, they stipulated that all that kind of spice should be extirpated in every one of the islands, and not a clove-tree permitted ever to raise its head in one of them again. This treaty has been renewed twice since, and in consideration of annual pensions granted to the king and to the nobility of *Ternate*, and to the rest of the princes, which, after being twice augmented, do not amount, in the whole, to three thousand pounds sterling^q. This article is very punctually performed: for the company's farther security in b this particular, they maintain three strong forts; viz. *Orange*, *Holland*, and *Williamstadt*, with good garrisons, in the island of *Ternate*, and eight or nine more in the rest of the islands, where they vend a kind of cloth from the coast of *Guiney*, which brings them back most part, if not all their money; and, with other merchandize of small value, purchase rice and tortoise-shell, the only commodities that are now to be met with in the *Moluccas*^r (F).

^p ARGENSOLA conquista de las Islas Malucas. *vaisseaux*, tom. ii. p. 22.

^q Memoires de Dr. GARÇIN. L'expédition de trois *Memories sur le commerce des Hollandois*, p. 193, 194.

(F) After all this pains taken, and expence in maintaining so many garrisons, it is very doubtful whether the Dutch company would be able to preserve their monopoly, if these seas were visited by any other ships than their own; which seems to be the true reason why they will not suffer even Dutch vessels to enter their ports without certificates from *Batavia*. In order to understand this, it is necessary to observe, that some hints are to be met with, as if the free burghes in *Ternate* and

Tidre made sometimes trips to the country of *Neto Guiney*, where, for bits of iron, small looking-glasses, and other trifles, they obtain excellent nutmegs, mace, and cloves, birds of paradise, and gold dust, which are carried to *Gololo*, and there, except the two last commodities, sold to the *Chinese*; who, either by the permission of the Dutch, or by stealth, carry on a great trade among these islands (49).

S E C T. XX.

The government of the Cape of Good Hope. Detail of the vast improvements made there; and a brief view of the present condition of the Hottentots, their subjects. The method of the company's fleets touching here, and other curious particulars.

Of the Cape of Good Hope, the sixth government in the East India company's dominions.

THE sixth government bestowed by the company in the *Indies* is that of the *Cape of Good Hope*. The governor is always one of the counsellors of the *Indies*, and has likewise a council to assist him in the administration of affairs, as the rest of the governors have. The *Cape* is situated on the coast of *Caffres*, and is the most southern point of the continent of *Africa*; and in the year 1653 it was taken from the *Portuguese* by the *Dutch*. It is justly esteemed one of the most important places in the hands of the company, though it is certain that the profits they draw from it are not comparable to those arising from some of the islands in the *East Indies*; and formerly things were in a worse situation, the revenues from that settlement falling short of its expence^s. Yet it would be impossible to carry on their trade to the *East Indies*, if they were not possessed of this place; because at the *Cape*, and only at the *Cape*, they can meet with fresh water, and other refreshments, in their outward and homeward-bound voyages, which are absolutely requisite, especially for such as are eaten up with the scurvy, who seldom fail to be recovered by the helps they meet with here. d

The vast abundance of provisions at the Cape, and the prodigious advantage of this to the company.

THERE is such an abundance of all sorts of provisions at the *Cape*, that, notwithstanding this vast annual demand both by outward and homeward-bound ships of all nations, never any scarcity arises, but all ships meet with the succours they expect at a moderate rate. In order to have a just notion of the great importance of this place, it will be proper to observe, that, in the space of a year, at least forty outward-bound ships touch there from *Holland* alone, and in these there cannot be less than eight or nine thousand people^t. The homeward-bound ships from the *Indies* cannot be fewer, in the space of a year, than thirty-six, and on board these there

^s P. KOLBEN description du Cap de Bon Esperance, tom. i. p. 17. 21. 22. *merce*, tom. ii. col. 672.

^t Dictionnaire de com-

a are usually three thousand souls; not to speak of foreign vessels that likewise put in here, and have also all kinds of refreshments. This must appear very surprising, when one considers what vast quantities such numerous fleets must require. But this is not all; these ships do not enter the port, and sail again directly, but continue there for some time, inasmuch that there are always ships in the road, except in the months of *May, June, and July*, when it is dangerous on account of the north-west wind, that blows with the utmost violence during these three months ^u.

The description of this country, as it is situated in *Africa*, belongs to another place; and therefore here we shall confine ourselves only to what immediately concerns the port, and the œconomy of the company's government, in what we have farther to add upon the subject. ^{By a strange fatality this country was abandoned by the Portuguese and English, and long neglected by the Dutch.}
 b But, previous to this, it will be requisite to observe, that this country had not only been rejected by the *Portuguese* and the *English*, as not worth the pains of keeping, but was actually fifty years in the hands of the *Dutch* before they judged it capable of any improvements ^(G). That they changed their sentiments in this respect, and, of a wild and waste desert, rendered it the fairest, finest, and fruitfulest spot upon the globe, was intirely owing to the judicious foresight of a private man, and to the ready acceptance his project met with from the company's directors. The name of this extraordinary person was *Mr. Van Riebeeck*, a surgeon on board one of their ships; who, being some time on shore, conceived in his mind the plan of almost all that has been since done ^x.

In his passage home he digested his thoughts in writing; and, having laid his scheme before the directors, they not only approved it, but fitted out immediately a squadron of four ^{The whole settlement made, and all its consequences, due to the jealousy of Mr. Van Riebeeck.} c of large ships, laden with every thing requisite for putting it in execution, giving the sole command of them to *Van Riebeeck*, with instructions drawn from his own papers. This man laid the basis of his new establishment in equity; he purchased the country he resolved to settle in from the natives, and gave them for it such goods as they chose, to the amount of fifty thousand florins: he did not oblige them to remove, nor did he put the least constraint upon their freedom. When they were disposed to work, he paid them; when they were sick, he relieved them. As they had not the use of letters, there could be no written agreement between them; he took no advantage of this: he performed his promises punctually, by which the *Hottentots* came to have a confidence in the *Dutch*. It quickly appeared that his notions d were perfectly well founded, and that the country was every way capable of improvement; but, as all things necessary for that purpose were to be brought from *Europe*, these improvements could not be made but at a vast expence, from which however there could not be expected any immediate return. The company considered this in a very right light; they comprehended presently the importance of the design, and cheerfully furnished at the rate of a million *per annum* for twenty years; that is, in plain *English*, they spent two millions sterling to make this country and colony what they are ^z. In this, beyond all doubt, they acted a wise

^u L'expédition de trois vaisseaux, tom. ii. p. 169, 170, 171.

^w Dictionnaire de commerce, tom. ii. col.

672. ^x P. KOLBEN description du Cap de Bon Esperance, tom. i. p. 23. ^y Dictionnaire de commerce, tom. ii. col. 673.

^z P. KOLBEN description du Cap de Bon Esperance, tom. i. p. 27, 28, 29.

(G) The fortune of this country is so extraordinary, that the reader will be certainly pleased to find the hints given in the text somewhat more fully explained. We have before shewn, that a famous *Portuguese* sea officer, *Bartholomew Diaz*, was the first *European* that doubled the *Cape*, *Anno Domini* 1493, by whom it was called the *Stormy Cape*, which was changed into that it now bears by the *Portuguese* monarch *John* the second. It was certainly a capital fault in his subjects, for which they have paid very dear, that they did not make a proper settlement here; which, if they had done, might have been of great consequence to their establishments in the *Indies*. Instead of that they were continually squabbling with, and destroying the natives, whom they represented as the basest, most cruel, and perfidious barbarians in the world; which is a character they by no means deserved; and at the same time gave them so bad an impression of white men, that they looked upon them with abhorrence (50). In the reign of queen *Elizabeth* several

English ships touched at the *Cape*, and at length took possession of it with the usual forms, three condemned persons being sent to remain there. Accordingly they stayed some years, and were then brought off by another ship, to whom they made a dismal report of the country and the people, begging heartily to go home and be hanged, rather than stay there any longer. Upon this representation all thoughts of fixing a colony there were given up; though the necessity of having some place of refreshment for outward and homeward bound ships to and from the *Indies* was so apparent, that the island of *St. Helena* was fixed upon, and has served for that purpose ever since (51). The *Dutch* began to touch at the *Cape* as early as 1600, and very prudently built a fort there, the ruins of which are still visible; but the first project of a settlement was in 1648; of the rise and progress of which the reader has a succinct account in the text, which it is hoped these dates and remarks will render sufficiently clear (52).

(50) P. Kolben description du Cap de Bon Esperance, vol. ii. p. 17. 21. *East Indies*, vol. i. p. 1, 2, 3, 4.

(51) *Hamilton's account of the*

and

and great part, worthy not only of praise and imitation, but of that prodigious success with which Providence has been pleased to bless their prudence and perseverance (H).

Bay at the Cape exceedingly spacious, admirably secured, and wonderfully advantageous. THE bay is very fine and large, of an oval form, and entering two or three leagues within land; about nine miles in circuit, and is capable of holding one hundred sail of large ships very commodiously; yet it must be allowed, that the anchorage is not every-where alike good, and near the shore there is some danger. The middle of this bay is commanded by a very strong fort, which is a regular pentagon, each bastion mounted with twenty pieces of heavy cannon. The fort and the town are both situated on the edge of a plain, three leagues in extent, at the bottom of three very high mountains; the first is stiled the *Lion Mountain*, because it has the resemblance of a lion couching upon his belly; the next is the *Table Mountain*, which is much higher, so that in a clear day it may be seen twenty leagues; the third is called the *Devil's Mountain*, and is not so remarkable as either of the former. The houses of which this town is composed are very neat, yet not above two stories high, because of the furious south-east winds that sometimes blow here. The people who dwell at the *Cape*, and on the coast, are for the most part Christians, and are stiled *Africans*; those who inhabit the country farther within land are called peasants. They are all of them either *Europeans*, or descended from *Europeans* ^a.

State of the inland plantations; and of such as in this country the Dutch stile peasants. THERE are some who are settled three hundred leagues from the coast; notwithstanding which, they are all obliged once a year to appear at a place called *Stellenbech*, where the *Droffard*, or magistrate of the country, resides. The design is, that they may pass in review; for the peasants, as well as the townsmen, are formed into companies commanded by proper officers. After the review is over, they return to their respective dwellings, and generally carry home such tools as they have occasion for in their country work. These people cultivate their ground, and sow rye, barley, beans, &c. They likewise plant vines, which produce very fine grapes, of which they make excellent wine. There are some of these peasants that are in very happy circumstances, having, besides large and well cultivated plantations, great quantities of sheep and cattle. Amongst other colonies, there is one at the distance of eight leagues from the town, intirely composed of *French* refugees, who have there a large tract of country very well cultivated. The place where they live is called *Drachonsstein*, and they are allowed churches and ministers of their own nation ^b. Part of the inhabitants of the town are in the service of the company, and the rest are free burgeses. They have their proper magistrates, who decide causes of small consequence, and regulate little disputes that happen amongst them; but, as to matters of any importance, they are carried before the governor and his council, who determine finally, and without appeal. It is pretty much the same in the flat country, where the *Droffard* terminates all things of small consequence; but any thing of importance is always carried before the governor and his council, by whom it is determined; and their sentences, in civil and criminal affairs, are executed without delay. As for the military establishment, it is exactly on the same foot as at *Batavia*; the officer who commands in chief has the rank and pay of a major-general. The officers under him are captains, lieutenants, and ensigns, who take care to keep their companies always complete, and well disciplined; so that, in case of an attack, they can draw together at least five thousand men well armed, and as good as any regular troops; every peasant knowing whither to repair, in order to range himself under his proper standard ^c (I).

THE

^a L'expedition de trois vaisseaux, tom. ii. p. 228, 229. ^b P. KOIBEN description du Cap de Bon Esperance, tom. ii. p. 52. ^c L'expedition de trois vaisseaux, tom. ii. p. 231.

(H) There are few persons who have left posterity clearer memorials either of their virtue or ability than this ingenious surgeon; and it is very happy for the *Dutch* nation that the principles he laid down have been steadily pursued in the management of this country ever since; because it would be no difficult thing to shew, that this system could never have been changed for a better. The company have now a vast territory, the soil of which is fruitful, the climate wholesome and pleasant, the country wonderfully improved, and daily improving, and this in the way most to their advantage, that is, by agriculture, vineyards, and feeding of cattle; so that their provisions and their people increase in the same proportion; and this colony, in the space of a few years, will become so populous, and the people, from their manner of living, so vigorous and hardy, that they will not only be secure from any attempt that other nations

might make, but be also in a condition to furnish supplies of well seasoned and serviceable men for the protection of any of their settlements in the *Indies*, in case of emergencies; a point of true policy, which the *French* have very wisely begun to imitate (53).

(I) It must be admitted, notwithstanding some imperfections and mismanagements to which the *Dutch East India* company, as well as all other great bodies, must be liable, that they are in many respects better served, and have their affairs managed with more oeconomy, than perhaps any other company in *Europe*; of this the establishment we are now speaking of is a sufficient proof. The company have there a governor and council, with the civil, military, and ecclesiastical establishment, the ordinary and extraordinary expence of which is borne by them in a very honourable manner; so that upwards of twelve hundred persons are maintained at their charge,

(53) See our account of their settlements in the isles of Bourbon and France.

exclusive

- a THE country round the town, at the *Cape*, is full of vineyards and gardens; the company have two, which are perhaps the finest in the world, the one lies at the distance of two hundred paces from the fort, between the town and *Table Mountain*; it is about fourteen hundred paces in length, and two hundred thirty-five in breadth: a fine rivulet from the mountain runs through the midst of it: it is divided into quarters; and they cultivate therein, with the utmost success, the fruits and flowers of all the four parts of the world. The other garden is at the distance of two leagues, in that which is called the *New Country*, and is likewise kept in the best order that can be by the slaves of the company, which are seldom less than five hundred^d. The country thereabouts is mountainous and stony; but the valleys very agreeable, and exceedingly fertile. The climate is the best in the world, for cold and heat are never felt there in any excessive degree; and the people live to great ages without diseases, which are never known but when produced by intemperance. The very mountains, besides contributing to the wholesomeness of the place, are supposed to be full of gold, and other valuable metals: some essays have been made, but as yet no mines have been discovered in such a situation as would permit the working of them to advantage. The late Mr. *Van Steel*, when he was governor of the *Cape*, travelled over the country, and examined it with great care and attention. He caused gardens to be laid out, and pleasure-houses to be built, in several places; but the peasants, who were employed in building these houses, and cultivating these gardens, sent over a complaint to the company, alleging, that it was prejudicial to their private affairs, and put it out of their power to maintain their families. Upon this, the governor was recalled immediately. His discoveries, however, were of very great consequence, inasmuch as they made known not only the inner parts of the country, but the nations who inhabit them^e.

- THESE, so far as they are yet discovered, consist of seven different nations, all comprehended under the general name of *Hottentots*. The first of these, and the least considerable, are without a chief, live in the neighbourhood of the *Cape*, and are most of them in the service of the company, dwell with townsmen, or are employed by the peasants and farmers in cultivating their lands. The second inhabit the mountains, or, to speak with greater propriety, live in the caverns of the mountains. They are thieves by profession, and draw their subsistence intirely from plundering the peaceable *Hottentots*, with whom they are in continual war. There is one thing, however, that is very singular with regard to this thievish nation, which is, that they never rob or molest a Christian. The third nation is called the *Little Macqua*; the fourth the *Great Macqua*; the fifth the *Little Kricqua*; the sixth the *Great Kricqua*. These words *Macqua* and *Kricqua* signify king or chief. They are constantly engaged in war with each other; but, when any nation is in danger of being ruined, two or three nations immediately join them; for the balance of power is a maxim as well understood and supported by the *Hottentots* as by the potentates in *Europe*^f.

- PART of these *Hottentots* have submitted themselves, and are therefore stiled the company's *Hottentots*. The *Dutch* send annually about fifty or sixty persons to trade with these people, who purchase their cattle, and give them in exchange arrack, tobacco, hemp, and such seeds as they have occasion for, by which means a good understanding is preserved. These *Hottentots* of the company are very often attacked by the other nations; and, when they find they have so far the worst of it that they are no longer able to defend themselves by their own force, the king puts himself at the head of a small body of troops, and marches down to the *Cape* to demand assistance. As soon as he arrives, he goes to the governor, with the principal people of his nation, holding the commanding staff in his hand, given him by the company, and which has their arms upon it; and, extending it towards the governor, desires he would grant him succours. If the governor does not think fit to yield to his request, but contents himself with giving him good words, he, without more ado, throws his staff at the governor's feet, and tells him in bad *Dutch*, *Voor my niet meer compagnies Hottentot*, that is, *For me, I will be no*

exclusive of a numerous militia, both horse and foot, that serve at their own charge, or that of the colony. The company likewise defrays the necessary expence of her ships outward and homeward-bound, and maintains an hospital for diseased seamen; all of which, taken together, comes within the sum of forty thousand pounds sterling *per annum*, which is answered by the sale of goods at the *Cape*, and by the customs and excises; so that,

upon the whole, they are little or nothing out of pocket, tho' near one half of their disbursements ought not to be placed to the account of this colony; so that in this sense they may be said to draw from thence a clear revenue of twenty thousand pounds sterling a year, with this additional advantage, that their income is constantly increasing (49).

(49) P. Kolsen description du Cap de Bon Esperance, vol. ii. p. 83.

more the company's Hottentot. The governor, however, generally sends an escort of troops^a back with him : for it is the interest of the company to be upon good terms with this sort of a prince, because he is always ready to do whatever they desire of him².

Some account
of the Caffres,
a nation more
martial and
more barbar-
ous than the
Hottentots.

THE seventh nation is that of the *Caffres*. These are properly the *Antropophagi*, who have made so much noise in the world. The *Hottentots* are exceedingly afraid of them ; and take all the care they can to keep out of their way, for fear of being roasted or boiled if they should be taken prisoners. This abominable nation would never enter into any sort of commerce with the Christians ; but, on the contrary, take all the pains they can to entrap them, in order to murder, and, as is generally believed, to eat them. It is indeed reported of late years, that they are grown somewhat more tractable, and entertain some sort of trade with those who will venture to have any dealings with them. They are a very potent and warlike nation, being^b all of them strong well-made men ; and, though their hair is curled and black, like that of other negroes, yet they have better faces, and a much more manly appearance^b (K).

^a L'expédition de trois vaisseaux, tom. ii. p. 236, 237.
L'expédition de trois vaisseaux, tom. ii. p. 240, 241.

^b HAMILTON's account of the East Indies, tom. i. p. 5.

(K) What is said in the text of the *Caffres* is taken from the *Dutch* writers in general, who perhaps have given a little too much credit to the *Hottentots* ; for, after all, there is some reason to doubt whether these people are men eaters, or void of civility and virtue (50). An author, whose veracity is justly esteemed, informs us of an *Englishman*, that a *Dutch* captain, who went into this country to trade, found living there à la mode de *Caffre*, who had two wives, and was very rich. The captain exhorted him to leave his family, which was very numerous, and return to the *Cape* ; to which the *Englishman* was easily persuaded. But the king of the *Caffres*, having intelligence of these conferences, sent for his white *Caffre* ; represented to him the baseness, ingratitude, and inhumanity, of such a behaviour ; told him that his wives and children must starve and perish ; that it was a wicked and profligate return for that humane

and generous treatment which he had received amongst them ; and that he ought to consider that as his country, where, by choice, he had taken wives, by whom he had many children. The *Englishman*, says this author, was so wrought upon by the eloquence of the black monarch, that he not only abandoned his design, but prevailed upon one of the *Dutch* captain's seamen to remain in that country, and bear him company. A writer of our own country gives us much the same account of these *Caffres* ; and adds a remarkable instance of their honesty and humanity (51). It is true that the accounts given here and in the text contradict each other, but there is no help for that ; and it is much better to give the reader notice of these contradictions, than to make choice of either account as certain, when in reality this cannot be affirmed of any hitherto received. The utmost that can be said, is, that the latter seems to be the more probable of the two.

S E C T. XXI.

The government of the fortress and territory of Malacca, the last, but not the least considerable, of the company's first-rate governments. The difficulties of reducing it, which fixed them in the Indies ; and the great importance of this settlement, from its admirable situation.

THE last government is that of *Malacca*, which city is the capital of a small kingdom^c of the same name, the inhabitants of which are called *Malayans*. The governor here is a merchant, and the establishment much the same with those in the other governments. The kingdom of *Malacca* makes the south part of the peninsula of *India*, beyond the *Ganges* ; and is divided from the great island of *Sumatra* by a streight, which bears the name of the *Streights of Malacca*. The *Dutch*, after several attempts, took this place from the *Portuguese* in 1641, and have maintained themselves in the possession of it ever since. It may not be amiss to describe the manner in which they acquired this strong fortress. They were informed that great disputes subsisted between the garrison and the king of *Johore* ; from which they immediately conceived hopes of reducing it. With this view they fitted out from *Batavia* a strong fleet, with a great body of land-forces on board : and at the same time concluded an alliance with the king of *Johore*, offensive and defensive, as long as the sun and moon gave light to the world. On which the king of *Johore*, with twenty thousand men, laid siege to the fort by land, while the *Dutch* distressed it by sea ; and yet, for all that both the fleet and army could do, they could not have taken it but by reducing them thro' famine, which would have taken up a great deal of time ; so what they could not effect by force they did by fraud^d. THEY heard that the *Portuguese* governor was sordid and avaricious, for which ill qualities he was much hated by the garrison ; the *Dutch* therefore tampered with him by letters, pro-

a mising him mountains of gold if he would contribute towards their reducing the fort. At length the price was set; 80,000 pieces of eight were to be the reward of his treachery, and he was to be safely transported to *Batavia* in their fleet, and be made a free denizen there. Upon this he gave secret instructions to the *Dutch* to make an attack on the east side of the fort, and he would act his part; which was accordingly done. He next called a council, and told the officers he had a mind to circumvent the *Dutch*, by letting them come close to the fort-walls; and then to fire briskly from all quarters, and destroy them at once. In consequence of this, the *Dutch* made their approaches without molestation, and placed their ladders^k. The garrison sent message after message, to acquaint the governor what danger they were in for want of orders to fire or sally on the *Dutch*, as was agreed on in council; but he delayed so long, till the enemy got into the fort, and drove the guard from the east gate, which they soon opened, to receive the rest of the army; who, as soon as they were entered, gave quarter to none that were in arms, marching directly towards the governor's house, where he thought himself secure by the treaty; but they forthwith dispatched him, to save the eighty thousand dollars.

THE city is large, and drives a great trade in consequence of its excellent situation, which renders it the storehouse and magazine of all that part of *India*; but there is one great inconveniency at *Malacca*, and that is, the scarcity of provisions; and even what little is to be had consists only of different kinds of fish. The inhabitants are of a dark complexion; a brisk, cunning, active people, and great thieves. Some of them are idolaters, but, generally speaking, they are *Mohammedans*. The *Portuguese* had no less than three churches and a chapel within the fort, and one without. That which the *Dutch* now use for their worship stands conspicuously on the top of an hill, and may be seen up and down the streights at a good distance; and a flag-staff is placed on the steeple, on which a flag is hoisted on the sight of any ship^l. The fort is both large and strong; the sea washing the walls of one part; a deep, rapid, but narrow river, the west side; and a broad deep ditch the rest of it. The governor's house is both beautiful and convenient; and there are several other good houses in the fort, and in the town without the fort; but the road is at too great a distance for ships to be defended by the fort, the shallowness of the sea obliging them to lie above a league off, which is a very great prejudice: for, in 1709, the *French*, coming into the streights with a squadron of three or four sail, and seeing a large ship in the road from *Japan*, stood in; and had certainly carried her out, if the wind had not failed them when but a musket-shot from her^m. At *Malacca* the streights are not above four leagues broad; for though the opposite shore on *Sumatra* is very low, yet it may be easily seen in a clear day; which is the reason the sea is always as smooth as a mill pond, except when ruffled with squalls of wind, which are commonly accompanied with lightning, thunder, and rain; yet, though they come with great violence, they are soon over, seldom exceeding an hourⁿ.

THE country produces nothing for a foreign market, except a little tin, and elephants teeth; but several excellent fruits and roots for the use of the inhabitants, and strangers who call for refreshments. Yet, after all, this is a matter but of small consequence, and would by no means compensate the charge, or justify the prudence of the *Dutch* company, in taking so much pains, and being at so large an expence, for the preservation of this small district. It is the importance of its situation that makes *Malacca* so much regarded. It stands as it were in the midst of the sea; and, if one may be allowed the expression, divides *India* from *India*; that is, there can be no commerce safely carried on from the coasts of *Malabar*, *Coromandel*, or the *Bay of Bengal*, to *Sumatra*, *Borneo*, *Java*, or the rest of the islands, or to *China* and *Japan*, without the leave of such as are masters of it^o. This was a thing known before the *Europeans* found a passage in these seas by the *Cape of Good Hope*; it was a just sense of this that put the *Portuguese* upon taking it; in which however they found more difficulty than in almost any of their conquests. It was this that made the *Dutch* so restless till they had it, and this makes them so cautious and so jealous in the preservation of it. They know that if ever a war should happen, its importance would quickly appear; and they very well know, that it is the sense that both *Indian* and *European* nations have of this that in a great measure contributes to their enjoying peace. These are the arguments, therefore, that have prevailed upon them to make it one of their principal governments; and these are the arguments which all competent judges of the trade of *India* must necessarily approve^p (L).

trefs, in which there are about three hundred *Dutch* families, and a much larger number of *Chinese*, *Malayans*, and

S E C T. XXII.

An account of the secondary governments, or, as the Dutch stile them, directions, on the coast of Coromandel, in Bengal, at Surat, and at Gombroon, ; as also of the commandants on the coast of Malabar, and elsewhere.

Directors, tho' inferior in rank and appointments, have the same power with governors.

WE have now done with the *Dutch East India* company's governments; and the reader will observe, that, as we hinted before, these are confined to those places of which they are absolute masters, and where other nations have no trade at all, or none but by their permission. But, as they carry on a prodigious commerce to places that are not immediately in their own possession; so those who have the superintendency of their concerns in these places, are distinguished by different titles. The directories of *Coromandel*, *Surat*, *Bengal*, and *Persia*, are all of great consequence, and the direction attended with great profit. The directors have, within the extent of their jurisdictions, the same power with the company's governors. The sole distinction is, that the director cannot execute any criminal sentence where he resides, but must cause it to be done under the company's flag; so that all criminals are executed on board a ship^a.

The first direction is that of the coast of Coromandel; the residence of the director fixed to Negapatam.

THE directory of *Coromandel* is the first of the four, and he who presides there has the fort and factories belonging to the *Dutch* under his inspection; as, in the commerce on this coast, the *English* and *Danes* have a share, and have built several good fortresses for its protection. The company have, notwithstanding, a very considerable interest in this part of *India*. Besides *Negapatam*, which lies on the southernmost point of *Coromandel*, and the fort of *Guedria*, in which the director resides, they have the factories of *Guenepatnam*, *Sadrespattam*, *Malispattam*, *Pelecol*, *Datkorom*, *Benispattam*, *Nagernauty*, and *Golconda*. The whole extent of the coast from *Negapatam* to *Masulipatan* may be about one hundred leagues. The *Dutch* director has a council; and, if he discharges his office with reputation, he is commonly, after a few years, chosen one of the counsellors of the *Indies*. This is a very wise provision in the management of the company's affairs, that the honour and rank of a counsellor of the *Indies*, though a post of much less profit than that of a director or governor, makes it aspired to by such as are already in more profitable employments; for it is not a very extraordinary thing in the *Indies* for a governor, in the space of a few years, to acquire an estate equal to the original capital of the *East India* company, that is six millions and an half of guilders, which amounts to upwards of half a million sterling^b. Messieurs *Disboek*, *Heilman*, *Swaardekroon*, *Patras*, and *Van Cloon*, within memory, acquired prodigious fortunes. There are also places at *Batavia* so very profitable, that, when the principal merchants are possessed of them, they sometimes decline the dignity of counsellor of the *Indies*, because, however honourable it may be, the profits are but small in comparison of these lucrative employments; such as the *Shabander* or chief of the custom-house, the *Fiscal* of the sea, the *Drossard* of the flat countries; all which bring in prodigious sums^c.

An account of the present condition and importance of this commerce.

HERETOFORE the country of *Coromandel*, being divided into a great number of principalities, these little princes or chiefs laid such high duties, and gave such interruptions to trade, as made the *Dutch* very uneasy; but, after the war of *Golconda*, which cost the company a great deal of money, but ended at last to their advantage, these princes grew more tractable

^a L'expedition de trois vaisseaux, tom. ii. p. 175. GRAAF, p. 300, 301.

^b Ibid. p. 176.

^c Voyage de NICOLAS

and other *Indian* nations (52). Besides their governor, who has the supreme direction of civil and military affairs, the *Dutch* company has another officer here, who is intirely independent, and is charged with whatever regards customs, licences, and duties; from whence the best part of the company's revenues spring. He is still distinguished by the title of *Shabander*, which is the usual title of this officer in all oriental ports; was borrowed from the natives by the *Portuguese*, and is still retained by the *Dutch* (53). This was formerly the place to which the company's ships repaired on their return from *Japan*; and here there cargoes were landed, and new assortments made for the different ports of *India*. But this method has been laid aside for many years, upon account of the

great frauds to which it was exposed; and those ships now return to *Batavia*, that the distribution of their cargoes may be made under the eye of the general and council of the *Indies* (54). This must certainly have diminished the commerce of *Malacca*, which however is very far from being so inconsiderable as it is generally represented; since, as the countries behind it abound with gold, so it is well enough known that the company's servants find ways and means to come in for a share, and very seldom fail of raising good fortunes in a few years, notwithstanding all the complaints made of the vast decay of commerce, and the great expence the company is at for its preservation and defence.

(52) *Memoires sur le commerce des Hollandais*, p. 201. *Dictionnaire de commerce*, vol. ii. col. 803. (53) *Janiçow* etat present de la republique des Provinces Unies, vol. i. p. 369. *Memoires de Dr. Garçin*. (54) *Dictionnaire de commerce*, vol. ii. col. 803.

a than formerly. At present the kings of *Bijnagar* and *Narsinga*, who are the most powerful in *Coromandel*, live on pretty good terms with the *Dutch*, and other *Europeans* (M). The chief trade carried on there is in cottons, muslins, chintzes, and such kind of goods; in exchange for which the *Dutch* bring them spices, japan, copper, steel, gold dust, sandal and siampan woods. The inhabitants of the country are some of them pagans, some *Mohammedans*, and not a few Christians. During the east monsoon the weather is exceedingly hot, yet the country is very fertile in rice, fruits, herbs, and whatever else is necessary for the support of man. All the manufactures of this country are transported in the company's ships to *Batavia*, from whence they are sent home to *Holland*, and thence, with great profit, distributed throughout all *Germany* and the north.

b THE seats of the second and third directions are fixed, the former at *Ougli*, on the *Ganges*, The second direction, seated at Ougli, in the Bay of Bengal, now in the Mogul's dominion. thirty-six leagues from the mouth of that river; the other in the city of *Surat*; both in the territories of the *Great Mogul*. Those marts are the most considerable for trade in all *Asia*. The *Dutch*, *English*, *French*, and other *Europeans*, traffick to both, and have erected factories and magazines for their security and convenience. The best part of the trade is carried on by negro merchants, who deal in all sorts of goods, such as opium, diamonds, rich stuffs, and all kinds of cotton manufactures. The empire of the *Great Mogul* is of a prodigious extent, and the countries under his dominion are esteemed the richest in the world. The air is tolerably pure: and yet the head-ach, and a kind of malignant fever, are common diseases here. The latter generally attacks strangers, and is a kind of seasoning sickness, in which if the patient escapes the third day, he generally recovers. Most of the inhabitants of this country are tall, black, robust men, and of a gay, lively disposition. In point of religion they are many of them idolaters, more *Mohammedans*, and some Christians; but that of *Mohammed* is the prevailing religion. As for the idolaters, they are split into abundance of sects, some of which believe firmly the metempsychosis, or transmigration of souls, and for this reason they will not take away the life of any living creature. They employ themselves, when they reside in towns, in the silk, cotton, and linen manufactures; and in the country, they cultivate their plantations, with the utmost diligence: so that they annually transport prodigious quantities of grain from hence to *Batavia*.

d SURAT is a town of no very great antiquity, but very large, and immensely rich. It is in compass about five miles within the walls, and the number of inhabitants are computed at two hundred thousand. The *Moorish*, and even the *Indian* merchants, are many of them prodigiously rich. The former addict themselves chiefly to the diamond trade, which is very precarious; for, with some, a small stock produces an immense fortune, whereas others waste prodigious sums, without finding stones of any great value; for at the diamond mines, they purchase so many yards square at a certain price, pay the slaves who dig and sift the earth, and take whatever stones are found in that spot, which sometimes are of great value, and sometimes so small and so few, as not to quit costs. Other *Moorish* merchants deal largely in foreign trade; and, as the *Mogul* is a very easy master, so there are some who arrive at prodigious wealth, and carry on such a commerce, as can scarce be credited in *Europe*. About 1720, there died a *Moorish* merchant at *Surat*, who fitted out annually twenty sail of ships, from three to eight hundred ton, the cargoes of which ran from ten to twenty thousand pounds; and he had always goods in his magazines equal in value to what he sent abroad. The customs of *Surat* amount every year to upwards of one hundred and sixty thousand pounds; and, as the merchants pay there, at a medium, three *per cent.* the value of the goods imported amounts to upwards of five millions. It is fit to observe, that, at this port, and indeed thro' all the dominions of the *Great Mogul*, *Europeans* deal chiefly for gold and silver, with which they find they purchase commodities on the easiest terms; and in this the *Dutch*, who settled

§ HAMILTON'S history of the

East Indies, vol. i. p. 149.

(M) In consequence of the company's success in the war mentioned in the text, they not only freed themselves from all the hardships to which their trade had been exposed from the ambition, injustice, or caprice, of the king of *Golconda*, but likewise obtained some great privileges, which they still enjoy, though that country is now under the dominion of the *Great Mogul*. The first is, that no merchant or trader among the natives, with whom their servants have any dealings, shall be liable to have his goods seized, on any pretence whatever, till the debts of the company are first satisfied. Next, that

whatever weavers, painters, or other manufacturers, are employed by the company, shall not be compelled to undertake any kind of work till they have intirely complied with those contracts. Lastly, that the company shall be at full liberty to employ what brokers they please, and not those of the government, or of the *Rajah's*: and, besides these, they enjoy, in common with the other *European* nations, an intire exemption from the duty styled *Chappa dellala*, for marking their cloths, which the natives are obliged to pay, and amounts to twelve *per cent.* (55).

(55) Memoires sur le commerce des Hollandois, p. 204, 205. Jançon etat present de la republique de Provinces Unies, vol. i. p. 378, 379. Dictionnaire de commerce, vol. ii. col. 791.

here about 1616, have a considerable advantage; for, instead of coin or bullion, they bring a fine silver from *Japan*, which bears a better price, as the *Indians* consume most of the rich metals they obtain in vast services of plate, very rich brocades, or in gold and silver stuffs, of which much is worn in their own country, and not a little transported into *Persia*, and other places; so that the common opinion of their hoarding up and burying silver is not over well founded ^a (N).

The fourth and last direction fixed at Gambroon, or Bandar-Abassi, on the coast of Persia.

THE fourth and last establishment under a director, is that at *Bandar Abassi*, on the coast of *Persia*. The director has a council, and a fiscal, to assist him. As this city stands on the gulf of *Balsora*, and is the only port which the *Persian* monarchs have on the *Indian* sea, it lies at a great distance from *Batavia*; which is one reason why this direction is not so much sought as others: but there is another more potent, which is, that the heat is greater there than in any other place, and the air excessively unwholesome. To balance these inconveniences, the director of *Gambroon* has an opportunity of making, in a short time, a vast fortune; so that some, who have been in that direction four or five years, have acquired such estates, as rendered it unnecessary to concern themselves any farther in commerce ^b. There are other *European* nations settled there besides the *Dutch*; but they have by far the best factory, and have fortified it so effectually, that though the highlanders in its neighbourhood, who are a crew of bold and barbarous robbers, have often attacked, yet they never could master it. This city is but a disagreeable place to live in, since in *August* it is so hot, that there is no bearing it, and in winter so cold, that they not only wear *English* cloth, but line it with furs ^c. They have here black cattle, sheep, goats, fowl, and fish, very good in their kind, and tolerably cheap; grapes, melons, and mangoes, in the utmost perfection; excellent wine, esteemed by the best judges superior to that of all other countries; and, as a proof of this, it is asserted, that it will bear four times its quantity of water, and still preserve a very rich flavour. In those troubles which have now for many years disturbed the whole dominions of *Persia*, all trading nations have had their share, and the *Dutch* amongst the rest; neither is it possible to say in what state their affairs stand in this empire at present (O).

AFTER

^a *Histoire des Indes*, vol. ii. p. 46. *HAMILTON's* account of the East Indies, vol. i. p. 149. ^b *Dictionnaire de commerce*, tom. ii. col. 709, 710. ^c *HAMILTON's* account of the East Indies, vol. i. p. 94, 95.

(N) We find it very positively asserted, in some books of travels which are in good repute, that the *European* factories at *Surat* are very strong, and well fortified, particularly that of the *Dutch*; which, however, is directly contrary to truth. If the reader is desirous of knowing how this can possibly happen, since it is a point about which an eye-witness can hardly be mistaken, it may afford him some satisfaction, when he is told, that many of these writers, and some of note, to render their books more complete, describe places where they never were, according to the best accounts they can get, and receiving these from persons that speak very indistinctly, fall into great mistakes. The *Dutch* settled here about the year 1616; and their factory is nothing more than a large house in the midst of the city, at a good distance from the river; and so far from being fortified, that it is really out of repair; not through any neglect in the company and their servants, but for want of a licence from the *Mogul*, his ministers being rather more jealous of the *Dutch* than of any other *European* nation (56). When their ships arrive in the road of *Surat*, their goods are brought on shore, and placed under a great tent at the foot of the castle, and under the command of the guns of that fortress, with a small guard of the company's soldiers, where they remain during the fair monsoon; before the end of which, the best part of them are sold, and sent away, and what remain, on the approach of foul weather, brought to their magazines, which are very far from being large. The three great commodities in which they deal are spices, sugar, and elephants teeth; upon all which, but more especially upon the last, they have a prodigious profit, since ivory sells no where better; they likewise vend copper, tin, tortoise-shell, camphire, vermilion, and *European* cloths of all sorts; their

returns are made in a variety of goods, which would take up more room than we can spare to mention; and we shall therefore only remark, that they carry from hence great quantities of silver coin, viz. *roupies*, with which they purchase goods in the bay of *Bengal*, and also rough diamonds. Upon their factory at *Surat* depend the establishments they have at *Amadabad*, and some other places in the dominions of the *Mogul* (57).

(O) Though the *Dutch* came later into the *Persian* trade than the *English*, yet, by their indefatigable industry, and their extraordinary address, in the management of commercial affairs, they came very soon to have a considerable share in this traffick, and went on improving it continually. At first, the company were not a little uneasy on the score of the superior privileges granted to the *English*, in return for the services they had rendered to the *Persian* government. But, in the year 1652, they found means to indemnify themselves, by a treaty which they made with the *Persian* court, by which they were allowed to bring in a certain quantity of goods, without paying any duties outward or inward; in consideration of which, they obliged themselves to take annually six hundred bales of silk, amounting, in the whole, to near seventeen thousand pound weight, at the price set by the officer of the *Shah* (58). By this bargain they would have been no great gainers at any time, and must have suffered often very much, if they had not been wise enough to take certain precautions. In the first place, they lived very handsomely in the factory, where the *Shah's* officers were elegantly entertained, and received, from time to time, valuable presents. In return for these, they sometimes procured an abatement in the number of bales, and permitted, at all times, twice the quantity of goods to enter duty-free, that had been stipulated in the treaty. In

(56) *Dictionnaire de commerce*, vol. ii. col. 423, 424. p. 208, 209. *Ovington's voyage to Surat*.

(57) *Memoires sur le commerce des Hollandais*, sur le commerce des Hollandais, p. 209, 210. *L'expedition de trois vaisseaux*, vol. ii. p. 182, 183.

a AFTER directors, the next rank in the *Dutch East India* company's service is commandant, *Commandants* or chief. In some places, where military skill, and a strict attention to the safety of the place *and chiefs, officers of the* committed to his care, is chiefly required, the power is intrusted with an officer, who has the *third rank in* title of commandant; and in other places, where almost the sole concern is trade, a merchant is at the head of the company's affairs, who is stiled the *Dutch* chief. As directors are *the company's* restrained from causing criminals to be executed, except under the company's flag, on board one of their ships; so there is a farther restriction upon a commandant, or chief; for his sentence is not valid, till revised, and confirmed, by the general and council at *Batavia*. This employment, though in the third rank, is very considerable, and the person raised thereto is respected within his jurisdiction, and his orders are as punctually obeyed, as if he had a superior *service.*

b title; but in case he exceeds the bounds of his authority, like the rest of the company's servants, he is liable to be called to an account; by the civil magistrates, if he be a chief; and by a court-martial if a commander; which keeps them pretty well to their duty⁴. We shall take the same method in speaking of these that has been pursued in giving an account of the governors and directors, as, indeed, there is no other method by which the power and influence of this company in the *Indies* can be thoroughly shewn, or an adequate idea given of its present state and strength.

THE coast of *Malabar* extends about an hundred and fifty leagues in length, and in breadth about twenty. The climate, though very warm, is very wholesome; the soil also is fertile in rice, fruit, and all sorts of herbs. This country is divided into abundance of small principalities; among which, the following have the title of kingdoms; viz. *Cananor, Calicut, Cranganor, Couchin, Calicoulang, Porca, Coulang, and Travankor*⁵. As the capital of the *Dutch* possessions in this country is the city of *Couchin*, where the commandant resides, we shall particularly describe that little kingdom. It reaches from *Cbitwa*, about twenty-four leagues to the southward, and, on the coast, is divided by the rivulets that run from the mountains of *Gatti*, into a multitude of small islands; and these rivers have two great mouths, or outlets, one at *Couchin*, the other at *Cranganor*. The *Portuguese* built, at the first of these, a fine city, on the river side, about three leagues from the sea; but the sea gaining on the land yearly, it is not distant now above one hundred paces, which makes it strong by nature; but art has not been wanting to fortify it. The city built by the *Portuguese* was a mile and an half long, and a mile broad. The *Dutch* took it about the year 1662, when *Heitloff van Gbonz* was general of their forces by land and sea, and the king of *Couchin* assisted with twenty thousand men⁶.

Couchin, the residence of the company's commandant upon the coast of Malabar.

THE *Dutch* had scarcely invested the place, before *Van Gbonz* received advice of a peace between *Portugal* and *Holland*; but that he kept a secret. He therefore, having made a breach in the weakest part of the wall, proceeded to an assault for eight days and nights, without intermission, and relieved his men every three hours; but the *Portuguese* keeping theirs continually upon duty all the while, and finding the city, at last, in danger of being taken by storm, delivered up the place. In the town there were four hundred *Topasses*, who had done good service, but were not comprehended in the treaty. As they knew the cruelty and licentiousness of the *Dutch* soldiery, they drew up on a parade, within the port at which the *Portuguese* were to go out, and the *Dutch* to enter, and swore, that if they had not the same favour granted as the *Portuguese*, they would massacre them all, and set fire to the town. The *Dutch* general knew his interest too well to deny what they desired, and offered moreover, to take those who had a mind to serve into *Dutch* pay; which many of them accepted. The very next day came a frigate from *Goa*, with the articles of peace; and the *Portuguese* complaining loudly of the general's unfair dealings, were answered, that the *Portuguese* had acted the same farce towards the *Dutch*, at their taking *Fernambuco*, in *Brazil*, a few years before⁷.

The manner in which the Dutch reduced this place when under the Portuguese.

f THE *English* had then a factory in *Couchin*; but the *Dutch* ordered them to remove, with their effects, which they accordingly did, to *Pennary*. The *Dutch*, thinking the place too large, contracted it to one-tenth of it. It is about six hundred paces long, and two hundred broad, fortified with seven large bastions, and curtains so thick, that two rows of large trees

Upon this revolution, the English, who had a factory

consequence of these relaxations, the *Dutch* were very considerable gainers; which induced them to build a new factory here, much handsomer, and more convenient, as well as much more spacious, than their old one (59). Upon this depended their house at *Ispahan*, and another in *Kirmen*. But, as we intimated in the text, it is not

easy to say how things stand there at present, since the trade of all the *European* nations has suffered severely, during the civil wars that have so long distressed that empire, and from which it is as yet far from being recovered (60).

(59) Dictionnaire de commerce, vol. ii. col. 709, 710.

(60) L'expedition de trois vaisseaux, vol. ii. p. 185.

there, were
obliged to
withdraw.

are planted on them, for shade in the hot season. Some streets built by the *Portuguese* are still a standing, with a church for the *Dutch* service, and the cathedral, which is now turned into a warehouse. The commander's house, a stately structure, is the only house built after the *Dutch* mode, and the river washes some part of its walls. Their flag-staff is placed on the steeple of the old cathedral, on a mast of seventy five feet high, so that the flag may be seen above seven leagues off. The garrison here generally consists of three hundred effective men: and from hence to *Cape Comorin*, are allowed for garrisons, in all their forts and factories, five hundred soldiers, and one hundred seamen, *Europeans*, besides some *Topasses*, and the militia. They have their rice from *Barfalore*; because the *Malabar* rice will not keep above three months out, but in the husk a year. The country produces great quantities of pepper, but lighter than that which grows more to the north. Their woods afford good teak for building, and angelique b and pawpeet for making large chests and cabinets, which are carried all over the west coasts of *India*. They have also iron and steel in plenty, and bees-wax, for exporting. The sea affords them abundance of good fish, of several kinds, which, with those that are caught in their rivers, make them very cheap ^b (P).

A considerable
settlement of
the Jews at
Cranganor,
from the time
of the capti-
vity.

CRANGANOR lies a league up the river from the sea, and the *Dutch* have also a fort there. This place is remarkable for having been formerly the seat of a *Jewish* government, that nation having been once so numerous there, that they could reckon above eighty thousand families, but at present are reduced to four thousand. They have a synagogue at *Couchin*, not far from the king's palace, about two miles from the city, in which are carefully kept their records, engraven on copper-plates, in *Hebrew* characters; and when any of the characters c decay, they are new cut: so that they can shew their history from the reign of *Nebuchadnezzar* to this present time ¹.

A succinct his-
tory of this
Jewish mo-
narchy, pub-
lished by Mr.
Van Reed,
from their
own records.

MYNHEER *Van Reed*, about the year 1695, had an abstract of their history translated from the *Hebrew* into *Low Dutch*. They declare themselves to be the tribe of *Manasseh*, a part whereof was by *Nebuchadnezzar* carried to the most eastern province of his large empire, which, it seems, reached as far as *Cape Comorin*; which journey twenty thousand of them travelled, in three years from their setting out from *Babylon*. When they arrived in the *Malabar* country, they found the inhabitants very civil and hospitable to strangers, giving liberty of conscience in religious matters, and the free use of their abilities, and industry in commerce. There they increased in number and riches, till, in process of time, either by policy or wealth, or both, d they made themselves masters of the little kingdom of *Cranganor*; and one family among them being much esteemed for wisdom, power, and riches, two of the sons of that family were chosen by their senators to govern the commonwealth, and reign jointly. Concord, the strongest bond of society, was, in a short time, broken, and ambition took place; for one of the brothers inviting his colleague to a feast, and, picking a quarrel with his guest, basely killed him; thinking, by that means, to reign alone. But the deceased leaving a son, of a bold spirit, behind him, he revenged his father's death, by killing the fratricide; and so the state fell into democracy, which still continues (Q). But the lands have many ages since, returned

^b L' Expedition de trois vaisseaux, tom. ii. p. 190, 191. HAMILTON's account of the East Indies, vol. i. p. 330, 331. ¹ Dictionnaire de commerce, tom. ii. col. 784.

(P) We have in the former part of this chapter, shewn how the *Dutch*, in virtue of their conquests upon the *Malabar* coast, have engrossed, in a great measure, the trade in pepper and cardamoms, by exclusive treaties with most of the petty princes; upon which advantageous footing that commerce still continues, and by which, consequently, they are very great gainers. It is true, that sometimes attempts are made to throw off their yoke, but they have hitherto been so far from having had that effect, that they have, on the contrary, contributed to make it more heavy. The *Samorin*, who was so great a prince when the *Portuguese* came upon this coast, retained some appearance of grandeur, and, which was much better, a real independency, till, about the year 1714, he engaged in a war with the *Dutch* company. It seems they had begun to build a fort at *Chitava*, on the frontiers of the *Samorin*'s dominions, which, without any previous complaint, or declaration of war, he surprised, and put a garrison into, which brought on a war. As the *Dutch* have, in their several fortresses upon this coast, a body of at least a thousand *European* troops, and a considerable maritime force besides, they

distressed the *Indian* monarch exceedingly; and, in the end, obliged him to conclude a peace, upon very disadvantageous terms: for he agreed to rebuild the fort which, soon after the war began, he had demolished, at his own expence; to pay all the charges of the war, which amounted to a large sum; and which was infinitely the worst part of the bargain, granted the *Dutch* company a duty of seven *per cent.* upon all the pepper exported out of his territories, for ever; so that he is now a vassal as well as the rest, though not altogether so much under their dominion (61).

(Q) In the travels which go under the name of *Benjamin de Tudela*, there are some passages which have been believed to relate to this kingdom of *Cranganor*; but that writer is so obscure, and his relation so confused, that, if his credit was better than it is, it would be no easy task to discover his meaning (62). Other authors of the same nation, but much later in point of time, have spoke of this country more clearly, but, at the same time, have swelled their accounts with such unconnected and incredible fables, that if we had no other evidence, we should scarce suspect they contained any truth. For, instead of

(61) Hamilton's account of the Indies, vol. i. p. 715, 716, 717.

(62) Ben. Tudela's travels, cap. 19.

a returned into the hands of the *Malabars*, and poverty and oppression have made many apostatise ^k.

BETWEEN *Cranganor* and *Couchin*, there is an island called *Baybin*. It is four leagues long, *Island of* but no part of it is two miles broad. The *Dutch* forbid all vessels or boats to enter at *Cranga-Bayhin*. *nor* and at *Couchin*. The chanel is about a quarter of a mile broad, but very deep, though the bar has not above fourteen feet water at spring-tides. It is from the large extent of country, and the considerable body of troops, over which he has an intire command, that the officer who presides at *Couchin* is looked upon as the first of his rank ^l.

b THE second commandery in the company's service is that of *Ponte de Gallo*, in the island of *Ponte de Gal-Ceylon*; the first fortress of consequence that fell into the hands of the *Dutch*, and a place, both ^{lo on the island} from its situation and strength, of very great importance. The port is more capacious, and ^{of Ceylon, the} much more commodious, than that of *Columbo*, but it is somewhat exposed to the west winds ^{second post in} The commander is subject to the orders of the governor of *Ceylon*, and can do nothing without ^{which the} his approbation. The reason of preserving this distinct command is, that, before the rest of ^{Dutch have a} the coast was reduced, this officer was at the head of the company's affairs in the island, and it still remains a post both of honour and profit; from whence, in process of time, such as discharge it with reputation are frequently raised to be governors ^m. It is here that the greatest part of the trade of the natives is carried on; and it may not be amiss to observe, that, as amongst the *Chingualeys*, every trade, and every profession, is confined to a particular tribe, or, as they style them, casts; so those who exercise merchandize are divided into four casts; which are thus distinguished; the *Chittays*; that is to say, Merchants who deal in drugs of all kinds, ^c linens, and other manufactures, and who are sometimes also concerned in shipping. The *Caver-chittays*, who deal in gold, silver, and other metals, in which they make assays, and ^a are very skilful. The *Cometi-chittays*, who vend grain, roots, herbs, and other kinds of provision. The *Valigi-chittays*, whose traffic consists in jewels, crystals, toys of their own making, and all sorts of minerals. Each of these casts live distinct and separate, never intermarry, nor so much as eat and drink one with another; which is also an inviolable rule amongst the casts of other professions; so that every branch of business remains precisely in the same hands, from one generation to another. Some writers say, that there is also a commander established in the fortress of *Jasanapatan*, in the same island; but whether this is an ^d old regulation, and is since laid aside, or whether it be still kept up, we cannot take upon us to decide ⁿ (R).

THE fourth commandery is that of *Samarang*, in the island of *Java*, which stands at the distance of sixty-eight miles from *Batavia*, and is one of the most considerable towns in that great island. It is very agreeably seated in a fine and fertile plain, with a large river running through it, navigable for small vessels. It is computed that the town does not consist of fewer ^{The last officer with that resident at Samarang in the island of Java.}

^k HAMILTON's account of the East Indies, vol. i. p. 324, 325. tom. ii. p. 190.

^m Dictionnaire de commerce, tom. ii. col. 851. L'expedition de trois vaisseaux, tom. ii. p. 192. ⁿ Dictionnaire de commerce, tom. ii. col. 851. HAMILTON's account of the East Indies, vol. i. p. 337, 338.

one kingdom, they make many, and those very populous and powerful, and this at a period when, in fact, this very kingdom of which they speak was much sunk and decayed (63). The famous traveller *Marco Polo* ment ons them in his writings; and though, at first, this was looked upon as an improbability, yet it has been since considered as a proof of the authenticity of his relations (64). The learned *Spanheim* takes notice of the several countries of the east through which the *Jews* are scattered (65). The famous Mr. *Du Pin* mentions a long letter, written by the *Jews* at *Couchin* to the synagogue at *Amsterdam*, in which was contained a short history of their establishment at *Cranganor*, to which he doubts what credit should be given (66). But that this letter was really genuine, there does not seem to be any good ground to doubt. It was from this country that numbers of *Jews* went to *Goa*, in the time of its prosperity, where they were received, had large privileges granted them, and were exempted from the power of the inquisition.

(R) The *Dutch* writers are not very distinct in what they report concerning the authority of the commandant at *Ponte de Gallo*, who is sometimes represented as dependent upon, and sometimes as free from any subjection

to, the governor of *Ceylon*. The truth seems to be, that they are checks upon each other; for the commandant is not appointed by the governor, nor can he remove him. On the other hand, the commandant cannot go out of the road of his ordinary functions, without giving advice to, and receiving the approbation of, the governor general. As this is the chief and proper port of the island to which the *Dutch* fleets constantly resort, it is impossible to conceive, that any considerable defection could be made, while the commandant here remained firm to his trust, to which he must be necessarily excited, by the first appearance of want of fidelity in the governor, as his pursuing a contrary conduct would be the most probable method of becoming his successor. As for the governor of *Jasanapatan*, it seems very likely that he should have the like title, and enjoy the same privileges, with the commandant of *Ponte de Gallo*, as he has a large tract of country under his direction, particularly the island of *Manaar*, which lies opposite to the coast of *Coromandel*, in which the company keep their state prisoners, and where they have sometimes had several *Indian* princes confined at a time (67).

than twenty thousand houses. The *Dutch* factory is very large and commodious, the fort ^a strong, well fortified, and held by a garrison that is always complete. The commander has under his direction all the adjacent coast. And the commerce here is very considerable, as well with the *Chinese*, who resort thither in great numbers, as the natives of the island of *Java*, who are continually bringing great quantities of provision and merchandize thither. It is from hence that the *Dutch* correspond with the emperor of *Java*, who holds his court at *Cartasaura*, which is distant from thence about four days journey, and is a city consisting of about thirty thousand houses, some built of stone, some of wood, and some of bamboo-canes. He resided formerly at *Mataram*, which is a days journey farther from *Samarang*, being without comparison the largest city in the whole island, two full leagues in length, and containing upwards of sixty thousand houses. The commander of *Samarang* is always an officer of distinction, one upon ^b whose judgment, activity, and fidelity, the company can intirely rely; for otherwise, any mistake or omission of his might be very fatal to their affairs, in a country where the people are restrained only by an apprehension of superior force; which, however, seldom keeps them from carrying on secret intrigues, and dark contrivances ^c.

^c Dictionnaire de commerce, tom. ii. col. 865. L'expedition de trois vaisseaux, tom. ii. p. 190.

S E C T. XXIII.

The third order of governments under those who are stiled only chiefs; viz. Bantam, in the isle of Java; Padang, Puclambam, and at the river Bencalis, in the island of Sumatra, than which, no country in the Indies is more abundant in gold, though no great sums are brought to the company's account.

First chief established at Bantam, in the same island, which is an office of great emolument.

^c **A**T *Bantam*, on the same island, the head of the factory has the title of chief. There is a very strong fort there, and a numerous garrison, to keep the people in awe, who are very mutinous, and far enough from being well affected to the *Dutch*. The king has also a fort, at the distance of some hundred paces from the company's fort, in which he has likewise a good garrison, for the security of his person. The only commodity of the country is pepper, of which they are able to export annually ten thousand tons. The bay of *Bantam* is very safe and pleasant, in which are many islands, that still retain the names given them by the *English*, who had formerly a very fine factory at this place, from which they were expelled in 1683 ^d. The *East India* company oblige the king to furnish them with a certain quantity of pepper; in all other respects they treat him kindly enough, because it is their interest so to do. He is the sovereign of a great country well peopled, and his subjects are a hardy enterprising nation, perfidious, revengeful, and naturally hating all Christians to the last degree. After giving this character of the people, the reader will know what to think of the dexterity and address of the *Dutch*, who are able to constrain such a nation, and to make them submissive, though not obedient. At the same time, however, we may take notice, that they are kept continually upon their guard; no private person, nay, no company of a score, or better, dare stir from under the cover of their fortifications; if they did, the first *Javanese* that had it in his power would infallibly deprive them of life ^d.

Dangers to which the Dutch are exposed.

At first sight, this seems to be a terrible inconvenience, and such as scarce any nation would support, for any consideration. But do the company consider things in this light? It may be not. This villainous disposition in the natives keeps the company's servants always upon their guard, confines their thoughts to their business, that it may be thoroughly and punctually dispatched, and themselves so much the sooner released from a place where they must live in continual disquiet. One may the more readily conceive this to be the case, because it seems to correspond with other maxims of the company's policy, very different in that respect from the *Portuguese*, who, by associating to much with the natives of the countries which they possessed, fell, by degrees, into all their customs, and began to forget the interest of their mother-country; which, whatever other faults they may have, is not to be reckoned among the vices of the *Dutch*, to which quality alone may be, in some measure, ascribed the stability of all their settlements in the *Indies* (S). ^e

THE

^p HAMILTON's account of the East Indies, vol. ii. p. 127. P. 194.

^q L'expedition de trois vaisseaux, tom. ii.

(S) Though the company grants various privileges to remain and settle in the *Indies*, more especially in the the meaner sort of people, in order to engage them to island of *Amboyna*, *Banda*, and the *Moluccas*, yet they pursue

- a** THE second, who is stiled chief, resides at *Padang*, on the coast of *Sumatra*, otherwise called *The second post of chief fixed at Padang, on the coast of the island of Sumatra.* This chief has his council and fiscal, like the rest, and it is usually considered as a very profitable employment. *Sumatra* is a very large fine island, separated from the continent of *Asia* by the *Streights of Malacca*, and is justly regarded as one of the richest countries in the *Indies*. It is, according to the best accounts, upwards of four hundred leagues in circumference. The greatest and most powerful monarch therein is the king of *Achem*, or, as is written in the *Indies*, *Atcheen* *. It was formerly governed by a woman, and queen *Elizabeth* entertained a close correspondence with the queen of *Achem*, who was living in her time. It is not above forty years since the government fell into the hands of a man; and several attempts have been made since to restore the old constitution, under which the people
- b** were much happier than any of their neighbours. It is to this day a free port, to which *English*, *Dutch*, *Portuguese*, *Chinese*, and in short all the nations of *Europe* and *Asia*, trade with safety. The goods which are brought thither are rich brocades, silks, muslins of all sorts, raw silk, fish, butter, oil, and ammunition, for which they are paid chiefly in gold, the great commodity of the country, and remarkably fine. The country is mountainous, which is not looked upon as a great inconvenience, since almost all these hills abound with gold, silver, lead, and other metals; and the company is possessed of some mines of gold which are very rich, and great care taken both to secure and conceal the profits that are made of them. There are likewise great quantities of gold-dust found in the rivulets of this country, especially during the time the west monsoon reigns, because then the torrents roll from the
- c** mountains with great rapidity (T). There is also abundance of copper of which they make great guns; several sorts of precious stones; and a mountain of burning brimstone, which continually throws out flames, like mount *Gebel* in *Sicily*. There are not any of those sorts of corn that grow in *Europe*, but plenty of rice, millet, and fruits, which afford good and sufficient nourishment for the inhabitants. It produces likewise abundance of honey, bees-wax, ginger, camphire, cassia, pepper, &c. white tanlers, and especially cotton, of which the inhabitants make their garments, and a variety of manufactures †.

- There is no country in the *Indies*, where, during the western monsoons, the rains fall with greater violence, or are attended with more terrible storms of thunder, lightening, and earthquakes, than *Sumatra*; but the natives, being used to them, are not much alarmed, *Few countries richer in gold than this island of Sumatra, in different parts.*
- d** bear them patiently, and are seldom heard to complain of their climate. These people are generally speaking *Mohammedans*, and are very expert in making all sorts of gold plate with very few tools, and yet with such inimitable dexterity, that what is of their workmanship sells at a very great rate throughout all the *Indies* ‡. The company sends every year a great

* *Memoires sur le commerce des Hollandois*, p. 202.
p. 685.

† *Geographie moderne*, par ABRAHAM DU BOIS, p. 198, 199. Voyages de NICOLAS DE GRAAF, p. 21.

pursue a contrary policy with respect to those who attain to the first employments in their service, and acquire considerable estates, and frequently put them under such difficulties, as oblige them to return home. This, joined with that natural affection which the *Dutch* preserve for their own country, and the desire they have of displaying in *Europe* the effects of their good fortune in the *Indies*, is a matter of no small consequence, since it equally contributes to keep every thing quiet in the *Indies*, which would not be altogether so easy if there were many rich and potent families in each of their settlements, and proves the means of returning annually immense riches into the *United Provinces*; many of which, as they were acquired, would be spent in these, if their possessors could promise themselves that ease, independency, and security, which naturally becomes the wish of every man, who, after many years danger and fatigue, finds himself at last master of a large estate. A contrary conduct would certainly make their colonies more flourishing, but the advantages derived from them to their mother-country would not then be so great.

(T) Upon comparing the best accounts that can be had of this island, it very fully appears, that not only gold abounds in almost all parts of it, but, what can scarce be said of any other country, there are found in *Sumatra* all the different sorts of gold of which we find any mention made by such as are best acquainted with that precious metal, and the different methods in which

it is collected. We have, in the text, spoken of the more common ways of coming at gold in *Sumatra*; but, beside these, there are others not so generally known (68). Some of the servants in the *Dutch* factories have, at the proper season of the year, staked flannel waistcoats in the small rivulet running down from the mountains; and, by wringing them twice or thrice in twenty-four hours, have obtained considerable quantities of gold-dust. By washing the mud taken out of holes in the rock, they obtain bits of gold from the bigness of pins heads to pieces weighing a quarter of an ounce, and sometimes more, but the latter are very rare. Larger pieces of gold are sometimes taken out of a rich, black, soft, mould; but, except the gold dust, these are of a low touch, that is, are far from being pure. The high mountains in the centre of the island are inhabited by a race of wild and savage people, who exchange with their more civilized neighbours for necessaries, and more especially, when they can get them for arms and ammunition, a sort of rock gold, than which there is none finer in the world; and from these people are sometimes purchased pieces of the rock, which appears sometimes to be a kind of white solid marble, through which there run sprigs, or, if we may be allowed to call them, veins of pure gold, some scarce bigger than a hair, and others as large as a common quill. These rocky fragments are preserved as curiosities in the cabinets of persons of distinction at *Batavia* (69),

(68) *Voyages de Nicolas Graaf aux Indes Orientales*, p. 22. *L'expedition de trois vaisseaux*, vol. ii. p. 198. *Memoires sur le commerce des Hollandois*, p. 203. (69) *Memoires de Dr. Garcin. Histoire des Indes par Guyon*, vol. ii. p. 212, 213. *Dictionnaire de commerce*, vol. iii. col. 1539.

number of slaves to work in their gold mines. The kings in that part of the country are very rarely upon good terms with the *Dutch*, and sometimes quarrel with the company, and draw all their subjects out of their service. The principal places where gold is found by the natives of the country are *Triou* and *Manincabo*. Their most usual method of coming at it is thus: they dig, at the bottom of the mountain, ditches, where the water being stopped as it pours down the sides of the mountain in the winter, in the summer they draw it off, and, by washing the mud which remains at the bottom, obtain from thence considerable quantities of gold-dust. It is generally believed that this island furnishes annually five thousand pounds weight of this precious metal; yet very little, if any, is ever brought to *Europe*, the *East India* company employing it in other places where gold is valuable, and where they can purchase other commodities which at home turn to a better account^t.

Another
Dutch factory
fixed at Pul-
lambam, on
the coasts of
the same island.

THE *Dutch* have a factory at *Pullambam*, about eight leagues from the coast, on the banks of a very large river, that empties itself into the sea by four different channels. The great trade carried on there is that of pepper, which the *East India* company would willingly monopolize in the same manner they do cloves, cinnamon, and nutmegs: in order to this, they are at a very great expence to keep several armed barks cruising at the mouth of this river, to prevent what they are pleased to call smuggling. It must be allowed that they have made a contract with the king to take off all the pepper in his dominions at the rate of ten pieces of eight for a *Babaar*, or four hundred pounds, which is a very fair price. They have, however, a saving clause in their contract, by which it is provided, that half the purchase of the pepper shall be taken in cloth, at such a rate as greatly reduces the value of their cargoes; and it is for this reason that the *Dutch* are so much afraid of smuggling (U). Yet, in spite of all their armed barks, it is a thing notoriously known, that for a thousand florins to his majesty of *Pullambam*, and as much to the *Dutch* chief, a cargo of a thousand *Babaars* of pepper may be carried off the island without any great trouble^u.

A third, on
the river Ban-
calis, which
affords vast
profits to the
factors, tho'
little to the
company.

ON the banks of the river *Bancalis* they have another very considerable factory, which produces annually vast sums from the sale of cloth and opium, which are paid for in gold-dust. This was discovered by a factor in the company's service, who, after he had carried it on privately for about ten years, and acquired by it upwards of ten thousand pounds sterling per annum, prudently resolved to secure what he had got by making a discovery of this branch of commerce to the company. There are likewise several other *Dutch* plantations on this island, which are all together comprehended under the general title of the west coast^w. Besides these, and all the places before-mentioned, the *Dutch* have a strong fort and great factory at *Jambie*, and another at *Siack*, which is excessively unwholesome. It stands on the great river *Andraghira*, into which, at a certain season of the year, there come vast quantities of shads of a very large size, one third of which is owing to their roes, which are accounted a great delicacy; and therefore, after taking these out, the rest of the fish is thrown away, and, lying in great heaps, corrupt, and exhale pestilential vapours that infect the air. The persons,

^w Memoires de Dr. GARÇIN.

^u HAMILTON's account of the East Indies,

(U) It may not be amiss to take this occasion of giving a general account of the pepper trade, so far as is consistent with the nature of a work of this kind. We have before observed, that this is the only sort of spice the *Dutch East India* company have not hitherto been able to monopolize, which has been chiefly owing to its being the produce of different countries, and growing very plentifully in all these countries. The pepper plant is a kind of feeble vine that grows to no great height, and is usually planted at the bottom of a large tree, that it may be the more conveniently supported. The leaves resemble in shape those of ivy, but are not near so green; on the contrary, they are generally speaking more or less yellow; the fruit hangs in clusters like our currans, and, like them, appears first green, then become red, and when dried in the sun black (70). There has been a great dispute whether there is not also white pepper; but, if we may rely upon the opinion of a skilful physician, who speaks of his own knowledge, there is really no such thing in nature; and what is sold under that denomination in *Europe*, is only black pepper blanché, either by rubbing the shell off before it is quite dry, or

by suffering it to take moisture afterwards in a degree sufficient to fit it for that operation (71). The pepper of *Ceylon* is commonly reputed the best in the *Indies*, but is not much cultivated in that island. The rest of the pepper the *Dutch* distinguish by the names of *Malabar*, *Jambe*, and *Bilipatan*. The greatest part of the *Malabar* pepper comes through their hands, and the rest falls to the share of the *English*. The *Java* and *Sumatra* pepper, which is the second sort, is transported in vast quantities into *Europe* by the *East India* companies of both nations. As for the last, which is a *Malabar* pepper, and derives its name from a great trading town in the kingdom of *Cananor*, the *Dutch*, *English*, and *French*, all deal in it; but, being smaller, more wrinkled, and milder in taste, than any other pepper, there comes but little of it into *Europe*, where it is in no esteem; whereas it is preferred to all the other sorts over all the east, which makes it a very valuable commodity (72). It is said, that a great deal of the pepper from *Java* and *Sumatra* does not stand the *Dutch* company in above a farthing a pound prime cost (73), and is sold in *Europe* for twelve-pence.

(71) Memoires
(73) Remarks on the trade

therefore

- a therefore, that are sent to *Siack*, are much of the same stamp with those that are sent to *Banda*; that is to say, men of abandoned characters and desperate fortunes *. To speak plainly, there is too much gold in this country, if any credit may be given to the accounts of the *Dutch* themselves, for honesty to take any deep root; the chiefs of the *Padang* being more exposed to suspicion, and falling oftener under prosecutions, than any other persons of their rank in the company's service; which is ascribed to some strange circumstances that attend the company's mines, which produce no great matters; though these chiefs, and all their under-officers, acquire great estates in two or three years, by methods which the general and council at *Batavia* are seldom able to discover (X). The company sometimes build ships at some of their settlements in this island, not for the sake of saving expences, but
- b on account of the excellency of the timber; those vessels lasting at least twice as long as ships of the same bulk built in *Europe* †.

* HAMILTON's account of the East Indies, vol. ii. p. 122, 123.
landois, p. 202, 203.

† Memoires sur le commerce des Hol-

(X) We find in the few accounts that have been written of the *Dutch East Indies* by such as have resided long there, that frauds are as often committed by their servants as by those of other companies, notwithstanding that some severe examples are now-and-then made; and, if we may credit *Graaf*, who seems to be a plain honest man, it is no easy matter to put an end to these practices. He seems to think that men are more frequently punished for want of friends, or from a want of liberality, when they are become rich by dishonest means, than for their crimes. He likewise observes that the company gain so little by confiscations, after the fiscal, and other

officers have had their shares, and the expences of prosecutions are defrayed, that it is seldom worth while to proceed to extremities (74). In respect to the spice trade, and the gold mines, however, there are some exceptions; and, where clear proofs have been had, many have lost their estates, and some their lives, but without striking any great terror into their successors: tho', after all, it is not impossible that these gold mines may be more beneficial to the company than they are generally reputed, since there is no body of traders in the world more given to complain, or less inclined to boast (75).

S E C T. XXIV.

A complete history of the commerce and state of the Dutch company at Japan. The manner in which their factors, officers, and seamen, are confined during their stay in that country, while they deal with the inhabitants, and make up their homeward-bound cargo. Immense produce of this trade, and how disposed of at Batavia.

- c THE third chief resides at *Japan*; he is always a principal merchant, and is assisted by some writers in the same company's service. The profit which they formerly made by this establishment was very considerable, amounting frequently to eighty or one hundred per cent. but is now sunk, as some writers affirm, to such a degree, that they rarely make above eight or ten. This great diminution is chiefly owing to the practice of the *Chinese*, who for some time past have purchased all sorts of goods proper for that market at *Canton*, and exported from thence to *Japan*. It is also said that they have contracted with the *Japone*se to furnish them with all sorts of merchandize at the same price as the *Dutch*. Another cause is a practice established by the *Japone*se themselves, which is, fixing the price of goods ². It is very possible that some improvements of this nature have been suggested to them
- d by the *Chinese*, who were treated in the same manner formerly at *Batavia*. The governor-general, *Van Zwol*, thought proper to set a price on all sorts of silks, and other goods, the *Chinese* brought to *Batavia*; and at the same time fixed the rate of the commodities and manufactures which the company were to give in exchange. This the *Chinese* looked upon as a prodigious hardship, and a thing incompatible with the nature of commerce. They represented this in the strongest terms to the general, but to no manner of purpose. They then addressed themselves to their sovereign; and complained of this innovation so warmly, that, after various expostulations with the governor, all commerce ceased between the two nations; and things continued in this posture till the death of Mr. *Van Zwol*. But his successor Mr. *Swaardekroon*, acting upon quite different principles, restored things to their former state, and put their commerce on the old foot ³. With no small difficulty things were brought to this pass also in *Japan*; and upon repeated applications, trade restored to its old channel. Yet not long after the court gave into a new project, to the full as oppressive; and this was,

² Memoires de Dr. GARÇIN.

³ L'expedition de trois vaisseaux, p. 202, 203.

fixing the quantity of goods which should be brought on board each sloop; that is to say, ^a the *Dutch* were left at liberty to bring what they would, to sell and buy at what price they would, provided they kept the whole of their dealings within the compass of a sum prescribed. Upon this they had recourse to fresh remonstrances; which were not altogether ineffectual, and yet did not procure an intire abolition of this troublesome edict ^b (Y).

No place in the Indies where the Dutch have so little authority as in Japan.

Upon the whole, there is no place in the *East Indies* where the *Dutch* have so little authority, and where their establishment is become of so little consequence, as in *Japan*. They have, it is true, a little island allowed them, where they have magazines for their goods; and a few ordinary houses, in which such persons live as are in the company's service. But then this is in effect a prison, in which they are shut up the time they stay here, and are not so much as allowed to pass the bridge that joins this island to the city of *Nangazaki*. The only ^b shadow of liberty that is left consists in the chief's going once a year, attended by two or three other persons, to the court of the emperor, in quality of ambassador, to renew the treaty of amity and commerce which subsists between that monarch and the company. One great cause assigned for the holding the *Dutch* to such hard terms, is, their having attempted familiarities with *Japone* women; but the true reason is, a well-grounded suspicion that the *Dutch* have an inclination to fix themselves by force, of which they have more than once given some very apparent tokens, the last of which notwithstanding it fell out many years ago, yet is like to be ever remembered ^c.

Mr. Carron, while chief at Japan, attempts, tho' unsuccessfully, an establishment by force.

It happened, as is reported, thus: Mr. Carron, their chief in *Japan*, was a person of great parts, and one, who, in several journies he had made to the emperor's court, had found ^c means to ingratiate himself with that monarch, by entertaining him with accounts of the state of *Europe* at that time, which that prince, and indeed all the *Japone* emperors, are very curious to know. Having by this means frequent access to the imperial presence, he, presuming on his credit with the emperor, begged permission to build a house on the little island where the factory stood, on his masters account; which the emperor granted. Accordingly the foundation was laid; the business went cheerfully on, till it grew into a handsome fortification of a regular tetragon. The *Japone*, being intirely ignorant of the art of fortification, had not the least suspicion of deceit, but suffered them to complete it. When it was finished, Mr. Carron advised the general and council at *Batavia* of the progress he had made; and desired, by the next shipping, to have some cannon sent him in casks filled with oakum or cotton, the ^d casks to be well bound with iron hoops, and the heads securely fixed in; with some casks of the same make filled with spices: which advice was accordingly followed. When the shipping arrived, the cargo in a proper time was landed; but, in rolling the casks, one, in which was a brass gun, fell to pieces, and the cheat was discovered. This put a stop to all commerce till the emperor's pleasure was known; and gave that monarch a very bad impression of the *Dutch*, and of all who were employed by them. He would not however prohibit trade; but gave orders to put any *Dutchman* to death who should presume to stir out of the island; and directed that Mr. Carron should be sent to answer for this fault to *Jeddo*, where he resided. On his arrival, being interrogated, he was able to say nothing in excuse; when the emperor reproached him with abusing his kindness: for which he had his beard pulled out hair by hair; ^e and then, being dressed in a fool's coat and cap, was exposed in that condition through all the streets in the city. After this he was sent back to the factory, with orders to return in the first ship that was sent to *Batavia*. This seems to be a more probable account of his disgrace, and of demolishing the *Dutch* warehouses, than what we find elsewhere given ^d; as also for

^b P. CHARLEVOIX *histoire du Japon*, tom. ii. p. 450. p. 202, 203.

^c HAMILTON's account of the *East Indies*, vol. ii. p. 246.

(Y) We are told from pretty good authority, that the original of this quarrel between the *Japone* and the *Dutch*, and which turned so much to the prejudice of the latter, was owing to the pique of a great minister, of so singular a nature, that it deserves to be remembered. The name of this *Japone* statesman was *Mino-Sama*, who, by complying with the emperor's humour in trifles, governed him absolutely in all matters of consequence. He took it into his head that his master would be very well pleased to have a large *European* lustre of chrystal hung up in the imperial vault where his ancestors were interred. He sent, therefore, his orders to the *Dutch* chief to procure him such a one as soon as possible; which were immediately complied with, and the lustre sent from *Batavia* by the next ships. But, the prime

minister having given no notice of his intentions to the *Japan* governor of the port, he directed the lustre to be put into the list of the presents to the emperor; which was accordingly done. *Mino-Sama* attributed this to the *Dutch* chief, and looked upon it as an arrogant attempt in him to make his court to his imperial majesty; and upon this presumption, without making any inquiries, became a violent enemy to the *Dutch*, and inspired his family with the same hatred, who, as they succeeded him in the ministry, plagued that nation for many years with edict after edict, full of concern for the welfare of their country, and breathing nothing but public spirit in their expressions, tho' dictated only by private vengeance, and a perverse disposition (76)

(76) P. Charlevoix *hist. du Japon*, vol. ii. p. 451.

- a the bad reception that *Carron* met with at *Batavia*, which induced him to desert the *Dutch East India* company's service, and to put himself into that of the *French* king, of which we have before said something, and of which we shall again be obliged to speak more at large (Z).

THE government of *Japan* is despotic; and, as is usual in all absolute governments, the prime ministers, while in favour, exercise the supreme authority in the name of their masters; so that it is very difficult, if not altogether impracticable, to obtain any relief from the grievances they impose, or any redress of such acts of injustice as they are disposed to do, more especially when the sufferers are strangers. The *Japanese* ministers have their maxims of state as well as other nations; and those who have negotiated with them, allow, that they want not either parts or penetration. The reader, perhaps, will not think it any objection to the truth of what has been advanced, that, in the space of one hundred and fifty years that the *Dutch* have been settled here, they have been able to learn but little with certainty concerning the extent of this empire, or the true situation of things in it; from whence it appears, that, with them, secrecy passes for the very basis of policy; and, though their ministers are not wanting in good sense, learning, or politeness, yet the humour of talking of their affairs, or of giving more light than is absolutely necessary as to the motives upon which they act, is not among the number of their foibles (A); otherwise we should not be so much at a loss upon this head as we really are, notwithstanding so many descriptions and accounts of the islands of *Japan* that have been published in various languages, from the perusal of which a judicious reader will reap but little satisfaction.

- c We are indeed very certain, that the countries under the dominion of the emperor are very large and very fertile, so that no part of the world, *China* not excepted, enjoys all the necessities of life in greater abundance. Besides these, the inhabitants are in possession of many valuable commodities, and of rich and curious manufactures. Arts and sciences flourish in this empire, agreeable to that taste which prevails amongst them; so that they stand in need of nothing that may contribute to the convenience of life, or even to the support of magnificence and luxury; visible marks of which are every-where conspicuous in their buildings, dress, equipage, and whatever else contributes to make distinctions between the several ranks of men, as all travellers agree. But, notwithstanding this, there is a wonderful regularity, and a very strict discipline, observed, which is owing to the exactness of their laws, and to that rigorous severity with which they are put in execution, without which, perhaps, it would be impossible to retain the numberless inhabitants of these populous islands within just bounds of obedience.

* Relation concernant l'empire et le gouvernement du Japon, par FRANÇOIS CARRON, président de la compagnie Hollandoise du Japon, dressé par ordre de Monsieur Lucas, directeur-général des affaires de la même compagnie des Indes Orientales, p. 4. KEMPFER, TAVERNIER, CHARDIN, CARRON, CHARLEVOIX.
 † Histoire du Japon, tom. i. p. 66.

(Z) According to the accounts given us by other writers, the *Dutch* chief incurred the aversion of the *Japanese* by his high spirit and lofty temper, which the *Japanese* ministers thought preposterous in a merchant who came to them as a deputy or servant to other merchants. Those accounts say, that the *Dutch* buildings were demolished at *Firando* upon the score of their having the year of our Lord engraven upon them; and at the same time occasion was taken to transfer the factory from *Firando* to this island of *Desima* (77). But the relation given in the text from captain *Hamilton*, who was a very inquisitive man, and found means to pick up much secret history in the *Indies*, carries a greater appearance of truth, since it suggests a rational motive for this jealousy and severity; whereas all the other accounts shew us plainly, that the *Japanese* took offence at the strength of the *Dutch* edifices, without assigning any cause; and, which is still more extraordinary, acknowledge, that themselves, upon the emperor's first order, fell immediately to demolishing; which, they say, was very lucky for them that they did, since otherwise the magistrate, who summoned them to hear that order read, had a party of men ready to cut them to pieces upon the spot, in case they had made the least expostulation (78).

(A) There is no country in the world where reason of state is oftener urged, or better understood, than in *Ja-*

pan, as might be shewn from a multitude of facts, as well as orders, judgments, and other authentic papers, published by the missionaries, and by some of the *Dutch* writers, which are penned in a very elevated and swelling, but at the same time clear and expressive style, so as to leave no doubt with the judicious reader that the measures were taken, upon which these pieces were founded, by very sound and intelligent politicians, who were not at all at a loss how to give colourable pretences for the violent exercise of their power, without letting the world into the real secret of their councils, or divulging their sense of things in such a manner as to give strangers an opportunity of interfering with their affairs. Their conduct towards the ambassadors from *Macao*, the ship in which their own people were sent back, the answers returned to the ambassadors of king *John* the fourth of *Portugal*; and the turning upon the *Dutch* themselves the hardships, which, through their suggestions, had been put upon other nations; are so many plain and indubitable proofs of this: for, except that insolence which naturally accompanies arbitrary power in all countries and climates, we see nothing barbarous in their proceedings, or at all more shocking and absurd, than in the manifestoes published in *Europe*, with an intent to give a colour of equity even to acts of the most crying injustice (79).

(77) Recit historique de la demolition d'une forteresse, et de quelques edifices construits à *Firando* dans le Japon par les Hollandois établis dans cet empire. Tiré et traduit de leur journal de l'année 1640. (78) Recueil de voyages au nord, vol. iii. p. 252. (79) See the instances referred to in the several parts of this work.

Of the temper
and general
disposition of
this people,
and of their
employments
and abilities.

As to the temper and genius of this nation, it is better to collect some notion of them from facts, than to take them implicitly from authors, who, as they frequently contradict each other, so no great weight can be laid upon their sentiments. In point of religion, the common people, as in other countries, are inclined to superstition; but the wiser and better educated part of the nation seem rather to lean to the contrary extreme. For, with respect to their persecutions, and the measures taken to prevent the revival of Christianity amongst them, it seems not so much the effect of religious zeal, as of a political principle of aversion to our faith, which in all probability took rise from the indiscretion of the *Portuguese* and *Spanish* missionaries, and the use they made of their influence over their disciples. In reference to their abilities in civil affairs, we have no reason to doubt that they are very great, since they have all sorts of learned professions amongst them; and merit is chiefly esteemed, even amongst nobility, and persons of the first rank. That their artificers are very ingenious, we see from the works that come out of their hands; and that the nation in general are haughty, enterprising, sprightly, brave, and capable of great actions, all who have written about them agree; and the excesses of these qualities will sufficiently point out their vices^b (B).

Are naturally
and generally
as much ad-
dicted to traf-
fick as any na-
tion what-
ever.

In reference to commerce, it is generally allowed that the bulk of the nation have a strong propensity thereto, insomuch that in their villages, as well as great towns, almost every private house is a magazine for some kind of traffick or other, so that it has been thought no bad description of the *Japonefe* to stile them a nation of shopkeepers. Yet this does not hinder persons of rank, and of learned professions, from entertaining a very low and mean opinion of trade, from a notion that the desire of gain is a principle of fraud, and must consequently produce many vices; to prevent the bad consequences of which, they have had recourse to that remedy which is most common amongst them, severe and sanguinary laws; which without doubt have a very considerable effect, as they are executed without relaxation, and yet have not intirely rooted out a desire of eluding them, and of practising upon the weakness, inexperience, or necessities, of mankind, though in the management of intrigues of this sort they are more adroit than most other people; and in point of arithmetic, and the art of keeping accounts, they are held to excel even the *Italians*, who yet have given lessons to other *European* nationsⁱ. What has been hitherto said relates to the state of their interior commerce; we will next say something of that which they had, and still have, with foreign nations, which their government now tolerates, and formerly encouraged (C).

^b Recueil de voyages au nord, tom. iii. p. 126.
Recueil de voyages au nord, tom. iii. p. 129.

ⁱ Memoire sur le commerce des Hollandois, p. 197.

(B) Whoever will take the pains of looking either into the particular pieces that have been written concerning these islands, and their inhabitants, or into the general collections in which the substance of them is contained, will find that the nobility, and persons of distinction, amongst the *Japonefe*, are remarkable for sound understanding, true greatness of mind, and a noble contempt of danger or death. They live in a manner suitable to their dignity; and in their houses, attendants, and diversions, discover the elegance of their taste, and this at a great expence; yet without being at all enslaved by these exterior marks of grandeur, since, in case of any reverse of fortune, or of being disgraced at court, they support their poverty with an air of fortitude that preserves to them all the respect formerly paid them in their prosperity (80). The whole country is thoroughly cultivated; the industry of the people appears in the vast abundance of necessaries, as their sagacity is shewn in the choice of the properest places for the different productions of their soil and climate. Their rivers, creeks, bays, and ports, are full of boats, barks, shallops, and other small vessels; for, since the government has prohibited foreign commerce, they are not permitted to build large ones that are very neat and commodious. Their manufactures of every kind, such as their porcelain, lacquered ware, wrought silks, graving, and paper, are exquisitely perfect. In short, they are the very reverse of the *Chinese*; for, as that nation value themselves upon the calmness of their dispositions, that nothing can ruffle, which at the bottom is founded in self-interest; so the ruling passion among the *Japonefe* is the point of ho-

nour, in which they are more tender than almost any other nation in the world; and, as the former are remarkable for a mean, false, tricking, double, artificial behaviour, so the latter are lofty, supercilious, suspicious, hasty, and vindictive (81).

(C) According to the antient fundamental maxims of this empire, there is no such thing as duty, imposition, custom, or excise, upon any kind of commodity or manufacture exported or imported, nor is there any thing levied for the use of the emperor to the prejudice of their interior traffick, but every man enjoys the produce of his own goods, and the fruits of his own labour. But, to prevent private persons from imposing upon each other, weights and measures have a legal standard, and an iron ell is fixed at each end of every public street, that, if any body suspects any foul dealing, it may be detected upon the spot, and, in that case, nothing less than death is the punishment; but for frauds of a deeper and more serious nature, not only the party offending, but his whole family suffers, that it may be a warning to the neighbourhood. In support of this the *Japonefe* statesmen say, that, where there are many traders, there must be severe laws to keep them honest; and that a few rigorous executions is the only way to prevent a great many (82). As for large payments amongst them, they are made by purses of gold sealed by one of the emperor's officers; and, so long as the purse and seal continue whole, they pass without scruple from hand to hand, without being ever opened, or the pieces counted, though some of these purses contain five hundred, and some a thousand pounds, of our money (83).

(81) P. Charlevoix

(83) Tavernier, Carren,

a THE *Japoneſe* heretofore had a pretty general intercourſe with the nations of the eaſt, both by receiving their commodities, and transporting their own; and it is in a great meaſure probable at leaſt, if not certain, that the government would be inclined to a free trade with all nations, if they were not withheld by theſe two political conſiderations: The firſt is, the dread of having their religion inſulted, which, from a miſguided zeal, was very frequent while there were Chriſtians among the *Japoneſe*. The other, their averſion to any innovation in the manners of their people, from which they apprehend the worſt conſequences. When the *Dutch* were firſt eſtabliſhed there, the prime miniſter of *Japan* gave their embaffador this account of the matter^k: “ We do not condemn your cuſtoms, or cenſure your way of living; but we are determined to preſerve our own. We know very well the advantages
b “ that reſult from the ſyſtem of government eſtabliſhed amongſt us, and we will not run the hazard of a change: we know too, that great revolutions are brought about by imperceptible degrees, and therefore we are reſolved to cure the itch of novelty by the rod of punishment.” Upon this maxim that law is founded, by which no *Japoneſe* dares leave his country; and, if he does, he muſt never return. Before this prohibition took place, they traded to *China*, *Siam*, and to the *Philippine* and *Molucca Iſlands*; but at preſent, as far as we can learn, they carry on no foreign commerce whatever^l (D).

THESE general obſervations will enable us to ſtate more clearly that ſo much envied trade which the *Dutch Eaſt India* company ſtill enjoy in this empire; in which though they have no *European* competitors, yet the *Chineſe* are ſtill permitted to ſend thither annually goods to the value of ſix hundred thouſand *Taels*. The *Siameſe* likewise ſend thither two or three veſſels every year; and the like number come from *Camboya*, though it is generally underſtood that theſe are freighted by the *Chineſe* who reſide there; to theſe if we add the inhabitants of the iſland of *Liquios*, who have likewise ſome ſmall ſhare in the *Japan* trade, we may venture to affirm, that we have named all who have any concern therein^m. It is highly probable, that, from that ſpirit of jealousy which has long prevailed in the *Japoneſe* government, they would be inclined to ſhut out ſome of theſe, if they were not apprehenſive of inconveniencies; as it is, they make their commerce ſo troubleſome and uneaſy, that nothing but the vaſt profits ariſing from the commodities they vend could induce any nation to diſpenſe with their regulations; but if it be true, that the *Dutch* gain annually half a million ſterling, excluſive,
d as ſome think, of the private trade, it accounts well enough for their conduct; and what that is, we ſhall next endeavour to ſhew as perſpicuouſly, and at the ſame time as ſuccinctly, as poſſible; with this previous intimation, that none of the memoirs we have been able to procure reach lower than the year 1740ⁿ; and it is not impoſſible that ſome regulations have been made ſince then, as it is certain that our accounts differ very much from thoſe that were looked upon as very authentic and exact but a few years before that period.

THE *Dutch* ſent annually four ſhips from *Batavia* formerly, but now they ſend only two to *Japan*, of between thirty and fifty pieces of cannon; but indifferently armed, becauſe there is little danger in theſe ſeas, and that they may give the leſs umbrage to the *Japoneſe*, who ſee with ſuſpicion ſhips of great force upon their coaſts. Theſe veſſels are laden with ſuch *European* and *Indian* goods as are in demand at *Japan*, ſuch as *Engliſh* and *Dutch* cloths, camblets of all ſorts, brocades, gold and ſilver, very rich ſilks of all colours, and eſpecially crimſon and white raw ſilk, raw cotton, and ſpun cotton, tapeſtries, lead, ſteel, and refined ſugars, and ſpices of all kinds, *Morocco* leather, and all ſorts of ſkins, particularly buck and doe, of

(D) According to ſome accounts, ſaid to be taken from the *Japoneſe* themſelves, the firſt motive of this prohibition was an act of vengeance and jealousy committed by the emperor of *China*, who, finding much difficulty in reducing a handful of *Japoneſe* that had rebelled in one of his cities, drove the reſt of the nation out of his dominions, and forbade all intercourſe with *Japan*, which it is ſaid the government of that country took ſo much to heart, as to reſolve not to put it in the power of any monarch whatever to offer another like inſult, which they knew not how to revenge (84). Mr. *Carron* reports, from the *Dutch* writers, reaſons of a very different kind; ſuch as, that they held it diſhonourable for the ſubjects of ſo great a prince to riſque their ſafety in fo-

reign countries for the ſake of ſubſiſtence; that they were jealous of exporting arms and ammunition by this means to their enemies; and that they were apprehenſive of their traders being converted to Chriſtianity when out of their own country, which they look upon as dangerous to the ſafety of the empire. But, as we have hinted before, ſome think the inſinuations of the *Dutch* contributed chiefly to this meaſure, to which they were excited by a violent deſire of monopolizing the whole trade of *Japan* (85); but were defeated by the ſuperior policy of the ſtateſmen of this nation, which gave riſe to a ſaying common in the *Indies*; viz. “ that the *Dutch* can “ over-reach all other nations, but that the *Japoneſe* can “ outwit even the *Dutch*” (86).

(85) *Hamilton's account of the Eaſt Indies*, vol. ii. p. 205.

which they carry a prodigious quantity, and about half the quantity of ox-hides^a. They sail about the middle of *June*, and the first land they make is usually the island of *Peltimon*, which is in the latitude of two degrees fifty minutes north. There they take in water, and other refreshments; and then continue their voyage to *Japan*, where they arrive in *August*; and, finding every thing ready prepared for them, their goods are quickly got on shore, and brought into their warehouses, sorted, and fitted for sale. The merchants likewise are summoned from the adjacent countries, and have catalogues given them of the goods brought by the last fleet; so that all is over by the latter end of *October*, and the ships are ready to sail very early in the next month, when the *Japoneſe* never fail to press them to be gone^b (E). The *Dutch* were formerly settled in the island of *Firando*; and that in which they are now fixed is properly called *Deſima*, being made by art, and originally raised to confine the *Portugueſe* in the year 1635. This disgrace is generally reported to have been drawn upon them by the intrigues of the *Dutch*; and, if the fact be true, they have suffered very juſtly for their contrivance^c.

A ſhort deſcription of the little iſland of Deſima, in which the Dutch have their factory.

THIS island is oblong, joined to the city of *Nangasacki* by a ſtone bridge, with a wooden drawbridge at the end. Where the bridge joins the city, there is a ſtrong corps de garde poſted night and day. At the entrance from the bridge there is a large ſtone pillar, upon which hang, in ſeveral tables, the emperor's edicts for the regulation of the *Dutch* trade; and three high poſts are ſet up in the ſea, to mark the places where the *Dutch* ſhips are to anchor, to prevent their coming near the city. The island is palifadoed like a park, and thoſe palifades ſpiked. It is not, in its greateſt extent, above two hundred and forty paces in length, and not more than eighty broad. There is a ſtreet acroſs it, with houſes, or rather huts, on both ſides; the lower ſtory of which ſerves for a warehouse, and the upper for the lodging-rooms of ſuch as reſide there. There is a very convenient houſe for the *Japoneſe* director of trade, who comes thither when the ſhips arrive; beſides another handſome houſe for the *Japoneſe* magiſtrate, who always reſides there, which has its garden: for in all their great cities the *Japoneſe* have a particular magiſtrate in every ſtreet, who is called the *Otona*; and they look upon the island of *Deſima* as nothing more than a ſtreet added to their city of *Nangasacki*, and therefore there is an *Otona* here as well as in other ſtreets. Another proof that this belongs abſolutely to the natives, and is not at all conveyed to the *Dutch*, is, that theſe laſt are obliged to pay a very high rent for their little wooden houſes, to thoſe who were at the charge of building them when the *Portugueſe* were ſent thither. By this account it is eaſy to perceive, that it produces nothing; and that there is no room to plant any thing, if they were permitted, which they are not, but are furniſhed from day to day with all the neceſſaries of life at a very high price, and by ſuch only as have this monopoly^d.

The ſtrict regulations to which they are obliged to ſubmit during their reſidence there.

THE *Dutch* reſident in this island ſeldom exceed the number of forty-five; and the *Japoneſe* oblige them to change their chief every year, though, after he has been abſent two years, the ſame perſon may be ſent again; ſo that commonly there are three perſons who have this poſt by way of rotation; viz. one reſident in the island, another in his paſſage, and a third at *Batavia*, till his two years are expired. On the whole, though the *Dutch* have taken all the pains they can to make this place convenient, yet, in ſpite of their care, it is a very indifferent abode, and very little reſembles any of their other ſettlements in the *East Indies*. They are

^a Memoires ſur le commerce des Hollandois, p. 197. Journal du voyage de Siam, par l'abbé DE CHOISY. Memoires de Dr. GARÇIN. ^b Voyage de GAUTIER SCHOUTEN, tom. ii. p. 118. ^c TAVERNIER, CHARDIN, CARRON, &c. ^d Memoires ſur le commerce des Hollandois, p. 197. Memoires de Dr. GARÇIN.

(E) This voyage from *Batavia* to *Japan* is accounted by the *Dutch* ſeamen ſeven hundred and fifty leagues; and, by reaſon of the tempeſtuous weather to which they are frequently expoſed in all ſeaſons, is extremely dangerous; and more ſhips have been loſt in their paſſage to and from thence than in all the other voyages to the *Indies* (87). This ſeems to be contradicted by a note frequently entered in the journals, importing, that the beſt voyages are thoſe to *Siam*, *China*, *Japan*, *Bengal*, *Coromandel*, *Surat*, and the coaſt of *Persia*; and the worſt thoſe to *Jawa*, *Macaſſar*, *Amboyna*, *Banda*, and *Ternate* (88). But the true meaning of this is, that in the former voyages they have an opportunity of getting money, which they have not in the latter. In reſpect to hardſhip, hazard, and fatigue, the voyage to *Japan*, as

we have before hinted, exceeds all the reſt; and the rather, becauſe men go from a very hot to a very cold climate. It may not be amiſs to obſerve, that, while the *East India* company ſent four, five, or ſix ſhips, every year, to *Japan*, they were very deſirous of diſcovering a north-eaſt paſſage; which, if they could have done, they might have ſailed from *Holland* to *Japan*, and from thence back to *Holland*, in leſs time than they uſually make a voyage from *Holland* to *Batavia*. But when this trade began to decline, and would admit of ſending no more than two ſhips, they have conſidered that paſſage in quite another light; and have been ſo far from labouring to diſcover, that they have endeavoured to re-preſent it as impracticable (89).

(87) Memoires du Japon, p. 35. Voyages de Gautier Schouten aux Indes Orientales, vol. ii. p. 118. (88) Voyages de Nicolas de Graaf aux Indes Orientales, p. 355. (89) Diſcours preliminaire à la tête de

- a also much restrained in their adding any thing either to their houses, magazines, or little wharfs for landing their goods, since they cannot build, or make the least alteration, without first delivering a petition, with a plan annexed, to the *Ottoma*, by whom it is transmitted to the governor; so that it is sometimes a full year before they can obtain this permission; and even then there is an inspector appointed, to see that in nothing they exceed their original plan. Such are the restraints to which those are liable that are left behind in the *Dutch* factory; which renders their course of life unpleasant enough, little, if at all, better than remaining all that time in a prison, and that too of a very narrow extent, where the inconveniencies to which they are exposed are many, and their amusements few. Let us now see how the new comers are treated upon the arrival of the annual vessels; but, previous to it, it must be observed, that no ships sent thither must have any figure whatever at their stern, because the *Japonefe*, observing that the *Dutch* have no images, took it into their heads that they were placed there in derision of their idols, and therefore permitted this custom as an insult upon their religion^s.

THE very moment that the ships arrive in the road, the governor sends several boats, filled with *Japonefe*, on board, who take all their cannon, small arms, sails, cordage, and spare anchors, into their possession. The crews of these ships are confined to the island, as well as the people of the factory, unless they have a licence to go into the city, and even this is restrained to four at a time. The prices of their goods are set by the *Japonefe* directors of trade, as are likewise the prices of the goods they take in exchange, and sales are made when and how they please. It is true, they are allowed to send the chief of their factory, with two or three attendants, to *Jeddo*, to the emperor; but, in their journey, they travel under the escort of a *Japonefe* guard, who will not suffer them to make any excursions by the way, or to visit any great lords. They are under the same or greater restraints during the short stay they make at *Jeddo*, where they have little other business than to deliver their presents to the emperor, and to particular princes and grandees of his court, to renew the treaty of commerce; which, being a thing of form, is speedily dispatched; and then they are ordered to return, having a guard about them while they remain there, and another to escort them back^t. Of all the restrictions their trade labours under, the *Dutch* are made most uneasy by their having the quantity of goods limited to the value of three hundred and eighty thousand taels, or one hundred and thirty thousand pounds sterling; and of this therefore they complained bitterly to the officers, and at last to the emperor himself. The *Japonefe* treated them, on this occasion, with great address; they told them, that they knew and understood the thing to be a hardship; insinuated, that it did not proceed from any diffidence or disrespect, but was done purely to justify the same restraint on the *Chinefe*, the number of whose junks increased every year; and, as there were frequently *Tartars* amongst them, they could not help suspecting that they might have some worse design than getting money by trade; but, for fear of bringing that evil upon themselves which they were labouring to avoid, they thought it necessary to lay this restraint on the *Dutch* as well as the *Chinefe*^u, that the latter might have the less reason to complain (F).

After what manner the Dutch ships are received and treated on their entering the port.

^s KÆMPFER, CHARDIN, CARRON, CHARLEVOIX, GARÇIN. 207, 208, 209. Memoires de Dr. GARÇIN.

^t L'expedition de trois vaisseaux, tom. ii. p. 199. ^u Memoires sur le commerce des Hollandois, p. 199.

(F) The shrewdness and sagacity of the *Japonefe* ministers will sufficiently appear from the manner in which they have sometimes answered the *Dutch* chief upon his making vigorous remonstrances to have these limitations of trade taken off: "To what end," say the *Japonefe* ministers, "do you solicit this as a favour? you see that every year part of your goods are left upon your hands, and you complain that you are no gainers by what you sell. If therefore what you call your privileges were restored, it would serve only to croud your warehouses, to lessen the price of your goods, and, from a small gain, bring upon you great loss by so tedious and dangerous a voyage. If, therefore, we do not restore these privileges, it is no mark of disrespect or diskindness, but quite the contrary; it is from an apprehension you should be disgusted by your losses, and set aside this commerce altogether." The *Dutch* might easily answer this, by owning that they already exceed their allowance; that the goods left in their

warehouses are employed in a clandestine trade; and that they could easily find the means of disposing of cargoes twice or thrice as great as those that are now sent (90). But as these are things they dare not mention, tho' perhaps they are not altogether unknown to the *Japonefe* ministers, they are forced, by their silence, to admit, that the *Japonefe* arguments are unanswerable. The whole secret of the matter is, that the government of *Japan* has an inclination to indulge its subjects in a foreign commerce, as far as they judge consistent with their own security; that they are sensible this could not be done if the *Dutch* were excluded, upon account of the company's great naval power, which would enable them to cut off all communication between *Japan* and *China*; and that, while they enjoy the small proportion of trade they have still left, it is sufficient to answer the views of the *Japonefe* government, and to prevent things from coming to extremities (91).

(90) Memoires de Dr. Garçin.

(91) Memoires du Japon, p. 152.

What new regulation the company thought proper to make for their own security.

THEY promised likewise that this regulation should be very tenderly executed, so as to give the *Dutch* very little trouble; in which, it is said, the *Japoneſe* have been as good as their words; for, abating their particular customs, and the warmth with which they are attached to them, there is no nation in the world more juſt, more reaſonable, or even more civil to ſtrangers. The *Dutch* took advantage of this ſtroke of policy at *Japan* to make a new regulation of their own affairs, and a very wiſe one it was. They are ſenſible that people do not ſettle in the *Indies* to make obſervations in natural hiſtory, but to acquire fortunes; that men ſubmit to the hardships they endure for the ſake of purchaſing future eaſe; and that the navigation in the ſeas of *Japan* is commonly ſo perilous, that it is but reaſonable even the ordinary ſeamen ſhould find an extraordinary account in it. Upon theſe motives they have thus ſettled the commerce of *Japan*: Goods to the value of three hundred thouſand taels are ſent on the company's account; and the other eighty thouſand is allowed in private trade in the following proportion; viz. forty thouſand taels on the account of the governor-general and council at *Batavia*; ten thouſand on the account of the new chief, who goes on board the fleet; eight thouſand on the account of the chief who is to come home; and twenty thouſand for the officers and ſeamen; ſo that every captain has eleven hundred taels on his own account, and every ſeaman twenty. If any of theſe people have not money to furniſh their ſhare of the cargo, it is either advanced on their wages, or they are allowed to diſpoſe of their right to ſuch as are richer than themſelves. Thus every man is intereſted in the branch of trade in which he is employed, and finds his private account in the punctual diſcharge of his duty ^w.

Inſpite of all difficulties and diſcouragements, this commerce is ſtill very lucrative and important.

AFTER their ſales are over at their factory, and the wind is fair for their return home, they have their cannon, ſmall arms, ſails, anchors, and rigging, reſtored to them, and are diſcreetly to depart without delay; with which they are obliged to comply. In their return they touch again, towards the end of the month of *December*, at the iſland of *Poltimon*, where formerly all the gold was put on board one ſhip, that proceeded immediately for *Batavia*, while the reſt continued their voyage to *Malacca*, where an aſſortment was made of the goods for the ſeveral markets of the *Indies*; but now the ſhips return to *Batavia*. It is allowed that the commerce of *Japan* is much ſunk to what it was; and it is likewiſe true, that great loſſes are frequently ſuſtained therein; but, after all, it is ſtill very conſiderable; ſo that, on the beſt computation that can be made, it produces annually to the company better than five millions of guilders, or half a million ſterling, excluſive of the great advantages that reſult from the diſtribution of the effects brought from *Japan* over all the *Indies*, which may perhaps amount to as much more; and then we are to conſider farther the profit that ariſes in *Europe* upon the goods that are acquired in exchange for the commodities brought from *Japan*; and we are likewiſe to remember, that the *Dutch* have always in view the recovery of their former privileges, and even the excluſion of the *Chineſe*, if it was in their power ^x (G).

^w Memoires de Dr. GARÇIN.

^x Dictionnaire de commerce, tom. ii. col. 895, 896. JANTON etat preſent de la republique des Provinces Unies, tom. i. p. 380, 381.

(G) An author, whom we have often quoted, aſſures us, that the private trade allowed by the company in *Japan* often turns to prodigious account, and much beyond what it ought to do, according to the eſtabliſhed proportion. As an inſtance of this, he relates, that, in the year 1683, upon the return of the homeward-bound ſhips from *Japan* to *Batavia*, one Mr. *Kanſeis*, who had made the voyage, took the liberty of ſaying to Mr. *Speelman*, then director-general, *Our private people did their buſineſs this year in Japan pretty effectually; and I dare ſay their returns are more conſiderable than thoſe of the company.* To this the director-general answered in a ſurly tone, *Hold your tongue, rascal; who aſked you any queſtions about the trade to Japan?* But, continues our author, Mr. *Kanſeis* was believed to be in the right, ſince, upon debarking the goods belonging to the private trade out of the ſhip in which he came, ſhe roſe full three feet and a half out of the water; which ſhews what room they took up (92). The ſame writers ſay, that, in 1686, the *Japoneſe* made ſome unlucky diſcoveries in reference to the conduct of theſe private traders; in conſequence of which nineteen interpreters and brokers loſt their heads, ſixteen had their bellies ripped open, and four were nailed alive upon croſſes. Theſe were all *Japoneſe*; but their *Dutch* confederates did not intirely eſcape, for two

merchants ſuffered a long imprifonment. Mr. *Andrew Kleyer*, who was then chief, and ſome others, were baniſhed from *Japan* during life; and all the goods in the warehouses, belonging to the private traders, were conſiſcated. The government at the ſame time declared they did not impute any of theſe miſdemors to the company, and for that reaſon did not touch any part of their ſtock (93). Upon the whole, the profit on the private trade, ſuppoſing it to be no greater than it ought to be, is computed at about twenty-five thouſand pounds ſterling a year; and, as one half of it comes to the governor and council at *Batavia*, it makes a conſiderable addition to their appointments. But, after all, is the company to blame? Be it private, or be it public trade, all the gains ariſing from it center at laſt in *Holland*; the deſire of conveying their riches thither makes thoſe who have acquired them glad to return home; and therefore taking all things together, the company are very excuſable, if, by ſuffering ſome loſs themſelves, they contribute to the emolument of their mother-country. The company might poſſibly gain more by a ſtricter adminiſtration; but the people of *Holland* would then gain much leſs, and the remedy might conſequently be worſe than the diſeaſe (94).

(93) Voyages de Nicolas

S E C T. XXV.

A succinct view of the Dutch residencies throughout the Indies; at Cheribon in the isle of Java, in the kingdom of Siam, and at Mocha in Arabia. The company have slighted their factories in the isle of Borneo, and are not very solicitous about their commerce with China.

^a **W**E come now to the lowest rank of officers bearing supreme command in the Dutch settlements; and of these there are only three, who, notwithstanding they have no higher title than that of resident, which is also given to those in the direction of all their factories, yet these are quite independent, as being appointed by, and having recourse to, the general and council at *Batavia*, without the least dependence on any governor, director, or chief whatever^y. The first of these independent residents has his dwelling in the factory at *Cheribon*, on the coast of *Java*, at the distance of forty-eight leagues from *Batavia*, where the company carries on a very advantageous commerce in coffee, cardamoms, indico, cotton, &c. The land is as fertile in rice, and other provisions, as perhaps any in the world. It is of considerable extent; and the people who inhabit it are under the dominion of four great lords, formerly stiled *pangerangs*, i. e. princes, but now *sultans*, i. e. kings, tho' their authority is not much extended in consequence of their new titles. There is one of them who is particularly called the company's sultan, because he is always attached to the Dutch interest. To say the truth, they might all four be very properly stiled so, since they are under her protection, and delivered from all apprehensions from the king of *Bantam*, who was continually at war with them, and had undoubtedly reduced them long ago under his subjection, if the company had not assisted them, and driven the *Bantamese* out of their territories^z. These princes have since that time, as well out of gratitude for favours past, as in expectation of protection for the time to come, granted the company great privileges in their dominions; among the rest, that of erecting a fort at *Cheribon*, where they have a garrison of sixty men, as well as a factory very well situated, and in perfect good order. About half a league from this fort are the tombs of the princes of *Cheribon*, in a vast temple erected for that purpose: they are three stories high, and are built of various kinds of fine stones. It is said that these tombs contain immense riches, which, tho' left unguarded, they are in no apprehension should be carried away, from a persuasion that they are protected in some supernatural manner; and report many instances of persons who have dropt down dead on approaching the places where those riches are hid with a thievish intention. There was formerly a very considerable *English* factory at *Cheribon*, with a little town belonging to it; but the persons of the factory intriguing with the natives wives, as the *Dutch* say, this so provoked the people, that in one night's time they massacred them all, and destroyed the town^a. It is not very improbable, if we could come at the truth of this story, that they were put upon this cruel action by some of their Christian neighbours; for their residence in *Java* was an intolerable eye-sore (H).

(H) There is no place in the island of *Java* where the people carry on a brisker trade than at *Cheribon*, where there are many of the *Japoneze* merchants that are rich, and make a great figure: at which we shall be the less surprised, when we consider, that one of these traders manages different sorts of businesses, which would be altogether incompatible in *Europe*. He has, perhaps, a large house in the town with a very commodious shop, where the principal commodity he deals in, whether *China* ware, silks, plate, or jewels, is disposed to the best advantage, and every thing shewn with such an air of respect and civility, and its perfections explained in so agreeable a manner, that it is almost impossible for an *European* to quit the place without buying something,

tho' he has no occasion for it (95). Besides this, perhaps he has two or three slaves that keep shops of quite a different kind, and others hawk things about the streets. To support this retail trade, he has several vessels employed on the coast of *Sumatra*, *Borneo*, *Celebes*, and perhaps in the *Moluccas*; and, by the help of their returns, he stocks his own, and also his slaves shops. In the country, if his substance be considerable, he has a large house, with all sorts of conveniencies, such as orchards, gardens, fish-ponds, and whatever else may contribute to luxury and pleasure: but even here business is not forgotten; for his slaves are employed in cultivating his land, raising fruits of all sorts, sowing corn, weaving nets; or it may be they exercise these employments at their

An account of
the precious
birds nests
which are so
much admired
throughout the
Indies.

BEFORE we quit this place, it will, perhaps, afford some pleasure to the reader, if we give him a distinct account of a certain curious merchandize, for which *Cheribon* is particularly remarkable, and of which great quantities are sent from thence to *Batavia*. These are the famous *Indian* birds nests, which are eaten in sauces and soups, and which are commonly ranked amongst the greatest delicacies of the table. The bird that builds these nests is a kind of swallow; her head, breast, and wings of a shining beautiful blue, and the body milk white. This bird builds in mountainous and rocky places, fixing her nest, either by the side or by the bottom, to the solid stone. It is composed of a glarous viscous substance, and, when thoroughly dry, is in some measure transparent; the colour commonly white, tinged with red, and now-and-then there are specks of purple at the bottom^b. It is shaped like the oval shells of which snuff-boxes are made, about an inch deep, and something more than three inches in compass, weighing about half an ounce, or a very little more or less. We have been the more particular in this description, because of the many fabulous reports concerning them; such as that they are composed of twigs from spice-trees; and, when dissolved, afford the richest and highest taste imaginable; whereas in truth they have very little taste, and what taste they have is far from being agreeable. Others have reported, that the bird forms them from a kind of froth or foam flowing from her own bill; but it is now known that this is likewise false, and that she brings the jelly out of sea-stars, and other fishes, and disposes it gradually in rings one above another, as is manifest to the eye. When these nests come to be considered as an oriental luxury in food, they are a very valuable commodity, and vast quantities of them are consumed over all the *Indies*, but more especially in *China*, and the adjacent countries. They are, when properly seasoned with salt and spices, a very wholesome, nutritive, and delicious jelly, either boiled in soup, or eaten by themselves in the manner of a ragoût. These birds nests are sold at *Batavia* for eight or ten shillings a pound^c.

The second resident charged
with superintendence of the
company's affairs in the
kingdom of
Siam.

ANOTHER resident has the direction of the company's affairs in the kingdom of *Siam*, and has an assistant or book-keeper under him. The company carry on a very considerable trade here in tin, lead, elephants teeth, gums, lack, wool, and other commodities. The king is a very formidable prince; his territories are near three hundred leagues in extent, and he encourages all nations to trade freely through his dominions. Ships, however, of any great burden are obliged to come to an anchor at the distance of thirty-six leagues from his capital, because the river *Menan*, upon which it stands, is so rapid, that they could not warp up without great difficulty. This river, like the *Nile*, and many others in the *Indies*, overflows its banks at a certain season: so that for half the year the best part of the country is under water; and for this reason the houses are all built upon posts^d. The country of *Siam* is very rich and fruitful, and there is a considerable trade carried on by the *Chinese*. The *Dutch* have great privileges there, and are considered as the most favoured nation ever since the great revolution, which happened at *Siam* a little after the departure of the *French* ambassadors; for the *Dutch* grew then into credit with the new king, because the *English* were intrusted with the best places in the government, civil and military, by his predecessor, whom he had murdered. It was not therefore consistent with his policy to have any great correspondence with a nation that he knew was not well affected to his title. The favour he shewed the *Dutch* became a rule to his successors, and, as we have before observed, they have been very much caressed ever since^e. They have a factory about a mile below the city of *Siam*, on the side of the river, which enables them to collect great quantities of deer-skins, which are annually sent to *Japan*; and this commerce, together with that of tin, which they have exclusively, and of which there is great abundance, and very fine, makes the company take more pains to oblige the king of *Siam* than most of their neighbours. The *Siamese* themselves are much addicted to trade, and the *Chinese* who reside there much more; so that they annually send ships to *Japan*, which, the difficulty of the navigation considered, is not a little extraordinary. They boast of having had the use of the compass above one thousand years before it was discovered in *Europe*; but the jesuits have observed, that the compass with them, as with the *Chinese*, is very imperfect,

^e Dic-

their own risk, and pay their masters a certain consideration monthly. But all their accounts are kept by the merchant himself, either in his own or the *Malayan* language; which being expressed by a few characters, they dispatch every thing in much less time, and with much less trouble, than the *Europeans*, and yet with equal exact-

ness. The women, and even the little children, are all some way or other employed; and it is wonderful to see with what dexterity and address they entertain their customers, and endeavour to put off the commodities they deal in (96).

a which, we may presume, is owing to the regularity of the trade-winds, that render an accurate division of the compass less necessary among them than with us^f (I).

At *Mocha*, on the coast of *Arabia*, the third residency is fixed, where the resident is always a merchant, who has under him two book-keepers as assistants. This country is under the government of an *Arab* prince, who has the title of *immaum*, or king, and who resides at a place two hundred miles east from *Mocha*. The sea-port of his dominions was formerly *Aden*; but that being inconvenient, he removed it fifteen leagues farther, to *Mocha*, which was then but a fishing-town. It is situated close to the sea, in a large, dry, sandy plain, that affords not either fruits or water, except what is so brackish and unwholesome, that such as are forced to drink it have long worms bred by it in their legs and feet, which are equally troublesome and dangerous^g. They are supplied, however, with very good water from *Mofa*, which lying at the distance of twenty miles, and coming by land-carriage, makes it as dear to the inhabitants as small beer is in *England*. The town of *Mocha*, notwithstanding this great inconvenience, is large, indifferently fortified, and makes a fine appearance from the sea. The markets are well furnished with provisions, such as beef, mutton, lamb, and kid, camel and antelopes flesh, common fowls, *Guiney* hens, partridges, and pigeons^h. The sea affords variety of fish, but not well tasted, which proceeds from the extreme saltiness of the water, and the nature of their aliment. The town is well furnished all the year round with good fruits, such as grapes, peaches, apricots, and quinces, of which they make marmalade, both for their own use and exportation; though near the town there is not a tree or shrub to be seen, but a few date-trees; and they seldom have more than two or three showers of rain in a year, and often no rain falls for two or three years together: but amongst the mountains, about twenty miles off, seldom a morning passes without a moderate shower, which makes the valleys very fertile in fruit and corn, such as the soil will bear; but they have no rice, tho' plenty of barley and wheat. Since the *immaum* made *Mocha* the chief port of his dominions, and a free port, it is become a place of great trade; for, besides the *Dutch* factory, and one belonging to the *English East India* company, they trade with *Portuguese*, *Banyans*, and *Moors*, and vessels from *Bassorah*, *Persia*, and *Muskat* in *Arabia Petraea*. The country of itself produces few valuable commodities besides coffee, and some drugs, such as myrrh, olibanum or frankincense from *Coffin*, and aloes soccotrina from *Socotra*, liquid storax, white and yellow arsenic, some gum arabic, and mummy, with some balm of *Gilead* that comes down the *Red Sea*ⁱ (K).

^g *Geographie moderne*, par ABRAHAM DU BOIS,

ⁱ *OVINGTON's voyage to Surat*,

(I) There is hardly any country in the east, of which we have more copious descriptions, and with which, notwithstanding, we are, after all, less acquainted than *Siam*. We may, however, venture to affirm, that no country in the east, of its extent, produces more valuable commodities than this; which is the reason that the *Dutch* are so attentive to its commerce. There is one thing singular in the constitution of this country, which is, that the king is the sole merchant, and carries on a very extensive commerce, sending usually five or six large *sommes* to *China*, two to *Japan*, considerable squadrons to *Tonquin* and *Cochin-China*, as also to *Surat*, and even as far as the coasts of *Persia*; but tho' the goods belong to the king, yet the vessels are, in a great measure, manned and navigated by Christians. All the returns are laid up in his warehouses, from whence they are retailed at his own price to his subjects (97). The tin mines at *Ligor* are farmed to the *Dutch* company, which is a point of inexpressible advantage to them, and enables them to set almost what price they will upon that commodity; for if at any time they find the market begin to fall, they send it into *Europe*. By their interest at court they certainly sell more goods than any other *European* nation; which, however, does not turn to any great account, the company's profits arising rather from what is purchased, than what is sold. The common people in this country are, in a manner, all dealers in something or other; yet have so little distrust in their tempers, that the seller never tells his money after the buyer, and the latter seldom insists upon seeing the commodity weighed (98).

(K) The commerce of *Mocha* has suffered great alterations; for those writers are certainly mistaken who suggest, that it has been only of late frequented. On the contrary, its commerce was at a great height about the middle of the last century; but, towards the close of it, suffered so much by the *Madagascar* pirates, that the merchants began to forsake it, and the trade was diverted to several other ports in the *Red Sea*: but, in the space of less than twenty years, things took once more a new turn, and *Mocha* became more considerable than ever; and upon this foot it has continued ever since (99). A few particulars may not be displeasing to the reader, as they are very consistent with the subject: the trading season extends from *May* to *August*; and in that space there seldom come in less than ninety or one hundred vessels from different parts of the world, such as *England*, *Holland*, *France*, and some other parts of *Europe*; *Goa*, *Diu*, *Dabul*, *Goga*, *Calicut*, *Achen*, *Mazulipatan*, and even remoter parts of *Asia*; *Mozambique*, *Melinda*, and some parts of *Ethiopia*. But this is not all; for the trade by land is also very considerable, which commences about three weeks before the ships come in, and continues for a month or five weeks after. This arises from the two caravans from *Alippo* and *Suez*, which are rarely composed together of less than a thousand camels; and which are never stiled rich, if the ready money they bring does not exceed two hundred thousand pieces of eight in silver, and a hundred thousand ducats in gold; which is to be understood barely of what is entered at the custom house, and which those, who are well versed in such kind of computations, esteem to be above one half of

HAMILTON's account of the East Indies, vol. i. p. 178, 179.

A succinct account of the coffee trade, as managed in that port, in a manner exclusively.

WE may discern what a prodigious advantage arises from the possession of any single commodity, which, either from art or nature, derives a degree of excellence not to be attained any-where else. The coffee-trade brings in a continual supply of silver and gold from *Europe* and *Asia*; for it is a point settled here, that, notwithstanding other goods and merchandize may be bought and sold on credit for a certain time, coffee is always bought for ready, or, as the mercantile phrase is, present money^k. The *Europe* shipping lade yearly at *Mocha* about twenty thousand tons, rather more than less; and the other nations about the same quantity. The whole province of *Betlefacee* is planted with coffee-trees, which are never suffered to grow above four or five feet high, and the bean or berry grows on the branches and twigs, first green, then red, at last a dark-brown colour. The berries cling to the branches like so many insects; and, when they are ripe, they shake off. The *Dutch* have here, as in most other places of the *Indies*, a great advantage over other nations, by their being possessed of the monopoly of spices, of which great quantities are consumed; and this consequently enables them to come at coffee at much easier rates than their neighbours: but this trade of theirs at *Mocha* is continually sinking, on account of the vast quantities of coffee cultivated in their own colonies, especially at *Batavia*, *Amboyna*, and the *Cape of Good Hope*; tho' there is, after all, no comparison between the flavour of the coffee raised in their own plantations and that which is brought from *Mocha*^l. It may therefore be doubted, whether the scheme of transplanting such kind of vegetables be really so profitable as at first sight it seems, since, the value of them arising from a certain peculiar flavour, it is impossible that imitations, where this flavour is wanting, should long preserve their credit; and therefore to penetrating people it will not appear very strange, if the taste for coffee, which has so long prevailed, should at length decay; or if by some new invention (which is not all impossible) the true *Mocha* coffee should be brought to *Europe* at so cheap a rate as to render the other imitations (which, without mending, begin to multiply very fast) despicable in the sentiments of those who must consume it, and who can be only tempted to consume it from their opinion of its flavour.

Motives which have induced the Dutch East India company to fight all settlements in Borneo.

WE have now run through the whole circle of the commerce carried on by the *Dutch East India* company in those parts of the world where they have any establishments; and it only remains to say something of two places with which tho' they have some correspondence, yet they have no settlement in either. The first of these is the great island of *Borneo*, which, in point of extent, is without question the largest in the *Indies*, and, as many believe, in the known world. Some writers say, that it is six hundred leagues in circumference; but the *Dutch* tell us, that it is not quite so big^m. It is divided into abundance of little sovereignties, of the princes of which the most powerful is the king of *Banjaar Masseen*, and, after him, the princes of *Borneo* and *Sambas*. The air of this island is reckoned very unwholesome, which is occasioned by the country's being low in some places, and marshy. On this account it is but thinly peopled, tho' it abounds in very rich commodities. When the *Dutch* first settled in the *East Indies*, they were extremely solicitous about establishing their factories in *Borneo*; and accordingly they fixed them at the city of that name, at *Sambas*, and at *Succadano*; but they soon found, by the repeated plunder of their settlements, and murdering all that were in them, that there was no such thing as dealing with the inhabitants, who are certainly, if their relations be true, the basest, cruellest, and most perfidious people in the worldⁿ. The *Dutch* therefore quitted the island; and, tho' invited thither several times since, have absolutely refused to return, tho' they send ships occasionally, and manage with great caution; but, for the most part, they leave them to come and seek *European* commodities at *Batavia*, or to purchase them at second-hand from the *Chinese* who trade thither, and to *Borneo* also; their natural diffidence

^k Dictionnaire de commerce, tom. ii. col. 701, 702. Hist. des Indes Orientales, par GUYON. tom. ii. p. 422, 423. of the specie that comes in this way. These caravans bring likewise vast quantities of velvets, sattins, armoiseens, cloths of gold, camblets, fine cloths, saffron, mercury, vermilion, and other goods as well of *Europe* as of the *Levant* (100). The royal vessel, as it is called, from *Suez*, has its cargo composed of much the same kind of merchandize with the caravans; but is commonly richer in silver, as having rarely less on board than forty thousand pieces of eight; but this is not the case with respect to gold, of which that ship has seldom above fifty thousand ducats. All this is left behind; and, in return, they purchase some *Arabian* cloth, myrrh, ambergrise,

and perfumes of all sorts, precious stones, more especially pearls and cornelians, aloes, balm, cassia, dragonsblood, gum arabic, and other drugs, as also vast quantities of *Indian* goods that are brought from all parts, even *China* and *Japan*; to which we must also add coffee, as a very considerable article to these traders, as well as the most considerable one with respect to the *Europeans*, who bring likewise prodigious sums in specie; of which it is thought that the *Dutch* bring the least, on account of their spices, and some other commodities, which come here to a very good market (1).

(100) *Memoires de Dr. Garçon.*

(1) *Hist. des Indes Orientales, par Guyon, vol. iii. p. 406.*

- a securing them from this innate spirit of fraud and cruelty which reigns amongst these treacherous islanders °.

THERE is not now any *European* settlement in the whole island; and yet the commerce of *Borneo* consists in as rich goods as any in all the *Indies*. At *Samdas* and *Succadano* they deal in diamonds, of which there is a mine in the heart of the country. These stones are generally from four to twenty-four carats, and there are some found of thirty and forty carats; but the whole trade does not amount to above six hundred carats in a year. They always sell these stones for gold, tho' that likewise is the commodity of the island, and tho' there is a very considerable trade for gold-dust carried on at *Pabang*, *Saya*, *Calantan*, *Seribas*, *Catra*, and *Melanouba*. Bezoar of the finest sort is another article in their trade, not at all inferior in its value to the former ^p. Sapan wood, fine wax, and several rich gums, are also met with there; but, after all, the staple commodity of the whole island is pepper, of which there is as much, and as good, as in almost any part of the *Indies*. Before the *Portuguese* discovered a passage to the *Indies* by the *Cape of Good Hope*, the *Chinese* were in possession of all the trade of this island; and, since the *Europeans* have declined settling there, it is again, at least in a great measure, fallen into their hands. The places where they are settled, besides *Banjaar* *Masseen*, are *Mampua*, *Teya*, *Lando*, and *Sambas*, where they carry on a very extensive commerce, and furnish the inhabitants in return with silks, chintz, calicoes, and, in short, with all the manufactures of *China* ^a and *Japan* (L).

It has been suggested, and with great shew of reason, that a more valuable trade might be established in this island of *Borneo* than in any part of the *East Indies*, because there arrive annually large fleets of *China* junks laden with all the commodities of that empire, which might be purchased as cheap, or cheaper, than even in *China*. There come likewise annually from the island of *Celebes* small vessels, which, in spite of the vigilance of the *Dutch*, bring considerable quantities of cloves, nutmegs, and other spices; which is the true reason that the *Dutch* are not able to put off any great quantities of these goods in their traffick with the inhabitants: yet sometimes they send ships hither to load with pepper, and endeavour to keep up a good correspondence with the kings of *Borneo* and *Sambas*; for, as to the king of *Banjaar*, he has long ago declined having any thing to do with them ^r. It is, however, not amiss to observe, that some, who are very well acquainted with the present state of things in the *East Indies*, look upon the *Dutch* as very much obliged to the inhabitants of this great island for the care they take in maintaining the antient reputation of their ancestors for cruelty and perfidiousness, but, above all, for their copying them exactly in preferring sloth and ease above all things; since, with the assistance of common sense, common honesty, and common industry, they might make themselves the greatest, richest, and most respected people in *Asia*, there being good grounds to believe, that there is full as much gold to be found here as in *Sumatra*; and still better authority for attributing what themselves say of their correspondence with the inhabitants of *Celebes* to the fear of the *Dutch*, the most intelligent persons being persuaded, that the mace, nutmegs, and cloves they sell the *Chinese*, are actually the growth of their own island ^s (M).

THE

° *Memoires sur le commerce des Hollandois*, p. 201. *L'expedition de trois vaisseaux*, p. 219, 220. ^p *Memoires de Dr. GARGIN*. ^a *Dictionnaire de commerce*, tom. ii. col. 871. ^r *L'expedition de trois vaisseaux*, tom. ii. p. 221. *HAMILTON's account of the East Indies*, vol. ii. p. 146, 147. ^s These particulars are chiefly derived from private information.

(L) There is nothing more difficult to be understood by one who is really inclined to penetrate the secrets of the commerce of the *East Indies*, than what regards the traffick of the *Chinese* in *Borneo*; and the rather because we have good grounds to believe, that no direct commerce subsists between this island and the empire of *China*. We may therefore, with some probability, conjecture, that the *Chinese*, established in *Borneo*, carry the rich commodities of that country not only to *Jawa*, *Sumatra*, and *Celebes*, but also to *Siam*, *Tonquin*, *Cambodia*, and perhaps to *Surat*; from all which countries they bring back not only their native commodities, but also those of *Europe* ². Besides, the *Chinese* junks that go to *Batavia*, and are so lucky as to sell off their cargoes early, frequently purchase a fresh cargo for *Borneo*, in which, perhaps, *Javanese* and *Dutch* merchants are also concerned, and, if they cannot dispose of their goods speedily, the conveniency they have of living amongst

their own nation till they can dispose of them, lessens the sense of the disappointment, and; perhaps, makes them amends for it (3). One reason has been assigned in the text, why the *Chinese* are better able to deal with the people of *Borneo* than any other nation; and to this, perhaps, another may be added, which is that these perfidious islanders are less jealous of the *Chinese*, who, they know, come there barely to trade, and who have neither temptation to attempt any thing against their liberty, or force to execute it, if they should conceive any such design (4).

(M) We have, in another part of this section, given the reader a very curious and authentic account of the true situation of things in the interior part of this great island, which is all inhabited by those who, with the utmost propriety, may be stiled *Borneans*, those settled upon the coast being for the most part *Malayans*. The principal reason of that obscurity, with which almost all

writers

(2) *Dictionnaire de commerce*, vol. ii. col. 871. tom. ii. p. 222.

(3) *Memoires de Dr. Gargin*.

(4) *Histoire des Indes*,

The Dutch
formerly very
solicitous, now
very cool,
about a cor-
respondence
with China.

THE other place, to which the *Dutch* company trades but little directly, is *Canton*, which is the only port in the empire of *Cbina* where strangers are allowed a free trade; and one would imagine the *Dutch* might have as much inclination, and to the full as much ability, to trade there, as any other people. We have seen that, in former times, they were very desirous of a strict and constant correspondence with the inhabitants of that rich and great empire; and, so long as they were masters of the island of *Formosa*, they carried on a direct trade thither to very great profit. After the setting up of the *Ostend* company, the *Dutch* did indeed send ships thither directly from *Holland*; but whether the trade did not turn to account, or whether they were influenced by some other secret reasons, it has been in a great measure discontinued. Those who have a passionate desire of penetrating into secrets, and who, from their long acquaintance with these parts of the world, are esteemed as capable of gratifying their curiosity in this respect as any, have suggested two reasons why the *Dutch*, in a great measure, decline this traffick, so eagerly pursued by other nations, and to which heretofore none were more attentive than themselves.

Two probable
motives for
this alteration
in their con-
duct in a point
of such im-
portance.

BUT, whatever becomes of this general assertion, we may safely affirm, that the *Dutch* do not affect any settlement in this empire, may be very well accounted for from the two following causes, which are very weighty. The first is, that, being at so great a distance from *Batavia*, and in a country where it is easy to consign their effects to *Portuguese*, *English*, and other foreign merchants, the officers mind their own concerns more than the company's; of which a convincing proof has been had by the *Portuguese* vending their pepper at a greater advantage than the *Dutch*, tho' they bought it at an high price at *Batavia*. But the second cause is still more important: there is a prodigious trade carried on by the *Chinese* to *Batavia*, which, tho' it is a voyage of seven hundred leagues, the *Chinese* make it in their junks in the space of six weeks, sailing from *Canton* in the beginning of *December*, and arriving at *Batavia* in the middle of *January*. The company, in the first place, have a duty of four *per cent.* on all the goods they bring, which are, gold, silks of all sorts, tea, annised, musk, rhubarb, copper, quicksilver, vermillion, *Cbina* ware, &c. for which they receive in exchange lead, tin, pepper, incense, camphire, cloves, nutmegs, amber, and abundance of other things; on all which the *Dutch* set their own prices, and consequently buy much cheaper than other nations can purchase the same goods in *Cbina*. They have also found by experience, that a direct trade between *Holland* and *Cbina* lessens very much this more profitable commerce at *Batavia*: neither

¹ L'expedition de trois vaisseaux, tom. ii. p. 222.
L'expedition de trois vaisseaux, tom. ii. p. 222, 223.

² Memoires sur le commerce de Hollandois, p. 200, 201.

writers speak of the produce of this country, is, that the *Europeans*, and even the *Chinese*, have no intercourse but with the inhabitants of the coasts, and they derive the most valuable of the commodities in which they deal from the savages, as they are pleased to stile them, in the center of the island; so that they cannot either give a good account of these commodities themselves, or settle any trade in them with certainty (5). A little reflection, however, will be sufficient to shew us, that how unfavourable soever this may be towards fixing an intercourse with the people of *Borneo*, yet it affords us an unanswerable proof of what are the true products of that island; because whatever these people bring, they certainly have of their own, and in much greater quantities than we can form any just notion of from what they sell to the people settled on the coast (6); which is measured only by the want of those things for which they exchange them, and not at all by the plenty of the commodities in which they deal; for, as much savages as they are, they have cunning enough to make these go as far as they can (7). But to come to the point: they furnish gold of several kinds, some fine, some coarse; they have also tin and iron: they bring down small diamonds that are very fine; and formerly they sold larger, and perhaps have them still, tho' they do not care to sell them. Fine pearls they furnish more freely. Cloves and nutmegs they vend in small quantities, which are, in every respect, as good as those at *Amboyna*, and the island of *Banda*. It may be presumed that they have cinnamon likewise, because they bring down large quantities of the finest camphire that is to be met with in the *Indies*; and therefore a very intelligent writer had good reason to

say, that *Borneo* produces all that is to be met with in *Samatra*, and some very valuable commodities besides (8). The business is, to know how to come at these; and the reader, perhaps, will not judge that so very difficult, if he considers the following passage from captain *Hamilton's* very ingenious book, in which he gives an account of the little kingdom of *Sambas*, on the coast of *Borneo* (9): "The prince and people are very hospitable and civil, so that strangers trade thither with security. I knew a *French Armenian* who, coming from *Manila*, had the misfortune to lose his ship on that part of the coast that belongs to the king of *Sambas*. They had but little goods; for generally *Spanish* dollars are the common return for goods sold at *Manila*. When the people that were shipwrecked came ashore, they were carried to the king, who examined what they were, from whence they came, and whither bound, with what they were loaded, and several other interrogatories; and then ordered them provisions, and men and boats to assist them in saving their treasure; for there was but very little lost, besides the ship and stores, that were worth the trouble of saving. The king gave him pearls and bees-wax for his silver, at such reasonable rates that the *Armenian* gained forty *per cent.* at *Batavia* (whither he went in a *Chinese* vessel), for the goods he disposed of there. At *Batavia* he took passage on board a *French* ship for *Cbina*, and in their way called at *Trangano*, where I met with him in the year 1719. I had the whole account from himself, and saw some beautiful pearls that he was carrying to the *Cbina* market, and among them a pair of pearls worth fifty pounds sterling."

on the commerce of India, p. 31.

(8) *Memoires de Dr. Garçin.*

(6) *Memoires de Dr. Garçin.*

(9) *Hamilton, ubi sup.* p. 146, 149.

(7) *Remarks*

a is it there only that they have an opportunity of dealing with the *Cbinese*, but in many other parts of the *Indies*, where, when the *Cbinese* merchants have completed their sales to the natives, they are very glad to part with the remainder of their commodities, at a very easy rate, to the *Dutch* *. Thus it clearly appears, that the *East India* company are able to send home vast quantities of *Cbina* goods, without carrying on a direct trade with that country either from *Holland* or *Batavia* (N).

* HAMILTON'S account of the East Indies, tom. ii. p. 239, 240.

(N) These reasons, taken together, might very well determine the *Dutch* company to decline, or at least to abate of their fondness for, this commerce; more especially when they found, by repeated experiments, that it still remained difficult for them to get the better of those prejudices which had been raised against them in the court of *Cbina*, where the *Portuguese* had taken care to return them, at least as far as lay in their power, those civilities for which they thought themselves indebted at *Japan* (10). Yet the *Dutch* do not intirely slight, though they are far from cultivating, the commerce of *Cbina*, because it is always a point of consequence to them to know the state of trade in that empire, that they may form the better judgment of their dealings with the *Cbinese* elsewhere, and because the knowledge of that is likewise necessary to settle the assortments of their several cargoes, as well for *Europe* as the *Indies* (11). Upon occasion of the late bloody affair at *Batavia*, they found it expedient to send a kind of apology to *Cbina*; and it is very remarkable, that, in so delicate as well as so important a business, they made choice of a native of *Britain*, one Mr. * * * *, who succeeded beyond their expectations in that ticklish commission, and would, no doubt, have been rewarded with some important office in the company's service, if he had not died before he could receive any adequate mark of the company's gratitude and respect (12).

S E C T. XXVI.

An ample detail of the government gradually settled by the company in the Indies, in respect to their civil, military, commercial, and ecclesiastical establishments; the provisions and perquisites of persons of all ranks in their service; and the method constantly observed in making their returns, and in sending their homeward-bound fleets.

b A FTER entering into so distinct an account, as well of the places to which the *Dutch* *East India* company trade, as of the territories they possess, we are next to shew in what manner the government of the *Indies* is administered, and how the dependence is preserved between the supreme council, to which the ultimate direction of the company's affairs is confided, and that numerous train of officers honoured with such a variety of titles, vested with such different powers, and residing in places at so vast a distance as the coasts of the *Red Sea*, and the factory of *Japan*, are from the seat of government at *Batavia*. We have seen, from the history of this company, the steps by which it rose, the prudence with which every fair opportunity was managed to the best advantage, the dexterity and address with which imminent dangers were avoided, the great sagacity, and manifold precautions, by which threatened mischiefs were prevented, in consequence of their being foreseen; and hence the surprize at their acquiring so vast an empire, and in so short a time, is taken away: but, when all this is done, there seems to be an equal ground for admiration left, how such a dominion should be maintained. It would be no difficult thing to shew, that, according to the lessons laid down by the most able politicians, the management of such a mixed form of rule over territories so disjointed, and people of so many different dispositions, is altogether irreconcilable to any principles, and must have such a natural tendency to anarchy, as to render the stability of it for a considerable space of time a kind of prodigy. This, therefore, is what yet remains to be explained, together with the means by which this admirable plan for the just regulation of all things in the *Indies*, is connected with that frame of direction which subsists in the *United Provinces*.

d To set this matter in a clear light, it will be requisite to state first the general plan for the exercise of supreme power in the *Indies*, to which all these governments, directions, and factories refer; from whence they receive their instructions; to which those employed in them are accountable for their conduct; and where too, upon any emergency, they must have recourse for orders and assistance. After this, we must enter succinctly into that private and particular oeconomy, by which the less considerable, and even lowest of the company's servants have the terms of their duty prescribed, and a moral certainty of being rewarded or punished according as they fulfil or neglect them; for, after all, this is the sole and great point,

The form and method of the company's administration in the Indies and in Europe, equally curious, and important to the perfect knowledge of this subject.

By the plan settled in the government of the Indies, the security of the company is established.

point, to which if a constant respect be not had, it is impossible that any system of government should long continue in good condition; and by a strict attention to which we see so complicated, so perplexed a system as this is, has nevertheless been kept in the most exact order. It is in bodies politic as in the natural body, in which health and vigour always depend on a free circulation of the juices through the smallest vessels; it is there the stagnations begin, from whence the most dangerous diseases ensue. It is to the care, therefore, taken by the company in this respect, their wisdom in settling the smallest things, and their great strictness, which some call unrelenting severity, in seeing what has been once prudently established punctually and perpetually complied with, that we ought to ascribe the solidity of their power, as well as the general success of their designs *.

Of the two supreme councils at Batavia, that of the Indies, and that of justice.

ALL the dominions, which the company possesses in the *East Indies*, are governed by two supreme councils; one stiled the council of the *Indies*; and the other the council of justice. They are both of them fixed in the city of *Batavia*, as the capital of their dominions. To the first of these councils belong all matters of government, and the direction of public affairs; and to the latter the administration of justice in all its branches. The governor-general presides in the first council, which is composed of eighteen or twenty persons, who are called counsellors in ordinary of the *Indies*. It very rarely happens that they are all at *Batavia* together, because they are usually provided with some or other of the seven governments which are in the company's disposal. This council assembles regularly twice a week, and extraordinarily, as often as the governor-general pleases. They deliberate therein on all things that concern the interest of the company: they likewise superintend the government of the isle of *Java*, and whatever depends upon it. If the affair be of very great importance, the consent of the directors of the company is likewise necessary. It is also from the council of the *Indies* that orders and instructions are sent, to other governments, which are implicitly obeyed. In this council all letters directed to the governor-general, or to the director, are read, debated, and answers agreed on by a plurality of voices * (O).

Establishment of the latter, its numbers, jurisdiction, and principal members.

THE council of justice is composed of a president, who is usually a counsellor of the *Indies*, eight counsellors of justice, a fiscal, or attorney-general, for affairs of government, another fiscal for maritime business, and a secretary. The president is, by his office, keeper of the great seal, on which is represented a castle, in the midst of which is Justice, with her balance and sword, with this inscription round it; *viz. The Seal of the Council of Justice in the Citadel of BATAVIA*. All the counsellors of this college are doctors of the civil law. The first attorney-general has a vote as well as the other counsellors, and has the third of all fines under an hundred florins, and a sixth part of the fines above that sum. The duty of his office consists in taking care that the laws are strictly observed, and in preferring informations against such as break through them. The other attorney-general, or fiscal of the sea, takes the like care with regard to frauds committed in commerce, acts of piracy, or whatever has a tendency to disturb the settled rules in maritime affairs *. There are, besides these two sovereign boards, the

* *Memoires sur le commerce des Hollandois*, cap. 14. des Provinces Unies, cap. 37. 355, 356.

* *BARNAGE description historique du gouvernement de la republique des Provinces Unies*, tom. i. p. 354.

(O) It is not easy to conceive how the company could provide better for the information and assistance of their governor and captain-general, and at the same time form a stronger barrier for their own security, than by appointing this council of the *Indies*. By the way, it may not be amiss to remark, that as much attached as the *Dutch* are, or would be understood to be, to a popular government in their own country, there are no marks of it at all in the *Indies*, where the government is mixed indeed, but without suffering what has the least tincture of democracy to enter into the composition. We have before observed, that the appointments granted to a counsellor of the *Indies* were very considerable, yet fall short of many offices less honourable in the company's disposal; which is certainly a very prudent and political regulation, as it has an indirect tendency to keep such as are inordinate lovers of money from aiming at this employment; nor can there be any thing more salutary to a state than to make a proper division of posts of trust and honour and posts of profit, that men of generous and noble dispositions may aspire to the former, while men of meaner qualifications are gratified with the latter (13). It is true, that, in spite of these and other laudable cau-

tions, a spirit of faction sometimes prevails in this council, of which several instances have been already mentioned, and some others will be hereafter hinted. But what then? this does not in the least reflect on the constitution settled by the company, which may be, and certainly is, admirably contrived, and yet not absolutely perfect. The same misfortune attends the best contrived political constitutions, that is visible in the finest machines executed by the wit of man; that is, time will discover certain faults that arise not from their structure, but from their materials. Friction will destroy the hardest metals; and then, how excellent soever the machine may be, defects will appear; so in all administrations, as they must be executed by men, the frailties inseparable from human nature will produce very apparent inconveniences; but, in both cases, the remedy is the same, that is, when faults become conspicuous, necessary alterations must be made, not to destroy, but restore, the first principles; and, to make the comparison complete, we must judge of constitutions as we do of machines, and, without requiring perfection in either, allow both to be excellent, when they last a long time, and need but little mending.

(13) *Memoires sur le commerce de Hollandois*, cap. 14.

a council or tribunal of the city of *Batavia*, intrusted with the sole administration of this colony, which is composed of nine aldermen, including the president, who is always a counsellor of the *Indies*, and a vice-president; the bailiff of the city, and the commissary of the country adjacent, have likewise seats in that assembly, and, with the secretary, make up the board* (P).

THE governor-general, as the head of the empire which the company has established in the *East Indies*, is in fact the stadtholder, captain-general, and admiral. He is, by his office, president of the council of the *Indies*, in which he has two votes. He has the key of all the magazines, and directs every thing relating to them, without being accountable to any-body. He commands by his proper authority, and every-body is bound to obey him; so that one might safely say this authority equalled that of several kings in *Europe*, if he was not answerable to, and liable to be removed by, the directors of the company at home^b. In case, however, of treason, or any other enormous crime, the council of justice have a right to seize his person, and to call him to an account. When a governor-general is dead, or resigns his charge, the council of the *Indies* chuse another by a plurality of voices. As soon as this is done, they write to the directors of the company at home, desiring them to confirm and approve of their choice: they likewise write for the same purpose to the States General, their high mightinesses having reserved to themselves this power of confirming or excluding a governor-general by their charter. It is usual, however, for the States, and for the directors, to approve of the governor-general that is chosen, and to send him his letters patent, conformable to the desire of the council of the *Indies*: yet some instances there have been of the directors rejecting the governor thus elected, and sending another^c.

THE company allow their governor eight hundred rixdollars a month, and five hundred more for his table, and pay, besides, the salaries of such as compose his household; but these appointments make but a very small part of his revenue, the legal emoluments of his office being so great, that, in the space of two or three years, he is able, without oppressing the people, or burdening his conscience, to raise an immense fortune. As he is, in a manner, sovereign of the dominions belonging to the company, it has been found requisite, in compliance with the mode of the eastern countries, to allow him a court, and most of those honours which are paid to crowned heads. Whenever he stirs out of his palace to go to his country seat, he is preceded by the master of his household, at the head of six gentlemen on horseback, with a trumpet: two halberdiers on horseback go immediately before his coach; on the right he has his master of the horse, at the head of six halberdiers on horseback; then follow the other coaches, which carry his friends and retinue; and the whole is closed by a troop of horse, consisting of forty-eight men, commanded by a captain and three quartermasters, and preceded by a trumpet richly clothed^d. If this office be extremely considerable by its revenues, its power, and the honours annexed thereto, it is likewise extremely fatiguing. The governor-general is employed, from morning till night, in giving audience to such as have business with him, in reading letters, and in giving orders for the company's service; so that he spares but one half hour for dinner, and even at table dispatches such affairs as are pressing^e. He also receives all the *Indian* princes, and their ambassadors, who come to *Batavia*, and of whom there are many that arrive every year, and who are received according to a settled ceremonial (Q). After saying so much of these great officers, it will certainly afford satisfaction to the

A kind of monarchical power established in the governor and captain-general of the Indies.

Court and magnificence of this great officer, and the facility afforded him of raising a fortune.

(P) The settling a distinct and independent council of justice (which is sometimes also styled the council of the *Indies*), which has likewise the inspection of the finances, was another very wise step, as experience has shewn; inasmuch as these supreme councils are checks upon each other, and yet are so constituted, as not to be subject to frequent, much less to perpetual oppositions, which would be highly dangerous. But if the curious and judicious reader should expect a reason why this council, and not that of the *Indies*, is vested with the distinguishing prerogative of calling to an account, in case of extreme necessity, the governor-general, he must be told, that they derive it from the States General, who confide to the president and members of the supreme council of justice the superintendency of their sovereignty; that is,

they are charged to prevent any steps being taken by the office, or in the name of the *East India* company, inconsistent with the fidelity they owe to the States General; and consequently, as the only crime the governor-general could commit, which they would remit to the cognizance of any judicature in the *Indies*, must be of a treasonable nature, this prerogative is, with greater propriety, and with less danger of being abused, vested in the council of justice, than it could have been in the council of the *Indies* (14). Besides these, there are four inferior councils in *Batavia*, the presidents of which are taken out of the superior council; to which, in cases of any difficulty or importance, appeals are allowed.

(Q) We have elsewhere remarked, that the business of the company could never be carried on, if it was not kept

the reader, as well as light to the foregoing history, if we exhibit a list of the generals of the *Indies*, and take notice of the times in which they succeeded.

List of the
governors-
general.

A chronological and historical list of the governors general of the Dutch East Indies, with the Time of their accession, and space in which they governed.

A. D. 1610.

PETER BOTH of *Amersfort*. He was advanced to the government, when the affairs of the *Dutch East Indies* were in the most critical situation, Admiral *Paul van Caerden* being then prisoner in the hands of the *Spaniards*, who, by assembling a great force in the *Philippines*, entertained very strong hopes of driving the *Dutch* out of the *Moluccas*; but, through the prudence of this governor-general, who appears to have been a man of solid understanding, great temper, and much fortitude, their schemes were disappointed, and the *Moluccas* preserved[†]. It was during his government that the *Dutch* made a great impression on the islands of *Solor* and *Timor*, countries which have not been hitherto mentioned; and of which therefore, and of their produce, something shall be said in the notes (R). He did not hold the government much above two years, and was then succeeded by

GERARD

[†] *Histoire de la conquête des îles Moluques*, tom. iii. p. 135.

kept in a constant uniform track; and the same thing may be affirmed of the function of the governor-general. His levee begins at seven o'clock, when the company's upper merchant, the commandant of the garrison of *Batavia*, the surveyor of the navy, and the major of the artillery, attend, to make their respective reports, and to receive his orders. At half an hour after ten precisely, the receiver general brings his report of the vessels and cargoes that are arrived, with the list of the names of such as have landed. At twelve o'clock he goes to dinner; half an hour after, he retires to his repose. Before two, he appears again in public, and dispatches business till between eight and nine o'clock. Whenever a messenger arrives, charged with a letter from any *Indian* monarch, the shawbander, or master of the ceremonies, upon notice given him, goes to receive it, with seven or eight of the principal officers in the company's service; then, the letter being laid in a large silver dish, covered with a piece of yellow flowered damask, is put into the hands of a halberdier, who carries it before the master of the ceremonies and the *Indian* minister, their respective trains following at a distance. The garrison, on such occasions, is drawn out, and takes post in two lines, which extend from the port to the governor's palace, between which the company march slowly, and with great solemnity, the soldiers resting on their arms, drums beating, colours flying, and all the military music playing. As soon as the *Indian* minister is in the presence of the governor-general, the halberdier presents him the dish, out of which he takes the letter, and puts it into the hands of the governor. At that instant, upon a signal given, there is a general discharge of the cannon, and three salvo's of the musketry. Then the minister, and those who accompany him, are conducted into the great hall, where the minister sits down to table with the governor-general and the commandant of the garrison, his secretary standing near the governor, and all the rest of the company at a distance, the table being surrounded by a guard of halberdiers. The entertainment being over, the minister is conducted back with the like ceremonies (15). On *Sundays*, immediately after dinner is over, follows what they stile the parade, in which, however, the governor is not obliged to assist, as it is calculated purely for the amusement of the *Indians*, who love nothing so much as these kind of spectacles. The principle figure in this parade is the general's led-horse richly caparisoned, followed by a troop of *Cuirassiers*; then come a company of grenadiers, and after

them a battalion of the garrison, with their head pieces. The horse are preceded by a trumpet richly clothed, the grenadiers by two bassoons, and six hautboys precede the battalion (16). Such is the state of a governor general of the *Indies*, or rather, such are the trappings allowed to him, who is the greatest slave in the company's service, and which, in the judgment of a sensible man, contribute rather to heighten than to relieve the burden of so painful and so troublesome an office, and which, while they do him so little service, expose him to the envy of those who might be much more at ease than he, if they knew how to make a right estimate of their own happiness.

(R) This island of *Timor* lies east south east from *Java*, and the *Dutch* have still a fort and a small factory upon it. The island is very well inhabited, and of very considerable extent; but the people, if we may credit either the *Portuguese* or the *Dutch*, are very barbarous, and, in some measure, savages. Yet some *Englishmen*, who were there with Captain *Dampier*, report otherwise; and that these people are no otherwise savages, than as they have a mortal aversion to slavery, and are not so stupid but that they have detested all the practices of both those nations to bring them under their yoke, and therefore have defended themselves, with equal skill and bravery, against force and fraud, and are still just as free as when they found them living under their own chiefs, and in the manner they like best (17). The *Dutch* continue to trade with them (though sometimes, it is said, that the profits of the commerce do not defray the expence of it) for three reasons. The first, which the reader will not find mentioned in many books, is the expediency of having intelligence from thence, in case of any ships coming to the *Indies* through the *South-Seas*, of which the *Dutch East India* company are at least as jealous as the *Spaniards*, let them be of what nation they will, their own not excepted. In this sense, the island of *Timor* is a kind of frontier, which vessels that take this route, and are not bound for the *Philippines*, seldom fail of coming to, and thereupon notice is given to all the *Dutch* fortresses in the *Moluccas* (18). The next reason is, because this island is both large and tolerably fruitful, a thing of very great consequence for the supply of the *Moluccas*, where, between the barrenness of the soil, and the idleness of the people, a perpetual indigence prevails. Either of these reasons are pretty good ones, and either of them might suffice for keeping the island. But there is a third, superior to both; which is, that it affords them

(15) *Voyage de Francis Leguat*, tom. ii. p. 99. *Relation de la ville de Batavia*, par *Nicolas de Graaf*. *Janiçon état présent de la république des Provinces Unies*, tom. i. p. 359, 360, 361. (18) *L'expédition de trois vaisseaux*, tom. ii. p. 21.

a GERARD REYNST, of *Amsterdam*. He prosecuted, with great vigilance, the schemes of A. D. 1612 his predecessor, and was particularly careful in bringing the islands of *Banda* under the dominion of the company, which was undoubtedly a great acquisition^g. But as he was very active and indefatigable, so his zeal for the service is believed to have shortened his days, since, after enjoying the post of governor-general for one year and a few months, during the greatest part of which he was at sea, or otherwise in action, he died, *December* the 7th, 1615^h.

LAURENCE REAAL, of *Amsterdam*, who was governor of the *Moluccas* at the time of 1616: the general's demise, succeeded him in his employment; which while he held, though the *Spaniards* threatened much, they were able to do but little; and, while they spent a long time in preparing a most formidable fleet and army, the governor-general, who had perfect intelligence b of all their motions, failed not to make a proper use of their delays, taking one fort after another, and worming them gradually out of what they had still left in the *Moluccas*, while they were meditating the intire conquest of them; which, as we have elsewhere shewn, came to nothing, after it had cost immense wealth, and exhausted the whole force of the *Philippines*ⁱ. He held his government about two years, which then devolved upon

JOHN PETERSON KOEN, of *Hoorn*. A man born to fix the hitherto unsteady fortune of the 1618: *Dutch* in the *Indies*. He it was who secured to them the full and intire possession of the spice islands; and, knowing perfectly the state of things in *Europe*, as well as the *Indies*, ventured to make use of the superior force they then had against both the *Javaneze* and the *Englisch*^k. We have shewn, in the former part of this work, how he took the city of *Juatra*, and c having, at one bold stroke, subverted that capital and the kingdom, established, on the ruins of both, the noble city of *Batavia*, of which, while he first held the government, he was the founder^l.

PETER CARPENTER succeeded, on his return to *Holland*. He regulated the inferior form 1623: of his government with success, extended the commerce of the company very considerably, and had the honour to have a part of the South Continent called by his name, which is sufficient to perpetuate it to latest posterity^m.

JOHN PETERSON KOEN, at the request of the company, and by the command of the States, 1627: took the reins of government once more into his hands, at a season when the whole island of *Java* conspired the ruin of the new *Dutch* settlement, as having judgment enough to foresee, d that those whom themselves had beheld but strangers in the island, their posterity would be obliged to regard as masters. It was this that provoked the emperor of *Java* to besiege their chief settlement twice, with armies so numerous, that it could scarce have been expected any fortrefs should have withstood themⁿ. Yet General *Koen* made that monarch sufficiently sensible, that force was not comparable to prudence, and that multitudes ill conducted are but multitudes conducted to slaughter. After having baffled this powerful monarch, and seen the greatest part of his army the victims of his ambition, this great general departed this world, *September* the 20th, 1629. As he lived the founder, he died the defender, of *Batavia*, and

the monopoly of a very valuable commodity, which is *sandal*, *sental*, or *santal*, which last is the best way of spelling it, a kind of odoriferous wood, highly esteemed in *China*, and indeed throughout the whole *East Indies* (19). It is the same that we call sanders; but, as there are many mistakes about it, published in books otherwise in good credit, it may not be amiss to give a short description of it here. It grows to the size of a walnut-tree; the leaves resemble those of the lentiscus; its flowers are of a dark blue, inclining to a black; and its fruit resembles our cherries, being first very green, and as they grow ripe turn black. The wood is not valuable till the tree is very old, which is easily distinguished by the leaves becoming smaller, and growing yellow. There are two sorts of wood in the same tree, one citron-coloured, and the other white. The heart of the tree, and where-ever there are knots, are commonly citron; and sometimes in the midst of the branches, and even in the body of the tree, there are spots of this colour, occasioned, as it is generally supposed, by the flagration of the oil; the rest of the timber is white. When it is first cut down, and split into billets, it has no smell at all, but, as it becomes dry, it acquires a very pleasant comfortable

seent, the citron being much stronger than the white. It is used as a perfume principally in embalming, and vast quantities are annually exported to *China*, where it bears a great price. In some part of the *Indies* they burn it, either in chips or in dust; but this is purely ostentation, since the smoke is without any smell. In the *Maldives*, and other islands, they reduce it to powder, and sprinkle it over their dead bodies. It is also used in medicine, to comfort the head and heart, but chiefly outwardly; in order to this, they rub the wood upon a stone, with a little water, till the water becomes thick, and then they anoint the head, face, stomach, or breast, with it. It is believed to be of great efficacy in head-achs, inflammations of the eyes, pleurifies, and all kinds of fevers. The true *santal* grows only in the island of *Timor* and *Solor*, and is generally worth ten pounds sterling a bahar, or five hundred weight. As for the brown *santal*, or red sanders, it grows plentifully on the coast of *Coromandel*, but is without smell, and employed chiefly in making chests and cabinets, highly valuable in one respect, that it resists all kinds of worms, and other vermin. This sort of wood comes frequently in the *Dutch* ships to *Europe*, under the name of *caliatour* (20).

(19) Histoire de la conquête des isles Moluques, tom. iii. p. 173, 174, 175.

(20) Memoires de Dr. Garçin.

was justly esteemed the ablest statesman, the completest officer, and the most fortunate person, a that had been entrusted with the care of the *Dutch* affairs, to that time, in the *East Indies* ^o.

A. D. 1629. JAMES SPEKS succeeded him in the post of governor-general, arriving at *Batavia* about the time of his decease. He distinguished himself by executing, with great skill, and equal exactness, all the dispositions of his illustrious predecessor; so that, in his time, *Batavia* became no less remarkable for its elegance and beauty, than it already had been admired for its happy situation, and great strength. But what gave the highest reputation to his government, was the settling of the *Chinese*, whom he took under his particular protection, and who, at his departure from his government, which he held about three years, made him a present of a most noble medal of gold, having one side a very beautiful plan of the port, fortres, and city of *Batavia*, and on the other, two inscriptions in honour of this worthy person, and expressive of their own gratitude, for the great indulgence he had shewn towards them ^p (S).

1632. HENRY BROUWER succeeded in the government, and followed the example of his predecessors, particularly in promoting trade, which flourished exceedingly during his administration. He also held the government about three years ^q (T).

1635. ANTHONY VAN DIEMEN, a good officer, and an experienced seaman, by whose name part of the South Continent, as it is generally reputed, is distinguished, was appointed governor-general of the *Indies*, at a very critical season, and when it highly imported the company, and the *Dutch* nation, to have a man blessed with a sound head and a steady hand at the helm. They were not disappointed in the choice they made in this great man, who found the natives of the *Moluccas* much discontented, and a general spirit of uneasiness, and even mutiny, in some other places. He applied himself immediately to put the fortifications every-where in the best state of defence, and stationed squadrons so prudently, that the seditious became silent and afraid. He then changed his measures, and, instead of that sternness which he shewed at the beginning, declared, that he was willing to hear and to redress grievances; to give the utmost satisfaction to the allies of the company; to ratify old treaties, and to rectify any mistakes in them, by new ones. The princes of *India*, when they saw that he was not to be either frightened or outwitted, and that, at the same time, he was willing to listen to reason, took him at his word; and, upon his going in person to the *Moluccas*, negotiated and concluded with him, in the month of *June* 1638, the clearest and most explicit treaty that, perhaps, was ever made with any Christian nation. It was during his regency that the *Spaniards* and *Portuguese* suffered so much in those parts, and at length lost the important fortres of *Malacca*, after a siege of four months and twelve days, in which the besiegers had a thousand men killed. It surrendered *January* 12th, 1641; and the *Portuguese* then lost, in effect, what was their greatest boast, being lords of the navigation of the *Indies*, all ships passing the streights paying a certain duty, and taking licences at *Malacca*. The rest of his government was equally fortunate and honourable; and his masters were so sensible of his diligence, fidelity, and capacity, in the execution of his trust, that they left him in possession of it, till he was removed by death, *April* 19th, 1645.

1645. CORNELIUS VANDER LYN, of *Alkmaar*, being raised to this high office, resolved to distinguish his regency, by making the company masters of the other passage into the *Indian* seas, between *Cape Comorin* and the island of *Ceylon*, which he saw happily effected. He was also the patron of a very important design, which was that of discovering the passage to *Europe* by the way of *Japan*; and though this proved abortive, yet, like all great attempts,

(S) This medal was an oval figure, and, on the reverse, the first inscription is in the *Malayan* language, written in old *Chinese* characters, in four lines, consisting, in the whole, of fourteen characters, forming a sentence of the following import (21): *The sun, by its irradiations, communicates the celestial light even to the earth; in the same manner, a wise administration conveys the glory of him from whom it flows down to the latest branch of his posterity.* The second inscription is in *Latin*; and runs thus: "In perpetuam gratitudinis memoriam, hoc munusculum nos cives Chineses Bataviae, lubenter meritoque obtulimus insigni heroi Jacobo Spexio, Indiarum Orientalium generali, patrono nostro observando, anno 1632, die 25 Novembris, Bataviae." That is: *In perpetual memory of our gratitude, we the Chinese citizens of Batavia, have freely, as well as conscious of his desert, presented this little gift to the illustri-*

ous hero James Spex, governor-general of the East Indies, our respected patron, A. D. 1632, the 25th day of November, at Batavia.

(T) It is requisite to acquaint the reader with a circumstance necessary towards the perfect understanding some passages in the *Dutch* voyages and histories of the *East Indies*, in which he may meet with the title of president of *Batavia*, by which he is to understand, the governor-general, whom the council of the *Indies* have an authority to elect, and to invest with all the prerogatives of his office, that of the title only excepted, which he cannot assume till he has had the approbation of the directors. In virtue of this distinction, the same person is sometimes called by both titles, in the same book; and in some catalogues it will be found, that such a person executed the office of president of *Batavia* so long, and was so long general of the *Indies*.

(21) *Histoire Metallique des Pays Bas, par Monsieur Gerard van Leen, tom. ii. p. 204.*

- a it produced some advantages, even from its miscarriage, and gave the first certain intelligence, that there was a passage by sea to the island of *Japan* from the opposite side of *Tartary* *. One of the vessels employed in this expedition being wrecked on the coasts of his dominions, the *Japanese* emperor took umbrage at these inquiries, and it was found necessary to send an embassy to quiet him. Some other parts of the South Continent were visited by certain *Dutch* ships homeward bound, and having held this employment, with great honour, for five years, this worthy person yielded up his charge to his successor, and returned into *Holland* *.

CHARLES REINIERTZ, of *Amsterdam*, succeeded in this high office, and sat there without A. D. 1650. meeting with any extraordinary difficulty, or distinguishing himself otherwise than by a mild and prudent administration, till he was removed by death, May 18th, 1653 *.

- b JOHN MAATSUYKER, of *Amsterdam*, took upon him the government, which he held much longer than any of his predecessors, or than any of his successors have hitherto done. He was a person of great abilities, had been long in the company's service, and irreproachable in his fidelity; so that the directors at home confided in him intirely, and gave him such powers, as set him almost above all restraint *. Yet it was under his direction, that their embassy miscarried in *Cbina*; that many hardships were put upon them in *Japan*; and that the island of *Formosa* was lost. But, to balance these, he managed very successfully two wars against the king of *Macassar*, and others, upon the continent of *Asia*. He was also very fortunate against the *Portuguese*; extended the trade, and the territories of his masters, on every side; and kept the officers in their service, of all ranks, in so good order, and executed the instructions he received so punctually, that no thoughts were entertained of sending him a successor; and therefore he remained governor-general till the time of his death, which was *January* the 4th, 1671, in the twenty-fifth year of his regency * (U).

1653.

RYKLOF VAN GOENS, who had served the state so effectually at *Ceylon*, and on the coast of *Coromandel*, succeeded in this great employment, in which nothing very extraordinary happened, during somewhat more than two years that he held the regency; and then he returned to *Holland*, to pass the remainder of his days in quiet, but died in his passage home *.

1678.

- c CORNELIUS SPEELMAN, of *Rotterdam*, was invested with this dignity, upon the departure of his predecessor, *November* 5th, 1681. He went to the *Indies* in a very ordinary station, and raised himself, by his merit, to the post of book-keeper general at *Batavia*, and president of the council appointed to take care of the successions of the *Cbinese*; which offices he discharged with so great honour, that, in the year 1663, when he was in the thirty-sixth year of his age, he was made governor of the coast of *Coromandel*; where, however, some exceptions were taken at his proceedings, for which he was recalled to *Batavia* *. General *Maatsuyker*, who had a kindness for him, perceiving that none of the counsellors of the *Indies* were willing to charge themselves with the management of the war against *Macassar*, gave the supreme command to *Speelman*, who, as we have shewn, twice reduced that monarch to the necessity of demanding peace; and the last time brought him so low, that he was content to come in person, and pay his homage to the council and regent at *Batavia* *. In consequence of these great exploits, he made a kind of triumphant entry into the city; and, as a reward, was appointed first an extraordinary, afterwards an ordinary, counsellor of the *Indies*, next governor of *Ceylon*, and *, *May* 13th, 1678, he was appointed director-general; which office he is said to have executed with greater punctuality and exactness than any of his predecessors; which made way for his being raised to the highest office in the government, which he held but very

(U) This gentleman distinguished himself in the year 1644, by his negotiation of a treaty with the *Portuguese* at *Goa*, where he acquired a great reputation, by his candour and frank behaviour (22). After he was invested with the government, which he managed with as much state, and yet with as much ease, as any of his predecessors; the seamen began to give him the name of *The Great Maatsuyker*, which, by degrees, became a kind of surname, and very deservedly; for though it was at first given on the score of that unusual pomp and magnificence which he affected upon certain occasions, and which no man became better, yet it belonged to him for the very opposite reason; because no man valued it so little, or indeed despised it more. He managed it, however, with

great address; and is thought to have concluded more than one advantageous treaty for the company, by dint of a little extraordinary feasting and parade; at the expence of which, however, the council of the *Indies* could not help clamouring; which had no effect upon him, and was not so much as well received by the directors at home, as the reader will be hereafter informed. But, after this dispute, they let him alone, and he actually governed at *Batavia* as if he had been a sovereign prince. The company felt the good effects of his temper and abilities, long after his decease, some of the best officers she ever had in her service being bred under him, and most of the courts in the *Indies* respecting the great *Maatsuyker's* memory, and the company for his sake (23).

(22) Histoire de la conquête des îles Moluques, tom. iii. p. 318.

l'abbé de Choisy, p. 137.

little above two years, dying *January* the 11th, 1684, in the fifty-fifth year of his age^a; and which is very remarkable, on the very same day died the next officer to him in rank, who, if he had survived, might probably have succeeded him (X).

A. D. 1684. JOHN CAMPBUIJS, of *Haerlem*, was elected upon the death of Mr. *Speelman*. He had not much to boast of in point of birth, being put apprentice to a goldsmith, at which trade he worked as a journeyman some time; but finding the wages small, and being of an enterprising genius, he resolved to try his fortune in the *Indies*. He came to *Batavia* during the regency of *John Maatsuyker*, the great patron of industry and merit; and, having obtained a seat in the secretary's office, he was soon taken notice of by the general, who advanced him gradually, till he came to be at the head of that office^f. From thence, in 1671, he was named chief of the factory at *Japan*, and went thither again in 1673 and 1675; which must have made a great alteration in his fortune, as it is one of the most profitable places the company can bestow. He was then named a counsellor of the college of justice; and General *Maatsuyker* made him his secretary, intending to have done more, but being removed by death, it was thought that the fortune of Mr. *Campbuis* would remain at a stay^g. Those, however, who were in this sentiment, quickly saw their mistake; for, in 1678, he was made an extraordinary counsellor of the *Indies*, and somewhat more than two years afterwards, he became an ordinary member of the council; in which he had scarce sat three years, when the governor-general *Speelman*, and the director-general *Borth*, dying on the same day, there were great intrigues set on foot about a new election. It so happened, that most of his brethren had a prejudice against Mr. *Campbuis*, of which they made no secret to each other; and therefore several of them, when the election came on, having a secret envy to those who were most likely to carry it, they gave their voices to *Campbuis*, supposing it impossible that this should have any consequence. This expedient, however, occurred to so many of them, that, upon collecting the billets, Mr. *Campbuis* had a clear majority, and was declared president of *Batavia*, to the great surprize, and entire dislike, of those who elected him. He took possession, however, of the government, in the management of which he shewed a very great capacity; but the counsellors of the *Indies* were so disturbed at his election, and so little able to reconcile themselves to a transaction of their own procuring, that they quickly quarrelled with him, and carried their resentment to such a height, as not to perform the functions of their office for two years together; which might have been attended with the most fatal consequences, if the governor-general had not conducted himself with equal firmness and prudence in his administration, during that space, at the end of which arrived the company's decision, when the council were in hopes of having him at their mercy. But they were once more sadly disappointed; for the directors intirely approved his conduct, confirmed his authority, and left it in his power to make them feel the whole weight of his resentment^h. The governor-general, however, was so thoroughly satisfied with this triumph, and so little inclined to sustain any longer a burden which he had long thought insupportable, that, on the 24th of *September*, 1691, he voluntarily resigned his employment; reserving, however, a guard of twelve men, for the security of his person (Y).

(X) The name of this illustrious person was *Balthazar Borth*, whom we have already mentioned in the former part of this chapter, on account of his twice commanding in chief the squadrons sent by the company to the assistance of the *Chinese*, in the years 1662 and 1663 (24). He was appointed director in chief at *Malacca*, *October* the 15th, 1665; and though, as we have already observed, that office is distinct from the governor, yet, three years after, he was advanced to that dignity likewise, by an express order from the directors at home, as the most distinguishing mark they could give him of confidence and respect (25). In 1670 he returned to *Batavia*, and was appointed a counsellor extraordinary of the *Indies*. In 1678, he became counsellor in ordinary, and was advanced to be president of the council of justice. And when *Cornelius Speelman* was elected governor-general of the *Indies*, Mr. *Borth* succeeded him in the post of director. Upon the death of both these great men, *Speelman* at the age of fifty-five, and *Borth* in his

fifty-eighth year, medals of gold were distributed at their funerals, to perpetuate the memory of their virtues and fortunes (26).

(Y) Mr. *Campbuis*, besides his guard, reserved the second seat in the council of the *Indies*, and lived at a country-palace, which he built, without the new gate at *Batavia*, which he adorned with fine gardens, and where he had a noble collection of strange beasts, and rare plants, till the 18th of *July* 1695, when he breathed his last; directing, that a gold medal, weighing sixty-six florins, should be given to each of the persons that supported his pall at his funeral. On these medals were several pious inscriptions, with the arms which he had assumed, being an arm with a goldsmith's hammer; the whole calculated to shew, that the prosperities of this world had never effaced from his mind the memory of his low original, or the thoughts of the world to come. He died in his 58th year (27).

a WILLIAM VAN OUDSHOORN, of *Ambogna*, was elected upon his resignation, and held his A. D. 1691. government with great reputation for almost thirteen years, resigning it voluntarily *August* 15th, 1704¹.

JOHN VAN HOORN, of *Amsterdam*, was elected in his room, and held this high office between 1704. four and five years².

ABRAHAM VAN RIEBECK, of the *Cape of Good-Hope*, being of the same family with the first governor of that settlement. He was a person of great worth and honour, and held his high employment to his death, which happened the 17th of *November*, 1713. 1709.

CHRISTOPHER VAN ZWOL, of *Amsterdam*, distinguished himself chiefly by his severity towards the *Chinese*; which had a very bad effect, and might have been still more fatal, if he 1713. had not been removed by death, the 12th of *November* 1718.

b HENRY ZWAARDEKROON succeeded him, and cancelled all that he had done against the *Chinese*. He resigned his employment the 8th of *July* 1725, having acquired as large a fortune as almost any of his predecessors. 1718.

MATTHEW DE HAAN, of *Dort*, entered upon the government *August* 7th, 1725, and died 1725. on the 1st of *June* 1729.

FREDERICK DERVEN, of *Delft*, was chosen upon the demise of the former, laid down his employment *May* 29th, 1730, and returned home in *October* 1732. 1729.

DIRK VAN CLOON, of *Batavia*, entered on the government *July* 24th 1732, and departed this life *March* 10th, 1735. 1732.

c ABRAHAM PATRAS, of *Grenoble*, assumed the government *August* 30, 1736, and deceased on the 6th of *May* 1737. 1736.

ADRIAN VALKENIER, of *Amsterdam*, was settled in the government *September* 28th, 1737. 1737.

GUSTAVUS WILLIAM, Baron *van Imhoff*, of *Lier*, was elected *December* 2d, 1740; returned home *July* 12th, 1741. 1740.

JOHN THEEDENS, of *Frederickstadt*, was elected *November* the 6th, 1741; laid down his employment *May* 23d, 1743; and died *March* 19th, 1748. 1741.

GUSTAVUS WILLIAM, Baron *van Imhoff*, of *Lier*, was appointed to this employment at home, *December* 13th, 1748; was confirmed and authorized by their High Mightinesses 1748.

d *April* 6th, 1742; arrived at *Batavia*, was received, and installed in his charge, *May* 28th, 1743, was promoted by their High Mightinesses to the rank of general of foot *March* 22d 1748; deceased *November* 1st, 1750.

JACOB MOSSEL, of *Enkhuizen*, elected *November* 1st, 1750; installed the 24th of *July* 1750. 1752; appointed by their High Mightinesses general of foot *April* 25th, 1754.

e AFTER the governor, the director-general has the greatest authority, and is the second person in the council of the *Indies*. This employment demands likewise a great deal of care and attention, and he who is invested with it has the buying and selling all the commodities that enter into or go out of the company's magazines. He orders what sorts, and what quantity of each sort, of goods shall be sent to *Holland*, or elsewhere. He has the key of all the magazines, and every officer in the company's service makes a daily report to him of the state of every thing under his charge. In a word, he has the supreme management of whatever relates to the company's commerce, as well at *Batavia* as at other places; and the members of all the factories belonging to the company are accountable to him for their conduct in their respective stations. He has his set hours of business as well as the governor-general, when those who are under his inspection are to attend; and, in both cases, these are not forms, but rules which are not to be dispensed with; and it is by their strict adherence to these that all things are kept in such perfect order, and that the necessary business of the company does not swell by neglects into such a bulk as begets perplexity and confusion. Besides, the examples of these great officers have a powerful and general effect; some are ashamed, and all are afraid, to be less assiduous in their respective charges than those great men who are at the head of affairs¹. Neither is this useful and expedient only, but absolutely necessary; since human wisdom cannot foresee what a day may bring forth; and, how paradoxical soever it may seem, one might produce a multitude of arguments to prove, that it is to the continual danger this government is in, and the sense those who administer it have of that danger, that it owes its safety. One must allow that this is no desirable, but experience seems to shew that it is for all that no ineffectual, protection.

d THE third person in the government is the major-general, who, under the governor, has the command of all the forces. The regular troops in the constant service of the company, even in time of peace, are in number about twelve thousand men, exclusive of their militia in

¹ TACHARD voyage de Siam. Histoire Metallique, tom. iv. p. 214. Indies, vol. ii. p. 133.

and the mili-
tary establish-
ment in the
Indies.

their respective governments, which are kept in very good order, and under an exact discipline, amounting, in the whole, to at least one hundred thousand men: but, as this is a matter of importance, it is necessary that we should insist a little farther upon it. The military establishment is much the same throughout the *Indies* as in the *United Provinces*; the troops in the company's service being as regularly paid, and as well disciplined, as those in *Holland*. The first officer in command in time of peace has, strictly speaking, no higher rank than that of major, under whom are captains, lieutenants, and ensigns; but, when the troops are in the field, the lieutenants and ensigns are at the head of companies, the captains lead brigades, and the major, acting as major-general, commands in chief^a.

The state of
the militia
throughout
the Dutch
territories.

THE natives of the country are under their own officers, who are capable of rising to the rank of a captain, but not higher. The burgeses of *Batavia* choose also their own officers, as high as captains of horse and foot: they are under the command of a colonel, who is also one of the counsellors of the *Indies*, and at the same time president of the council of war. By virtue of these regulations all the company's settlements are kept in a constant state of defence at a far less charge, and without any of those inconveniencies that must naturally attend the keeping in their service a number of officers with superior titles, the pay of which, generally speaking, makes one third of our military establishments. At the same time care is taken that all the corps, as well of militia as of regular troops, are kept always complete, and fit for service; so that on any emergency there is a constant force at hand, which may be relied upon; more especially considering that in every settlement there is one or more good fortresses, thoroughly supplied, and in excellent repair, which consequently is in no danger of being taken before competent succours can be received from *Batavia*; and this disposition of things is one of the most essential points in the company's system of politics^c (A).

Of the mari-
time power of
the company in
the Indies,
and its regula-
tion.

IN reference to the maritime power of this potent society, it consists of about one hundred and eighty ships, from thirty to sixty guns, with about twelve or thirteen thousand officers and seamen in constant pay; and, in case of necessity, they are always able to equip, in a few weeks, at *Batavia*, forty sail of larger ships, which they could man without any difficulty. This great naval force is regulated on the same foot, and according to the same maxims, as the military establishment; that is, there are no officers wanting necessary to the preservation of good discipline; nor are there any honoured with high titles merely to secure large appointments, without any benefit to the state. The whole fleet is under the direction of one officer, who has the modest title of commander, or commodore: he has under him a vice-commander; and, besides these, there are no flag-officers, but every captain has the command of his ship. When their vessels are in the harbour of *Batavia*, the captains are obliged to repair every morning to the commander, or commodore, in order to make report to him of the state of their vessels, and to receive his orders: yet even this commander does nothing of consequence without the consent and approbation of the governor-general, to whom in fact all the officers of the company, civil, military, and marine, are accountable; and whose authority in this respect is as absolute as the nature of his command, and the service in that distant part of the world, requires, in order to prevent factious cabals or confederacies, which would be highly prejudicial to the service^d.

Of their eccle-
siastical esta-
blishment.

THE ecclesiastical government at *Batavia* consists generally of eleven persons, all ministers of the reformed or presbyterian religion, five for the two *Dutch* churches in the city, and that in the citadel, besides the minister that resides in the island of *Onroost*, three *Portuguese* ministers, and two *Malayans*. The five last are *Dutchmen* by birth, as well as the former, though they preach in the *Portuguese* and *Malayan* tongues. And as it is necessary that the state should be very well informed of whatever passes amongst their clergy when they meet together, the eleventh person is a deputy on the part of the government, who is to see that they preach or practise

^a BASNAGE description historique du gouvernement des Provinces Unies, cap. xxxvii. Journal du voyage de Siam par l'abbé CHOISY, p. 87. ^c L'expédition de trois vaisseaux, tom. ii. p. 81. ^d JANIÇON état présent de la république des Provinces Unies, tom. i. p. 364. L'expédition de trois vaisseaux, tom. ii. p. 111, 112, 113.

(A) It may be very easily conceived, that, if the *Dutch East India* company were to keep in each of their colonies a body of regular troops sufficient for its defence, it would be attended with an excessive charge; whereas by putting it into the hands of the inhabitants, they save all expence, and have their business better done; for, when people fight for themselves, they are very seldom wanting in courage. It might be surmised, that this must be attended with danger; but against this there are two provisions; the first is, that the superior officers are named by the company; the second, that in their fortresses they have regular troops in the pay of the company. But, after all, the great advantage arising from

this disposition of military power lies so deep, that few have taken notice of it (2). The fact is this; the governor can no where be guilty of any great violence, much less of treason, because the force of their colonies is not composed of mercenaries, but of men of property; and, on the other hand, if they should make any insurrection, the fortresses and naval force being in the hands of the governor and his officers, they never want power sufficient to defend themselves till they can be relieved. Abuses in smaller matters there may be, and will be, in all administrations; but it is a thing of vast importance to have great points secure.

- a nothing prejudicial to the civil government, or inconsistent with those laws which the company has prescribed. Besides these ministers, the consistory is composed of eight elders and twenty deacons. One great branch of their business is, to send ministers into other governments, where, after a certain term of years, they are relieved, and return to *Batavia* or to *Holland*, to enjoy in peace the fruits of their labours. Sometimes a preacher has been known to make so good use of his time, that, on his return, he has bought a noble fief, and, of a pastor, immediately became a man of quality *.

- In other little places they have no ordinary minister, but one is sent regularly every three or four years to baptize, marry, and give the Lord's supper; which is so much the more necessary, because the synods have taken a resolution not to permit any religion but the reformed b to make any progress in the dominions of the *East India* company. The *Lutherans* for a long space of time have warmly solicited for a church at *Batavia*, but have been constantly refused it, tho' certainly their demand was reasonable, especially in a place where *Mohammedans* and Pagans are freely tolerated in their religion, and even the *Chinese*, who worship the devil himself'. The ecclesiastical council have also dependant upon them the consolators of the sick, schoolmasters, and catechists. Of these last the company have a great many in their service on board their ships, whose duty it is to say prayers constantly every day, and to instruct such as embrace the Christian religion. These catechists are, for the most part, natives of the country; and, as they speak several languages, they are better enabled to give the necessary instructions, and to teach the confession of faith to so many different nations, who, after being converted c and baptized, are to receive the communion. For the better preservation of uniformity, there is an annual visitation, made by the ministers amongst all the new converts, with great punctuality and decorum, when they fail not to make strict inquiries, and to root out as soon as possible all new opinions * (B).

- In consequence of these regulations, the reformed religion makes a great progress, especially among the negroes, of whom there have hundreds at a time demanded baptism; which, however, is not rashly granted, since all are obliged to be well instructed, and to be able to make their confession of faith, before it is bestowed; and in this the *Dutch* are so strict, that they do not dispense even with princes and princesses. It is well enough known, that the *Chinese* are so obstinately addicted to their great *Confucius*, as not to be over-ready to embrace any other religion; yet there are from time to time some of them who abjure their idolatry, and embrace the Protestant faith. In all the eight governments there are many schools erected and supported at the expence of the company; as for instance, there were near one hundred in the island of *Ceylon* in the year 1720; and it was then computed, that the company had three hundred eighty-five thousand Christian subjects in that country only; but some of these were of the *Romish* communion, and consequently were not permitted the open exercise of their religion; and in *Amboyna*, and the adjacent islands, they have ninety thousand subjects, of which at least the third part of them are Christians, not nominal only, but really so from principle, and in some measure in practice * (C).

AT

* BASNAGE description historique du gouvernement des Provinces Unies. cap. xxxvii. L'expédition de trois vaisseaux, tom. ii. p. 105, 106. † Ibid. p. 107, 108. ‡ Voyages de NICOLAS DE GRAAF, p. 336, 337. § Memoires de Dr. GARÇIN. L'expédition de trois vaisseaux, tom. ii. p. 110.

(B) The *Dutch East India* company have certainly great reason to guard against religious disputes in their territories, to which we must attribute their inflexibility with regard to the *Lutherans*; which, tho' it cannot be justified on a religious, is very excusable on a political principle. In *Europe* the States General act wisely in allowing a toleration in their dominions, because, as things are circumstanced, no danger can arise from thence. The directors of the *East India* company act upon the same principle when they permit *Mohammedans* and Pagans the free exercise of their religion, because no danger can result from thence; but many inconveniencies might arise from the indulgence of different sects of Christians in their dominions, both to the state and to the reformed church. For if this were allowed, it would excite an emulation of making converts; which emulation, instead of being advantageous, would be really prejudicial, to the Christian religion, because it would furnish the *Mohammedans*, who are very zealous for, and very indulgent in, the propagation of their faith, with a very plausible objection against Christianity, and at the same time throw a stumbling-block in the way of all conver-

sion, since the natives, who are both a cunning and a penetrating people, would naturally say, you must agree amongst yourselves who is in the right, before you undertake to convince us we are in the wrong.

(C) The *Dutch* are blamed by some writers, who it may be have not inquired thoroughly into the matter, for not making the propagation of Christianity so much a point of government as they ought to do. When they first came into the *Indies*, there might be very probably great truth in this; but then it was because their circumstances would not allow them. They were continually in a state of war and confusion, and those who had the direction of the company's affairs found their military and commercial concerns as much as they could manage; besides, they were in some measure scandalized by the behaviour of such of the natives as called themselves Christians, whose practices were, generally speaking, not at all better than their neighbours; who, upon examination, were found to be acquainted with a few unedifying ceremonies, and to know very little of the doctrines of Christianity. Add to all this, that numbers of them, when they came to propose alliances to the *Dutch*,

The chamber of
orphans at Ba-
tavia, which
is the model of
other chambers
through the
Indies.

AT *Batavia*, and in all other governments, they have a chamber of accounts for orphans, in which there is a president, who has for his council half the company's servants, of the quality of copemen and upper copemen, and half of the best burghers, besides a secretary, and other assistants. They sit once a week, and order the disposal of all orphans and deceased mens estates as they think fit. They are sworn to deal justly, and to keep secret the concerns of the chamber. The secretary of the office must give three thousand pagodas security for the performance of his trust; and be responsible for all goods sold at auctions, for which he receives three *per cent.* upon the amount of the sale; and, as he is responsible, he may deny any man leave to bid or buy, whom he thinks it not safe to trust. The secretary also enters the wills and inventories; and posts the journal, which is kept by one of the masters; and takes care of the papers that belong to the office. The chamber of orphans may call whom they will into council, to advise with in difficult matters; and no person may refuse to come and sit with them, though it was the governor himself. The council is allowed two and an half *per cent.* out of the estates of the deceased, for what is received upon the sale of goods, but nothing on money left in cash; which two and an half is equally divided betwixt the president and all the masters; besides which, they have each money for a gown yearly, which is charged on the deceased person's estate. If any man or woman dies leaving children under age, the chamber of orphans take care of the estate, and provide for their bringing up, till they arrive at the age of twenty-three years; and then they receive what their parents left, with interest. If the parents of the children have any estates in *Europe*, the chamber of orphans where such persons die writes for the effects to be sent them; which is accordingly done.

How the mo-
ney is secured
for the benefit
of the chil-
dren, which
is brought into
that chamber.

THE money the chamber of orphans pays into the company's cash at *Batavia* brings in nine *per cent.* and it is often lett to freemen, and others, at twelve *per cent. per annum*, upon good security; but at *Policat* it is usually put into the company's stock at six *per cent. per annum*. If a person dies, and leaves no will, or relation in *India* to inherit, the chamber of orphans takes care of the estate, and gives the deceased man's account current credit for the same, and there it remains till the heir demands it. If any person dies with a will, and leaves his widow in trust for the children, though their own mother, the chamber of orphans may, if they please, require the estate, and keep it for the children; and, if they allow the mother to keep the estate and the children, they always take a copy of the will, and security from the mother for the estate. The chamber of orphans may keep the estate in their hands, and manage them as they please; but, for better security, it is usually put into the company's hands, at the interest before-mentioned, and they have the company's bond for it. If a person dies leaving a will, and does not give such a proportion of his estate to his children as the law requires, they will not allow the will, but require their full part for the children. If a man dies in the company's service, and they owe him wages, the chamber receives it, and enters it to the credit of the deceased. By these wise regulations, and by a strict adherence to them, the company has obtained great reputation * (D).

THE

offered to become of their religion, let it be what it would (29). They were not therefore to be blamed for rejecting offers of this kind, more especially as they saw of how little advantage it was to the *Portuguese* to have had so many thousands of these nominal Christians under their dominion. They chose, therefore, to make fewer, but better Christians; and in length of time, and the descent of a few generations, they have so far carried their point, as to have in their dominions multitudes of Christians, and, amongst them, many thousands that are good men, and good subjects, upon principle; which is of real utility, as the company have found by experience (30). Yet there is no doubt to be made that Christianity might be better promoted, and flourish more abundantly, if their own examples were consistent with their principles; a circumstance that would reflect highly upon the *Dutch*, if they were singular in this respect, and the same objection did not lie strongly against other Christian nations settled in the *Indies* (31).

(D) It is not to be supposed, that, with all the care that can be taken, there are not some frauds committed

here as well as elsewhere; but it is also true, that whenever they do happen, and are discovered, which generally happens likewise, they are very severely punished; which is all that can be done to prevent them, and which renders them less frequent. There have been instances of putting people, who made a great figure, to the torture, where deficiencies have happened, and they have refused to give an account of the sums that came into their hands (32). But even in these cases the orphans have not been sufferers, but the loss has been made good to the chamber by the company. Indeed if it was not for this precaution, all others would be vain; but, where the government is answerable for the frauds of its officers, and where that government is also responsible for its conduct, it is hardly possible that offences should be committed, and offenders escape; for this plain reason, that the negligence of the government in that case would be considered as an offence at home; and therefore the members of the council of justice at *Batavia* dare not suffer lesser criminals to escape with impunity, for fear of being looked upon as greater criminals themselves (33). To

a THE company, besides one-third of their half of the fiscal's confiscation, allow also fines on offences, and the confiscations of the estates of men executed, for the use of the Poor. There are many overseers and masters of the poor at *Batavia*. At *Policat* they have but two, and those not masters of orphans, but others. They have cognizance of all poor Christians under the government, whether they be *Dutch*, *Portuguese*, or others, and take care for their relief, by making collections in churches every *Sunday*, and distributions according to their necessities. The poor always have a considerable stock beforehand, which has been gathered from the confiscations or persons detected in private trade, and charitable gifts. This stock they let out to the company upon interest, which they constantly receive, and employ as is needful; and, tho' the interest of the stock be sufficient to maintain the poor, yet they never neglect the weekly collections in churches, to increase the stock as much as they can: for they say, it may so happen, that, by great wars and losses, many may be maimed, made widows and fatherless, and then the principal may not be enough to maintain them. The overseers or masters of the poor keep a fair book of all receipts and payments; that is, an account of cash, and an account of what is paid into the company's stock at interest, with a roll of the names of all persons to whom they give alms, and what they give to every one. At *Batavia* there are collections for the poor every *Sunday* morning and evening in all their churches; and the like practice in this, as indeed in most other respects, is likewise observed in other settlements¹.

c THERE can be nothing better calculated for the safety and prosperity of the company than these provisions for orphans, and such as become indigent; since it keeps up the spirits of all, from the knowlege they have that neither they, nor their children shall ever want bread; and, at the same time that it keeps them from being desperate, it retains them in their duty. Some indeed have suggested, that the company is more benefited by this than either the orphans or the poor, as she makes use of a large sum of money at a small interest, considering the profit that accrues from it to the society; and, to put this in a stronger light, it is said, that the company very frequently lends this money at an advanced interest, from which nevertheless neither the orphans or the poor receive any benefit. But view this in another light, and all this hardship will disappear. The lowness of the company's interest is balanced by the security of constantly and punctually receiving it; whereas if trusted in private hands, though more might in some cases be made, much more would be embezzled; whereas in this way a man dies with the satisfaction of knowing, that what he leaves his children will have; that they become the wards of the company; and that his private fortune, and that of the public, stand upon the same bottom. In reference to the poor, again, the public has an interest and a right in seeing them provided for, which, if this fund of charity should fail, they must be obliged to supply; so that, being answerable for the deficiency, theirs is certainly the best security^a (E).

e BUT we come now to the particular detail of the company's officers; and, in respect to this, it is conceived the constant prosperity which has attended it is, in a great measure, owing to that nicety of judgment shewn in adjusting all their salaries, and allowances for diet, to the several qualities and degrees of their servants; so that none has so little as to be pinched by necessity, nor any so much as to set them above the performance of their duty, which is generally speaking the ruin of such governments as pursue a contrary conduct; for the more easy understanding of this point, we shall take their inferior officers first, and so ascend gradually to the governor-general of the *Indies*. The under-assistant, or, as they stile him in *Dutch*, *Scrivener*, or writer, is the lowest degree, and is chiefly supplied by soldiers taken out of the guards, who receive from nine to fourteen guilders *per mensem*. Next is the assistant, at twenty guilders *per mensem* salary, and four rixdollars diet. After him the upper-assistant, book-keeper, or secretary, from twenty-eight to thirty-six guilders *per mensem* salary, and four rixdollars diet. In the fourth place, the under-copeman, or under-merchant, from thirty-six to forty-five guilders *per mensem* salary, and eight rixdollars diet. Then the copeman, from

¹ Relation de la ville de Batavia, par NICOLAS GRAAF. Management of the Dutch in India, published by Mr. LOCKYER. ^a NIEUHOFF. GRAAF. JANISON.

this, therefore, we must attribute such examples of severity as those before-mentioned; and without such examples, and the consequences they produce, things could not have been preserved through such a series of time in that condition they now stand.

(E) There is no doubt that the *Dutch*, as well as the *Portuguese*, have felt the fatal effects of adopting the manners of the natives, from their living amongst them in the *East Indies*. We are informed by very credible writers, that luxury is arrived at a very great height in *Batavia*; and that people, who make no despicable figure, who dress in jewels, and who appear in public with slaves

to attend them, are notwithstanding upon the lists of the poor, and receive annual supplies from the public charity; whether through connivance, corruption, or from a political consideration that it would not be proper to let certain persons sink there into an abject state, who have formerly lived in affluence, is out of our power to determine (34); but, from whatever cause this springs, it is certainly more excusable than the custom at *Goa*, which we have mentioned in a former section, of letting such people go a begging, because that brings a national scandal, which it is presumed this method is calculated to prevent.

(34) Relation de la ville de Batavia, par Nicolas Graaf.

fifty to sixty-five guilders *per mensem* salary, and eight rixdollars diet. Next to him the upper-copeman, from eighty to one hundred and twenty guilders *per mensem* salary, and twelve rixdollars diet; yet some from the lesser chambers are sent out at seventy two guilders *per mensem* salary. At *Batavia* and *Ceylon*, where provisions are dear, they have thirteen rixdollars diet. In the seventh rank, a commodore has one hundred and fifty guilders *per mensem* salary, and twenty rixdollars diet. The eighth director has two hundred guilders *per mensem*, and thirty rixdollars diet. The governor has the same, as also an extraordinary member of the council of *India*. A member ordinary of the council of *India* at *Batavia*, each three hundred and fifty guilders *per mensem* salary, and one hundred rixdollars diet. The director-general has six hundred guilders *per mensem*, and one hundred rixdollars diet. And, lastly, the governor-general of *Batavia*, as we have before mentioned, has one thousand two hundred guilders *per mensem* salary, and two hundred rixdollars diet; and every time he goes to visit the fleet, one thousand five hundred rixdollars gratuity, which however he seldom does, except on its departure for *Europe*. But, besides, he has many legal perquisites, which may be said to raise the value of his office beyond our estimation" (F).

Provisions allowed to all, according to their respective ranks.

ALL persons in the service, whether merchants, divines, civil magistrates, soldiers, or seamen, are ranked in certain degrees, have their privileges, and take their places accordingly. The governor-general is allowed wine, and all other liquors and provisions, out of the company's warehouse, without limitation. All others, down to the assistants, are allowed, monthly; liquors, spice, oil, wood, rice, vinegar, candles, &c. according to their quality, very largely. The upper-copeman's allowance is twenty canadars of *Spanish* wine *per mensem*, besides rum, white wine, and other liquors, twenty-four pounds of wax for candles, corn for poultry, rice for slaves, &c. so that the diet-money allowed them is only for fresh provisions. Soldiers are ranked in the same manner; viz. first, a common soldier receives from nine to fourteen guilders *per mensem*, as the under-assistant. Next, surgeon's pay and diet, as the assistant. Then ensign's pay and diet, as the under-copeman. After him, lieutenant's pay and diet, as the copeman. The fifth, captain's pay and diet, as the upper-copeman. And the sixth, major's pay and diet, as the commandore. Military persons give place to the civil of the same rank; viz. a commandore precedes a major, and upper-copeman a captain; and a copeman a lieutenant; but a major precedes an upper-copeman, a captain a copeman, and a lieutenant an under-copeman. There are three majors in *India*, one at *Batavia*, one at *Ceylon*, and one at *Amboyna* or *Randa*. They assist the governor in military affairs, and have the command over all other officers and soldiers, but have no proper company of their own.

Naval service of provisions; rank and pay.

SEAMEN are ranked in the same manner; viz. first, a common seaman, from nine to fourteen guilders *per mensem*, as a common soldier; next, third mate, gunner, boatswain, and steersman, from eighteen to twenty-four guilders *per mensem*; and the assistant, carpenter's wages, from forty to fifty guilders *per mensem*. The under-steersman, or second mate, from twenty-four to thirty-six guilders *per mensem*, as the upper-assistant. After them, upper-steersman, or chief mate, from fifty to sixty guilders *per mensem*, in the under-copeman's rank. The fifth are skippers, from sixty to one hundred and fifty guilders *per mensem*, in the copeman's rank; and the sixth, commodore's, from one hundred to one hundred and fifty guilders *per mensem*; besides which they have the ship's allowance for provision; and, when in *Batavia*, roads, they are supplied with these things from the factories on shore. They have none who have the title or pay of captain at sea; and the commodores are very few, sometimes not more than one in *India*.

Ecclesiastical system in all the respects.

THE minister's pay and allowance stands thus; viz. first, the predicant or preacher's pay and diet, the same as the upper-copeman's. The second, dominees, or visitors of the sick, twenty-four guilders *per mensem*, as the assistant. The ministers are all sworn not to write of, nor intermeddle with, any matter relating to the affairs of the state, or to commerce. In all govern-

" Management of the Dutch in India, published by Mr. LOCKYER. Groot Placart, boek iii. deel, fo. 169.
 c Voyages de NICOLAS DE GRAAF aux Indes, p. 323, 324. p Management of the Dutch in India.

(F) There have been several exceptions taken in respect to the emoluments arising from this great office; but whoever considers the point attentively, and takes into his consideration the dangerous consequences that must necessarily attend the putting an officer vested with such high powers under too close restrictions, will certainly see things in another light. In the first place, it is reasonable that a man, who gives his talents, his time, and his experience, to the public, should have an ample compensation; for this is plainly a point of justice. In

the next place, allowing him this, makes the office desirable, notwithstanding that excessive fatigue, that perpetual application, which is required in him who administers it; so that this is a point of policy. And, lastly, that a man, upon his resigning this high employment, or having a successor sent him, should have a large private fortune to live upon, and out of which he may be made accountable for any acts of violence or injustice, is evidently a point of prudence (35).

a ments they are allowed a predicant; and in *Batavia* two or three to spare, in case of mortalities. In all directions they have dominees only who read the scriptures, and printed forms of prayer, mornings, evenings, and *Sundays*. With them the surgeons pay is from forty to fifty *degrlsui per mensem*, that is, from four to five pounds of our money ⁴ (G).

In all these several stations, as high as that of upper-copeman, every man agrees to serve for a time certain, commonly for five, sometimes only for three years; but, whatever the term be, he is free when it expires, that is, he remains under no obligation to continue in the company's service, but is at liberty to return home, or to settle himself as he thinks fit. However, if nothing better offers, and he petitions, his term is renewed in the next superior degree to that which he had; so that every man, if he lives, may make his way without having

b many friends, or more than a common stock of merit. This common course of things does not, however, bind the company, or those intrusted with the direction of its concerns, from taking another method whenever they see proper; so that a writer, if he be faithful and diligent, though he contracted for three years, shall be promoted in three months; and, if he has any opportunity to signalize himself in the company's service, he is sure to be preferred. When a chief dies, or is removed, the succession is not a thing of course; but, if the third person in the factory is the most capable, the second is removed somewhere else, and he who deserves it is preferred to the superior post; so that it frequently happens, that a man rises in three years time to be an under-copeman, and in three years more to be an upper-copeman ⁵.

MARRIED men are paid their whole salaries; such as are single, but half; every officer's salary commences from the time he enters the company's service, and determines upon his return, both outward and homeward-bound voyages included. In obtaining this there is no sort of trouble; for at the end of the year every man has a copy of his account, as it stands in the company's books, which he may keep, or send home, or sell in the *Indies*; which account, when transmitted to *Holland*, is paid at sight. If a man, when his time is determined, resolves to stay in the *Indies*, he may settle where he pleases in any of the company's towns; and trade in whatever he thinks fit, except the company's commodities, or even in them if he takes a licence; so that diligence and fidelity never fail to put a man in the way of making his fortune, either in the company's service, or out of it ⁶. There is, however, a degree of strictness in preventing such as are actually in the company's service from trading, which, it has been d doubted, has not so good an effect as is expected, because where temptations are frequent, men will sometimes fail; and, if this be overlooked, it is a bad example; if constantly punished, it carries an air of severity, and frights those people from service who perhaps are best qualified. But, all consequences considered, the company have not hitherto given into the way of indulgence, but insist peremptorily upon a due obedience to the rules which they prescribe, under severe penalties. Yet in a country where men can convert their wealth into jewels, which lie in a narrow compass, it is no difficult thing to bring larger estates into *Europe*, than it would be convenient for them to avow while in the *Indies*. Neither are there other methods wanting to answer the same end; and, when once this wealth is returned to *Holland*, all is safe. This naturally leads us to speak of the manner in which returns are made; and brings us e to shew, that the *Dutch* flotillas from the *Indies* are as regular, and it may be of no less value, than those that come annually into the ports of *Spain*.

THE *East India* company's ships, then, usually sail from *Batavia* for *Holland* five times in a year. The first go in the month of *July*; and this squadron consists of four or five sail, which touch in their passage at the island of *Ceylon*. The second, making a fleet of sixteen or twenty sail, did not formerly sail till the month of *December*; but that regulation is changed, and they sail now constantly in the month of *October*. The third squadron of six or seven vessels sails in *September*; the fourth, which commonly consists of four or five, in

Conditions upon which persons are commonly sent by the company into the Indies.

Privilege acquired by serving in the factory, which is very beneficial in the Indies.

The season and circumstances of the homeward bound ships sailing from Batavia.

(G) This maxim of giving the post of honour, in every instance, to such as are employed in the management of the company's commerce, though it appears very strange to some writers, is however very just, as well as very natural. The judicious and impartial reader will easily perceive this, if he considers that the sovereignty is placed in a trading company; that the vast dominions which they possess were originally acquired, have been gradually extended, and are constantly maintained, by their trade, upon the right management of which their safety and power abroad, and their prosperity and importance at home, have hitherto always depended,

and must ever depend. This therefore being their capital interest, those who manage it must naturally have the preference; for, if that should be given in general to military persons, it would absolutely change the nature of their establishment, and that in a manner altogether inconsistent with the interests both of the company and of the States. This prerogative, therefore, is plainly necessary, and, experience has shewn, is both practicable and salutary; which perhaps, had the thing been only speculatively considered, even the wisest politicians might have doubted (36).

(36) *Beilage description historique du gouvernement des Provinces Unies*, cap. xxxvii.

January; and the last vessel in the month of March, but not till the *Chinese* fleet is arrived which brings the tea; for of this the best part of the cargo of the homeward-bound vessel is composed; and therefore this is commonly called the tea-ship; but the common people call it the book-ship, because it brings the current account of the company for the year, by which they see the state of their trade in the *Indies*: (H).

How the command is regulated of these squadrons, as also of single ships.

It is to be farther observed, that all these vessels, laden with the riches of so many countries, sail from the same port of *Batavia*. The ships from *Mocha*, which bring home the coffee, are the only vessels in the *India* company's service allowed to proceed directly home, without going to *Batavia* at all. As to their admirals out of *Europe*, the flag is borne by turns; *Amsterdam* Squadron carries it three years, and the *Zealand* Squadron every fourth year. The *Amsterdam* having two parts of the stock, the other lesser chambers add theirs to it, and the *Zealanders* have one quarter of their own. The merchant who is sent admiral must either take his passage in the *Amsterdam* or *Zealand* Squadron. If a copeman or under-copeman goes from port to port in any ship, they have the command of her, and also of the fleet, or all ships in company, by the company's settled order in their articles. When there is a fleet together under the command of a commandore, the council is to consist of copemen and skippers. When a ship is single, the council is to be of copemen, skipper, under-copeman, book-keeper, and steersman; and they are always to steer their course by the printed directions, and to set off their work every day upon charts, which are delivered up the very day on which they come to *Batavia* or *Holland*. There is an under-copeman or book-keeper in every ship, who keeps an account of the ship's expences, as stores, provisions, and mens wages, in the nature of a purser; and they are to see the provisions so given out, that none be spoiled. These take place as they are capable of preferment, in their factories, by their time of service; and they are often taken out of factories when they are wanted, and others put in their places. If he that is upon a ship as a book-keeper be but an assistant, he takes place of the steersman, or next to the skipper, by reason of his office, or, as they in respect term it, the pen.

Those who are invested with authority on shore, have the direction of vessels on the coasts.

ALL chiefs of factories, &c. have free power to dispose of their ships and men while they are under their chiefship, and as occasion requires in the company's service. They may take out men, ammunition, provisions, and stores, though such ships come there casually through accident or necessity. Thus every thing relating to this subject is so fully and clearly regulated, that doubts or difficulties rarely arise. In their return to *Holland* they always make some stay at the *Cape*, as well to take in refreshments, as to be informed of the company's orders that may concern any of the passengers on board; some of whom perhaps are ordered back, that their conduct may be examined in the *Indies*, and to receive the news of the state of things in *Europe*, as, by the way, they carry gazettes, or news-papers, home with them, that contain the principal transactions in the *Indies*, of which we are now to take leave, and to conclude with a brief representation of the manner in which the company's affairs are conducted at home (I).

* Management of the Dutch in India, published by Mr. LOCKYER. aux Indes. p. 364, 365, 366, 367. DE GARÇIN.

* Voyages de NICOLAS DE GRAAF. Memoires sur le commerce des Hollandois, p. 161. Memoires de

(II) There is nothing that deserves more attention in this section than this circumstance, which we have mentioned more than once, that the *Dutch East India* company maintain an exact uniformity in their conduct at home and abroad; and, as far as it is practicable, decide and adjust every thing within the compass of the year. Some exceptions there may be, but these are few in number, and in their nature inevitable. As to what respects their general concerns, and the regular course of their policy and commerce, there is no kind of procrastination permitted; but, as the general accounts are annually made up in the *Indies*, so the servants of the company are immediately paid upon their return to *Europe*; and this readiness and punctuality is a prodigious benefit to the service, which indeed could very hardly, if at all, be carried on without it.

(I) This power, which all who have the supreme direction of the company's affairs any-where, are trusted with in regard to the ships upon the coast, is a rational and necessary branch of their system, as the foregoing observations fully shew; neither can it be attended with

any inconvenience, provided those who have this authority are constantly called to a strict account for the use they make of it. It is possible this may not be done; and it is highly probable that if it be not, mischiefs will ensue. But this does not discredit the system; it only shews defect in the administration; and though there may be many such defects in different branches, yet, when they arrive to any considerable height, correction must ensue. Sometimes the company have granted extraordinary powers to such as have been intrusted with the inspection of abuses; and while this is done from time to time, they will be in some measure kept under; for utterly to extirpate fraud and speculation in the affairs of a trading company, is as little to be expected as the making men perfectly virtuous, and consequently rendering them in the highest degree happy, by the wise institutions of government (37). But, in both cases, though success is never to be hoped, yet it must be always endeavoured; and the consequence will be, that matters will go on tolerably well, and not either stand still, or fall to ruin.

(37) *Janicon etat present de la republique des Provinces Unies*, cap. xii.

S E C T. XXVII.

The domestic æconomy of the Dutch East India company. The immense profits that have resulted to Holland from this commerce. The nature of dividends and transfers; concluding with some observations and remarks upon the foregoing particulars.

AT the time the original stock of the *East India* company was subscribed by men of property residing in different places, there were six chambers erected, one in each of the cities and great towns, from whence the subscriptions came; *Middleburgh*, on this account, being considered as the centre of commerce for the province of *Zealand*; and from these six chambers the seventeen directors are deputed, called in the *Dutch* language *Bewintbebers*, who are sometimes also stiled the assembly or council of seventeen. They meet four times a year successively at *Amsterdam*, and twice at *Middleburgh*, but not at all in the other towns. These deputies are in some measure the sovereigns of this illustrious company, yet under the authority of the States General. These seventeen directors are chosen in the following manner; eight by the chamber of *Amsterdam*; four by that of *Zealand*; *Delft*, *Rotterdam*, *Horn*, and *Enchusen*, send one for each; and the *Maese*, *Middleburgh*, and *North Holland*, choose one by turns. These seventeen directors govern the company, and represent the sovereignty of the whole body, the sentiments of which are determined by plurality of voices. They regulate all affairs of consequence, such as making counsellors of the *Indies*, captains, lieutenants, in land and sea-service, and equipping of ships, the sale of the goods, the division of profits; and all the particular chambers are obliged to confirm themselves to their orders. They likewise appoint the time for the sale of the goods, one half in the chamber of *Amsterdam*, a fourth in that of *Middleburgh*, and a sixteenth in each of the other four chambers, at the time by them assigned, to the highest bidder, by auction^a.

BUT, besides these seventeen directors, each of the chambers have more belonging to the same body: thus *Amsterdam* has ten, exclusive of the eight sent to the sovereign court; and *Haerlem*, *Leyden*, *Utrecht*, *Dort*, and *Tergoe*, have each of them one there, as have the provinces of *Guelderland*, *Friezeland*, and *Zealand* likewise; besides, their four directors have eight or ten more from other towns of the province. All these deputies are to give their advice, in their respective chambers, for the benefit of the company; and when any of the deputies die, the towns to which they belong name three others in their stead, out of which the magistrates choose one. This committee meets twice a week, and change their president each month; so that every one presides in his turn. There are two advocates belonging to the company, who transmit what is resolved upon to the *Indies*; upon which the officers of the company there form their resolutions, and issue their orders. There are eight deputies for the affairs of the marine, war, and building of ships; four to inspect their magazines, and the goods that are sent to and come from the *Indies*; four who are to take care of the money which the company pays and receives; and the rest are charged with the accounts, and other affairs relating to order and justice, which is done to the meanest mariner as well as to the greatest officers, and with equal expedition^b (K).

THE whole, though it seems at first sight independent of the state, is however kept in great subordination by means of the wise regulations made in establishing the directors, and the care taken that not any two shall be related to each other, which in a very great measure prevents combinations, and all those practices by which public establishments are converted into private jobs; and what ought to redound to the common benefit of a nation, conveyed into the pockets of a few private men. Once in three years the States General demand and receive a strict account of the company's whole transactions, in order to be satisfied that they

^a *Traité general du commerce, par SAM. RICAUD, p. 4. cap. xiv. Memoires de Dr. GARCIN.*

^b *Memoires sur le commerce des Hollandois,*

(K) The reader may find, in a great many treatises, accounts that differ very widely from these; but then he ought to reflect, that every complaint is not well founded, and that conviction does not follow from violent charges, but convincing proofs. Where these appear, as in many cases no doubt they may appear, a just exception is raised against what is advanced in the text; but exceptions demonstrate, rather than destroy, general rules; and though there should be every year some par-

ticular cases, where individuals are hardly dealt with, yet this is not the peculiar misfortune either of the *Dutch* nation or the *Dutch East India* company. We have no intention to extenuate, much less to apologize for, or defend, male-administration, either in the *Indies*, or in *Europe*; all we aim at is, to shew the rectitude of the plan upon which their management is founded, and the consequences that would attend a right administration, if strictly and steadily pursued (38).

(S) *Basnage description historique du gouvernement des Provinces Unies, cap. xxxvii.*

It is, by
which all its
dependancy is
secured.

keep within the bounds of their charter; that they do justice to their proprietors; and that they manage their trade so as that it may not be prejudicial to the republic; which regulation may be justly esteemed the principal cause that hitherto the affairs of this company have been so perfectly well conducted *.

Some modern
alterations for
the security of
the proprietors,
and the benefit
of the company

In order to this examination or controul of the company's accounts, the antient practice was, for the States General to name a committee of the members to go to *Amsterdam*, and there examine the books of the *East India* company upon the spot; which took up a considerable time; and during that whole space this committee from the States had their charges defrayed by the company. But in the year 1728 they thought fit to make a representation to the States General, setting forth the inconveniencies and unnecessary charge this method occasioned; praying, that their High Mightinesses would consent to its alteration, and allow the company to send a deputation to the *Hague*, to lay their accounts before them; which, after mature deliberation, was assented to. Since that time another alteration has been made, of much greater moment, and that by the body of the proprietors, who insisted, that the supreme direction of their affairs in *Europe*, and in *India*, should, by a solemn instrument, be transferred to his serene highness the prince of *Orange*, as stadtholder of the Union, by which he has entrance into all the assemblies of the directors by his representatives, and consequently the power of looking into and regulating their proceedings; which indeed was the sole thing necessary to remove the inconveniencies introduced by time, and to purge out such errors as had grown up imperceptibly, and for which no adequate remedy but this could have been provided * (L).

Method ab-
solved in the
management of
their maga-
zines, docks,
workmen, and
sailors.

THE magazines of the company are kept in excellent order. Such as are intrusted with the care of them give large security; and are liable, besides, to severe punishments, in case they are guilty of any breach of trust. The same strictness is shewn to all degrees of persons in their service; nor are the directors themselves exempted, in whom the smallest fraud would, if discovered, be punished with speedy and exemplary justice. This keeps up that spirit of care and diligence which is so absolutely requisite to the right management of commerce; and all the under officers, moved by the example, as well as constrained by the inspection, of their superiors, discharge their duty very exactly; so that the dock or yard, in which the ships are built and repaired, is kept in as exact order as that of any private man, though there are not less than twelve hundred persons employed at a time. They do not, however, exert the same authority over the sailors and under-servants of the company that return from the *Indies*; but, on the contrary, allow them all the liberty they can desire, and suffer them to live in what manner, and at what expence, they please; which is likewise done from a principle of true policy, since it affords them the means of spending in a short space all that they have acquired in long service; so that in five or six weeks they are generally speaking reduced to their primitive state of indigence, and consequently are obliged to enter again into the company's service for a fresh term *.

Some abuses,
notwithstanding
ing, there may
be, but even
these become in
their conse-
quences ser-
viceable.

THUS the liberty of the subject is preserved intire, and the company nevertheless seldom wants a regular supply of able and seasoned seamen; which has very good effects, because experience shews, that such as are used to these eastern climates go many voyages without prejudice to their health; whereas raw seamen die in great numbers, to the vast prejudice of the state. The utmost care is taken that all employed in this service, both at home and abroad, shall be properly qualified for the stations in which they serve; and therefore it is a rule that none can enter into office before they have undergone a proper examination; and, though there may be some instances where interest or favour may have procured dispensations in this respect; yet these occur but very seldom, and are not therefore of very great consequence. The same thing may be likewise said with respect to frauds, of which without question there sometimes happen both small and great in the *Indies* and at home; but as these can never

from public and private informations.

* These facts are taken
JANSON *etat present de la republique des Provinces Unies*,
tom. i. p. 389.

(L) The good effects of this new regulation have been already visible, to the great satisfaction of the proprietors and the public. In all trading societies whatever, if there is no secrecy, there must be danger; and, on the other hand, there will be danger, if there be too much secrecy; for though every proprietor has not a right to every secret of the society, yet their secrets ought not to be monopolized, and so kept in the hands of a few,

as that the body of the proprietors shall have no just idea of the state of their affairs; for this will beget suspicions, and suspicions, whether well or ill founded, are always attended with bad consequences. Since the investing the stadtholder with this power, which has been executed by his representatives, the company's dividends have been augmented, and the price of the stock has advanced (39).

(39) This is taken from the Dutch gazettes, and other public papers.

a be long carried on without detection, and as every new discovery produces fresh precautions, they are not very detrimental, upon the whole, to the interests of the society * (M).

WHEN the company first began to raise settlements and establish colonies in the *Indies*, *Time has wrought a great change in the persons sent by the company to her settlements.* there is nothing more certain than what the great *De Witt* has observed, that few people went thither but what were of blasted characters, or ruined fortunes, that is, in lower stations; but in process of time the face of things intirely changed, and great solicitations are requisite to obtain even mean employments. All of them, as we before observed, from the highest to the lowest, are bestowed either by the council of seventeen, or by the particular chambers. The great posts, such as governor-general, the governments of *Ceylon* and the *Cape*, together with the counsellors of the *Indies*, are never conferred but upon such as have deserved them by long and faithful services, and for the most part on the recommendation of the council at *Batavia*; but counsellors extraordinary, who, though they are allowed to give their opinions, yet have no votes, are often sent out in that quality from *Holland*, as officers likewise are in all the inferior stations, but at large, and without particular appointments, that the council of the *Indies* may dispose of them as the service requires ^d.

UPON the first erecting of the company, we have shewn, that the capital consisted of near six millions and a half of florins, which was divided into actions of three thousand florins each, or five hundred pounds *Flemish*; which appellation or actions they still hold, though much altered in their value, in the same manner with our stocks, the title of which remains the same, whether the stock rises or falls. As for the actions of the *East India* company, they have risen a thousand *per cent.* that is to say, an original action, which was subscribed at three thousand florins, has been actually sold for thirty thousand. The rise and fall of these actions, like that of our stocks, depends partly on the real value, compared with the ordinary interest of money, partly upon the circumstances of affairs in *Europe* in general, and of the republic of the *United Provinces* in particular. As for instance, before the breaking out of the war in 1672, the actions of the *Dutch East India* company were sold at six hundred and fifty *per cent.*; yet during that war they fell to two hundred and fifty, and rose again after the peace. But whatever the price of actions may be, a principal director must have two in his own possession, to qualify him for the post; and none are capable of a vote in an election, who are not possessed of one whole action at least. The salaries of the directors vary according to the chambers to which they belong. Those eighteen that are chosen by the city of *Amsterdam* have three thousand florins a year; yet there are others that have but twelve hundred, but these may be chosen if they have no more than two actions ^e.

THE manner of buying and selling *East India* stock is very easy and expeditious. When the parties have settled the price between themselves, they go together to the *India-bourse*, where the seller applies himself to the clerk of the book, in which his stock is entered, and desires him to transfer so much from his account to that of the buyer; which being done, he signs it, and afterwards signs a receipt for the purchase money; and, the whole transaction being performed in the presence of a director, he signs the book likewise; so that there is not so much as a possibility of any fraud being committed; yet the whole expence of this transfer amounts to no more than seven shillings and six pence of our money, upon one whole action of three thousand florins, and in the same proportion for all smaller sums, and the brokerage upon an action comes but to twelve shillings. The directors, who have the sole management of the company's concerns, settle not only the times, but the quantities and qualities, of the company's goods that are to be exposed in their sales; from the produce of which, their dividends are paid, and are high and low, according to the profits made by the company. This, however, must be understood with some restriction; for certain it is, that, from the first establishment, they have never divided to the full extent of their profits, and for very good reasons; because long wars, and other chargeable expeditions, must be defrayed out of this reserved stock, to prevent a great and apparent decrease in their dividends, which would necessarily occasion a very great fall of their actions. Besides, they have constantly paid the state very

^e *Traité*

(M) If it should be said, that what is above asserted is matter of fact that stands in need of proof, the answer is far from being difficult. The state of the company's affairs at home and abroad, the produce of their sales, the value of their dividends, the price of their stock, the visible credit of the company, taken in the aggregate, amounts to an invincible proof; the rather, because it is the only kind of proof the nature of the thing will admit; and those who will not be satisfied with this,

can never be satisfied at all. We see from daily experience, as well in *Holland* as in other countries, that thro' misfortunes and mismanagements the greatest companies may decline, and come almost to nothing; and therefore, if from contrary effects, we are not allowed to infer right conduct, and real prosperity, it will be impossible to reason upon things of this nature either with certainty or so much as probability.

large sums, for the renewing of their charters, and for such other acts of state, as they have a procured from time to time in their favour. It has been found also requisite for them to keep large sums in bank, to answer the exigencies of the state, as well as the company, in times of great difficulty and danger. Add to all this, that they have reserved vast quantities of spices and other rich commodities, that their sales might not lower the price of them too much; and, upon this principle, they sometimes burn great quantities of spices. They formerly had recourse to another method, for the benefit of their proprietors, which has been paying their dividends in cloves, mace, and nutmegs, at a very low price, by which those who receive them gained very considerable advantages' (N).

Reasons which render it expedient to conclude this chapter with some observations.

THE proper and immediate subject of this chapter being thus brought to that period we promised, and set in as true a light as it was in our power, it may, perhaps, not prove either unpleasant or useless to the reader, if we shut up all with a very few observations, concisely stated, fitted for his farther consideration, and then submitted to his candid decision. All history is but written experience; and though it may not be either necessary or expedient for such as assume the office of historians, to write comments upon their own works, yet this part of ours, being of a very mixed nature, may claim some peculiar privileges, or at least justify the taking such liberties, as may render it more applicable to the present course of things, and so invest it with the greatest excellence of experience, that of affording a rule for action, as well as a lesson of improvement. It is in most cases sufficient to relate things clearly, and to deliver all matters of fact without bias; but there are some few in which this is not all that is requisite to give them that appearance, and to impress that conception of them which their weight and importance deserve. To judge of these cases, must be the province of him into whose hands they fall; and if in this he is so unlucky as to mistake, it can only be imputed to his indiscretion; which, with every candid peruser, the rectitude of his intention will excuse, more especially in matters relating to commerce, addressed to a trading nation. After this apology, proceed we next to the observations (O).

First observation, that this vindicates whatever has been said as to

FIRST then, this history of the *Dutch East India* company fully vindicates, from all suspicion of exaggeration, what antient writers have recorded of the wealth, the power, and the prosperity, of *Sidon*, *Tyre*, and *Carthage*, which, from low beginning, rose to such height and splendor, and maintained themselves in it through a long series of ages, by the wise management of extensive commerce, we may easily conceive, that all we find reported of them might d

¹ BASNAGE description historique du gouvernement des Provinces Unies, c. 37. Traité gen. du com. par SAMUEL RICAUD, p. 6.

(N) It would be a very difficult, if not an impracticable, undertaking, to aim at the computation not only of the intire value of the commerce of the *East India* company, but even of any single branch, otherwise than by the help of their dividends, and in the manner suggested in the text; which, however, cannot lead us to any competent notion of the gross amount of their annual returns from the *Indies*; though some have ventured to fix this, one year with another, at sixteen million of guilders. But, in respect to these, we may help our conceptions a little, by reflecting how great a share the *Dutch East India* company still retain of this commerce, in all its branches, notwithstanding the prodigious efforts that have been made, more especially within a century past, in favour of other nations. As to the spice trade, pepper excepted, they are possessed of the monopoly, and were never so thoroughly or so securely settled therein as at present, and while they retain this, they can never fail of being masters in the *Indies*; that is, of trading more largely, and upon better terms, than their neighbours. They hold also their monopoly of the trade of *Japan*, and enjoy the mines of *Lignor*, from whence they derive still farther advantages of the same kind. They draw prodigious quantities of valuable commodities and manufactures out of their own dominions, which they annually bring home to *Europe*, and which they are constantly improving in quality, and augmenting in quantity; the consequences of which, if we duly weigh them, will sufficiently convince us, that their profits must be much larger than those of other nations who trade to the *East Indies*; and that therefore, though they are not the least jealous, yet they are the least like to be hurt by new establish-

ments, and have the greatest security of being able to carry on this commerce, for ages to come, with prodigious profit, notwithstanding all the attempts that may be made to interfere with them; because it is not easy to foresee that they can be ever in danger of losing the superior advantages before-mentioned, and many others that might be enumerated (40).

(O) The remarks and reflections that are made on other parts of general history, chiefly regard statesmen and politicians; but, with respect to speculations upon commerce, they extend to all ranks and degrees of people; and there cannot be any thing either more entertaining or of more general utility, than to spread them as far as it is possible, as this is the most effectual method of correcting vulgar prejudices, eradicating errors of an old standing, and engaging such as have leisure and abilities to employ them in the study of points of the greatest consequence, points capable of being reduced to practice, and which may be of universal benefit. There never was an age in which the curious and inquisitive had so great opportunities of gratifying themselves in these particulars, as in the present; and therefore it becomes us to exert our diligence in that respect, as well for our own benefit as that of posterity. Besides, it is, in some measure, a new field of inquiry; it is a kind of knowledge in which the moderns have a confessed superiority; and there cannot therefore be any thing more honourable for our age or country, than to push this to the utmost, and to make it appear, that, where we have advantages, we are as able to use and to improve them, as those who went before us, and who, for our benefit, have done so much in the cultivation of other subjects (41).

(40) *Janicon etat present de la republique des Provinces Unies*, c. 12. edition of the *Dictionnaire de commerce*, and the history of the trading companies in *Europe*, at the end of the second volume of that work.

(41) See the preface to the last

a have truly happened in times past, since we see an empire raised from a lower and more unlikely foundation, to a wider compass of dominion, and in actual possession of all that she acquired in our own times. We discern from hence, that trade is as true and solid a principle in respect to power, as ambition or thirst of glory; and that it is as impossible for merchants to manage great designs, as military heroes. We may be convinced, from this detail, that a naval power is superior to any other kind of force, and that a small squadron of ships, well directed, is capable of achieving as much, or more, than a well disciplined army ^{the power of commercial states:}.

THE very summit of *Alexander's* glory was, that, with a handful of men, he pierced through the greatest empire in *Asia*, and first led the *Europeans* to the banks of the *Ganges*. It is to the credit of those, who lived in far later times, that, with forces much inferior, they not only attempted to lay the foundations, but have actually succeeded, in raising an empire in the *Indies*, greater in that respect than his. The same high and haughty spirit that enabled him to push his conquest so far, rendered his possession of so little duration. That spirit, as it was natural, diffused itself through those whom he commanded; and the same ambition that rendered him the conqueror of the *Indies*, quickly deprived his successors of that conquest. But those who acted upon less airy motives, gave a different turn of mind to those they employed, and, by combining interest with obedience, have been not able to acquire only, but to maintain. Well therefore might the ancient states, acting on the same principle, and governing their conduct by the like maxims, lay such foundations of power as lasted longer than most of the great empires so much celebrated by antiquity; and as the progress and prosperity of this company throws such a light of probability upon those early histories, so we may learn from them, that empires, thus founded, are only brought to decay by intestine commotions, in conjunction with universal corruption: for these are the diseases of free governments, as ambition, pride, and resentment, work the ruin of despotic systems of power. Acute distempers are terrible in their symptoms, which, though milder in chronical cases, experience shews us are no less fatal in length of time ^{since it evidently surpasses any that we find mentioned in ancient authors.} (P).

WE may, in the second place, observe, that, with respect to a particular nation, the value of the *East India* trade is, from the facts contained in this chapter, set beyond objection or suspicion: for, had there been the least degree of truth or reality in the narrow notion of a country's being undone by a commerce that carries out bullion, and is attended with some loss in seamen, soldiers, and servants, how evident must it have been from the state of *Holland* long ago? The company, if that kind of reasoning had been right, instead of supporting, must have subverted the commonwealth. *Holland* is without mines, and of no great extent; so that an impoverishing and destructive trade must have drained her long ago of her last man, and her last florin. There could not therefore be a more decisive experiment than this, as to the true nature of the *East India* trade, or more capable of bringing to light those secret sources of mischief, which some have suggested to lie hid, under the specious appearance of profit ^{Second observation, that this proves the commerce to the East Indies is a real advantage.}.

BUT now, after a trial of one hundred and fifty years, what discovery has been made? Is either the company on the decline, or the commonwealth exhausted by her means? Certainly neither the company was ever more powerful than she is at present; her naval force is at least equal, and her military strength by land not much inferior, to that of the republic when this company was erected. It is, indeed, true, that the dividends for many years past have not equalled those in the earlier times of her commerce; but, taking it upon the whole, she has divided above twenty *per cent.* upon her original capital, from the date of the first charter, ^{The truth of this is not to be at all doubted, since experience shews it.}

^a DE WITTE *Gronden en Maximen van de republiec van Holland*, iii. deel. ^b BASNAGE *description historique du gouvernement des Provinces Unies*, c. 37. JANIÇON *etat present de la republique des Provinces Unies*, c. 12. ^c BASNAGE *description historique du gouvernement des Provinces Unies*, c. 36.

(P) It is a point of great consequence towards keeping either the natural or the politic body in good health, to be well acquainted with its constitution, and to have a just notion of these diseases to which it is most liable. It must, indeed, be allowed, that it is alike improbable, that bodies of either kind should be rendered immortal; but this, instead of discouraging, ought to excite us to be the more assiduous in our endeavours to find out the most proper and efficacious remedies for all diseases, since tho' death in one case, and though dissolution in the other, will certainly come, in spite of all our care in both cases; yet we have a great and plain interest in preventing this as long as we can. The basis of commercial empire rests upon frugality and industry; the opposite qualities to these are the most dangerous in such a state; that is, luxury and idleness; but frugality and luxury are, in a great measure, comparative things; and there are circumstances when frugality may be dispensed with to a certain degree,

without danger; and luxury permitted to a certain extent, without any just apprehensions. But it is otherwise with indolence and idleness; for, if the former be lost, or the latter prevail in any considerable degree, the cure is very difficult, if not impossible. The reason of this is easily discerned; idleness is a political scurvy, with which, when the bulk of any nation is infected, they grow in love with their disease, and are less afraid of its consequences, than remedies. We may therefore, from this observation, collect, that whatever motives there may be consistent with political wisdom to permit, or at least to connive at luxury, there can be none to wink at idleness; and from thence there follows an inference of prodigious importance; which is, that, in whatever nation this appears, it is a sign that the disease has reached the noble parts, and that such a state is at the very brink of ruin.

one year with another. Is not this a prodigious thing! and yet, is this all? Has not the *Dutch* a nation received, from the increasing expences of the company at home, as great or greater advantages, than from the sums she has actually divided? Let us consider what this is. About twenty years ago, it was computed that the company had divided to her proprietors, in less than one hundred and thirty years, upwards of one hundred and eighty millions of their money, or more than eighteen millions of ours. The truth of this fact cannot be called in question, while there remains any such thing as certainty from evidence^k.

By which all objections, how specious so ever, are absolutely confuted.

THERE is likewise to be taken into this reckoning, whatever extraordinary sums the company has, from time to time, paid, either upon the score of renewing her charters; for the assistance of the state in times of public exigency; or by way of conciliating the public favour, as in building that magnificent structure the town-house of *Amsterdam*; the vast sums that have been paid for duties, in the course of such a number of years; and the prodigious estates which, though raised in the *Indies*, have been drawn over, and spent in *Holland*; and lastly, the profits of the trade driven with the goods brought into *Holland*, for obtaining *Indian* commodities; since, notwithstanding these goods are bought with money at the company's sales, yet that money is raised by the sale of goods, which must bear down their price, and occasion a large profit upon them, on their exportation. Upon this review, therefore, and upon the reflection, that, in the very same proportion in which the trade of this company has been extended, both that and the naval power of the *United Provinces* has increased, while the maritime power of the crowns of *Spain* and *Portugal* has declined, as they lost the monopoly of the *Indian* commerce, we must be persuaded, that the reasoning advanced in the first chapter of this part of our work, is thoroughly supported by experience, and that it is impossible a thing of this nature should be better proved, than that the commerce of the *Indies* has been of inestimable value to the *Dutch* commonwealth; and that the encouragements she has constantly given to the *East India* company, ought to be regarded as flowing from principles of true policy, and an evidence of the wisdom with which the public affairs in that country have been managed^l (Q).

The third observation, that strict adherence to a wise and prudent regulation, is a certain and safe method of preserving any system whatever in its full vigour. Such writers as have given us their thoughts upon the *Dutch East India* company, and the manner in which her affairs are administered, have generally expressed their astonishment, that no extraordinary revolution has happened in their dominions, from the wonderful change of their circumstances. But this surprise, perhaps, will cease, when we remark that, in reality, no very perceptible change has happened in the maxims of her government. In the infancy of the company, the people she sent abroad were equally unhappy in their circumstances and characters; and this, if we may believe the pensionary *De Witt*, continued to be the case down to his time; which he attributes to the severity of the rules prescribed by the company to those in their service. But, perhaps, there might be more candour, and as much truth, in saying, that the strictness of the company's frame of government arose from the knowledge she had of those that were to live under it. Her care therefore was, to provide such regulations as might prevent private vices from becoming prejudicial to the public interest. Now, whatever motive led to this maxim, there could

^k See the table of dividends made by the *East India* company, from the time of its establishment, inserted in the *Dictionnaire de commerce*. ^l *BASNAGE* description historique du gouvernement des Provinces Unies, c. 36.

(Q) We may seem, in this observation, to contradict flatly the sentiment of that great politician *John de Witt*, who thought it would have been more advantageous to the *Dutch* state, and consequently a higher point of wisdom in their government, if the *East India* trade had been laid open. We judged it necessary therefore to add this note, to shew that this was not our design. We are very sensible, that the pensionary *John de Witt* was too well acquainted with matters of this nature, and by far too good a judge of the interests of his own country, for us to venture to charge him with a mistake. But the true state of the case is this: at the beginning, the carrying on this trade, otherwise than by an exclusive company, was found impracticable; and when it had been so carried on for some time, the company came to have such an interest, and the visible profits to the nation were so great, that it was not thought expedient to refuse them the continuance of their charter. Yet, for all this, it may remain a doubt, and it is indeed the very doubt that

Mr. *De Witt* had, whether, if this first renewal had been denied, the trade might not have subsisted, and have been still more beneficial to the subjects of the States General, than it has been (42). But, without pretending to resolve this doubt, what we assert is, that the states have acted very wisely in the manner in which they have supported the company, since they held it proper to support it; which, after the renewing of the charter once, we think was likewise the wisest course; and in this we are so far from opposing Mr. *De Witt*, that we have, on our side, if not his opinion, yet his example; for he was at the head of the councils of the republic, when the company's charter was again renewed, when they payed pretty largely for it, but were not refused it; because, as things were then circumstanced, no doubt that able statesman, and his associates in the government, thought it a measure dangerous, if not impracticable, and therefore very prudently declined attempting it.

(42) *Gronden en Maximen van de republiek van Holland*, i. deel, c. 16.

- a not possibly be a better principle be established for a government like theirs. To honest men, the strictness of laws can never be grievous; because their own inclination would keep them in that very track those laws prescribe: but to men of another disposition, they are necessary, as well to keep things from falling into confusion, as to oblige them to discharge their duty ^m.

- But, with all this exactness and precision in their instructions, and in the model of their constitution, there was another ingredient thrown into the composition, which has sufficiently tempered it for general use; that is, the absolute power left to the governor-general, without any check, but that of his own discretion; the bounds of which, perhaps, were never known, or executed, in their full extent. *Jobb Maatzuyker*, who was general twenty-five years, expended, upon certain occasions, larger sums than the salary allowed him by the company. The council of the *Indies* disputed the legality of his demands upon the treasury; upon which, having first soberly remonstrated, and shewn his reasons, without convincing his opponents, he at last produced a secret power from the company to take what appointments he pleased; which put an end to the dispute ⁿ. This power in the governor, and the great authority of the council of the *Indies*, serves in such cases as absolutely require it to moderate the letter of their regulations, and to make things easy to the company's servants, in all stations: for it is very well understood, that the spirit of those rules is to support the company's interest, and not to put such as are in her service under unreasonable difficulties; and therefore it passes for a practical maxim in the *Indies*, that he who will not mind his own business, will never mind that of the company's; and therefore, riches are the way to preferment, as well as preferment to riches. Those who administer the company's affairs in that part of the world, know very well, that it is not pleasure but profit that brings people thither; and, provided that men pursue their profit, without prejudice to the company, they never fail to give them all the encouragement in their power; because this has a good effect, both at home and abroad.

- Those who return, carry their fortunes back to *Holland*; and the apparent change of their circumstances, in the course of a few years, excites men of spirit and industry to take the same method of arriving early at an easy condition in life. This has, in a great measure, altered the condition of things in the *Indies*, and many go thither now, who are not driven by indigence, and that too in stations conferred upon them from a just regard to their birth and education. These men never complain of the company's strict regulations; because, in reality, they never feel them; they know very well that their own interest depends upon that of the company, and come thither with a resolution of doing what is required to be done; that, in virtue of their diligence, and punctual discharge of their duty, they may, in a reasonable course of time, acquire wherewith to return both with wealth and dignity. Whatever therefore there is now of iniquity and corruption, is not to be found in any great proportion amongst those who are in the actual service of the company in the *Indies*; and when any instance of this kind appears, those intrusted with the administration in that part of the world have so great an interest in preserving things upon their present foot, that they are very ready to bring to light, and punish it; of which the reader has seen some recent examples. On the whole, therefore, as the increase of their power, and the extent of their dominions, have been gradual, in consequence of a strict adherence to those fundamental maxims before-mentioned, things have rolled on constantly in the old channel, and are like to continue therein; for as, on the one hand, there is no great probability that any of the *European* powers should have either inclination or capacity to undertake any thing to her prejudice; so, on the other hand, it is not very likely, that she should make any farther accession to her territories, but rather content herself with maintaining what she has already acquired, and reaping quietly the profits of an establishment which will be always most admired by those who are best acquainted with its history, and with that amazing series of success and good fortune, which has attended almost all its enterprizes, from the time of its erection to this day (R).

(R) It may, perhaps, be objected, that we reason in the text intirely from the company's success; which some may incline to think no direct proof of its merit, but rather of its good fortune. In answer to this, we desire it may be considered, that though this objection may be rationally enough raised in particular cases, and as to the company's conduct in any given transaction, yet, as to the whole of its conduct, it is very absurd and unreasonable, and consequently no objection at all. What we allege in the text is not grounded on a few particular facts, Mod. Hist. Vol. IV.

picked out and set in a strong light for that purpose, but upon a long regular series of events, flowing from the constant and steady execution of a particular system, which is not only the best and clearest, but indeed the only method with which we are acquainted, of distinguishing its nature. Besides, such as long ago opposed the carrying on the *East India* commerce, as well here as in *Holland*, appealed always from the experience of those times to that of posterity; affirming, that whatever immediate good effects that commerce might produce,

Very natural
that this
amazing suc-
cess should pro-
duce rivals.

THERE is no room to wonder, that success so extraordinary as that of the company, should excite both envy and imitation; but it may be thought no inconsiderable proof of the truth of our remarks, that, notwithstanding other nations have exerted their utmost strength, and their utmost policy, in order to fix upon a solid foundation establishments of the same nature, they have not been able, even in any tolerable degree, to accomplish their end; though, at the same time, the lustre of this company has so far dazzled their eyes, that, notwithstanding repeated disappointments, they have still persisted in the pursuit of the same design, and, by their perseverance, have at length fallen into some share of this trade; which makes the following chapters necessary, wherein we are to give a succinct account of the rise and progress of these establishments, and of that distribution of the commerce of the *Indies*, which, at this time, subsists in *Europe*; where, after the possession of two hundred and fifty years, it remains still an object more desirable than ever, notwithstanding the confident assertions of some, that the wealth of *Europe* would, in a far less space of time, be absolutely exhausted, if this trade continued: so dangerous it is to reason in commercial affairs from any thing but facts; or to suppose, that any commerce can be detrimental, which encourages industry, and increases a naval power; though, at the same time, they may cross certain maxims, plausible in appearance, but false at the bottom, and which therefore could not stand the test of experience.

duce, yet, in a course of years, what they predicted would infallibly come to pass. There cannot therefore be any thing more reasonable, than to conclude the falsehood of their prophecy a full refutation of all their objections (43).

(43) See Sir William Monson's *naval tracts*; and the judicious discourses upon the *East India trade*, by Thomas Mun; as also the two chapters in Mr. Basnage's work, that have been so often quoted.

C H A P.

C H A P. VIII.

The commerce, colonies, and companies, which the Danes have heretofore maintained, or still support, in the East Indies.

S E C T. I.

Character of the Danish nation ; their ancient turn to navigation and naval expeditions ; their share in the holy war ; the time when an ardent desire of making discoveries, and opening new branches of trade, revived amongst them. Account of the famous empire of Bitnegar in Indostan, and the circumstances which facilitated their settling at Tanjour.

^a **A**S far as we can penetrate through that midst of fabulous inventions in which the antient history of the northern nations is enveloped, the *Danes* have been from the most early times equally distinguished by their martial temper, and being strongly addicted to maritime expeditions ^a. The conquests they gained over their neighbours served only to excite in them an ambition of undertaking greater things, and carrying the terror of their arms into countries more remote. The *British* isles, after being long harassed by their incursions, became at length for a time a part of their dominions ^b. They erected in *France* the noble duchy of *Normandy*; and, from thence extending their naval incursions, fixed themselves in *Naples*, which they subdued, and from thence sent their vessels to cruise upon the coast of *Asia* ^c. These are facts that may be proved from history; but whether before these exploits, they, or any colony of theirs, had found a passage, which is now lost, from *Iceland* to *Japan*, as some have imagined, is a point that we cannot take upon us to decide (A).

The genius of the antient Danes, and their maritime expeditions and conquests.

^a STRABONIS geograph. lib. vii. HERTZHOLMIUS præcellent. regn. Dan. & Norv. p. 95. ^b CLAUDIUS, LYSCANDER in genealog. reg. Dan. p. 323. chron. SAX. ALURED BEUERL, &c. ^c EGINHARDIUS in vita Caroli Magni. ALBERTUS STADENSIS in annal. Dan. OLAVUS WORMIUS ad calcem, lib. vi. Monument. Danicorum.

(A) Some learned persons have observed, that there is a great conformity between the language spoken in *Iceland*, and that of the *Japonesc*; from whence it is inferred, that there must have been, in the earlier ages of the world, some kind of intercourse between these nations (1). If we allow the fact to be true, that there is a conformity between the languages, then this inference of a commerce between them will be very just; but, notwithstanding this, the judicious reader will certainly think it no very easy thing to give an account of this commerce, or how it could be carried on. That the north-east passage was frequented to such a degree as this notion suggests, is not very credible (2); or that attempts were made to sail from one country to the other, through the open sea, directly under the pole, will hardly gain credit (3); though some good authorities might be produced to shew, that many ages are past since great discoveries were made on that side (4). We might perhaps solve the difficulty better by saying, that those who peopled the northern part of *Asia* sent off colonies to the east and west; and thus by degrees peopled both islands; which, tho' not a very probable, is yet a possible thing. However, let us return to matters of fact, and we shall

find another route assigned by a late author (5); who, speaking of certain priests in *Japan*, proceeds thus: "These priests were descended from the *Goths*, who, coming first out of *Scania*, which antiently comprehended the countries of *Sweden*, *Norway*, and *Schonen*, were led by their general, whose name was *Taunastis*, quite into *Egypt*, where they vanquished king *Vesefis*. From thence they marched against the *Persians*, and committed strange devastations in their countries during the reigns of *Cyrus*, *Darius*, and *Xerxes*. From thence they made an irruption into the *Indies*, *China*, and *Japan*, blending their religious notions with those of the *Brachmans* and the *Bonzes*: so that it is no great wonder there is such a conformity between their opinions." It would perhaps be no easy task to produce authentic vouchers for this extraordinary piece of history; but if any author should endeavour to render it probable, he might very easily shew, that the genius, manner, and temper, of the *Japonesc* (6), resemble the northern nations much more than the *Chinesc*, from whom others believe them to be derived; and might also produce, from the fabulous stories of the northern nations, a traditionary account of their intercourse with the east.

Their exploits in the holy wars, which are supposed to have given rise to the order of the elephant.

IN the wars that were carried on by the Christian princes for the recovery of *Jerusalem* out of the hands of the *Mohammedans*, the *Danes* had a large share; and their private memoirs, as well as public histories, have preserved many particulars which do honour to the memories of those generous heroes, who, from perhaps a mistaken principle of piety, signalized their courage in these distant countries, and spread the fame of their nation to the utmost limits of the east^a. It was with a view to perpetuate the renown of these great and gallant actions, as some of their ablest antiquaries assert, that the order of the elephant was erected, which is still the most distinguished mark of royal favour the kings of *Denmark* bestow upon their subjects^b (B). We may from these circumstances, with a reasonable degree of certainty, collect, that whatever lesser alterations might be made in the policy, or in the dispositions of the *Danes*, they still continued to cherish, through a long series of ages, that noble ardour which had been so conspicuous in their ancestors, and which had spread the trophies of their victories into regions so far removed from their own^c.

By this martial spirit, and the losses which attended it, the crown of Denmark declined in power.

BUT this conduct, and these expeditions, how much soever they might serve to raise the glory, contributed not a little to weaken the strength, of this nation; so that in succeeding times we find her struggling hard to preserve those antient prerogatives which she challenged as being the first of the northern crowns, and of which she was gradually deprived thro' the long wars that were brought upon her by the ill conduct of some of her monarchs^d. Amongst these, *Christiern II.* was the most remarkable, who, from being possessed of the three crowns of *Denmark*, *Sweden*, and *Norway*, fell first into the condition of a private man, fled next into the *Low Countries* as an exile; and at length, finding all endeavours to recover his former dignity vain, yielded himself a prisoner, in which sad state he continued to his death^e. By his deposition the crowns of *Denmark* and *Norway* came to *Frederick* duke of *Holslein*, whose great-grandson *Christiern IV.* being a prince of singular abilities, and having a strong desire to promote the welfare of his subjects, willingly listened to whatever proposals were made for promoting industry, erecting manufactures, and extending commerce; which laudable spirit, to speak impartially, seemed to prevail in an extraordinary degree about the beginning of the seventeenth century throughout all *Europe*^f (C).

Christiern IV. the first Danish monarch who applied himself to the promoting commerce and discoveries.

OF all the schemes that were offered to this intelligent prince, he was most pleased with that for opening a trade between his own dominions and the *Indies*, from which tho' some endeavoured to dissuade him, by suggesting that the passage was long and hazardous; that the *Portuguese* were already in possession; and that, though the *English* and *Dutch* had made some voyages into those parts, yet the returns they had hitherto received were rather of honour than profit^g. That prudent prince easily discerned, that the first of these fallacious arguments

^a PONTANUS hist. Dan. lib. vii. p. 475. Saxo-Grammat. lib. xii. p. 223. SNORRO STURLESONIUS in chron. Norv. p. 436. HERTZOLMIUS in breviario equestri, cap. ix. § 1. SNORRO STURL. in chron. THUAN. hist. sui temporis, lib. i. xxii. ^d Essai sur le marine et sur le commerce, 159, 160, 161. ^e Commerce des Danois aux Indes, p. 19.

(B) The *Danish* historians are not very well agreed as to the time, the founder, or the occasion of this order being erected; some say it was instituted by *Cnutus* the sixth, *Anno Dom.* 1135; others ascribe it to *Christiern I.* king of *Denmark*, *Sweden*, and *Norway*, *Anno Domini* 1478; others to *Frederick* the first, *Anno Domini* 1525; but all agree, that it was revived by *Christiern IV.* *Anno Dom.* 1590 (7). It is certain that in former times this was likewise styled the order of the Blessed Virgin, the figures of elephants being represented only on the collar, to which the image of the Virgin was pendant (8). But, since the revival of it by *Christiern IV.* the knights, who are thirty-four in number, wear a jewel of gold, with an elephant enamelled white on a field Or charged with a tower, *Argent* and *Sable* (9). A very learned writer upon this subject affirms expressly, that the origin of this order was from the exploits of the *Danes* in the holy war. Another writer acquaints us, that a *Danish* hero having slain a white elephant in *Palestine*, this order was instituted to preserve the memory of so glorious an action (10). Notwithstanding this, a more modern author inclines to refer this institution to the feats of arms performed by the *Danes* in *Africa* (11).

(C) It is not a little wonderful that the *Portuguese* and *Spaniards* should enjoy, for almost a whole century, their empires in the *East* and *West Indies*, from whence they drew such immense treasures, and which besides brought them almost all the wealth of *Europe*, without interruption; but perhaps it will appear still more strange, that, when once an opening was made, so many nations should in a manner at once endeavour to acquire an intercourse with the people of the *Indies*. Yet the fact is indisputable; for our glorious queen *Elizabeth* granted her charter to the first *English East India* company December 31, 1600; the States of *Holland* incorporated theirs by an octroy, dated March 20th 1602. The *French* king, *Henry* the fourth, by his arret, dated June 1st 1604, erected a like society; and, as we have shewn in the text, *Christiern IV.* king of *Denmark*, granted his charter for the like purpose in 1612. We thought it, however, just to give the first rank to the *Danes*, because they actually established themselves in the *Indies* before the *French* sent any ships thither, as the reader will see in the next section.

(11) *James Meursius* in his dedication of Dapper's description of *Africa*,

a might be urged against any other branch of trade as well as this ; and that to accustom his subjects to long voyages was the most effectual method of rendering them less hazardous, since, without skill, men will be always in danger at sea, and the knowledge of the mariner can only be acquired by practice. He knew that the *Portuguese* had overstrained their power in the east, and that strangers were never more welcome than at that juncture. As to the *English* and *Dutch*, he was well acquainted with their exploits ; and thought that it was high time his subjects should distinguish themselves in the like manner. Upon these motives, therefore, which were equally solid and honourable, he took a resolution to countenance those who were inclined to hazard their private fortunes in an undertaking, that, if it succeeded, must necessarily tend to the public benefit. He rightly foresaw the consequences that must follow on the establishment of such a trade, which, if it failed, would occasion but a small loss ; and that, by being divided amongst many, would fall the lighter ; but, if it had a favourable issue, would employ a multitude of hands, increase their shipping, and encourage a commercial spirit amongst his subjects. The loss, therefore, seeming to be but a trifle in comparison of the gain, and probability being on the side of the former rather than the latter, he vigorously supported, on reflection, a proposal, which, from inclination, he had first encouraged.

ABOUT the year 1612 those who had associated themselves at *Copenhagen* for carrying on the trade of the *East Indies* received the sanction of royal authority ; and, having divided their capital into two hundred and fifty shares, of a thousand rixdollars each, began to make the necessary preparations for equipping and sending a squadron to the *East Indies* ^{An account of the Danish East India company, and of their first expedition.}. As the success of their project depended in a great measure upon the issue of their first adventure, they were more solicitous to have every thing in good order, though this was attended with some delay, than to run any considerable hazard for the sake of haste. There were at that time seamen, who had visited the *Indies* in some service or other, easy to be met with in the northern ports, and of these they collected as many as they could. They likewise took care to study thoroughly whatever had been published in *Italy, Spain, Portugal, England, or the Low Countries*, in reference to this subject ; and, having from thence formed the best plan they could of the commerce of the *Indies*, they gave ample instructions to those who were intrusted with the management of their affairs ; and particularly recommended to them obtaining a settlement by fair means, and for a reasonable consideration ; keeping always on good terms with the natives, and avoiding as far as possible any disputes with the subjects of those *European* powers, that they might find engaged in projects of a like kind. With these instructions, fortified by the king's commission, the officers intrusted with the company's ships departed from the island of *Zealand*, and reached the *East Indies* in 1616 ^a. But, before we come to speak of their proceedings, it will be expedient to give the reader a short account of the state the country was in where they first traded, and where they afterwards settled, at the time of their arrival ; that it may appear how far they complied with their orders, and on what terms they established their colony where it still remains, and of which they have been ever since in possession, though not without disturbance and danger, or without their having their full share of those difficulties with which all the *Europeans*, who have visited those distant climates, have sooner or later been oppressed. We do not find that any umbrage was taken at this step of the *Danish* court ; for in those days none of those refinements on the rights of distant navigation, which have so much perplexed the moderns, and are become a distinct branch of politics, were so much as known ; for, all starting together, as it were, for this prize, they were more intent upon obtaining it, than on finding arguments to give the colour of an exclusive title, when it should be obtained.

AT the time the *Europeans* first opened a passage to the *Indies* by sea, the great peninsula without the *Ganges* was most of it subject to the emperor of *Bisnegar*, whose dominions extended from the frontiers of the kingdom of *Oriza* to *Cape Commorin* ^b. The reason that we find so little mention made of this most potent monarch in the relations of the *Portuguese*, that is, the more early relations, arises from hence, that his territories were limited by the mountains which run parallel in a manner to the sea-coasts of *Malabar*, where they first established themselves, and where the principal potentate was the samorin or king of *Calicut* ^c. While the *Portuguese* were extending their power, the vast empire of *Bisnegar* was crumbling to pieces through its own weight. The first monarchs of that mighty state had acquired their power by the exercise of their virtues : in time of war they were at the head of their own armies ; in time of peace they directed their own councils, visited their dominions annually, and rendered

^d TA-

justice to all their subjects with the utmost punctuality^a; but prosperity, dangerous to all human establishments, proved fatal to this empire. From delighting in great actions, the emperors of *Bisnagar* became fond of swelling titles: *King of kings*, and *The Husband of a thousand wives*, were the first of a long catalogue of whimsical epithets, at once very pompous and very insignificant^b. By degrees their vanity rose to such a height, and their flatterers prevailed so far, that they conceived themselves to be more than men, appeared rarely in public, affected divine honours; and, leaving the care of their dominions to the great officers of state, and to the governors of provinces, thereby paved the way to their own destruction^c (D).

What foreign
rivalties arose
out of the
ruins of this
overgrown
monarchy.

THE *Pattaneers*, a *Tartar* nation, invaded the north-east provinces of the empire; the generals of the *Mogul* attacked the north-west^d. The governors, being necessarily at the head of armies, laid hold of this opportunity to render themselves independent, and some assumed the title of kings; as for instance, those of *Visapour* and *Golconda*^e; but those in the southern provinces, tho' they also rendered themselves independent sovereigns, contented their ambition that way, and retained their old title of *Naick*. Amongst these the three most considerable were those of *Madura*, *Tanjour*, and *Gingi*^f. *Madura* is of great extent, reaching from *Cape Commorin* along the coast of *Coromandel*, opposite to the island of *Ceylon*, and very far within land. *Tanjour* is of a smaller compass; and is bounded on the south and on the west by *Madura*, on the east by the sea, and on the north by the province of *Gingi*, from which it is separated by the river of *Coloron*^g. *Tanjour*, which is the capital of this principality, lies in the north-west corner of the country, and is a city of considerable extent, tolerably well built, and has a good inland trade. As for maritime places, the *Naick* had two that were pretty considerable on the coast of *Malabar*, which were *Negapatan* and *Tranquebar*^h. In 1597 the *Portuguese* were settled at the former; which gave so much satisfaction to the *Naick*, that he was desirous they should likewise erect a church at the latter; which about that time they did, and the *Jesuits* took possession of it, made a considerable number of converts among the natives, and brought several of their countrymen to settle there likewise on the score of commerce; and this was the condition in which the *Danes* found that country when they came first to trade upon the coast of *Coromandel*ⁱ (E).

(D) It is a point of very great consequence, in order to a clear and accurate idea of the historical facts contained in this and the succeeding sections, to be well informed with respect to this ancient empire, the extent of its power, the times in which it flourished, began to decline, and was at length rent to pieces, as also the present condition of those countries which were once provinces of the *Bisnagar* empire, because in these are seated the capital establishments of the *English*, *Danish*, and *French East India* companies. As to the bounds of this empire in its flourishing condition, it reached from eight to twenty-one degrees of north latitude; and comprehended, where it was widest, not less than fifteen degrees of longitude (12). The ruler of this potent monarchy was possessed of a great part of the *Malabar* coast, from the river *Aliga* to that of *Cangerecora*; so that he was lord of the west as well as the east sea, and of the pearl fishery. This must have been in the fifteenth century (13); and in all probability it is this monarch which the *Danish* missionaries intend to point out, in their accounts, by the title of the emperor of *Malabar* (14). The first *Portuguese* historians call him the king of *Narsinga*, or *Narsingue*, and give us the detail of his wars with *Idalcan* (15). It is believed that this was either a title of honour, or the proper name of that prince; for though some writers mention the city of *Narsinga*, yet the best geographers have been at a loss to find it; and agree, that *Cbandegry*, or *Bisnagar*, about one hundred and forty *English* miles

from *Fort St. George*, was the capital of this empire (16). It must however be allowed, that in different books of voyages this monarch has very different titles given him; in some he is stiled king of *Carnate*; in others the king of *Vehur*, and his consort the queen of *Paliccat*; because, when these accounts were written, they happened to reside in those places (17). When this emperor took the field in time of war, his army consisted usually of one hundred thousand foot, thirty thousand horse, and seven hundred elephants; in time of peace his revenues were prodigious, and the commerce of his subjects as rich as any in the *Indies* (18). In the beginning of the sixteenth century his neighbours began to encroach upon him on all sides; and in a short time he was deprived of all his territories west of the mountains of *Balegate*, and the northern provinces also conquered. In 1565, when the emperor was a mere cypher, and his great officers governed all, *Bisnagar* was taken and sacked by four *Moorish* kings; and thenceforward affairs continued in great confusion (19), till towards the end of the century, when the empire was totally subverted, of which we shall speak in the next note.

(E) The clearest account we have of the ruin of this empire is that written by our countryman Mr. *William Metcald*, who was in these parts in the first quarter of the last century. He assures us, that, at the demise of the last monarch of *Bisnagar*, which must have been some years later than 1600, the whole country had been

a THE *Danes*, at their first coming, seem to have been very well received by the natives; and, finding the place more commodious for traffick than any other, where they could with any probability expect a settlement, they began to make propositions to the *Naïck*, for his permission to seat themselves in his dominions; which were favourably accepted; and in all probability they were rather assisted than opposed therein by the *Portuguese*, who were desirous of having some fortrefs in their neighbourhood, that might in a time of danger afford them protection^a. In the space of five years, when the disposition and customs of these *Europeans* were better known, the *Naïck* of *Tanjour* entered into an agreement with them for this port, and a certain district round it, which he sold, or rather farmed to them, at the annual rent of two thousand pardoes, or perdous, which is still regularly paid; and in 1621 they built a fortrefs, after the *European* manner, for the defence of the port, and of the town that was erected under it^b. This is the best account that we are able to give of the first establishment of the *Danes* upon this coast, which was suitable enough to the views of the company, and became gradually of much greater importance^c (F). It might have been much sooner improved, if their thoughts had not been drawn away by an object of much greater consequence; and of which though they never availed themselves in any degree, yet it may be both useful and entertaining to the reader to meet with a short account of it here, because it is rarely mentioned in descriptions of the *Indies*.

^a Commerce des Danois aux Indes, p. 25.

^c Histoire des

so distracted by civil wars, that, all agriculture being neglected, such a famine ensued, that thousands of children were driven to the sea-side, and there sold by their own parents for the value of half a crown sterling each of rice (20). We have spoken in the text of the three sovereigns that seized on the provinces lying on the coast of *Coromandel*, as far as *Sadraspatan*. The interior part of the country on the east side was distinguished by the name of the kingdom of *Carnate*; to the north-east of that lay the kingdom of *Golconda*; to the north-west the kingdom of *Visapour*; to the west the territories of some *Indian* Rajahs, as far as the mountains of *Gate*; to the south-west a small inland country belonging to the *Naïck* of *Côila*; and, to the west and south-west of that, the kingdom of *Maïssour* (21). As to the little kingdoms on the *Malabar* coast, which were taken out of this empire, they were erected long before, and therefore we need say nothing more of them. But it is very requisite to observe, that the famous emperor *Aurengzebe* reduced *Golconda* in 1668, as he likewise did *Visapour*, and afterwards *Carnate*, and the country of *Gingi*, all of which are now no more than provinces of the *Mogul* empire; but the sovereigns of *Tanjour* and *Madura*, who have long since assumed the titles of Rajahs, are tributaries only (22). But there is still a potent monarchy of native *Indians*, or *Gentous*, stiled *Marattes*, the king of which people is very formidable, and whose city is the capital of *Satara*, near the mountains, who seems to be independent, and is now the greatest prince of the *Gentous* (23). Whether he is descended from the emperors of *Bisnegar*, part of whose country he certainly possesses, is more than we have any authority to assert. The reader will from hence discern how, at different times, the *Europeans* settled upon the coast have had different landlords; excepting only the *Danes*, who still are, what they always were, tributaries to the sovereign of *Tanjour*,

whether he be stiled *Naïck*, Rajah, Prince, or King, by all which titles he is called by different writers, according to the times in which they have had occasion to mention him.

(F) The term *Naïck* implies both governor and commander in chief, so that it seems to be equivalent to the *Turkish* title of bashaw (24). In all probability this title was kept up as long as there was any apprehension of the monarchs of *Bisnegar* recovering their former power. But when this dread was removed, they made no scruple of stiling themselves Rajahs. As they were desirous of commerce, and saw that it naturally followed wherever the *Europeans* had any establishment, it will appear a point of good policy in the *Naïck* of *Tanjour* to engage the *Portuguese* Jesuits to build a church at *Tranquebar*; for this invited Christians of different sorts to settle round it, made the place known, and brought thither ships of different nations (25). There are few places the name of which admits of greater variety in spelling. The *Danish* missionaries, transcribing the *Malabar* word, write it *Tranquebar*; the *Dutch*, *Tranckebar*; our old *English* writers, *Tranquebay*, and sometimes we find it written *Trincombar*; which observations, how frivolous soever they may seem to others, will be found very useful to those who occasion to consult indexes. It is by a comparison of facts, and dates occasionally mentioned, that we find the time of the *Danes* establishing themselves here; for on that head the best writers are able to speak only from conjecture. The protestant missionaries, sent over thither in the reign of *Frederic* the fourth, say in their letters, dated in 1706, that their colony had been seated at *Tranquebar* about fourscore years (26); which corresponds very well with the dates we have given the reader from other writers, as well as what is said by Mr. *William Metbold*, who was actually upon the coast of *Coromandel* when the *Danish* settlement was made.

S E C T. II.

A negotiation between the monarch of Ceylon and the court of Copenhagen; the fortress of Tranquebar erected, and the favourable aspect of things in regard to the affairs of the first Danish company. Change of circumstances in the Indies, and unfavourable events in Europe, exhaust the funds, and wound the credit of the company, abroad and at home.

Marcellus van Boschhower is sent by the Dutch to negotiate with the monarch of Ceylon.

WE have in the foregoing sections given a large and copious detail of the conquest of the island of Ceylon from the Portuguese by the Dutch, but have barely touched on a certain negotiation which preceded that war, as having it in our intention to explain that matter more fully here, as it gave an opening to the Danes to have possessed themselves of that island (G), and which they were not backward in embracing, though, by the premature death of the author of this project, it proved altogether abortive ^a. When the Dutch concluded, in 1609, a truce with the crown of Spain, after a long war, by which both parties were almost exhausted, the States and the prince of Orange both thought proper to write to the king or emperor of Ceylon, in order to give him notice of this temporary peace, by which they were left at full liberty to prosecute their commerce in the Indies ^c. These letters were sent by the squadron that carried over Peter Both, in quality of governor-general; and, upon their arrival at Bantam, a vessel called the *Black Lion* was prepared for Marcellus van Boschhower, who was in no higher post than that of an under-merchant, to proceed with these letters, and full powers, to Ceylon. When he arrived in that island, he was received with much respect and esteem by Cenuwierant Adascyn, who, by the marriage of the widow empress, was in possession of the throne; to whom he presented his letters, and with whom he concluded a treaty, which was confirmed by the Dutch governor and his council ^b. He would then have quitted the island; but both the emperor and the empress were so well pleased with him, and entertained so high an opinion of his abilities, and zeal for their service, that they laboured to retain him by the offer of very great preferments ^c (H).

He is created by that potentate prince of Mignonne,

It is seldom that foreigners continue long in favour, more especially in absolute governments, and therefore the fortune of Marcellus was the more singular. The monarch of Ceylon bestowed upon him the principality of Mignonne, by which, saving his homage, he became a sovereign, having espoused a lady of the first quality; and having with her in

^c *Histoire de*

(G) This chance which the Danes had of establishing themselves in the island of Ceylon, though very slightly treated by their own and other authors soon after it happened, and almost forgotten since, was in reality a thing of prodigious consequence, and a disappointment they had the greatest reason to regret. In the situation things then were, as well in Europe as in the Indies, we may with great probability conjecture, that if the Danes had once got footing on that island, they would have supported themselves therein; and the prodigious advantage to which their first voyages must have turned, could hardly have failed of convincing so clear-sighted a prince as Christian IV. was, that supporting his interest there was of infinitely more consequence than any success he could have against the Swedes. As he reigned many years after, if this project had at all taken effect, he would have had an opportunity of improving it to a degree that would have set it above the reach of accidents; which must have had a surprising effect upon the affairs of Denmark, and indeed of all Europe. That these are not idle chimeras, but well grounded conjectures, will appear from the spirit and force with which the single attempt was made, from the progress made by the Danes in their commerce with the Indies during his reign, and their re-

viving with success a correspondence with China in our own times.

(H) The Spaniards and the Dutch were equally disposed to chicanery about the truce with regard to the affairs in Ceylon, as is very evident from the actions of the former, and from the letters of the States General and prince Maurice, which are yet extant. The emperor, upon his first intercourse with the Dutch, had granted them leave to settle themselves in the kingdom of Cotiary, on the north-east side of the island, with the consent of the king of that country, and upon condition that his customs were paid; which they accordingly did upon the bay of Trinquerale (27). The Portuguese (then subject to the crown of Spain), without any respect had to the truce, resolved to attack them; and accordingly Simon Corrier marched across the island with one thousand whites and three thousand Chingulays, surrounded the Dutch, and cut them all off to a man, with very little loss; but in his retreat he was attacked by one of the emperor's generals, who killed six hundred men, and took a great number of prisoners (28); and thus that war was opened, which gave the emperor of Ceylon an opportunity of changing masters (29).

(29) *Histoire*

a dowry a fair country, with a considerable revenue, and some thousands of subjects^a. He was also promoted to the highest commands, being sometimes at the head of armies, having at others the direction of fleets, with the title of admiral; neither did he ever lose, but on the contrary increased his credit, so long as he remained in the island. At length, finding the *Dutch* administration in the *Indies* either unable or unwilling to perform the treaty they had made, though the *Portuguese* had cut off all the *Dutchmen* he had brought with him to *Ceylon*, in violation of the truce, he prevailed upon the emperor to send him, with the title of his ambassador, into *Europe*¹. His credentials were directed to the States General; but, besides these, he had, in case his applications to them should fail, full power to treat with any other *European* potentate who should be disposed to assist the emperor of *Ceylon* in recovering his dominions from the *Portuguese*, upon such terms as he should think just and equitable. He sailed from *Ceylon*, May the 9th 1615, for the port of *Masulipatan*, where he addressed himself to the *Dutch* director, and at his request went from thence to *Bantam*; where, finding the governor-general *Gerard Reynst* dead, and affairs in some confusion, he obtained leave from the council to pursue his instructions, and to return to *Holland*, that he might represent to their High Mightinesses, and the Prince of *Orange*, the true state of affairs in the island of *Ceylon*, and what assistance might be necessary to procure them a free commerce²; a commission which it was supposed would be highly acceptable in a country where the importance of the cinnamon trade was well understood, and the government consequently perfectly well disposed¹ (I).

But these hopes proved altogether fallacious: for, when *Marcellus van Boscbower* came to *Holland* with his lady, they expected to be treated as the prince and princess of *Mignonne*, living in a manner suitable to their title, and disdaining to be considered in any other light³. The directors of the *East India* company, who had sent out Mr. *Boscbower* as an under-copeman, could not be brought to comprehend any thing of his being a prince; which quickly occasioned a breach in the negotiation, and induced the emperor of *Ceylon*'s plenipotentiary to think of carrying his credentials somewhere else. After mature reflection on the state of things in other countries, he determined to proceed to *Denmark*, which was very probably occasioned by his receiving intelligence of the king's attention to the commerce of his subjects in general, and to that of the *East Indies* in particular. Some have thought that this was incompatible with his allegiance to their High Mightinesses; but it is very apparent that he considered himself as the subject and privy-counsellor of the monarch of *Ceylon*; and, if he was received and treated as such in *Holland*, he was certainly at liberty, when his proposals were rejected, to pursue the other points in his instructions⁴. To say the truth, it looks as if things had been considered in that light by the States General, who might, if they had thought it proper, have hindered his leaving their territories, or obliged him to return in one of the company's ships to the *East Indies*?

(I) By the treaty of peace which Mr. *Boscbower* concluded with the monarch of *Ceylon* in 1610, the latter consented that two *Dutchmen* should have a seat in his privy-council; and in consequence, or at least under colour, of this treaty, that prince gave him in marriage a woman of high quality, declared him prince of *Mignonne*, which is an inland province on the west side of the island, made him governor of another province, and then introduced him into his privy-council (30). In 1612 he put him at the head of an army, against some of his rebellious subjects that had joined with the *Portuguese*, in which post he behaved with all the fidelity and bravery imaginable. The same year died the empress *Catherine*, who in her last moments recommended her children to the care of the princes of *Mignonne* and *Uva*, with all the circumstances possible of favour and confidence (31). The death of his consort, in whose right he held the crown, afflicted the emperor extremely; and his grief brought on a disease that the physicians judged to be mortal. In order to guard against the inconveniencies that naturally attend a minority, the emperor called an assembly of the states, in which he not only declared the prince of *Mignonne* and the prince of *Uva* regents, but intrusted them likewise with the education of his children, whom,

with the most moving expressions of tenderness, he put into their hands. The princes were sent, by order of the states, to a fortress, for their greater security; but the governor entered into a conspiracy to take away their lives. His forces were dispersed by the prince of *Mignonne*, and himself arrested on his coming to court, where, on the evidence of his letters, and some accomplices, he, with twenty-six noblemen, and fifty soldiers, were put to death for treason (32). In 1614 the emperor gained a glorious victory over the *Portuguese*, and the rebels that had joined them, the princes of *Mignonne* and *Uva* commanding the van. His affairs being now in a flourishing condition, that monarch, on the twenty-ninth of *August*, proposed in his privy-council to marry the deceased empress's daughter by a former husband, whom he acknowledged, in the life-time of her mother, to have debauched. The prince of *Mignonne* opposed this steadily; and made so pathetic a speech on the occasion, that the emperor burst into tears, desisted from his design, and promised to live with her as became him for the time to come (33). Such were the actions by which this *Dutch* under-copeman acquired the confidence of an emperor, and added lustre to those dignities which he derived from his favour.

In this disposition he proceeds to Copenhagen, and concludes a treaty there.

He arrived at *Copenhagen*, July 16th 1617, and it seems was received there in a manner suitable to his pretensions. While he resided in this capital the princess of *Mignonne* was brought to bed of a son, to whom his *Danish* majesty was godfather. His propositions were favourably accepted by the company, who entered into a negotiation with him; and, a treaty being concluded between them, it was ratified and confirmed in the succeeding year by king *Christian IV.* He granted him also a man of war, called the *Elephant*, to carry him, his family and retinue, back to *Ceylon*. The company likewise added some ships of theirs; and the whole squadron was under the command of a *Danish* nobleman, whose name was *Owen Giedde de Tommerup*. He sailed with this squadron from *Copenhagen*, March 30th 1691, and anchored at the *Cape of Good Hope*, July 19th the same year, from whence he proceeded for *Ceylon*; but, meeting with very bad weather, numbers died in the passage, and, amongst the rest, the prince of *Mignonne*. On the arrival of the *Danish* commodore in the harbour of *Trinquemale*, he sent advice to the emperor, who, the *Dutch* writers say, disavowed the treaty, because perhaps he thought the succours insufficient, and too hasty a demand was made for the expences of the fleet. However this might be, the *Danish* commodore is said to have seized all the prince's effects, and to have set his widow on shore in a very distressed condition; which may notwithstanding admit of some doubt, since, after remaining seven years at the emperor of *Ceylon's* court, she thought fit to go to *Tranquebar*, and there ended her days. As soon as the princess was landed, the *Danish* commodore proceeded for the coast of *Coromandel*, where he made a treaty with the *Naik* of *Tanjour*, and left the forces that should have been debarked at *Ceylon*, to garrison the fort that was erecting at *Tranquebar*, and on which he bestowed the name of *Danebourg*. In his return he anchored again in *Table Bay*, under the *Cape of Good Hope*, August 30th, 1621, and returned safe in the beginning of the succeeding year to *Copenhagen* (K).

The town of *Tranquebar*, and the fortress of *Danebourg*, acquired by the *East India* company.

WHEN the fortress was in a state of defence, and the *Indians* began to erect houses, or rather huts, under its protection, *Tranquebar* soon changed its appearance, and, from being a place very little considered, and of which scarce any notice was taken, grew into great reputation. Those who had the direction of the company's affairs treated the natives, whether of the *Portuguese* stock, *Moors*, or *Gentews*, with justice and lenity; received ships that came to trade with all imaginable readiness, and put them under none of those restraints to which they were subjected elsewhere. By these prudent methods the colony augmented in the space of a few years, not only to the utmost of their expectations, but beyond even their most sanguine wishes. This prosperity induced them to think of establishing factories upon the opposite coast of *Malabar*, for the sake of obtaining a share in the pepper trade, of fixing factories in other places, and of sending their ships to the remotest parts of the *Indies*. The *Danes*, therefore, had very little reason to treat the memory of the prince of *Mignonne* with disregard, or to complain that they were seduced by his promises of mountains of gold to navigate distant seas, where they could meet with no such thing; for, whatever benefit they reap from the settlement of *Tranquebar*, whatever they drew in process of time from the rest of the *Indies*; and whatever advantages have attended, or may attend, the revival and extension of this commerce, ought in a great measure to be ascribed to that unfortunate great man, whose project produced such an armament, as rendered their first feeble endeavours effectual, from whence all the rest has flowed as from its proper source (L).

(K) According to the *Danish* admiral's inscription in his own language, there were but four ships in his squadron, and those all belonging to the king (34); but the *Dutch* historian says expressly there were five of the company's ships, and only one of the king's. The same person says, that one of them was lost after the crew had revolted at *Trinquemale*; which induced them to weigh anchor with the rest, and return immediately to *Denmark* (35); which is not at all consistent with the inscription, or with the account given by the *Danish* writers, who must be presumed to know their own affairs best, and who ascribe to him the fortifying and establishing their settlement at *Tranquebar* (36).

(L) We might easily give the reader several matters of fact, in support of what is delivered in the text; but one

instance may serve. *Francis Cauche*, of *Rouen*, acquaints us, that, in the month of *May* 1642, he went on board a *Danish East India* ship that put into the port of *Madagascar*, where he received a letter in *Portuguese* for Mr. *Regimond*, who commanded in the island for the *French East India* company; and proceeds in his relation thus (37): "When I came to *Regimond*, he was angry, because I had staid so long, and acquainted the *Danes* with the ports and state of the island. I told him, that, as I did not belong to his ship, he had nothing to say to me; and that, as a Christian, I was obliged to relieve other Christians. Three days after, three *Danish* factors, and four other men, came in their boat; and one of the factors, speaking *French*, said, they came to desire him to exchange some com-

(36) *Gesta et*

- a It must be allowed, that our materials for the history of this commerce are very scanty ; and that we are obliged to collect and range, in the best order we can, such passages as occur in authors of other nations, that speak incidentally of the traffick of the *Danes*, and not always with so much candour as we could wish. In spite, however, of these obstacles, we may venture to affirm, that in twenty years the ships of the *Danish East India* company had opened a trade with the *Moluccas*, which enabled their directors at *Tranquebar* to send home large vessels richly laden, with cargoes well assorted, from all parts of the *Indies* ; so that during the reign of *Christian IV.* this commerce might be justly said to flourish in as high a degree as that of any other nation in the same space of time, the *Portuguese* and *Dutch* only excepted ; and, if we consider the difference of circumstances in regard to those nations and the *Danes*, we cannot but look on this as very extraordinary, and affording a proof that justice, industry, and indefatigable application, will improve even a very small stock into a fund sufficient to answer the greatest purposes".

As far as we can judge from our materials, this company continued some time in a thriving condition.

- Those, however, who pique themselves upon penetrating to the bottom of things, may possibly discern, that within these first twenty years there were many accidents happened in the *Indies* very favourable to the *Danish* colony, and to the views of those that were employed by the company at *Copenhagen*. The *Portuguese*, still under the subjection of *Spain*, were struggling with a foreign war, and domestic difficulties. The *Spaniards* rarely sent any ships beyond the *Streights of Malacca*, the *Dutch* were fully occupied in obtaining the monopoly of spices, and the *English* felt the weight of discord at home even at so vast a distance. On the whole, therefore, the *Danes* met with little or no opposition from any of these nations, notwithstanding that the ruin of their commerce was looked upon as the joint interest of all. On the contrary, having nothing to do but to mind their own concerns, they were generally inclined to render good offices to such a stood in need of them, supplying them with provisions, ammunition, and arms, when they had occasion for them ; by which they were great gainers, and made themselves many friends. In process of time, as things began to alter, and the *Dutch* acquired an apparent and a considerable ascendancy in the *Indies*, the *Danes*, as well as other nations, felt the effects of it, and found themselves excluded from some of those branches of trade, which, within the foregoing period, had turned to the best account ; and which, if they could have preserved, would have enabled them to have fulfilled the hopes that were entertained from so prosperous a beginning".

But those circumstances, that had been favourable to them, changing, their situation alters.

At the same time that things began to take a wrong turn in respect to their affairs in the *Indies*, those in *Europe* took still a worse. The founder and supporter of this commerce, *Christiern* the fourth, had his attention called off from things at such a distance by those long

Affairs in Europe also take such a turn as is very prejudicial.

" *Gesta et vestigia Danorum in oriente*, p. 66. tom. i. p. 577.

" *Voyage aux Indes Orientales*, par GAUTIER SCHOUTEN,

" modities proper for that country, for such as they had in their ship, or to sell them for ready money. *Regimond* answered, he would go see their commander, and supply him and his with all he could ; dismissing them very well satisfied, with some presents. Five days after, *Regimond* manned his boat, and put into it a bottle of *ros felis*, which is a water distilled from cinnamon and sugar, very comfortable for the stomach, some wet and dry sweetmeats, some bottles of *Spanish* wine, gammons of bacon, a barrel of salt, a hundred thousand of all sorts of string beads, four tun of rice, and a barrel of beer. I went in the boat, with sixteen others, of which number were *Regimond* himself, and *James Proni*, commander of the colony of *St. Peter*. The same day we departed from *Port St. Lucy* we came to that of *Isalangare*, they being but four leagues distant from one another. The *Danish* ship prepared to engage, hanging out their lights even on the round tops ; but, when they knew us, all was turned into joy, embraces, and feasting. The commander treated us with pigs, ducks, and other fowl, he had brought alive from the *Molucca Islands* ; and, after the entertainment, presented *James Proni* with a stag and a hind, both alive, brought from the same islands, and, like ours, to breed in the island of *Madagascar*, where there were none ; keeping two stags and two hinds to shew in *Denmark*. *Regimond* presented the said captain with all that was mentioned above, six pieces of ebony, each of them six feet long and half a foot square, and two barrels of *French* bread. In return, the *Dane* gave him a *Persian* jar bound with cane

" hoops to carry it by, containing about half a tierce, and full of sugarcandy ; another full of white citron peel ; another, something smaller, of preserved ginger ; two others of little preserved oranges and lemons ; a bag of pepper, containing two measures ; a bag of one measure, of cloves ; a thousand of nutmegs ; a pot of preserved orange flowers ; a bag of cinnamon ; two pieces of *Denmark* cloth, twenty-five ells long each, the one of a violet, and the other of a rose colour ; two pieces of *China* double taffety, as long as the others, one of white sattin, and another of black grogram ; six pair of coloured silk stockings, six fine callico shirts, four cotton night-caps stitched with white silk, two pair of *Persian* breeches which reach down to the ancles ; two bundles of *Indian* canes of several colours and shapes, great and small, being about one hundred ; a whole service of china-ware ; and an earthen pitcher made of clay, taken up near *Mohammed's* tomb, with a grate over the mouth, to pour water through, which, being exposed to the sun, cools, instead of growing hot." This last article is a little superstitious ; but, however, there cannot well be any evidence clearer than this produced, of the *Danes* driving completely the trade of *India* at this juncture ; which might surely have been extended and established, if domestic disturbances had not destroyed in a great measure the attention, and in a still greater degree the capacity, to carry on such a trade as required a support at the beginning, which, when arrived at maturity, would have been amply repaid.

and

acial to the
company.

and bloody wars, in which, during the last years of his life, he was continually engaged ; a and which, with a very few, and those but short intervals, lasted for many years after his decease *. These troubles in the north, amongst other mischievous consequences, had very bad effects on the affairs of the *Danish* company, and put it out of their power to correspond regularly with their colony at *Tranquebar*, which of consequence disabled that settlement from sending ships in the manner they had hitherto done into *Europe* †. This alteration in their affairs was not only severely felt by them, but at the same time rendered them contemptible to the *European* nations that were more fortunate, and diminished their credit with the natives ; circumstances that were equally mortifying and irreparable ; neither was it a small addition to these untoward accidents, that, being altogether unforeseen, the state of their commerce did not at all correspond with the appearance of the fort and town, which they had taken care to embellish in a manner that distinguished it from most of the towns upon the coast, at least at this juncture ‡.

Walter Schouten's account
of the state of
Tranquebar
about the year
1661.

THE famous *Dutch* navigator *Walter Schouten*, who is justly esteemed for the simplicity and veracity of his relations, informs us, that he was there in 1661 ; at which time the *Danish* fort, being a square, with regular bastions, all built of hard white stone, and the town of a large extent, laid out into long and broad streets, under its protection, afforded a very agreeable prospect from the sea. But he observes, as if it had been something remarkable, that there were two *Danish* ships in the port, the officers of which were very civil to those of the *Dutch* ship called the *Red Lion*, on board of which he was. It seems it was no usual thing for two ships to be there together ; and he farther remarks, that their flags were but rarely seen in other ports of the *Indies*. He tells us likewise, that they were upon very bad terms with the *Moors*, which was one great occasion of their losses ; and that the town was sometimes in danger of being plundered, if it had not been for the succours received from the fortress, in which there is always a pretty good garrison of *European* troops. The town, he farther says, was inhabited by *Topasses*, *Gentows*, and *Moors*, all of whom, according to the custom of that country, pay an annual capitation to the *Danes*, as an acknowledgement for their defending them in time of danger § (M).

† Commerce des Danois aux Indes, p. 53.

‡ Dictionnaire de

§ Voyage aux Indes Orientales de GAUTIER SCHOUTEN, vol. i. p. 577.

(M) The Christian nations that trade to the *Indies*, such as the *English*, *Dutch*, and *French*, as well as the *Danes*, have settlements all along the coast of *Coromandel*, so that they are no-where above ten, and in some places not six leagues one from another. Each of these *European* forts or factories has a town, or at least a village, belonging to it, inhabited by Christians, *Moors*, and *Gentows* ; but these last are, generally speaking, the most numerous (38). The huts that they live in are small and poor, resembling rather hovels for beasts than habitations for men, and yet for the most part they have numerous families. On the outside these huts appear to be so low, that one would scarce suppose a man could enter them with ease, or stand upright in them ; but they are sunk so much below the surface of the soil, that they are considerably higher within. In these huts there are, properly speaking, no windows, but rather holes, which admit so few rays from the sun, and those too so oblique, as to create only a kind of twilight ; yet in these mean, low, damp, dark, and wretched places, are wrought all those fine and beautiful piece goods that are brought in such quantities, and sold at so high a price, all over *Europe*. As provisions are cheap, and industry great amongst these people, who all work at something or other, they labour for very small wages, which enables such as purchase their goods at the first hand to gain considerably by them (39). This employs the Christians and the *Moors*, as well as the merchants of their own nation, who either send them to

different places on their own account, or sell them to some of the *European* companies. Sometimes *Gentows* merchants, that are very rich, put themselves under the protection of an *European* fort, and manage the commerce between their masters and their countrymen, by which they grow excessively rich ; which wealth, however, they conceal with as much industry as may be, since otherwise it would be taken from them either by the *Mogul's* officers, or by some of their own *Rajahs*, who are people equally rapacious. As the *Europeans* commonly defend them from both, they serve them with great fidelity ; and, when they become rich, seldom stir out of their district (40). The *Moorish* merchants are more in number, and drive a very extensive trade, having several large ships of their own, which however are usually navigated, at least in a great measure, by *Europeans* ; and it is mostly under their colours that they sail to all parts of the *Indies*, even as far as the *Manillas*. Of these vessels there are commonly twenty or thirty that belong to the ports of *Malabar*, besides those of the *Danish* company ; and, as in this part of the world there is nothing done for nought, it is easy to conceive, that those, who have the management of affairs at *Tranquebar*, draw considerable profit from that traffick which is carried on under their protection, as well as from the mechanics, and others who live by the fruit of their labours (41).

S E C T. III.

The different shifts to which the Danish colony are forced to have recourse, in order to maintain themselves in possession of their fortrefs. Attacked by the Naik of Tanjour with superior forces. Generously assisted by the English, to whose gallant behaviour they stand indebted for the preservation of Tranquebar, and, of consequence, their footing in the Indies.

- a** **A**S it requires infinitely more skill to conduct a vessel in storms, or through freights beset with rocks and shoals, than in fair weather or in the open sea; so in a situation like this, when the mother-country was able to do little or nothing, sending supplies both seldom, and in a manner very irregular, we cannot with any colour of justice deny, that the managers of the *Danish* commerce deserved commendation for keeping their affairs on foot, rather than contempt for the mean condition they were in. The methods by which they did this merit explanation. In the first place, the revenue of the town of *Tranquebar* afforded a subsistence for the garrison, which, though not very considerable, was regularly paid, and kept constantly complete. The small factories they had on the *Malabar* coast, their lodge at *Chinchurat*, and some other places in *Bengal*, and a more considerable settlement at *Bantam*, furnished them with several kinds of commodities and manufactures, which were embarked, as occasion served, on board the vessels they sent to *Surat*, into the *Bay of Bengal*, to the *Streights of Malacca*, and to the island of *Celebes*^b. This country trade, if they had driven it intirely upon their own bottom, would not only have kept them from want, but procured them wealth, at least under a frugal management. The case, however, was otherwise; for, not having a sufficient capital, they were obliged to let out their ships for hire, and to take a great many goods on freight for *Gentow* and *Moorish* merchants. These several ways, taken together, kept them in a tolerable condition, and put it into their power to send now and then, perhaps once in two or three years, a ship to *Europe*^c.
- b** BUT though these, and other arts of the like kind, might enable them to go on in peace-
c able and quiet times, yet it could not be supposed they should afford them any resources in circumstances of distress or danger to which they were sometimes exposed, and more than once brought to the very brink of ruin. The principal cause of these difficulties was the quarrels they sometimes had with the Rajah of *Tanjour*, who, upon very frivolous pretences, interrupted their communication by land; and sometimes carried his resentment so high, as to besiege their fortrefs and town with a numerous army^d. If we may credit some accounts, as small and insignificant as the *Danish* commerce might appear in the eyes of their potent competitors, this did not intirely exempt them from envy, or hinder their covetous neighbours from offering very considerable sums for the port which they possessed. If the *Indian* Rajah could reduce it at other times, being himself hard pressed by the *Mogul*, he judged it reasonable, or at least necessary, that his tenants should bear a share of the hardship as well as himself; and therefore employed force to extort the sums for which he had occasion, and which, tho' their ability was very small, the *Danes* were compelled to furnish^e. When under these pressures, it has been insinuated, that they took very bold and unwarrantable steps to extricate themselves. An instance of this, we are assured by a countryman of ours, happened in 1684, when, through accidents of this sort, and the additional calamity of a famine, they were reduced so low as to pawn three of their bastions to the *Dutch*, for such a sum of money as might keep the garrison, and the people of the town, from starving. These, however, they redeemed the next year; but how they acquired the means of doing it, was a secret in the *Indies*. Some suspicions there were, however; because an *English* country ship, called the *Formosa*, bound to *Surat*, and which in her passage called at *Calicut* for water, wood, and other stores, never reached her port; and a great firing of guns was heard from sea not long after she sailed from *Calicut*; and two *Danish* ships were at that time cruising from *Cape Comorin* to *Surat*, which occasioned great doubts which were never cleared up^f (N).

(N) We have shewn in the foregoing note, that all the *Indies*, have also settlements upon this coast, and are the *European* nations, who have any share in the trade to consequently rivals. This is the true source from which those

Imputations on the Danes in regard to ships taken, or supposed to be taken, by them.

It is without doubt a very unbecoming thing in a historian to throw out national reflections, or to deliver as matters of fact what may suggest them, when no authority can be brought to support those facts beyond the power of contradiction; and for this reason we have been so tender in mentioning what the reader may find very roundly asserted in several books of voyages, and which it is certain is an opinion commonly received in the *Indies*, whether well grounded or not. Taking it for granted that it is not altogether without foundation, that piracies are said to have been committed by ships under the *Danish* flag, the same, perhaps, may be also said of other nations; and the *French* accounts of *Madagascar* furnish us with instances of their ships cruising upon the *Moors* without any colour of justice, and without so much as the excuse of necessity or distress* (O). But as these are things of a very odious

* Hist. de grande île de Madagascar, par Monsieur FLACOURT.

those strange stories arise that are circulated in the *Indies*, often upon very slight, and not seldom without the least foundation. Thus, if we may depend upon Mr. Tavernier (42), when the *French East India* company was about to form an establishment at *Surat*, the governor of that great city was informed, that they were no better than a nation of pirates; and, to make this the better believed, they magnified the cruelties of one *Hugo Lambert*, who had taken a *Moorish* vessel laden with the baggage of the queen of *Vishapur*, on the coast of *Arabia*; on which occasion it was said that he tortured several persons, to make them confess what was become of the silver and jewels that had been on board. However, a certain capuchin monk, whose name was father *Ambrose*, undertook to clear up the matter; and tho' *Hugo's* vessel was in part manned by *French*, had a *French* commission, and sailed under *French* colours, yet this *Hugo*, who commanded her, was a *Dutchman*; and thus the tale was retorted upon those who had given it credit. But, after all, whatever suspicions there were, no proof is pretended in the case mentioned in the text; and as several *Moorish* princes upon the coast of *Malabar* regard piracy as a sort of royal amusement, the loss of the *Fermosa* may be as well placed to their account (43). But we may go one step farther; the ships from *Surat* are generally richly laden, that is, have a large quantity of silver on board; but vessels bound to *Surat* have little or no money on board (44); and, as to a rich cargo of goods, the *Danes* could never have sold them without furnishing sufficient evidence of the means by which they had acquired them.

(O) It is very possible, and, to say the truth, very probable, that the *Danes* might at this time cruise upon the *Moors*; and might justify this by way of reprisal, on account of their own vessels being taken by the people of *Malabar*: but the *French* could have no such reason; since they made prizes of the *Moors* before they had so much as an establishment in the *Indies*. We will cite an instance from one who was himself an actor in what he relates, and who ingenuously confesses, that, having been able to make nothing by planting at *Madagascar*, they were desirous of trying what might be done by sea on the coasts of *Arabia*. Take his narration in his own words (45): "Proceeding onward in twenty-three degrees of north latitude, near the tropic of Cancer, and before *Mecca*, we met five *Dutch* ships. After the usual salutes, they made out to sea, and we ran up in sight of *Suez*, which is at the bottom of the gulph. Passing betwixt *Zibid*, an open town on the coast of the kingdom of *Abyssinia*, under the tropic of Cancer, and the island of *Sabega*, which is on the other side of the gulph, above *Mecca* in *Arabia*, we discovered an *English* frigate conveying the merchants that traded from one side to the other. They of the frigate would have picked a quarrel with us, threatening to deliver us up to the country people as rovers; but seeing us prepare to fight, they let us pass. At length, after ranging all the gulph, we steered about towards the mouth of it; and being in fifteen degrees

" of north latitude, near the island *Zeiban*, which is between *Zibit* in *Arabia*, and *Muzua* on the coast of *Abyssinia*, our bark met a *Malabar* vessel, having thirty men aboard, besides the passengers, going over from *Arabia* to *Arquico*. This bark carried twelve patteroes, and was loaded with scarlet cloth, gold and silver, besides a quantity of money, most of which belonged to an *Abyssinian* lord, who had just married a wife in *Arabia Felix*. She was likewise aboard, beautiful and young, wearing a tunic of white and red striped sattin, with a sort of man's coat of the same silk, reaching down to her hams; a little red and white turbant on her head, and under it a white coiffe of very fine muslin. The husband's garment was of crimson velvet, with gold loops; and his servants, being twelve in number, had all cloaths equally striped black and white from top to bottom, as also turbants and scymiters. The sails of the vessel were made of rushes, as are those of the *Malabars* and *Japoneses*: the commander's name was *Lalo*. As soon as our bark discovered them, she hoisted the red flag at the top-mast-head, and fired a gun, to give notice to our ship that we espied a sail; and then chased the vessel till we came up; which as soon as we did, she presently sent to order the stranger vessel to strike her sails, and disarm; and they refusing so to do, the bark fired four guns. That daunted them; but much more when our ship laid her aboard, they demanded to capitulate, and surrendered, upon condition that no wrong should be done either to the new-married lord, his retinue, or the vessel. This being granted, we made *Lalo* come aboard our ship, and brought with him all the money we found aboard his vessel, with some pieces of scarlet cloth, and eight cows, leaving them four, with their provisions and water, which was in great jars, as also a considerable part of their goods. The ready money, amounting to above two hundred thousand crowns, satisfied our captain's avarice, which made him undertake that voyage. Having taken leave of one another, we held on our course to return to *France*; but fortune, which favoured us beyond our wishes, brought into our mouths a merchant-ship bound from *Cape Guardafu* to *Xael*, without any defence; of which having possessed ourselves without any opposition, we took out most of the goods, being silks and calicoes of all colours, with raw silk and cotton, leaving the ship and merchants to go where they pleased. We steered our course thence to *Madagascar*; and, without meeting any thing worth observing, anchored at *Port St. Lucy* the beginning of November 1643, and landed at our colony of *St. Peter*." This humour of taking, instead of trading, has been fatal to those nations who have indulged it, and more especially to the *Portuguese*; so that, if the *Danes* have really dipped in it, we need not wonder at the declension of their colony; for none surely would willingly confide in such as were partly merchants, and partly corsairs.

a nature, we will dwell upon them no longer, but return to the current of our history; which leads us to show, that the *English* were much better neighbours to the *Danes* than some other people, who made no scruple of taking advantage from their distress^a; whereas our countrymen not only contributed to relieve them from a principle of friendship and generosity, but did it also at their own cost, and to their own loss.

ABOUT the close of the last century, when Mr. *Pitt* was the *English* governor at *Fort St. George*, a proposition is said to have been made to the rajah of *Tanjour* for the purchase of *Tranquebar*, at no less a rate than fifty thousand pardoes in ready money, when it should be in his power to deliver it. The *Danes*, having early intelligence of this intrigue, applied to the *English* for succour; which was generously promised, and afterwards as punctually performed¹.
 b The rajah of *Tanjour*, having once resolved upon this enterprize, assembled an army of between thirty and forty thousand men, with which he marched strait towards *Tranquebar*. The *Indians* were so extremely cautious, that they began to open their trenches above a mile from the town, and carried on two attacks. The soil being a dry sand, they drove down the bodies of cocoa-nut-trees instead of stakes, both in the inside and in the out, and filled up the space between them with sand; so that their trenches were almost as thick as a town-wall, and so very high, that they were perfectly covered from the *Danish* fire. They had about twenty or thirty thousand men employed in this siege; and, with incredible labour and patience, they brought down their trenches within pistol-shot of the walls, and with their batteries had almost ruined one of the bastions, when the *English* reinforcements arrived. The *Danes* expected
 c every day an assault, and were preparing to move their effects into the fort, and quit the town; and indeed they gave the enemy very little disturbance in carrying on their works, for the garrison did not consist of more than two hundred *Europeans*, as many *Indian Portuguese*, and about a thousand blacks; and, besides the fort they had to defend, the circumference of the town-wall was not less than a mile and a half: it was faced with stone, but had no ditch; and therefore the *Danes*, to prevent the enemy's scaling it, had set high palisadoes upon the top of the ramparts.

A DAY or two after the *English* arrived, a sally was resolved; and about sun-rise a detachment of the blacks marched out, and were followed by the *English*: but the blacks were no sooner out of the gates, than they opened to the right and left, and made room for the *English* to advance, never intending to engage themselves. A body of the enemy moved out of their entrenchments upon this, and came on in tolerable order with their broad swords and shields, without shooting an arrow, or firing a piece. They were all decently clothed in white vests and turbans, and seemed determined to engage hand to hand in the plain between the town and the trenches. The *English* officers were in some pain, seeing this body of *Indians* advance with so good a countenance, knowing their men were several of them new raised, and mixed with *Portuguese*, on whom there is very little dependence; but the great guns from the walls beginning to play, put them in confusion, and they retired to their trenches with much greater
 d haste than they came out, and our men advancing while they were in that consternation, drove them still farther; but there being no preparations made for levelling the trenches, and the day growing hot, the *English* retired into the town, and the enemy returned into their works, without any great loss on either side.

A FEW days after, it was resolved to make another sally with the greatest part of the garrison; and accordingly they marched out at the great gate opposite to the principal attack. The black soldiers, according to custom, retired under the walls almost as soon as they were out, to make room for the *Europeans*. The enemy kept close in their trenches, firing continually. Between the two attacks, upon the plain, stood a considerable body of musketeers and pikemen, against whom the *English* commander thought fit to advance; but had not marched many paces before a ball wounded him in the middle of his foot, which compelled him to quit
 e the field. The next officer thereupon took the command, and led them towards the enemy, who were drawn up in the plain. That body retreating, drew the *English* so far from the town, that they were intercepted by the *Moorish* horse; and the *Danes*, whom the *English* expected to have supported them, never advanced a step. In this exigency the *English* officer having thrown some grenades into the trenches, the *Indians* were so complaisant as to quit them, and make room for the *English*, who marched quite along them towards the town, till they came to the end of the works; but here they were met by the *Moorish* horse, yet, upon making one general fire, in which great execution was done, the horse scoured off, and left the *English* at liberty to march on to the walls, where they found the *Danes* drawn up in perfect security. In this action the *English* were one half of them killed or wounded: but, however,
 f it was by this seasonable assistance that the *Danes* preserved this town and fortress; for soon after, the rajah of *Tanjour*, growing weary of a war that harassed his subjects, and brought

S E C T. IV.

Frederic IV. takes a resolution of employing missionaries to preach the Christian faith amongst the Pagans. The steadiness with which, in spite of all discouragements, this excellent design has been pursued. An accurate account of the Danish settlement, fortress, port, adjacent country, dependencies, present condition, and future prospects from the colony at Tranquebar. Some conjectures on this subject, and the arguments for and against the Danish schemes truly and clearly stated.

Danish missionaries sent to Tranquebar by king Frederic IV.

BY these, and other such-like accidents, the commerce of *Tranquebar* was exceedingly reduced at the entrance of the present century, notwithstanding all the care that those, intrusted with the management of the company's affairs, could take; they therefore thought themselves at liberty to divert a part of their attention to putting things upon the spot in the best condition possible, that, by enlarging the town, and increasing the number of her subjects, their revenue at once might be augmented, and rendered more certain. In order to further this scheme, the *Danish* company, having applied themselves to their monarch *Frederic* the fourth, a prince of sincere piety, as well as great clemency and prudence, he inquired narrowly into the state of religion, which, he apprehended, ought to have been one of their principal objects in the conduct of that colony; and, receiving a very unsatisfactory account, he determined to send over missionaries thither: an action equally worthy of a Christian prince, and of a sound politician ^l (P). Upon this occasion, recourse was had to the celebrated doctor *Francke*, divinity professor of the university of *Halle* in *Saxony*, a man equally distinguished for his learning, piety, and disinterested zeal for religion; who, from amongst his numerous disciples, made choice of two, *Bartholomew Zeigenbalg* and *Henry Plutschau*, whom he recommended as perfectly qualified for so arduous an undertaking ^m. These therefore were received in that quality by his *Danish* majesty, and orders given that they should be sent by the next

^l HAMILTON's account of the East Indies, vol. i. p. 352. p. 2.

^m Propagation of the gospel in the east. P. iii.

(P) The desire of propagating the Christian religion is natural to every prince who is sincerely influenced by his own belief of it; and to this principle the spreading of the Christian faith has been in a great measure owing. What advantages have attended this may be easily perceived, by comparing *Europe* with the other parts of the globe, and by considering the circumstances in which the inhabitants, particularly of the northern regions, were before their conversion, and the condition in which we behold them at present. The zeal, therefore, of spreading the gospel, as a scheme of happiness, into the most distant parts of the world, is at once a testimony of true beneficence, as well as solid piety; and experience shows us, that it has prevailed farther, and had much more powerful effects, than either human policy, or force of arms. A Christian prince, who desires to raise an establishment in countries at so vast a distance as the *Indies*, can never fix those hopes on any notion so probable or rational as that of converting the natives to Christianity, because this is the only way to intitle him to the especial favour of Providence, without which all hopes of prosperity are vain (46). Possessions acquired either by purchase or by conquest, turn to little account without people; and to think of sending sufficient numbers so far, is to hazard depopulation at home for the chance of raising colonies abroad. But to convert the natives, is, in effect, to acquire their bodies as well as to save their souls. Whoever becomes a good Christian, is a good

subject of course; and in the *Indies* more especially, where the natives have moral notions and moral habits from education, the consequence is so much the more certain. But, to form some judgment of the benefits that might arise from hence, let us only reflect on the advantages the *Spaniards* would draw from their territories in the *West Indies*, if those ten millions of people, which they are said to have destroyed there by that time their conquests were complete (47), were added to the present number of their subjects; according to a moderate computation, this must add to their annual revenue at least as many pounds sterling. Suppose the emperor of *Ceylon*, and all his subjects, were Christians and Protestants, can there be any doubt made that this would increase the commerce of that island in an extraordinary degree? One great argument in favour of the truth of the Christian religion is, that it contributes highly to our temporal interests; and if this be so, then the propagation of the gospel is the most perfect policy, and will be found so in the event. Plausible objections, no doubt, may be raised against this by men of subtilty, and who have the art of representing their notions in a fair dress; but they will have little weight with those who reflect, that human nature is every-where the same; and that what has spread learning, politeness, and happiness through one quarter of the world, is like, with due attention, to be attended with the same happy effects in any other.

(46) *Histoire de la Colonie de Tranquebar*, par M. La Croix, p. 521.

(47) *Purchas pilgrimage*, p. 662, 663.

a ships into the *Indies*; and accordingly, on the twenty-fifth of November 1705, at *Copenhagen*, they embarked on board the *Princess Sophia Hedwig*, and arrived in the month of April following at the *Cape of Good Hope*; and sailing from thence again on the eighth of May, they entered the harbour of *Tranquebar* on the coast of *Coromandel*, the beginning of July 1706 ⁿ (Q).

THEIR countrymen gave them but little encouragement upon their first coming over; and were so far from shewing any extraordinary zeal for this new establishment, that they made no scruple of treating it as a project chimerical and impracticable; into which belief they were led from a persuasion, that the missionaries would never be able to learn the *Damulian* language, which is commonly spoken throughout *Malabar*, to such a degree of perfection as to preach it fluently to a people naturally fond of oratory, and esteemed to speak their own language more correctly than any of the nations in their neighbourhood ^o. This did not at all discourage our missionaries, who, within a short time, set up a *Portuguese* school, where they taught poor children *gratis*. They next took a *Malabar* schoolmaster, with all his disciples, amongst whom they entered themselves, and were content to learn to read and write that language with the children; which they did with such assiduity, that in a year's time they became masters of it, and could read, write, and speak it, as well as any of the natives ^p. Mr. *Zeigenbalg* continued his apostolic labours with indefatigable zeal till February 23d 1719, when, being absolutely worn out with his incredible fatigues, he departed this life when not full thirty-six years of age ^q. As for Mr. *Plutscbau*, being of a weaker constitution, he was forced, after preaching there for some years, to return home; but his place was supplied by others, who, following the example of Mr. *Zeigenbalg*, promoted vigorously the design upon which they were sent, and made many converts. In the course of their mission they met with many difficulties and discouragements; but by an indefatigable diligence and exemplary life, and a fervent zeal for that gospel they preached, overcame them all (R).

WE

^o *Propagation of the gospel in the east*, P. i. p. 26.
^q *Hist. du Christianisme des Indes*, par Monf. LA CROZE, p. 536. 567.

(Q) The pious design of sending missionaries to *Tranquebar* is said to have been suggested to *Frederic* the fourth by one of his chaplains (48); but whoever proposed it, the honour certainly belongs to that prince who carried so good a design into execution. Some possibly may surmise, that the scheme of sending Protestant priests into the *Indies* was, in some measure, a work of supererogation, considering the number of Popish monks and missionaries who are already there with greater advantages, better connected, and more effectually supported, than Protestant preachers can, with any probability, propose or expect. If therefore these, as themselves report, make continually multitudes of converts, why should they be disturbed? Or, on the other hand, if they labour in vain, and the harvest proves but thin, tho' the husbandmen are many, what reasons are there to hope? In answer to this, it may be truly said, that these considerations, instead of deterring, ought to have prompted, as very likely they did, a prudent and religious prince to pursue this measure with vigour. The jesuits, and other missionaries, do not so properly convert the *Indians* to Christianity as to Popery: they preach not the gospel according to St. *Matthew* or St. *Luke*, but according to father *Jerom Xavier* (49). They multiply their converts rather by teaching them exterior ceremonies than the doctrines of the Christian faith; and keep them in such a dependence on the church of *Rome*, and on themselves, as takes away all probability of seeing any national churches of Christians in the *Indies*. Whoever seriously reflects on these particulars, will easily discern why they have preached hitherto with so little effect, and what grounds there are to hope, that those who preach the gospel sincerely, who put the holy scriptures into the hands of the natives in their own language, who profess that God is no respecter of persons, who make not the least difference between new and old Christians, who de-

fire to see these people not profelytes only, but preachers, may succeed where they have failed (50). On the whole, therefore, the sending these missionaries was certainly a very prudent, as well as a very pious undertaking, flowing from just and laudable motives, and not from a hasty fit of enthusiasm; and which, as the reader will see in the next note, has been steadily and constantly prosecuted, to the honour of the *Danish* government, and the great benefit of the natives, through the visible blessing of God on the labours of the missionaries, and the assistance given them, more especially by their *English* neighbours, which they have generously and publicly acknowledged.

(R) The reader will easily perceive, that to enter into a regular detail of these matters would require a complete treatise, and that of no small extent. What, therefore, is said here to illustrate what has been already said in the text, is only with a view to prevent the charge of omitting, in a work of this nature, a point of such high importance; and, having premised this, we will proceed to some further hints. The missionaries first sent over met with many difficulties, and amongst others with these, which must have discouraged men of less piety, prudence, or application. They discovered, when they came to study, that the *Damulian* language was extremely copious, very elegant, and that they were fallen precisely in that part of the country where it was the most correctly spoken, and best understood: it was therefore necessary for them not barely to acquire this language, but to acquire it in the greatest perfection, that, in point of eloquence, they might not fall short of their opponents. Their grammars, dictionaries, and translations fully prove that they overcame this obstacle, and made the way smoother for those that succeeded them (51). They found a great coldness in their countrymen at *Tranquebar*, and indeed a general contempt of their design, as undertaken

A succinct description of the little principality of Tanjour, and of the considerable places therein.

WE are indebted to the letters published from these worthy missionaries for the largest, and clearest, and most certain account that we have of this country, taking in the dominions of the Indian prince to whom the sovereignty belongs, as well as the *Danish* colony, which is our proper subject. The principality of *Tanjour* extends in length, from east to west, about one hundred *English* miles; and in breadth, from south to north, about seventy'. This country is extremely well peopled; and the *Gentows* are here, as they are every-where else, ingenious, innocent, and indefatigable. The ordinary revenues of the rajah are about seven or eight hundred thousand pagodas; but, like the other princes of the *Indies*, he is supposed to have prodigious sums in his treasury'. He has always an hundred and forty trained elephants, and about three hundred horse, with a small body of infantry; but when he is disposed to take up arms, he can, by the help of his money, raise almost what number of men he pleases, but thirty or forty thousand without difficulty. He is, notwithstanding, tributary to the *Great Mogul*, who sometimes draws from him large sums besides his tribute. His capital, which is likewise called *Tanjour*, is large, and encompassed with a strong wall, and his castle, or place of residence, spacious, magnificent, and well fortified; insomuch that, notwithstanding the armies of the *Mogul* have sometimes over-run his country, yet they have never been able to reduce this place, though they have besieged it more than once. According to the computation of our missionaries, it is distant from *Tranquebar* about sixty *English* miles. The rajah of *Tanjour* has, besides, three other strong places in his territory, exclusive of the little port of *Karical*, and the fortress which covers it; and which are now, as the reader will see in the next chapter, fallen into the hands of the *French* (S).

' Account of the religion and government, learning and oeconomy, of the Malabarians, p. 6. LE BRUN, DELLON, &C. Hist. des Indes Orient. tom. iii. p. 263.

TAVERNIER,

undertaken by persons ignorant of those circumstances that rendered it impracticable. In a little time they got the better of this; and, by a just application of small charities, procured more considerable assistance from all quarters, but more especially from *England*, where archbishop *Tennison*, and the society for propagating the gospel in foreign parts, entered heartily into their scheme, and procured them a printing-press, and printers, which were sent over. They were likewise very kindly treated by those intrusted with the *East India* company's affairs at *Fort St. George* (52). Some discouragements were thrown in their way, and many calumnies published concerning them by the jesuits and their creatures; which they refuted by the soundness of their doctrines, the probability of their lives, and the progress of their mission, which exceeded all expectation (53). They had great opposition given them by the rajah of *Tanjour*, and from the implacable malice of the *Moors*. By degrees they softened both, by making no returns, and by shewing that modesty, humility, and universal charity in their actions, which they recommended in their discourses (54). One only difficulty lay out of their reach to subdue, which gave them greater trouble, and retarded them more, than all the rest: this was, the general corruption of Christians, which was continually objected to them, and which they could not either deny or reform; yet in this they were no further unhappy than the *Portuguese* had found themselves, according to the report of *Francis Xavier* (55); who, upon his arrival at *Goa*, thought fit to preach the gospel to his countrymen, before he attempted to convert the heathens, finding their lives resembled those of idolaters more than Christians. However, from the exact behaviour and exemplary lives of the *Malabar* children brought up in their charity-schools, the natives are now taught to see what Christian principles will produce in practice, and the difference between real converts and those who become nominally so for some trivial advantage.

(S) The very last war, which proved so fatal to the authority of the *Mogul*, and so disastrous to all the Eu-

ropeans settled on the coast of *Coromandel*, of which we shall be obliged to speak again more largely in another place, took its rise from the then reigning king of *Tanjour*. *Daoust Ali Khan* was nabob or viceroy of *Arcatte* at the time that *Nadir Shah* deposed, and made prisoner, *Mohammed Sbab*, emperor of *Indostan*; and, instead of marching, with the numerous army under his command, to the support of his master, he formed a design of reducing all the *Indian* princes as far as *Cape Commorin*, in order to distribute their dominions between his son and his son-in-law (56). Those young men, being at the head of an army, speedily reduced the little principality of *Trichnapaly*, and from thence advanced into the neighbouring country of *Tanjour*. The name of the then reigning prince was *Sabagi Maha Rajah*, who had but just put an end to a civil war, that had constrained him to demand assistance from the *French*, and to promise them, in return, a town and port more commodious, and a district more valuable, than that of *Pondichery*, of which, at this very juncture, they were endeavouring to get possession by force (57). *Sabagi*, pressed by the *Moorish* army on one side, and having their allies the *French* upon his coast on the other, had recourse to that method which had been so useful to his ancestors; and, having chosen out of his whole army a sufficient number of determined men, he shut himself up in his capital, and sent his ambassadors to *Maha Rajah*, king of the *Marattes*, to implore his assistance; who accordingly, in *October* 1738, sent a powerful army to his relief, by which the siege of *Tanjour* was raised (58). In the mean time, the *Moors* had put the *French* in possession of *Karical*, as will be shewn at large hereafter, and is remarked here only to put the reader in mind of the alteration this has made as to the circumstances of the *Danes* at *Tranquebar*, who are now in the middle between *Pondichery*, which lies to the north, and *Karical* to the south of them; and there is little doubt to be made, that, in the space of a few years, the latter will be as much improved as the former; and what consequences this may have with respect to the *Danes*, is left to the judicious reader's consideration (59).

(59) *Hist. des*

a As to the climate, in the months of *August*, *September*, and *October*, it is temperate and healthy; the land breeze warm in the morning, that from the sea cool and refreshing in the afternoon. In *November*, *December*, and part of *January*, the west wind blows, bringing with it, at the beginning, very stormy weather, much rain, and sometimes frost. From the middle of *January* to the end of *April*, the weather is temperate again; but from *May* to the middle of *July*, it is excessively hot; and sometimes there is a wind blows as if it came out of an oven or a furnace^u. In all these seasons the nights are not only temperate, but even chilly: the natives enjoy the hot, the *Europeans* the rainy or winter season, when every thing is fresh and green, and a variety of odoriferous flowers, shrubs, and trees, exhale a fragrance that may be conceived, but not described. It is almost unnecessary to observe, that the days and nights are nearly equal. At the changing of the seasons they have commonly very tempestuous weather, attended with terrible storms of thunder and lightning, which frequently do a great deal of mischief; but, with respect to hail and snow, they are never seen in those parts; yet their water is so chilled in the winter, as to give them an idea of ice^w (T).

The nature of the climate, seasons, weather, and the annual alterations therein.

As for the soil, it is in itself extremely fertile, producing vast quantities of rice, many sorts of nourishing roots, and great variety of wholesome herbs, as well for the use of the table, as for the apothecary's shop: they have most of those fine fruits of which they boast so much in the *Indies*; and their flowers equally delight the sight and smell by their beauty and odour: yet this country has scarce any rivers, and but few rivulets, and is, notwithstanding, tolerably well watered: for in the summer, when every thing would be parched and burnt if it were otherwise, there come down land-floods from the northern countries, which the *Gentows* distribute with such dexterity over their lands, that whatever they cultivate is sufficiently nourished^x: yet, for constant and domestic use, they are obliged to have recourse to well-water, which, if it is not at all brackish, and is brought from any distance, bears a considerable price for that country; and on this account, in all the roads, at the distance of a league, or a little more, there are very neat structures built by charitable and public-spirited persons, where travellers may repose themselves as long as they think proper, and are in many accommodated with water *gratis*^y. There are also in the country of *Tanjour* very fine meadows and pastures, well stocked with cattle of different sorts. On the coast they have plenty of good fish; and birds and fowl, tame and wild, of as many different kinds as in almost any country. In short, the

Fertility of the soil, how watered, produce, and other particulars relative to the country.

^u Account of the religion and government, learning and oeconomy, of the Malabarians, p. 11, 12, 13. ^w Voyage aux Indes Orientales, par GAUTIER SCHOUTEN, tom. i. p. 593. Description of the coast of Coromandel, by BALDÆUS. ^x Account of the religion and government, learning and oeconomy, of the Malabarians, p. 17—20. ^y Hist. des Indes Orient, par GUYON, tom. ii. p. 101.

(T) What is said in the text is taken from the plain relation of the *Danish* missionaries, and may, without doubt, be depended upon as to the facts; yet, as the weather hereabouts has afforded much speculation to the learned, and as the curious reader may probably expect that we should not slip over unheeded a matter so capable of affording him entertainment and instruction, we will endeavour, from the best authorities, to set this affair in as clear a light as we can (60): "It has always been considered as a thing very extraordinary, that in *Coromandel* the seasons differ from the heavens; for the sun there causes great heat in *March*, *April*, *May*, and *June*, and no rains. The *Moors* divide the year into three seasons, hot, wet, and cold. The heat, from the fourth of *May* to the fourth of *June*, is intolerable. The wind blows from the north, to which if you turn your face, you feel such heat in the air as is perceived near a furnace; for the sun is to the north at mid-day, and the stones and wood are very hot; but the water in the wells very cold, so that sometimes people are killed by drinking it when they are hot. The greatest heat is from nine in the forenoon to three in the afternoon, and then there is no travelling; but at other times it is temperate and tolerable, and the air clear, and travelling delightful. The wet season is from the first of *July* to the first of *November*; and the cold from the first of *November* to the first of *March*; and in *January* and *December* the cold in the night is sensible enough. There are here several things that deserve to be inquired into; for, from the first of *March* to the first of *July*, the sun is nearly vertical to them, and therefore no wonder if the heat be

" great then; yet one would think it should be as hot in *July* and *August*, when the sun is also over them, and hath the advantage of the former heat, and so should, in this way of reasoning, be greater: and, besides, how come the seasons here to differ from those on the *Malabar* shore, being both in the same climate, and having the sun vertical and remote at the very same time? and, which is more strange, there are not seventy miles, and in some places only twenty miles, between; so that you may come from the places where the air is clear and hot to where it is foul and rainy in one day." *Maffæus* (61) writes on this subject thus: "There are other things very strange in that country; but what more especially puzzles naturalists is, that, in the same months, there should be summer beyond the mountains of *Gate*, which run all the way to the promontory of *Comoren*, and on this side the *Gate* there should be winter, and constant rains, the people, tho' near one another, having opposite seasons. The best account hitherto given is, that it arises from the situation of the mountains which divide *Coromandel* and *Malabar*, running north and south, together with the stated winds; for, on the shore of *Coromandel*, the general wind is more felt, except in the summer months of *May* and *June*, which drives the vapours against the mountains, and makes rain in *Malabar*. The mountains are then observed covered always with clouds in the wet months, and the showers more vehement on them when it rains in *Malabar*; but, when it rains in *Coromandel*, the sky is clear on the mountains as in *Malabar* itself, excepting the months of *July* and *August*; for then it rains in both."

country

country affords every thing that can render it commodious and pleasant to such as are disposed to live in a manner suitable to the dictates of nature and right reason; that is, temperately in all respects; for it must be owned, that excesses are always dangerous, and sometimes fatal; but those, who are careful in avoiding these, commonly enjoy a good state of health^a (V).

The genius, manners, and employments of the natives, extent of their language, and other circumstances.

THE natives are naturally sensible and ingenious, very capable of being instructed in all sorts of learning, and have a surprising facility in acquiring mechanic arts. The *Malabaric* language is said to be divided into eighteen dialects, the principal of which are these three; the *Keren-dum*, which may be stiled the tongue of the learned, being chiefly used by the *bramins*, and confined to their religious mysteries; the *Damulian*, which is the proper and polite language of all the *Gentows* in this peninsula, taking in the compass of more than three thousand *English* miles; the *Wardagis*, spoken in the northern countries, and which differs from the *Damulian* in the same degree as the *Scottish* from the *English* language^a (X). The dress of the natives is clean, thin, and slight, for the conveniency of being easily thrown off when they are inclined to bathe, which they do frequently. As to their manners, the better sort of them are honest, courteous, and civil; the common people rude and unpolished, as in other places. There are many rich and great men amongst them; but the most part are but in middling circumstances, getting their living by the sweat of their brow; and, tho' they work hard, live frugally, and have but little to depend upon, yet they are commonly chearful and content: and as for beggars, except the *faquirs*, who are religious mendicants, there are none; for the *Gentows* say, that he who made the mouth to eat, made the hands to work. As there is little wood, and no timber in this country, the better sort of houses are built with brick; and the poor live in cottages made with clay, and covered with straw: but the *Europeans* build with stone, only one story high; yet their rooms are spacious, airy, and very commodious^b. Provisions are still very cheap, tho' much dearer than they were formerly. The *Gentows* live upon boiled rice, milk, herbs, and sweetmeats. The *Moors* live there as in other places, that is, as well as they can, and nobody better, if they can afford it. As for the *Europeans*, they have rice, herbs, eggs, fish, fowl, hares, veal, mutton, goats, beef, and pork. The soldiers live com-

SCHOUTEN, p. 592. Description of the coast of Coromandel, by BALDÆUS, and the missionaries.

^b Account of the religion and government, Voyage aux Indes Orientales, par GAUTIER

(V) There is a great deal of confusion and obscurity in what those writers say, who have visited this coast, about the overflowing of the rivers. The learned *Varenius* (62) says, that they overflow in the wet months, and are supplied by the rains that pour from the mountains of Gate. At first sight, these words seem to be plain; but, when better considered, we shall find them very obscure; for this ridge of mountains separating the two coasts, how shall we know what is meant by the *wet season*, that is, whether it refers to *Malabar* or *Coromandel*? since, as these are directly opposite, till that question is answered, the true sense of the expression cannot be known. On comparing, however, the best writers together, it appears, that the overflowing of the rivers, or rather the coming down of land-floods, is in the dry season, as is asserted in the text; without which, the earth would be then so parched that it would scarcely be habitable; whereas when the seasons are regular, from this special provision made by Divine Wisdom, and directed by human experience, all the arable and meadow lands are kept for some time two feet under water, which renders them wonderfully fertile, besides affording them the benefit of double harvests (63). The more the disposition of these countries, and the consequences that follow from thence, and from the annual motion of the sun, are considered, the more evident it will be to every competent judge of these matters, that they are conducted by unerring wisdom, and with that spirit of bounty and goodness that is universally discoverable throughout his works.

(X) We are assured by the reverend Mr. *Zeigenbalg*, who took incredible pains to make himself master of whatever knowledge was requisite to the discharge of his

pastoral duty, that the *Damulian* tongue, though very copious and significant, is yet very regular, and may be very easily reduced to the rules of grammar (64). They write upon palm-leaves, holding the leaf in their left-hand, and an iron stile or pencil in their right. They move the leaf forward till the line is finished, and then pull it back again, and begin another; and this they do with great dexterity, and will dispatch much business in a little time. In all their cities, and even in their towns and villages, they have schoolmasters to teach the boys to read and write; notwithstanding which, there are but few who attain either in perfection, and the number is still smaller of those who attain both; because, according to their method of teaching, it requires six years at least, and that with constant practice, to become an expert scholar, and a ready scribe. As for the females, they are never sent to school at all, except a few only that are bred up for the service of the pagodas, and are stiled *Attendants on the gods* (65). These have an admirable education, and are taught every thing that can contribute either to form their understandings, or to adorn their persons. In reference to the sciences, the other missionaries represent the natives as miserably ignorant, and amused with silly, trifling, and ignorant fables; but that worthy and diligent person we have before commended, and who had spent many years in cultivating that learning which he had with so much difficulty acquired, very candidly acknowledges, that, besides a mysterious allegorical theology, they have likewise systems of ethics, treatises of logic, rhetoric, poetry, philosophy, physic, geography, astronomy, chemistry, medicine, music, and the mathematics (66).

- a fortably upon two or three dollars a month; a *Gentow* will live upon one; and those who spend high can hardly spend eight, or ten at the most. As for the luxuries of the place, they are tea, arrack, and fincken, which is a sort of small wine, not made of grapes, but from the juice of a kind of palm *. The *Moors* are implacable enemies to the gospel, and are very seldom converted. The rajahs, their courtiers and the bramins, have also an obstinate aversion to the Christian faith; and the common people are apt to insult those who have deserted paganism: yet, notwithstanding all this, the *Danish* missionaries have made a very considerable progress, and have excited a like spirit amongst their neighbours the *English* and *Dutch*; so that the number of new Christians is vastly increased, and they are, generally speaking, modest and sincere ^a (Y).
- b We will now describe the town, fortress, and fort of *Tranquebar*, which could not have been done with so much perspicuity, if we had not previously described the country. The missionaries say that it stands in the latitude of eleven degrees; but the *French* maps place it in ten degrees forty minutes, and in the longitude nearly of seventy-eight degrees from the meridian of *Paris* *. The compass of the city is between two and three miles, fortified with a good stone wall, and several bastions, well provided with artillery, and in no great danger of being taken by all the forces that the *Gentows* can bring against it. Before the gate that leads into the country stands a fine citadel; and the fort towards the sea is well-built, regular, the bastions supplied with brass cannon, and has commonly a garrison of three hundred men complete. Within the walls of the city there are three Christian churches: first, that of the jesuits or *Portuguese*, settled before the *Danes* came thither, and which they have always tolerated, and treat the Papists upon all occasions with much civility, though they have not made the most grateful returns †. *Zion* is the *Danish* church belonging to the garrison and old inhabitants, where service is performed in the *Danish* language, and according to the liturgy of that church. The third is that of *Jerusalem*, built by the missionaries, consecrated on the fourteenth of August 1717. Every Sunday morning they preach there in *Portuguese*, and in the evening in the *Damulian* tongue; and the children are catechised immediately after sermon: the same is repeated every Friday. There is also a large mosque for the *Mohammedans*; and five great pagodas, or pagan temples, for the *Gentows* ‡. We may easily collect from hence, that, taking in Christians of every denomination, *Moors*, and *Gentows*, the place is very populous, more especially at certain seasons, when the conveniency of trading with other *Europeans* invites thither strangers from the adjacent countries, who make frequently a pretty long stay there. We find no exact computation made either of the whole number of its inhabitants, or of the Christians, *Moors*, or *Gentows* that dwell there; yet some writers, who were well acquainted with the affairs of the *Indies*, assure us, that, after *Batavia*, *Tranquebar* is the handsomest and best built place in the hands of the *Europeans*; and express their wonder thereupon, that it has not been more considered by the *Danish* government, and rendered more advantageous in every respect, which, they say, might not only be done with certainty, but without difficulty; yet, in these cases, the reader will observe we report only, and do not pretend to decide ^b (Z).

Present state of the town and fortress of Tranquebar, and of its inhabitants, Christians, Moors, and Gentows.

(Y) The progress of the *Danish* missionaries, or, to speak with greater propriety, the progress of the Protestant religion in the *Indies*, has been intirely owing to the steadiness of the court of *Denmark* in the support of this institution, for the maintenance of which its founder granted a certain revenue. In 1714, a council was erected for superintending the great work of propagating the gospel, composed of two privy-counsellors, and three ecclesiastics, upon whom the superintendence of this undertaking devolved. The persons sent to the *Indies* in the space of thirty-two years have been: in 1705, Messieurs *Ziegenbalg*, *Plutschow*, and *Bowring*; in 1709, Mr. *Grundler*; in 1713, Messieurs *Berlin* and *Adler*; in 1719, Messieurs *Schultze*, *Dahl*, and *Kirstenmacher*; in 1725, Messieurs *Bressler*, *Bose*, and *Walther*; in 1730, Messieurs *Richtsfug* and *Worm*; in 1737, Messieurs *Obuch*, *Widbrock*, and *Kohlhoff*. Within this space of time they have converted many thousands of the *Gentows* to the faith of Christ, not only in the district of *Tranquebar*, but in all

the adjacent countries, partly by their discourses, and partly by the books printed and published under their direction. By their unwearied labours the holy scriptures have not only been translated into the *Damulian*, but also into the *Mellician* and *Varugic* languages, and into that vulgar *Portuguese* which is spoken over all the *Indies*. The *Damulian* Bible has been printed twice, and the New Testament oftener. In 1716, a theological seminary was erected, in order to qualify the most capable of their scholars to become catechists, schoolmasters, and even preachers. Upon the extraordinary and unexpected success of this *Danish* mission, the *English* and *Dutch* have applied themselves to the conversion and instruction of the natives; and there is reason to hope, that we shall speedily hear of the good effects of their endeavours (67). *Incrementum concedat Pater luminum, à quo omnia dona per secula superne descendant!*

(Z) The reader will see at large, in the ensuing chapter, how great difficulties occur, and how many obstacles are

(67) *Gesta et vestigia Danorum in oriente*, tom. i. p. 74.

The district of
Tranquebar,
and the towns
and villages
that lie therein
described.

THE district belonging to this town, which belongs also to the *Danes*, is of a very considerable extent, full of villages, and those crowded with people. The biggest of these villages is *Borejar*, in which there are thought to be very near as many inhabitants as in *Tranquebar*. The *Moors* have several mosques, and, within these thirty years, they have built a new one; and the *Gentows* also have several large and splendid pagodas: but the fairest and most pleasant of their villages is *Tilliar*, in which reside forty bramins, who have houses perfectly clean and neat. The road to *Tilliar* from *Tranquebar* is set with a double row of trees, which bear red, white, and yellow flowers, not unlike our lillies; and, as these are fresh and green through the whole year, it makes travelling, even in that hot country, very agreeable. Besides these, there are seven other places; viz. *Tsandarapari*, *Kottupaleam*, *Erukittantseheri*, *Tschattanguri*, *Dewanallur*, *Oruwamangalam*, and *Tschenkitankerei*, which, tho' far inferior to the former, yet are all of them well inhabited, with a pagod in each; and the grounds about them are well cultivated. There are still six more villages; viz. *Pommeampoettei*, *Killinschimedu*, *Calink-raipoettei*, *Singnurpoettei*, *Akkamenpoettei*, and *Elamenpoettei*, the inhabitants of which are fishermen, and such kind of people who acquire a subsistence by supplying the town of *Tranquebar* with fish; and also ply with their boats along the coast, carrying goods from place to place, as occasions require¹.

An account of
the harbour
and road, as
also of the ship-
ping belonging
to the place.

THE port and road of *Tranquebar*, tho' not much to be commended, yet are as safe and commodious as any in their neighbourhood, and capable of admitting larger vessels; so that a famous *Dutch* writer had good reason to say, it was strange the *Danes* made no better use of this place; tho' there seem to be no good grounds for his adding, that they had as good or better opportunity than the *English*^k. It is highly probable, that the chief reason of their having no greater success was, the want of regard to this commerce, which, either through negligence or want of ability, was shewn at home. In respect to those who reside there, it is not altogether so inconsiderable; for, by the help of the *Gentow* merchants, they maintain some kind of correspondence with the people of the island of *Ceylon*; tho' they can trade only in small vessels, and by stealth, as it is no easy matter to escape the vigilance of the *Dutch*, with whom also they have some dealings^l. They still keep up a few small factories on the pepper coast; and have a lodge, with a fine garden, as we have mentioned before, on the coast of *Bengal*, to which they have sent some missionaries of late to preach the gospel. It seems to be their great misfortune, that they are very seldom upon good terms with the rajah of *Tanjour*, who seldom finds himself in any tolerable state of security but he thinks of falling on the *Danes*^m. In 1718 he attacked them with the whole force of his country; and though he was then obliged to

¹ Account of the religion and government, &c. of the Malabarians, p. 3, 4. Malabar, by Mr. BALDÆUS.
^l From the letters of the missionaries.

^k Description of the coast of
^m Histoire des Indes Orientales,

are to be overcome, before a regular commerce can be settled in the *Indies* by a nation far more powerful, and in most respects better qualified for such an undertaking, than the *Danes*, even when encouraged and supported by the government for a long series of years; which was far from being the case of that company and colony, the concerns of which make the subject of this chapter. If we consider their progress at first, it was very extraordinary; if we reflect on the causes of their declension afterwards, we cannot but esteem it very natural: yet, after all, it must be admitted, that things might have been better managed, that is, those who had the direction of affairs at *Tranquebar* might certainly have made themselves more acceptable to the natives, and found more proper means to soften the prince in whose dominions they were settled (68). In reference to the people, we have the fullest evidence that they were in general humane, beneficent, and very well disposed. The following instance will put it beyond all doubt: in the month of September 1709, Mr. Zeigenbalg made a tour into the dominions of the rajah, and advanced as far as the town called *Perumulei*; where he preached publicly to a great number of persons of the first rank, among whom were many bramins (69). After his sermon was over, they told him, that he ran a very great risk in making this excursion; that the rajah had given positive orders for seizing such as should presume to preach the Christian religion to his subjects; that, in obedience to these orders, they might

make him prisoner, and send him to court; that, however, this was far from their intention; and that if, contrary to their advice, he was resolved to persist in his design, they would give him no opposition. To all this they added, that, as soon as it was known at *Tanjour*, he would be immediately arrested; and though, in all probability, the rajah would not put him to death, yet he would throw him into a close dungeon, to obtain a large ransom; that he had often proceeded in this manner against *Portuguese* priests; and that running thus precipitately into difficulties would render him rather a victim to his own obstinacy, than a martyr to his religion; for they assured him, that in this method he hazarded all to little or no purpose, because, if any of their countrymen were inclined to hear his discourses, they would certainly come to him at *Tranquebar*, where he might teach, and they be instructed, without danger. After this prudent representation, they entertained him very handsomely, assured him of their great respect for his person, and their willingness to hear him upon moral subjects (70). It is not easy to conceive how a stranger could have been better treated in any country; and therefore there are some grounds to suspect, that, if condescension and complaisance had been employed, and no bad examples given, the *Danes* might long ago have gained such an interest amongst these people, as might have turned to their advantage.

(68) Histoire des Indes Orientales, tom. iii. p. 78.
that missionary's own letter.

(69) Hist. du Christianisme des Indes, p. 551.

(70) From

a raise the siege, yet it has been conjectured, that pieces of eight prevailed more than bullets. Since that time, there have been so great distractions on the coast of *Coromandel*, that they have been less in danger than formerly; and, as their trade is now reviving, it is very probable that they will find the means of rendering themselves more acceptable or more formidable to this *Indian* prince, either of which would certainly have a good effect ⁿ (A).

The scheme in which they are engaged, of converting the *Indians* to the Christian faith, cannot fail of producing very beneficial consequences. Those converts, and their descendants, will be so many loyal and useful subjects to the *Danish* government, and may, by degrees, be employed in very different capacities; and it has been already observed, that, with a very small assistance, they apply themselves to some kind of trade or other, and get a comfortable livelihood. They may be also disciplined, and made at least better soldiers than any of their countrymen ^o. Besides, it is found, that the resentment shewn against these new converts, when the missionaries first went over, by their own nation, which was so great that they were frequently obliged to quit the country, begins to wear out, and the *Indian* Christians live at present in good correspondence with their pagan relations. As these people are naturally sober and industrious, as well as sincerely devout, so there is nothing plainer than that the acquisition of numbers of such persons must add both strength and wealth to their masters. We may therefore expect, in process of time, to see the face of things extremely altered in this part of the world, where the raising new commodities, for which their soil is as fit as any of the adjacent regions, and the introducing new manufactures, would either excite the *Danes* who reside there to aim at extending their commerce, or induce some of their neighbours, who have more money, to settle amongst them, and both encourage them by their example, and assist them for the sake of their own interest; which has been the case elsewhere ^p.

It may possibly be objected to this, that these conjectures are not very agreeable to facts; that, since the scheme of sending missionaries from *Denmark*, the concerns of the *East India* company declined, the little trade they had grew less, and the rest of the *European* nations, who had not taken much notice of them before, began in a great measure to forget that there was such a thing as a *Danish* company or colony ^q. There is no doubt that much of this might be disproved; and that without difficulty it might be shewn, that this objection has been actually made already. But, notwithstanding this, what has been before advanced is very consonant to experience as well as reason; for though the affairs of the *Danish East India* company might not mend, but rather grew worse from this period, yet the condition of the colony grew better daily: their villages augmented, the people lived better, and the government of *Tranquebar* found itself more and more secure. Besides, the stated accounts given by the missionaries, the return of some of them upon necessary occasions into *Europe*, and the rumours that were spread by the seamen employed in the company's service, were attended with extraordinary consequences; since there is hardly a country in *Europe*, which has not heard of, and approved, this measure (B).

^o Account of the religion and government, &c. of
^q *HAMILTON'S* account of
Gesta et vestigia Danorum in oriente, tom. i. p. 74.

(A) A great part of what is suggested in the text has been actually effected since, by the concession of the town and fortrefs of *Tranquebar* to the *Danish East India* company, upon the renewal of their charter, who are obliged to keep the garrison complete, to pay the annual rent to the rajah of *Tanjour*, and to defray the public expences of the government settled there (71). As this commerce has been ever since increasing, and as the company have at present a constant and regular trade to the coast of *Coromandel*, the bay of *Bengal*, and the port of *Canton* in *China*, there is no doubt that gradual improvements are daily making. We shall have another opportunity of speaking of the extraordinary attention shewn to the recovery of trade by the northern nations in general, and the government of *Denmark* in particular, with the consequences that are likely to attend it, more especially if it should be supported by a spirit of discovery likewise, than which nothing is more probable, not to say certain. A new route to the *Indies* would produce surprising effects, as might be easily demonstrated by arguments, if the experience of what has been done since the *Portuguese* opened a passage thither by the *Cape of Good*

Hope, did not render all reasoning upon this head in a manner unnecessary.

(B) There seem to be good grounds to attribute the preservation of the *Danish* settlements in the *East Indies*, and the keeping the company on foot in *Europe*, to this religious design of propagating the Christian faith. King *Christiern* the fifth had renewed the company's charter, and granted them a further term of forty years, from *November* 28th 1670, when this drew towards a conclusion, which occasioned those applications that have been mentioned in the text. King *Frederic* the fourth inquired more narrowly into their circumstances; and perceiving plainly that no good could be expected from this society, unless their establishments in the *Indies* could be improved, and their capital in *Europe* could be greatly augmented, he chose to take this step of sending missionaries, which he judged most effectual for that purpose, without delay, at his own expence (72). At the same time he renewed his composition with the company; and agreed to take one hundred thousand weight of salt-petre, or eight thousand crowns, in lieu of all duties for homeward-bound ships, the cargo of which should amount in value to one hundred

(72) *Histoire*

The continu-
ance of this
colony the cause
of reviving
the commerce
from Den-
mark to
China.

As soon as a new spirit of commerce sprung out of those necessities, which the love of money and gaming had produced, and those great powers that were possessed of it shewed a just persuasion of its value, by the zeal which they expressed against the first attempts made to change its course, *Denmark* was next thought of; and that company, which had been so much neglected, was considered as a foundation upon which a noble superstructure might be raised. We see, therefore, that colonies ought not to be slighted, even when, thro' a concurrence of untoward accidents, they fall into a decline; for it is not to be conceived that any effect whatever of human policy should be exempted from those vicissitudes to which all subinary things stand exposed; but, for the very same reason, perseverance appears to be prudent, since, if the root be kept alive, when the bad weather is over, commercial plants never fail to shoot out afresh; and, when it is least expected, provoke by their sudden appearance, that attention which is necessary for their cultivation*. But, to speak more clearly, and to return from reflections to narrative, let us proceed to shew how that change which we have described was brought about, and what effects it has produced.

S E C T. V.

Proposition made to the late king of Denmark, for erecting a new company for carrying on the commerce of the Indies. An abstract of his majesty's charter, and an account of the progress of this undertaking. It gives umbrage, from the critical conjuncture in which it was set on foot, to the maritime powers, who vigorously oppose it. Appears to be a consolidating scheme, in which the old Danish East India company being comprehended, it stands on a quite different basis from that at Ostend.

The proposal
made, on this
important sub-
ject, to the
court of Den-
mark, by Mr.
Van Asperen.

UPON the ruin of the *Ostend* company, a *Dutchman*, whose name was *Josiah van Asperen*, who had been concerned in that affair, went to *Copenhagen*, where he applied himself to *King Frederic* the fourth, a prince of great goodness and virtue, and who had nothing more at heart than promoting the welfare of his subjects by all the means that lay in his power^c. The scheme proposed by Mr. *Asperen* to his *Danish* majesty had a very fair appearance and great probability of success: he observed, that there was a strong spirit raised of opening a new trade to the *Indies*; that many people, who were very well versed in that trade, had engaged in the service of the *Ostend* company, the success of which would unquestionably have answered their expectations, if they could have carried it on; that the causes of its ruin were such as could not attend that project in any other country, but least of all in *Denmark*, which had enjoyed an uninterrupted commerce to the *Indies* for above a century; that therefore there was nothing farther necessary to render the *Danish* company as flourishing as those of *England* and *Holland*, than to increase its capital by opening a new subscription upon advantageous terms^d. By the force of these arguments the king was prevailed upon to suffer his scheme to be put in execution; and, that it might be done more conveniently, the *Danish East India* company was transferred from the city of *Copenhagen* to the borough of *Altena*, a place belonging to the crown of *Denmark*, but situated close to the rich and free city of *Hamburg*, and therefore made choice of upon this occasion^e (C).

^d *Recueil historique d'actes, negotiations, memoires, et*

dred and fifty thousand crowns, or upwards; stipulating likewise to demand nothing more if the cargo exceeded that value ever so much, and to require nothing if the value of the cargo did not amount to one hundred thousand crowns (73). As soon as the success of the missionaries was known, he caused commissioners to be appointed, as we have already observed, for the future direction of the mission; waiting no doubt a favourable opportunity for putting the other part of the project in execution, that is, enabling the company to extend her commerce by augmenting the capital. We need not wonder, therefore, that, a proposal for that purpose being made, it was readily embraced, or that his Majesty

willingly consented that foreigners should have a share in the new subscription, by which a measure so beneficial to his subjects might be carried into execution, the success of which appeared to be very doubtful without obtaining such assistance.

(C) The design of setting up this commerce where they did, by placing over the building erected for the reception of the director and servants of the company at *Altena*, this inscription in large characters, "Here is the new *India-house* for carrying on the commerce to *Transquebar*, *China*, and other places," was purely for the convenience of obtaining subscriptions, and in that respect was well contrived by Mr. *Van Asperen*. But notwithstanding

- a In order to induce foreigners to engage in this undertaking, his *Danish* majesty thought fit to grant a new charter, dated in *April* 1728, for promoting the commerce of the said company to the *Indies*, *China*, and *Bengal*, the chief articles of which were these^{*}; viz. The new subscribers shall have an equal share and right with the old members in all the concessions, octroys, and privileges, granted to the said company by his present Majesty and his august predecessors; and likewise in all the forts, settlements, revenues, houses, magazines, ships, effects, and in short whatever the company is possessed of at this day, or may acquire in time to come. The old shares or actions, which are in number two hundred and fifty, of one thousand rixdollars each, shall subsist and remain as they are, and shall have the same rights as the new shares. The directors shall declare and affirm, upon their honour, that all the debts
- b of the company do not exceed one hundred and sixty thousand rixdollars in specie. The united company are obliged to discharge and pay the said sum of one hundred and sixty thousand rixdollars, upon condition that the old shares shall have no dividends till the year 1733. Though there is no question that the accounts of the company are just, and that their debts do not exceed the said sum of one hundred and sixty thousand rixdollars, it is nevertheless stipulated that, if the said debts should appear to exceed the said sum, the old shares shall be answerable for the overplus, and that the new subscribers shall not be obliged to contribute thereunto. Each new share shall be one thousand rixdollars in bank, or specie, whereof twenty *per cent.* shall be paid upon the account of Mr. *Alexander Bruguier*, banker at *Hamburg*, or in the manner prescribed in the project published by the company at *Copenhagen*, *December* 16th, 1727. If there was any absolute necessity to make a further call the present year 1727, the same shall not exceed five or ten *per cent.* at farthest. The call for the next year shall not exceed twenty or twenty-five *per cent.* The remainder of the subscription shall not be called in without the resolution and determination of a general court of the company. If the intire sum of the said one thousand rixdollars for the new actions is not paid in the year 1738, the proprietors of the old shares shall have an interest at the rate of five *per cent.* allowed them for the sum they have paid more and above the new subscribers. There will be no other actions than shares of one thousand rixdollars, and half shares of five hundred rixdollars each. Every subscriber shall be allowed to take shares for the bearer, signed by the company; and such as please may have them inscribed in the company's books. There shall be paid for each transfer
- d two rixdollars to the company, and half a rixdollar to the poor. The creditors of the company are allowed to take new actions for the sums due to them, provided they discount on the said debts thirty *per centum* for the present year for each share, and twenty-five *per centum* for the next. The shares they shall purchase on this condition shall have the same dividends as the other new actions. The said share shall not be liable to any seizure or stop upon any account whatsoever, as it is declared in his majesty's octroy. The directors shall yearly communicate to the subscribers an exact and particular account of the affairs of the company. The dividend shall be regulated upon the said account in a general court of the company, by the majority of voices. The directors are not allowed to undertake any trade but the commerce in the *East Indies* upon the company's account, without the consent of the members thereof; and still less
- e shall they dispose of or lend the company's money, to any person whatsoever, for which they are to be answerable *in solido* in their own name and estate. They shall take an oath of exact observation of this article; and, for a faithful administration of the affairs of the company for the common benefit and advantage of the members thereof. All the merchandize which shall be sold in any other place than *Copenhagen*, shall be paid in the bank at *Hamburg* to one or more merchants, and most substantial traders, for the company's account. These merchants shall be chosen and appointed, in a general court, by a majority of voices, and in no other way upon any pretence whatsoever. The said merchants, or cashiers, shall pay no money but upon orders signed by three or four of the directors at least. The money to be paid this year shall be at the disposal of the present directors, till new ones to be added to them are chosen. The money

* Corps universelle diplomatique du droit des gens, tom. viii. P. ii. p. 150.

withstanding this, it subjected his project to various suspicions and imputations, from which it would have been otherwise free. In the first place, it was insisted upon, that this was a new *East India* company, to the institution of which the maritime powers conceived that they had a right to object; whereas the old company of *Copenhagen* was, even in their sentiments, established in its legal right to that trade by prescription. In the next place, it was given out, that the *East India* company at *Altena* was only an invention to revive the mystery of stockjobbing, and enable those who were in the secret

to compass immense sums under colour of a trade to the *Indies*, when in reality they meant to deal in nothing but moonshine. It was farther added, that the royal concessions in their charters were so very extensive, and so highly disinterested, that it was extremely difficult to apprehend an absolute prince as the king of *Denmark* is, by the voluntary surrender of the liberties of his subjects, meant to be bound by them any longer than till they have answered the concealed purposes of this plausible proposal (73).

(74) *Historical register*, vol. xiii. p. 204, 205, 206.

arising by the new subscriptions shall be laid out in sending ships to *Tranquebar*, *Bengal*, and *a* *China*, and for no other use whatsoever. No more money shall be kept in cash than what will be necessary for the fitting out and sending of ships, as in the preceding article. A general court of the company shall be called as soon as possible, in order to chuse four new directors out of the new subscribers, who may be all foreigners.

The news of this company gives a great alarm to the subjects of the maritime powers.

On the publication of this new charter, and Mr. *Van Asperen*'s soliciting his friends and correspondents in *Holland* to take a share in this subscription, a great inclination appeared to follow his advice^y; but, as this could not fail of giving great offence, more especially to those who were in the direction or service of other *East India* companies, it was not long before measures were taken to intimidate him, and take off those impressions that his applications had made^z (D). This certainly gave some check to that spirit which appeared in foreign countries in favour of this design; which, notwithstanding, had so great success, that those intrusted with the administration of the company's affairs, began to make preparations for such an expedition as might give them credit^a. Several persons also, well versed in the *East India* trade, repaired to *Copenhagen*, and shewed an inclination to enter into the service, where they were kindly received, and often consulted; by which this important subject came to be not barely known, but generally understood in that country; so that not only great expectations were raised of the success which might attend this scheme, but also a warm zeal for promoting it to the utmost, and this amongst every order of men, upon that sensible and salutary principle, that whatever contributed to the public benefit ought to be esteemed a thing of public concern^b. When affairs were thus circumstanced, preparatives, as it was very natural, were made with all imaginable vigour (E). b

Their application on this head to the court of Denmark by their ministers.

As soon as it was certainly known that the *Danish East India* company was actually on the point of sending ships to the *East Indies*, agreeable to their plan, and to the power given them by their charter, a resolution was taken by the maritime powers to act in concert in this affair, and to endeavour to deprive the new company of their sole support, which was his *Danish* Majesty's charter of incorporation. It was with this view that orders were sent to Lord *Glenorchy* and Mr. *Dassensfeldt*, the ministers of *Great Britain* and *Holland* at the court of *Denmark*, to act jointly in this affair, and to use their utmost industry to procure the repeal of the powers granted to this society; and, in consequence of these instructions, those ministers d soon after drew up and presented the following paper to the court of *Denmark*^c.

“ His

^b Dictionnaire de commerce, tom. iv. col. 1144.

(D) As the *Sieur Van Asperen* was a burgher of *Amsterdam*, and had retired into a foreign country, and entered into a foreign service, without renouncing his burgherhip, this, according to the laws of *Holland*, was an act of felony; upon which a prosecution was set on foot, and carried to the last extremity, which was, executing him in effigie. An answer was also writ to his circular letter; in which, besides the objections stated in the last note, it was suggested, that the honour of the directors was no indisputable security, since one of them, tho' now a count, and honoured with a white ribbon, had been a bankrupt in *France*, and been driven out of *England* and *Holland* by prosecutions from his creditors; that the *Danish* company had made prize of a *Moorish* ship bound to *Surat*, and had sold her cargo for three hundred thousand crowns, till which sum, with interest upon interest, at the rate of twelve per cent. was refunded, the natives would exclude them from trade; and that therefore, the hazards considered, no prudent man would subscribe, notwithstanding all the fair promises and large privileges granted to the new company, which seemed, upon the whole, rather calculated to draw the money of other countries into *Denmark*, than to revive the drooping trade of the *Danes* with the *Indies*. This answer was dated *May* the first, 1728, from *Amsterdam* (75), and was highly relented by the *Danish* court; but, as it was signed by nobody, and the author could not be easily found, the complaints made against it had no effect (76).

(E) When the *Sieur Van Asperen* and his colleagues

saw what pains were taken to discredit their scheme, they held it expedient to demonstrate the falsity of some, and the fallacy of other objections. In a piece published at *Copenhagen* upon this subject, it was observed, that the erecting of a new *India-house* at *Altena* did not constitute a new company, as was evident from the royal charter, which was undeniably an ingraftment upon the old one; that, as to the credit of the directors of the *East India* company, there was no just reason to impeach it, since it was their interest to declare the truth, and since a provision was actually made in the charter to prevent the subscribers from being injured in case they did not declare the truth; that the story of the *Moorish* ship was an absolute falshood; and that, in fine, the very letter itself, being inconsistent and contradictory, ought to have no weight with any disinterested person; for one part was calculated to prove that the *Danish East India* trade could turn to no great account because of the circumstances of the company, which plainly admitted an intention to carry on an *East India* trade, and to carry it on upon the old company's bottom; whereas in the other part of the letter it was insisted upon, that this was a new company, and that they had really no intention to trade at all. It was impossible, therefore, taking things together, that all their objections should be true; but that there was nothing either absurd or improbable in presuming them all to be false, and calculated only to subvert a society established by the authority of his *Danish* Majesty, which ought to be respectable to all *Europe*, and more especially in the sight of his allies (77). This

 (76) Historical register, vol. xiii, p. 204, 205, 206. (77) Mercure historique et politique, tom. lxxxv. p. 72.

- a “ His Majesty the King of *Great Britain*, and their High Mightinesses the States General
 “ of the *United Provinces*, foreseeing the injury the transferring the *East India* company from
 “ *Copenhagen* to *Altena* will do to the commerce of their subjects; and perceiving with con-
 “ cern, that almost at the same instant they are making so great efforts to stop the progress of
 “ the *Ostend* company, the King of *Denmark*, their good old friend and ally, is setting up
 “ another equally prejudicial to their subjects; have ordered the subscribing ministers to make
 “ most humble representations to his *Danish* Majesty, hoping, from his majesty’s friendship,
 “ that, as soon as he shall be informed of the uneasiness this novelty gives them, he will
 “ withdraw the privilege lately granted to that company, and leave it on the antient foot as it
 “ has always subsisted at *Copenhagen*: accordingly the subscribing ministers desire your Excel-
 b lency to make a report thereof to the king, and to procure them a favourable answer.
 “ Done at *Copenhagen*, July 31, 1728.”

GLENORCHY and ASSENDELT.

- WHATEVER address or moderation might be used, or how smooth soever its language, the King of *Denmark* and his council did not at all relish this memorial; to which however an answer was given, wherein his *Danish* Majesty insisted, that the maritime powers had totally mistaken the point, because it never was the king’s intention to erect a new company, or to transfer that which had now subsisted above an hundred and ten years from *Copenhagen* to *Altena*^d: that this appeared clearly from the very project of incorporation, which granted no new powers to the company, but barely confirmed the old ones: that the voyages proposed directly for *China* could not be esteemed an infraction of treaties, any more than the voyages formerly made by the company’s ships from *Tranquebar*: that, farther still, his *Danish* Majesty was not restrained by any treaty whatever from maintaining and supporting the commerce of his subjects to the *Indies*, either from their establishments in that part of the world, or directly from *Copenhagen*: that the law of nature and nations not only gave him a right, but made it his duty, to promote the welfare of his subjects, and to extend their trade as far as it was in his power: and that, finally, as he did not encourage this commerce with any view of injuring the *East India* companies in *England* or *Holland*, but purely with a design to benefit his own subjects, he could not discern how this should expose him to the resentment of any other power whatever.
- d How clear and full soever this answer might seem to the court of *Denmark*, it was far enough from giving any satisfaction to *Great Britain* and *Holland*; and therefore a fresh memorial was drawn up, to shew the insufficiency of this answer, and the right which the maritime powers had to expect that his *Danish* Majesty should comply with their demands, and withdraw his protection from the company. This memorial was delivered by the Earl of *Chesterfield*, and the deputies from their High Mightinesses the States General, to Mr. *Greys*, his *Danish* Majesty’s minister at the *Hague*, in the summer of the year 1729^e, from which time it does not appear that any farther applications have been made on this subject, or that the rights of the *Danish East India* company have been farther controverted.
- f THIS warm opposition seemed at first to answer the end of the powers that formed it, but, in the issue of things, was really favourable to the design of the *Danes*. *Frederic* the fourth, who was at this time drawing towards threescore, and was equally unwilling to perplex himself with disputes, or to sacrifice the rights of his crown, and the interests of his subjects, declined the support of the *Altena* company; but at the same time recommended the *East India* commerce to the care of the Prince Royal, his son, who not long after succeeded him by the title of *Christiern VI*^f. This had a double effect; for it prevented those from interesting themselves in the capital of the *East India* company, who had nothing in view beyond trading in actions; and it put many others upon resolving to contribute all in their power towards re-establishing a commerce, the value of which was sufficiently demonstrated by the jealousy that had been shewn about it. The dreadful conflagration by which *Copenhagen* was laid in ashes, prevented any great progress from being made by the Prince Royal in the life-time of his father; but when he was seated on the throne, and had recommended himself to his subjects by abolishing a farm of the excise which had been set up about four years before, and was extremely grievous to the people, he resolved to apply himself to trade, and to promote to the utmost of his power whatever might excite the love of industry amongst his people^g.

His whole administration at home and abroad was conducted intirely with these salutary views, and conducted with such address, that they perfectly answered his purpose. All the

paper war seems to have ended here, at least with regard to private persons; and with the greater propriety, since the maritime powers at *Copenhagen* and the *Hague*.

^d Recueil historique d’actes, negotiations, memoires, et traitez, par Mr. ROUSSET, tom. v. p. 35. ^e Ibid. p. 37. ^f Mercure historique et politique. 1730, p. 581. ^g Introduit à l’histoire d’univers, tom. iv. p. 291.

order by Chris-
tians VI. who
enabled them
to carry on a
direct com-
merce to
China.

affairs of the *East India* company were by degrees brought into proper order; their house at *Copenhagen*, their docks, yards, and magazines, put into a good condition; and a commerce with *China* directly opened at a convenient season, and so prudently managed, that it has been constantly carried on ever since, and has grown more and more considerable in the space of about twenty years. The missions have also augmented during the same space; and the trade to *Tranquebar* has been rendered both more regular and more lucrative than it was in times past^a. It is indeed true, that the *Danish* may be stiled inconsiderable in comparison of the *English* and *Dutch* companies; but it is still a company, and a thriving company too, in comparison of what it was at the opening of the present century. What the consequences of this commerce may be in time to come, must be left to the conjectures of the judicious reader, as they lie without the province of an historian.

A strong con-
firmation of
the principle
laid down at
the beginning
of this work.

BUT, before we conclude this section, it may not be improper to put the reader in mind of a matter of fact, which very strongly confirms the doctrine we laid down when we first entered upon this subject. The matter of fact is this: that the attention of the *Danish* councils to trade has had no small influence upon the peace of the north, where they have taken no share in any war for these thirty years past; and in that space have not barely enjoyed the blessings of repose, but have cultivated and improved the arts of peace^b. The benefits derived from thence to all the subjects of the crown of *Denmark*, are sufficiently evident in the surprising changes made in the face of the country, the settling of a great variety of manufactures as well in other cities as in *Copenhagen*; and the increase of their shipping, which is become very considerable. We might also add to this the improvement of their marine, the wise precau-
tions taken to secure their just rights by treaties, and the vigilance that is shewn in equipping
and sending abroad their squadrons, to protect their traffick every-where, as occasion required,
if all the accounts we have from thence did not agree in representing an invariable attachment
to the common tranquillity of *Europe*, and the laudable hopes of making the people in general
easy and happy, the ruling maxims in the *Danish* cabinet.

How this
chapter stands
connected with
the history of
the *Ostend*
East India
company.

If any want of connection appear, or any difficulty be found, from the reference some part of what we have delivered necessarily has to the history of the *Ostend* company, that will be fully cleared up in a succeeding chapter, where we treat of the rise, progress, and suppression, of that company at large; but we could not divide our history of the commerce of this nation to the *Indies* without manifest prejudice to their rights, by considering the new charter as creating a new company, a point expressly denied by the crown of *Denmark*, and which seems to be decided in its favour by the acquiescence of those powers under the present method of their carrying on that commerce, who so warmly contested the establishment of any new society. The progress of this trade may, and in all human probability will, furnish them materials for a much more ample and accurate history; but, till these shall appear, the public, we flatter ourselves, will not despise the unwearied pains we have taken to render ours as complete as possible.

^a Dictionnaire de commerce, tom. iv. col. 1144.

^b Introd. à l'histoire d'univers, tom. iv. p. 288.

C H A P. IX.

The history of the French commerce in the Indies, including a full and accurate account of their views in erecting, and the difficulties that occurred in supporting, an East India company in that kingdom; and comprehending farther a succinct account of the final decline of their East India company, and the plan and progress of the present company of the Indies.

S E C T. I.

Endeavours of the French monarchs to inspire their subjects with a passion for navigation and commerce. Henry IV. erects their first East India company, which sunk without ever attempting any thing: makes way for another more active, and for a little time successful; but, in the close, after varying their scheme, fall into a declining state, and are unable to sustain themselves in that capacity.

- a** **T**HE natural ambition, and great vivacity, of the *French* nation, have excited the wonder of some of the best writers of their own, as well as amongst their neighbours, that they came so late to understand the benefits of commerce, and the great influence arising from a naval force. But whoever considers this matter attentively, and consults what has been said upon it by one of the ablest as well as greatest men *France* ever produced, will find it no difficult thing to discover the true causes of the slowness shewn in applying themselves to points of such importance, and the little success they met with in their first undertakings of that kind. In the first place, they had not the spur of necessity which produced such wonderful effects upon the *Venetians* and the *Dutch*, who were forced for a subsistence upon those measures which in a short time raised them to wealth and power. Next, there were, generally speaking, great imperfections in their government, at least with regard to these matters; for sometimes their monarchs had too little, and at others too much power. In their former situation they were able to give but small encouragement to such projects; and, in the latter, the want of security in the possession of property was a bar to industry, and extinguished public spirit. Lastly, the vivacity, fickleness, and vanity of their tempers, rendered the *French* very unfit for things that required a calm, steady, and tractable disposition. If, therefore, we put all this together, and clearly comprehend what obstacles the abundance of a country, defects in government, and opposite inclinations in the people, are to the establishment of a solid and extensive commerce, we cannot be surprised at the small progress made in a long course of time by a nation, in other respects, very capable, as well as very enterprising.
- b** It will appear that these reasons are founded upon facts, when it is known how early one of the greatest *French* monarchs discerned these inconveniences, and with how much earnestness he laboured to find proper remedies. This was *Francis* the first, who, by his declarations in 1537 and 1543, exhorted his subjects to take long voyages, and laid before them the advantages that would result to themselves from complying with his desire. This conduct was imitated by the last of his immediate descendants, *Henry* the third, who in an edict, dated the 15th of *December* 1578, pressed the same point, but with very little effect; for either want of attention in the people, or the inability of the crown to give the necessary assistances, prevented any undertakings that, in a work of this nature, are worth mentioning. (A). However

A succinct view of the true causes why the French nation were so late in encouraging commerce.

At what time an extensive traffick was first thought of, and the East India trade attempted in France.

(A) The candid reader will not be displeased if we remark upon this occasion, that the temper of the *French* nation is, after all, the chief reason why, with all their vigour and vivacity, they have hitherto made so indifferent

ever, in the reign of *Henry the fourth*, one *Gerard le Roy*, a *Fleming*, who had made several voyages to the *Indies* in the *Dutch* service, came and offered himself as a pilot, in case a *French East India* company could be established; and in consequence of his proposal, which, like every thing of that kind, was at first well received, and afterwards little regarded, such a company was formed under the king's letters patent, dated the first of *June* 1604, by which they had an exclusive trade granted them for fifteen years, on the setting out of their first ship^f. This design, however, came to nothing; but the same person revived his project in the succeeding reign, and by the assistance of some friends at court, procured a new company to be erected by letters patent from *Lewis* the thirteenth, dated *March* the 2d, 1611; but the same difficulties that rendered the former scheme abortive, that is to say, disputes amongst the proprietors, and want of money, had a bad effect upon this, so that for four years they undertook nothing^g. At the end of that period, two merchants of *Roan*, *Muiffon*, and *Canis*, petitioned the king, that the privileges granted to this inactive society might be transferred to them, offering to fit out ships that very year, which however was opposed by those who were interested in the former establishment; and therefore the court judged a coalition necessary, which was soon after brought about^h (B).

A new East India company set up on a coalition between the old adventurers and new ones.

UPON this letters patent were granted to the old and new proprietors, *July* 2d, 1615, which were registered in parliament the 2d of *September* following. In the succeeding year they fitted out two good ships, the command of the largest of which, with the title of general, was given to Captain *de Nets*, who at that time served the king in the marine. The lesser ship was bestowed on Captain *Beaulieu*, who had no other recommendation than meritⁱ. The voyage was in all respects fortunate and well conducted, though in the end it did not turn to any great account; for the *Dutch* president in the *Indies* having published an order, requiring all the subjects of the States General, that were on board those ships, to quit them immediately, the two captains found it thereby out of their power to bring home both the vessels; and therefore that which had been commanded by Captain *Beaulieu*, was sold to a little prince of the island of *Java*, and all their effects brought home on board the largest; notwithstanding which unforeseen misfortune, and the great expence with which this undertaking was attended, they managed so prudently as to make it a saving voyage^k.

Undismayed by their want of success in their first, the company resolve to send a second time.

THIS, however, did not discourage the company; on the contrary, they made the necessary preparations for another expedition, and took all possible precautions for rendering it successful, giving the chief command to Commodore *Beaulieu*, who sailed *October* 2, 1619, from *Honfleur* road, with three ships, the *Montmorancy*, of four hundred and fifty tons, and carrying one hundred sixty-two men, twenty-two guns, and twenty patereroes; the *Hope*, of

^f Histoire des Indes Orientales, par GUYON, tom. iii. p. 82, 83. ^g Histoire des Indes Orientales, tom. iii. p. 85, 86.

ⁱ Discours sur le voyage de general Beaulieu.

ferent a figure in maritime affairs. They were almost as early in their discoveries as any nation whatever; but, while other people improved and pursued their discoveries, the *French* intirely slighted theirs, and have never heard any farther news of that discovery to this day. But to be a little more explicit: In the reign of *Lewis* the twelfth, and in the month of *June* 1703, the *Sieur de Gonneville* doubled the *Cape of Good Hope*, and discovered a great country, to which he gave the name of the *Southern Indies*, where he remained upwards of six months, and brought home with him the son of a person of distinction (1). The truth of this fact, as well as several curious circumstances relating to it, are put out of all doubt by very authentic records of those times; yet no pains were taken to prosecute this attempt, tho', from the description of the country given by the gentleman before-mentioned, and by many others on board his vessel, it was such as would have tempted any other nation (2) to have made the utmost efforts for establishing a correspondence that must have been attended with honour, and might probably have been the source of great profit. If this temper had prevailed among the *English* and *Dutch*, his Catholic Majesty might have been the sole monarch of *America*, and the crown of *Portugal* might have monopolized the *East Indies* to our

times; for the reader will perceive it was no less than forty years after this singular and extraordinary event that *Francis* the first published his edict, in order to excite his subjects to undertake long voyages (3), and to enterprize something at sea for their own benefit, instead of lavishing away their lives in private quarrels, or in the maintenance of public commotions, which were the grievances of those times, and particularly in that country.

(B) The members of the company defended themselves by setting forth, that, if they had not been so early in equipping ships as might be expected, it was not through any fault of theirs, but arose from many untoward accidents which they could not foresee or avoid; such as the fatal death of king *Henry* the fourth, the unexpected demise of their patron and protector the duke *Dampville*, admiral of *France*, and of several of their captains and pilots; notwithstanding which, they were ready to equip ships for this service in as little time as their rivals (4). These suggestions determined the court not to take away their charter, but rather to associate with them those who had an inclination to engage in the same design, with an exclusive power of trading to the *Indies* for twelve years, and many other privileges (5).

(1) Memoires touchant l'establissement d'une mission chretienne dans le troisieme monde, autrement appelee la Terre Australe, Meridionale, Antartique, et Inconnue, presentee à N. S. P. le Pape Alexandre VIII. par une ecclesiastique originaire de cette meme Terre, 1663, 8vo. (2) Declaration du capitaine de Gonneville, datée Juillet 19, 1505. - a four hundred tons, one hundred and seventeen men, twenty-six guns, and twenty patereroes; and the *Hermitage*, an advice-boat, of seventy-five tons, thirty men, eight guns, and eight patereroes; all victualled for two years and an half. We have the history of this voyage written at large from that gentleman's papers, and a very curious and instructive voyage it is; and from thence it appears, that as these were stout ships, and well equipped, so the whole voyage was conducted with the utmost skill and address, and a good lading procured for both the large ships at the port of *Acben* in the island of *Sumatra*¹. Yet in some respects it was disastrous, the *Hope* being lost upon the coast of *Java*, or, as the commodore had very strong reasons to believe, was sunk by the *Dutch*, and all the men on board, and a cargo to the value of between seventy and eighty thousand pounds sterling; but, however, the commodore returned safe in his own ship to *Havre-de-Grace* on the first of *December* 1620^m (C).

THE consideration of this misfortune, and the fear of meeting with the like in succeeding expeditions, induced the company to confine her views to the island of *Madagascar*, in hopes that, if she could raise a powerful colony there, it might be a means to render succeeding attempts in the *Indies* more secure, but in this also, thro' a series of ill fortune and ill management, with which there is not either room or reason to trouble the reader here, they found the hopes they had formed disappointed, and that all their returns from thence fell very short of the expence that was absolutely necessary for the maintenance of their settlementⁿ; so that, instead of contributing to the dispute of their original design, it served only to exhaust their funds, to discourage those who were in their service, and to discredit their undertaking to such a degree, that for many years together there was no more done towards the establishment of an *East India* commerce, than if no such company had ever been erected^o; and in all probability these sinister events would have stamped the character of impracticable upon every thing of this kind, amongst a nation equally ready to venture upon enterprizes the most difficult and dangerous, and to abandon even the most probable, if they do not immediately answer, in point of success, to their most sanguine expectations; a humour that prevails but too generally amongst the herd of mankind in all countries, and contributes more towards keeping them in indigence and misery than either barrenness of soil, or an unlucky situation; for all local evils admit of remedies, if the minds of men are but well inclined.

II. p. 123. ⁿ Relation du voyage de FRANÇOIS CAUCHE, de Rouen, en l'isle de Madagascar, isles adjacentes, et cotes d'Afrique. ^o Histoire des Indes Orientales, par GUYON, tom. iii. p. 85, 86.

(C) It was in reality the civil war which broke out in *France* that interrupted the progress of this company, disabled the members from contributing the sums necessary for its support, and diverted the attention of the government, without which it could not subsist. Upon this, some traders in *Normandy* endeavoured to avail themselves of the company's charter, from whence sprung the original design of making a settlement in the island of *Madagascar*, as we learn from the testimony of a person who was deeply concerned therein, and whose voyage

gives us light into many circumstances (6) that other writers endeavour to hide, particularly the bad behaviour of the *French* towards the natives, which, without doubt, gave a bad impression of the whole nation, and their early bent to privateering in the *Red Sea* (7); both which errors in management became more and more evident in the conduct of their successors, notwithstanding that they set out upon a better plan, and for some time at least were better supported, which rendered them so much the more inexcusable.

S E C T. II.

The famous Cardinal Richlieu turns his thoughts upon this subject; resolves to set up a new company, with more extensive powers, better funds, and under his immediate protection; all which, however, could not secure it success. Mr. Colbert enters into the like scheme, pursues it with equal ability and application; notwithstanding all which, the affairs of the royal *East India* company gradually decline.

- d BUT that wise and great minister, whose enterprising genius did so much good as well as Cardinal Richlieu's hurt to *France*, the famous Cardinal de Richlieu, resolved to revive this commerce, and Richlieu's undertook it, as he did all things, with great spirit. The royal privileges granted to this new project for establishing a new *East India* company were dated the twenty-fourth of *June* 1642, and contained all that could be thought necessary for promoting a society under the peculiar protection of so great a minister^p. Yet it fell out unluckily, at least for this establishment; he did not long survive this grant, which was a great prejudice to the company's affairs. However, *Lewis* the fourteenth, or rather the

^p Histoire de la compagnie des Indes, p. 16, 17.

regency acting in his minority, confirmed those privileges by an edict dated the twentieth of September 1643. All these it quietly enjoyed for twenty years, during which space this third company sent every year a vessel to *Madagascar*; but the greatest part of them were either cast away in their passage, or lost the best part of their crews by the scurvy; so that though the name of an *East India* company was kept up in *France*, yet they were possessed of no such trade; but contented themselves still with fruitless attempts to settle a colony at *Madagascar*; a design, which, after all, they could never bring to bear^a. The time of their privilege being expired, the Duke de la Meilleraye attempted an *Indian* trade upon his own bottom; which ended in sending a ship or two to *Madagascar*, where he got into the possession of their settlements, and found them not worth keeping; though it is said that he made this attempt at a pretty easy rate, because, being master of the ordnance, he made free with the king's stores. On his death his son sold his interest in this island for about twenty thousand livres, which proved a great deal more than it was worth^a (D).

This company coming to nothing likewise, the trade to the Indies was for some time dropp'd in France.

THIS shews how little the *French* government agrees with commerce, and how difficult her ablest ministers find it to establish trade by dint of power. Yet it must be allowed Cardinal Richlieu took all the pains in this respect that was in the capacity of man; he sent for persons, who were best versed in trade, from *Holland*; drew abundance of rich merchants from different parts of *Europe* into *France*; formed the plan for the establishment of the new company himself, and engaged the principal persons for quality and fortune in *France* to embark in it. This step, which he conceived would most promote it, proved the ruin of the whole design; for, there being always some great nobleman at the head of this business, such as endeavoured to obtain employment in the company's service were forced to become his creatures; by which happy contrivance there were hardly any employed who had either merit or capacity; so that such as were the best judges of the means of carrying on this commerce with success, treated the *East India* company as a phantom, and never concerned themselves therewith. On the other hand, the *English* and *Dutch East India* companies, being solely guided by experience, treated the affair of a *French East India* company with contempt; while the rest of the states of *Europe*, seeing *France*, with all her power, could make nothing of those repeated attempts, took it for granted that the *India* trade was designed by nature for the maritime powers, and never troubled their heads about it; a thing hardly credible, if we had not the authority of the best historians to support it^c.

The famous Mr. Colbert reviews this project, and, with the assistance of Mr. Charpentier, publishes his scheme.

BUT the scene soon changed when Lewis the fourteenth came to manage his own affairs, and had taken into his service such ministers as were equally capable of foreseeing and overcoming all the difficulties that could possibly be met with in the execution of the great designs they formed for the glory of their nation. The famous Mr. Colbert, so much distinguished by that great prince whose activity and prudence procured him many of those successes which rendered him the most powerful monarch in *Europe*, was the person who conceived the design of reviving the *French East India* company, notwithstanding all the misfortunes which had over and over disappointed the skill and care of his predecessors^d. But, before he made his intentions known to the public, he took care to be well informed in the affair he was to under-

^a Histoire des Indes Orientales, tom. iii. p. 86, 87.

^e Essai sur la marine et sur le commerce, p. 113.

(D) As wise and great a man as this famous minister was, yet he very ingenuously confesses it was a long time before he could frame to himself any conception how that commerce could be beneficial to any kingdom, which carried out of it gold and silver; and he farther owns very freely, that, upon this principle, he disliked and discouraged the trade carried on from *Provence* to the *Levant*, as being chiefly driven with ready money, and bringing in scarce any thing which might not be accounted an article of luxury. But perceiving, that however unnecessary, these things were grown into common use; considering that, if his countrymen did not go to fetch them, foreigners would bring them into the ports of *France*; and being well informed, that the silver exported was *Spanish*, and not *French* coin, he penetrated his mistake, and saw plainly that a nation might be enriched by the carrying out of money, by its proving the means of bringing in more money from other nations (8). It was this notion that induced him to patronize the *East India* trade, which, as it sprung from his influence, seemed to expire with its protector. There were however, to

say the truth, some very untoward circumstances, which contributed to overwhelm the company. As for instance the murder of Mr. *Fouquet*, who, returning from *Madagascar* in 1646, was assassinated on the road to *Paris*, upon a false supposition that he had abundance of jewels about him, by which they not only lost the opportunity of consulting him on the affairs of that country, but also his memorials, and other papers, which would have been of singular use to them (9). Another misfortune was, the death of Mr. *Flacourt*, who, returning to *Madagascar* with the king's commission, as governor and commander in chief in *Madagascar*, was attacked in his passage by certain *Barbary* rovers, when his ship was blown up June the 10th, 1660, by which himself, and upwards of two hundred other persons, perished (10); and the death of the Duke de la Meilleraye, after he had comprised matters with the company, and was very intent upon giving them all the assistance in his power (11); which last blow engaged them to desist from all farther endeavours, and to surrender their privileges, in order to make way for a new establishment.

a take, by drawing to his acquaintance such merchants and seamen as were held to understand this subject best (E). It was from them he learnt the three principal difficulties in the way of that structure which he laboured to raise. The *first* was, the finding a sufficient fund for establishing such a company, as to which nothing had been done that could afford any probable hopes of success. The *French* merchants, fond of new projects, were ready enough in subscriptions, but slow in complying with the terms of their contracts after they had subscribed. The *second* was, a peremptory exclusion of foreigners, notwithstanding it was evident that the necessary funds for the carrying on so extensive a trade were not easily to be found in *France*. The *third* and greatest difficulty was, the granting and establishing such a degree of liberty and independency to this company, as might satisfy strangers and natives as to the security of their properties, and put the intire management of their affairs into the hands of such only as were esteemed fit to be trusted by themselves. All these things he weighed in his own mind; and, when he had sufficiently ripened his project, he communicated his plan to Mr. *Carpentier*, of the *French* academy, esteemed one of the best pens in *France*. As this paper was esteemed a master piece in its kind, explains the subject clearly, and contains abundance of curious circumstances: it may not be amiss to give the reader an extract of its contents; the rather, as we shall be obliged to refer to it often.

It began with this remark, that, as former schemes had failed for want of proper funds, there was no danger any thing of this nature should happen here, since, besides the constant protection which the government determined to give the king himself, and the greatest and the wealthiest persons in the nation, were resolved to furnish such large sums at the beginning as might put it on a level at least with the *Dutch East India* company at the time of its first establishment. In regard to any objection that might be raised from the disappointments which had overturned three companies already, it was observed, that few or no undertakings of this sort were attended with immediate success: that the *Spaniards* suffered greatly in their first expeditions to *America*, which did not hinder them from persevering in those designs, that had acquired them the empire of the new world: that the *English* colony in *Virginia* had failed four or five times, and yet was brought to perfection at last: and that even the *Dutch East India* company, which so much excelled all others, was far enough from being fortunate in its beginning.

THESE principles laid down, it was next shewn, that the island of *Madagascar*, a considerable part of which was then in the possession of the *French*, was a country capable of being improved to such a degree, as to become of more consequence, and of greater advantage, than any of the settlements possessed by the *Dutch* in the *East Indies*. In support of this it was said, that nobody would deny this settlement was incomparably more commodious and more secure than that of *Batavia*, which the *Dutch* had nevertheless made the capital residence of their company in the *Indies*: for, with respect to the place, the country of *Madagascar* was extremely agreeable, the climate equally temperate and pleasant, and the soil affording all the necessaries of life in the greatest abundance; whereas the territory about *Batavia* was so far from being fruitful, that the company were obliged to procure from distant places rice, fresh meat, and other provisions, for twenty-five or thirty thousand people, which could not but be attended with great difficulties, as well as a vast expence.

In respect to security, it was well enough known, that only a small part of the island of *Java* was in the power of the *Dutch*; and that the rest of the country, which was large and populous, was inhabited by a variety of nations, agreeing however in the fierceness and brutality of their natures, and in a bigotted zeal for the *Mohammedan* religion, which made them hate and despise all Christians to the last degree: that the territories of the *Dutch* bordered on one

* Eloge de Mr. Colbert, par Mr. PERRAULT.

• Discours d'un fidele sujet du roi touchant l'establissement d'une compagnie Françoise pour le commerce des Indes Orientales, Paris, 1664, 4to.

(E) We find this consummate minister speaking of this company to the king with very great modesty, and not only without arrogating any thing to himself, but with a fair acknowledgement, that whatever might result from this establishment ought to be considered as flowing from the plan of Cardinal *Richlieu* (12). This company, which was properly of his erecting, is generally esteemed the fourth *East India* company deriving its authority from the crown in that country. It may not be amiss to recapitulate the several titles by which these companies are mentioned in *French* authors. The first, then, is called the fleet of *Montmorency*, or the company of the

Moluccas, which subsisted from 1611 to 1642. The second they stile the company of *Ricault*, or the *Madagascar* company, which was that formed by Cardinal *Richlieu*, and continued from 1642 to 1656. The third had the title of the Duke de *Meilleraye's* company, because he compromised matters with them, and entered into a kind of partnership, which subsisted from 1656 to 1664, when the Duke of *Manarim*, son of the Duke de *Meilleraye*, and the old company made over their rights to that formed under the auspice of Mr. *Colbert*, who may be truly stiled the parent of commerce and naval power in *France* (13).

(12) Testament politique de Mr. Colbert, chap. iiii.

(13) Histoire de la compagnie des Indes, p. 1.

side on those of the king of *Materan*, who had more than once invaded them at the head of an army of upwards of an hundred thousand men; that, on the other, the city of *Batavia* itself was but twelve leagues distant from the dominions of the king of *Bantam*, who had likewise shewn himself their powerful and inveterate enemy; whereas the inhabitants of *Madagascar* were of a mild disposition, and so inclined to receive the gospel, that a settlement consisting of one hundred men would be in greater security there than one of a thousand and upwards in the island of *Java*: that, besides all this, by fixing their principal post in *Madagascar*, the *French* company would be better seated for trade than the *Dutch* in *Batavia*, because it was equally convenient for carrying on the commerce of the *Red Sea*, or of the gulf of *Ben-gal*, and lay at the same time very properly for the dispatch of ships to *China* and *Japan*, affording a convenient place for refitting and refreshing in their return.

In reference to the execution of a project which these arguments were supposed to demonstrate probable and feasible, it was said in this memorial, that a fund of six millions, or three hundred thousand pounds of our money, would be necessary in order to the equipping twelve or fourteen large ships, from eight hundred to fourteen hundred tons, in order to embark such a number of persons for this island of *Madagascar* as might effectually and at once establish a considerable colony there; that there was no reason to doubt that his majesty would advance a tenth part of this sum: that the nobility, and other persons of fortune, would advance also the sums requisite to set this design on foot; and that, as the king was willing to take a tenth share in the setting out, they had reason to expect he would concern himself largely in future expeditions; that as a further encouragement, he was willing to grant the company an exemption from half their duties, both inward and outward, on all goods exported to or imported from the *Indies*; and, over and above all this, his majesty was content to take upon himself all the loss that might arise for the first eight or ten years; which was sufficient to shew how much and how sincerely he had this great design at heart, and how willing he was to contribute to its success; that as to private persons, they should be at liberty to subscribe in what proportions they pleased, till the fund was full; after which, no farther subscriptions should be received on any terms.

THAT the king would not only permit foreigners to take what share they pleased in these subscriptions, but, to encourage them thereto, would likewise consent that such as subscribed ten thousand livres (this was afterwards changed to twenty thousand), or upwards, should thereby acquire the right of naturalization, without any farther ceremony, by which their relations, though strangers, should be capable of inheriting their effects in *France*; and farther, that, in case of a rupture with the state to which such strangers were subjects, their effects should never be liable to confiscation on any pretence whatever: that the affairs of the company should be managed by their own directors, chosen from amongst themselves, in whose hands the funds of the company should constantly remain; and that foreigners should be capable of being elected directors, provided they were interested in a reasonable degree in the stock of their company, and resided in *France*: that, in point of law-suits, the company should be made as easy as possible; and, after being heard in the first inferior court, near the place where the cause of action arose, they should be at liberty to appeal directly to the parliament.

Good effects of this memorial, which produced a new East India company, with greater powers.

THIS memoir was exceedingly well calculated to answer its end, by reviving the hopes of the nation, and by throwing the weight of former disappointments upon want of money and want of conduct; it was also well contrived to magnify the importance of *Madagascar*, and that without doubt a little at the expence of truth, that people might not be discouraged at the recurring to a measure that had so often failed, and that they might please themselves with the hopes of seeing the whole design quickly brought to bear; since a place of such high importance, though hitherto so indifferently managed, was still in the possession, or at least in the power, of *France*. Upon this basis, therefore, was raised the last *East India* company, which in some degree still subsists, and which was erected by a very large and well-drawn edict, in which every thing was put into the best form, and set forth with all the advantage imaginable, dated in the month of *August* 1664, and soon after registered in parliament, containing forty-seven articles; and fixing the actions, as they were then first called, at one thousand livres; reserving a power to the company of making farther demands upon her proprietors, not exceeding half that sum upon each share. All the advantages formerly promised to natives, or to strangers, were actually given, and every other method employed that might keep a good opinion of the government's favourable intention for this new company, the success of which, after so many fruitless attempts, it was believed it would do honour to that reign, and to the administration of Mr. *Colbert*, who, as he shewed great spirit in forming the plan, so his

* *Histoire de la compagnie des Indes*, p. 177—190.

* *La vie de Jean Baptiste Colbert*, p. 36, 37.

a constancy was visible in supporting this commerce with great firmness, and persevering in his care for it even to the last (F).

WHATEVER is heartily espoused by a prime minister will, in all countries, but more especially in those under an arbitrary government, find a multitude of advocates, and rise into general esteem, especially if it receives concurrence as well as countenance from the government, which in this instance was actually the case; for the king, as he had promised, paid three hundred thousand livres in ready money; and most of the great men of the court, either from motives of prudence or public spirit, interested themselves in like manner, and their example was followed by all who could afford it; so that in a short time the company was in a condition to undertake any expedition that should be judged most conducive to the end for which it was instituted. Upon mature deliberation, therefore, an effectual settlement was resolved upon in the island of *Madagascar*; in order to which, a regulation was drawn up for the intended colony, so well contrived in all respects as to attract, and that very justly too, the public approbation^r. It was indeed in many circumstances very strict; notwithstanding which, numbers of people offered themselves to go over and settle there; and accordingly, on the seventh of *March* 1665, four large ships, equipped as well for war as for trade, carrying in all five hundred and twenty men, sailed from *Brest*, and arrived safely at *Madagascar* on the 10th of *July* following. Such was the first attempt of this new company, which, being executed in all respects with spirit, diligence and success, raised a general expectation that all obstacles would be at length overcome, and that the great and magnificent promises made in favour of this establishment would be effectually performed^z.

THE first thing this new colony did after they arrived, and were settled on the place, was, to change the name, and that in honour of the heir apparent of the crown of *France*, then about four years old; so that, instead of *Madagascar*, it was for the future to be stiled *Isle Dauphine*. The next year a new embarkation was made; and, in order to excite still greater numbers to go thither, a description of the island was given, together with an account of the new colony, representing the former as a perfect paradise, and the latter as the happiest and best satisfied people in the universe; and, by affixing these papers in public places, and circulating them through the kingdom, the ends of the company were answered; and a great reinforcement of new adventurers sent over to the *Isle Dauphine* where a regular government was actually settled, together with the company's first and chief residence, agreeable to Mr. *Colbert's* original memorial, and in imitation of the *Dutch* establishment at *Batavia*^y. In the mean time that great minister employed his thoughts for compassing more essential advantages, and such as might render the commerce of the new company more agreeable to its title; being sufficiently sensible, that, whatever might be said for the present, it would not be long before the *French* would exclaim that their new *India* company had as yet brought nothing from the *Indies*. To second his views in this respect, many projects were offered, and not a few of those bold adventurers presented themselves with magnificent promises; but though the former were received, and the latter encouraged, yet the cautious minister, who knew of how great consequence it was to make choice of a right plan, and of proper persons to carry it into execution,

Which being countenanced and encouraged by the court, is quickly enabled to act vigorously.

Their colony sent to Madagascar call it Isle Dauphine, and endeavour several settlements.

^y Relation de l'établissement de la compagnie Française pour le commerce des Indes Orientales, Paris, 1665, 4to.
^z Histoire des Indes Orientales, par GUYON, tom. iii. p. 136
^r Histoire de la compagnie des Indes, p. 38. 9. Methode pour apprendre la geographie, par Monsieur ROBERT, tom. ii. p. 248, 249.

(F) The plan of this great minister was, to raise himself and his family by the favour of the king his master; but, in order to do this, it was necessary to enable that monarch to raise vast sums upon his subjects. Mr. *Colbert* very well knew, that, to draw prodigious wealth from a nation generally poor, was impossible; and that to make a people, even moderately wealthy, bear repeated taxations, was a thing very grievous to a sovereign, as well as very unsafe for a minister. He ventured, however, as nobody was better skilled in the finances, to take some very bold steps, in order to fill his master's coffers; but as, in doing this, he attacked only public plunderers, the bulk of the people were so much the less offended (14). He next advised the king to employ large sums, out of what he had in this manner obtained, to promote industry, manufactures, and navigation, that his countrymen might be in the better circumstances, and the king have it more in his power to establish high taxes, without bringing his people into absolute indigence. Upon this basis he constructed an *East* and a *West India*

company, erected several manufactures, and formed the plan of a royal navy (15). It has been said, that he undertook too much; but the reason of mentioning these undertakings here, is, to shew how closely so wise a man thought all these designs connected, and the hopes he had, that, if steadily pursued, they would support each other. His notions were certainly right and his conduct too, so far as his immediate interest reached; for, by his skill and attention, he raised manufactures, and a navy, contrary to the sentiments of many, and beyond the expectations of all; and, if he was less fortunate in his schemes of commerce, it was because his instruments failed him, and it was impossible for him to exert even his own great talents effectually in places at so great a distance (16). All he could do he did; and all we mean to do, is, to shew what he contrived, upon what principles, what he achieved, and in what he failed; this being the only method from which the subject we are treating can be thoroughly understood.

was far from being hasty in his decision; and indeed every day's experience taught him, that, whatever it might be in other countries, there could not be a more difficult task in *France* than to establish an *East India* company; and this, notwithstanding he had the authority of the crown, and the good opinion of the better part of the nation, to support him in his design, without either rivals or enemies to give him any opposition^b (G).

But the company suddenly alter their plan, and resolve to enter on the East India trade at once.

AFTER mature reflection, however, and the necessary consultations with those who were placed at the head of the company's concerns, it was resolved, that, in the year 1667, some ships should proceed from *Madagascar* to the *Indies*; and that the care of fixing an introductory establishment there should be left to the joint endeavours of two very intelligent persons, who had been lately taken into their service. The first of these was Mr. *Caron*, who has been mentioned already more than once; he was a native of *France*, but had been for many years in the *Dutch* service, and had been raised in that service to the rank of president of the factory of *Japan*, where, for reasons which we have assigned in their proper place, he suffered severely; and, not thinking himself sufficiently considered for those sufferings, quitted the *Dutch* service, and returned to *France*, at a juncture when a man of his abilities was much wanted, and therefore he was caressed and employed^c. The other was Mr. *Marcara Avancin*, a native of *Ispahan* in *Persia*, and nearly allied to several persons of great rank in that empire, as also to some who enjoyed governments, and other great employments in the *Indies*; so that the company had good reason to expect great things from their abilities and experience^d (H).

THEY

(G) At this distance of time we may perhaps be in a condition to discern some errors in Mr. *Colbert's* plan, or rather to point out some defects; but, however, candid inquirers will find it very hard to perceive how these could be otherwise discerned, than from the event; and this being the case, it acquits him of all blame. His foundation was very broad; for he intended that the entire capital of the *French East India* company should have consisted of fifteen millions of livres, of which the crown was to advance nine, and the proprietors six (17). This was a very extraordinary encouragement; for in other countries the public had never contributed any thing except countenance and protection. He apprehended thoroughly the advantages derived to the *Dutch* company from her great establishment at *Batavia*; but it may be he over-rated the benefits he expected from the *French* settlements at *Madagascar*; and yet, patience, industry, and oeconomy, might have gone a great way in justifying even his sanguine expectations. But these were wanting; and, as the whole plan of his company rested upon this plantation, the disappointment was in some degree fatal; and it was a dreadful distress upon a new company to be obliged, as this was, after a great part of the capital wasted, to begin again. Yet, as we see, he did not lose his courage, but concerted a new scheme, in which he shewed vast abilities, and attempted the execution of it with vigour (18). But the obstacles he met with were not to be overcome; the best instruments he could procure were unequal to the undertaking; and other *European* nations were so well established in the *Indies*, that strangers had but little chance of succeeding, even if they had conducted their affairs with the utmost circumspection and frugality, which time and events could only teach, and which even the most penetrating statesmen might not be able to foresee.

(H) The great impediment in the way of this establishment was, the want of proper persons to carry it on; a want, of which Mr. *Colbert* was very sensible, and which he did all that it was possible for him to do in order to supply; and much more than could have been thought necessary, if the event had not shewn, that all he did was to little purpose. He saw that there was a certain spirit in free governments, from which companies received, by a kind of communication, the courage

and confidence necessary to venture on the boldest undertakings. In the place of this he introduced the royal attention and paternal tenderness of his most Christian majesty, who, out of mere affection to his subjects, not only contributed great sums to the original fund of this company, but charged himself from time to time with their losses, that the proprietors might not be discouraged with the disappointments incident to all new trades (19). He understood that in *England* and *Holland*, where there were always abundance of moneyed men and rich merchants there was a kind of an emulation in subscribing at the first setting on foot of their *India* companies. As this resource was wanting in *France*, he had recourse to the royal and ministerial influence, by which the principal nobility, and most opulent persons in the nation, were brought to concur in supporting this design, in order to make their court to those who had it really at heart; and as for those in a mercantile way, who were inclined to espouse its interest, he caused them to be taken into the direction; and, to render this disposition the more general, he imitated the example of the *Dutch*, by setting up several chambers (20). He perceived, that in maritime countries the affection of independency, and the desire of arriving at that power which naturally arises from property, was another strong motive to adventure in such undertakings. He procured, therefore, to balance this, repeated promises that the king would look with an eye of favour upon such as exerted themselves with a laudable degree of diligence, either in the direction or in the service of the *East India* company; and would bestow upon them honours and rewards which should descend to their posterity (21). But whereas the *English* and *Dutch* companies managed their own affairs, and were never at a loss to find proper persons to fill every station, this was a great hardship upon Mr. *Colbert*, who was obliged to search every-where for agents and to take most of them upon recommendation, and this too founded rather upon opinion than experience (22). He was also under the necessity of receiving and encouraging adventurers and deserters, that is, such as gave themselves out to be fit for service, and such as were either rejected, or had quitted the service in which they had formerly been (23). These were but indifferent tools to work with; but they were the only ones he had, and he took

a THEY proceeded accordingly from *Isle Dauphine*, as the *French* call it, and arrived the day *Upon which* before *Christmas* 1667 at *Cochin*, where they were well received, and very respectfully treated *their agents* by the *Dutch* governor; and from thence they continued their voyage to *Swally*, which is the *proceed to settle a factory* port of the famous city of *Surat*, in which they were to erect their first factory*. In 1669 it *at Surat* was judged for the company's service that Mr. *Marcara* should repair to the court of *Golconda*, where he had several particular friends, as well as near relations, in order to obtain, through their interest with the king, the privilege of trading through his dominions, purchasing whatever kind of merchandize they wanted, and employing manufacturers for the service of the company, as also for obtaining a licence to establish a factory at *Masulipatan*. This commission, taken all together, was extremely difficult, more especially as it was known that **b** the *English* and *Dutch* had not been able to procure smaller favours than these, though they had great interest in that court, and had been at vast expence to preserve it; nor was it any secret that their agents would give this *Persian* negotiator all the trouble and opposition in their power; and at the same time he was but indifferently supplied with money, which is as necessary, in such cases, in the *Indies*, as in *Europe*. However, the *Sieur Marcara* undertook very chearfully, and executed very happily, this important negotiation†. It is true, he was a long time about it; and rejected one phirmaund, or letters patents, from his majesty of *Golconda*, in which there were so many great qualifications and restrictions, that he judged they would have been of little use; but in the end he obtained a phirmaund, dated *December* the 5th, 1669, by which the *French* company were permitted to negotiate through all the king's dominions for ever, without paying any duties either inwards or outwards, either for the king's ships, or for those of the company; a privilege which the *Dutch* could never obtain, and which the *English* acquired in 1655 at a vast expence; and after having rendered, for twenty years together, very signal services by sea to the monarchs of *Golconda*. After this Mr. *Marcara* went to *Masulipatan*, caused his letters patents to be registered there, settled a factory; and, in quality of chief, carried on the commerce of the company with the same zeal and diligence that he had shewed in his negotiation‡.

ONE would have imagined, that, after such testimonies of his fidelity, and those too attended *But the Sieur* with such surprising success, the credit of this *Persian* gentleman should have been so thoroughly established, as well with the *French* court as with the company, as to be out of any *Caron soon* danger of suffering from sinister insinuations; and yet it fell out quite otherwise, for his com- *gains an as-* petitor, Mr. *Caron*, having acquired by his intrigues a superior interest there, obtained an *cendency,* *which is no* order from Mr. *Colbert*, in 1671, by which himself was raised to the second post in the *great advan-* *tage to him.* *India* company's service, and all the friends of Mr. *Marcara* removed from their employments, and subjected to prosecutions, though there was not a word said of him in that order, or the smallest mismanagement laid to his charge§. But things wore another face in *France*, where his character was injured by a multitude of aspersions; of which having notice from his friends, he transmitted such full justifications, that Mr. *Colbert*, having thoroughly examined into every thing, and made an impartial report to the king, his conduct was intirely approved, and his innocence acknowledged by a solemn arret. But it is fit that we should likewise shew what the **c** services were which his rival also rendered to the company, and by what projects he so effectually recommended himself to so intelligent and clear-sighted a minister, as to be able, though but for a short time, to abuse his confidence to such a degree, as to bring a person into disgrace who had deserved so well, and whose interest, as well as his experience, was of so great service to the company's affairs, without his giving so much as the slightest occasion for their displeasure, or even for their suspicion¶ (I).

all the precautions possible to render them fit for the purpose. Upon the whole, therefore, it must be granted, that though many of his expedients proved ineffectual, yet they were most of them well imagined and well applied.

(I) We have already mentioned the *Sieur Caron* so often, and said so much of him, that there is no need to enter, upon this occasion, into a retrospect of his character: it is sufficient for our purpose to observe, that tho' his capacity, activity, and experience, raised him very high in the opinion of Mr. *Colbert*, and gained him such a share in his confidence as to give him, from the first, a very honourable employment in the company's service,

and to intrust him at last with the principal direction of affairs; yet this was not done hastily or blindly, but, on the contrary, was accompanied with all possible precautions (24). For Mr. *Caron*, though born of *French* parents, not being a *French* subject born, was obliged to naturalize himself and his children, whom, together with his wife, he brought into *France*, and put into the hands of the government, as a kind of security for his behaviour; and, that he might be also under the strongest tie of gratitude, the king was graciously pleased to give twenty thousand livres by way of fortune with his daughter, upon her marriage with a gentleman of *Normandy* (25). Yet he no sooner came to act abroad, than a spi-

His project of
attacking
Ceylon comes
to nothing,
and, in the if-
su, proves
his ruin.

It is allowed that the *Sieur de Carron* settled the factory at *Surat*, of which the *French* are still in possession, as also that of *Bantam*, upon the island of *Java*, which they held till, as we have shewn elsewhere, the *Dutch* became masters of that kingdom, or rather of the king, and, under colour of his authority, excluded them and the *English*; which, however, happened some years after this gentleman's death^a. The great experience he had gained during the time he served the *Dutch*, made these things easy and familiar to him; but what, without doubt, made him most acceptable to Mr. *Colbert*, was, the scheme of surprizing some of the fortresses in *Ceylon*, and bringing the *French* thereby at once into a share of the spice trade: In this he is on all hands allowed to have had a very large concern, if he was not the original inventor of it; and it must be likewise confessed, that the plan was very well laid. The minister was very desirous of seeing the *East India* company firmly established, a regular correspondence fixed, and rich cargoes brought every year into *France*; for he began to be convinced, that, if this was not speedily done, the last *India* company would be little better than the first; and that as the busy roving spirits of the *French* would not allow them to live long enough in a place to render it fertile, if it was not so naturally, or to accumulate riches if they were not at hand, and, in a manner, to be had for taking up; so, if this project had succeeded, which was supported by a competent force, and they could once have fixed themselves in any part of the island of *Ceylon*, for which it is said they had obtained the consent of the emperor of that island, it would have answered all these purposes, and would have given them a fortress, a port, and a share in the cinnamon trade, at a single stroke^b. But, as we have informed the reader, in treating of the affairs of the *Dutch*, how this affair miscarried, and how the *Sieur Carron* lost his life in sight of the port of *Lisbon*, on his return, it is not necessary that we should dwell longer upon it here, though it is certainly a piece of history that very nearly concerns this subject. By his death it came to be known, that though he had been very zealous and diligent, yet he had not been over-faithful in the management of the company's affairs, but had amassed much wealth for himself, of which the greatest part perished with him, while he was endeavouring to deposit it in a place of safety^c (K).

A resolution
taken by the
company to
quit the Isle
Dauphine,
and transfer
their residence
to *Surat*.

BEFORE this unhappy event fell out, the new *East India* company began to be weary of her establishment at *Madagascar*, chiefly as they acknowledged, through the ill management of those who were placed in authority, and principally intrusted with her affairs; but, in reality, because the country was fruitful, pleasant, and very fit for hunting, and other sports, to which those they sent over intirely devoted themselves, and thought very little of the conditions upon which they were carried thither. The necessaries, the conveniences, and the pleasures of life, were easily to be had; and, in acquiring these, the people thought they pursued their own interests, and would not forego them, or fatigue themselves, in respect to the interests of the company; who therefore desired that the king would resume his gift, which his most Christian

^a TAVERNIER, CHARDIN, LE BRUN, &c.

^b BASNAGE annales des Provinces Unies, tom. ii. p. 457.

^c Journal de Voyages des Grandes Indes, Paris, 1698, 12^o.

it was raised against him by those whom the company principally intrusted; against which he was strongly supported, upon a presumption that this arose chiefly from envy, and from the spite they had against him as a stranger. There is indeed nothing clearer, than that he was the person principally relied on for carrying the scheme of a trade to the *Indies* immediately into execution; and that the court went so far, as to take all the measures possible to force such as were in the *Indies* to pay an implicit obedience to his orders, and to pursue his instructions in respect to commerce in all respects, and to their utmost extent (26). We may well imagine that this extraordinary confidence proceeded from the superior knowledge he had of the whole circle of trade in the east, which he was very able to set in the fairest light, as is evident from those pieces of his which are still remaining; and from which it is also clear, that he had made some overtures about an embassy to *Japan*, for which some have thought, and it may be justly, that, notwithstanding his former residence in that island, he was not by any means a proper person.

(K) It is somewhat difficult to fix the dates relating to this expedition; but there appears sufficient authority to prove, that the *Sieur Carron* sailed on the expedition against *Ceylon* in the month of February 1672 (27). Au-

thors are not exactly agreed what the errors were which he committed in the management of this important business; and yet they are almost unanimous in ascribing the miscarriage of this great design to some mistake or misinformation of his. However that matter may be, he actually embarked for *France* with all his effects, and arrived upon the coast of *Bretagne* towards the close of the year 1674 (28); but whether it came to pass through fear of his enemies, or, as his antagonist *Marcara* asserts, from the consciousness of his own misbehaviour, so it was, that he ordered the vessel to steer for *Lisbon*, where, as the reader is told in the text, he perished (29). By his death the *Dutch East India* company lost a dangerous and determined enemy, the servants of the *French East India* company a man whom they hated and feared, and Mr. *Colbert* a person from whom he had received great lights, and who perhaps might have been of farther use to him if he had lived; for whatever the slips in his conduct might be, there can be no dispute, that, from the experience of two-and-twenty years, in which he had served the *Dutch*, he had acquired a more comprehensive knowledge of the trade of the *Indies* than any of those he left behind him in the *French* company's service, as was evident from the confusion into which their affairs ran after his decease (30).

(29) Mémoires du *Sieur*

a majesty accordingly did by his arret dated *November 12th 1670*^a; and thus, the *Isle Dauphine* being abandoned, the company's chief residence was fixed at *Surat*, where they had new powers and fresh favours granted them by the crown; for all which they were indebted to Mr. *Colbert*, as well as for the exemption from duties of all kinds, and indeed for every thing else that they could ask with any tolerable pretence, in order to encourage and render flourishing, if it had been possible, a commerce upon which he had set his heart^b; and that for no other reason, but because he thought it honourable and profitable for the kingdom, the welfare of which was the object of his ministry (L).

But all would not do; for, notwithstanding these repeated favours, it became every day more and more apparent that their affairs were in a bad condition, and that without some speedy remedy they would fall into absolute confusion. Upon this a general court was called of all the proprietors, at *Paris*, before whom a true state of their concerns was laid; of which, through the interposition of Mr. *Colbert*, a report was made to his majesty, who thereupon issued his declaration, dated *September 13th, 1675*, by which he first directed a dividend of ten *per cent.* to be paid to such of the proprietors^c as had completed all their payments; that, with respect to those who had not completed them, they should have time to the first of *July 1676*; and, upon completing their payments, should have a discount of ten *per cent.*: that the capitals of such as neglected to complete their subscriptions should be forfeited for the use of the company: and, lastly, that whereas, through the losses and discouragements to which all undertakings are inevitably liable, the *East India* company had incurred a debt of no less than four millions, his majesty, according to the promise made in the edict of his creation, discharged that debt, and also forgave freely and for-ever the said sum of four millions advanced for their service^d. This extraordinary generosity of the crown was followed the next year by a new favour, which had come sooner if it had not been opposed by the farmers general, which was, the freeing all merchandize bought at their sales from all duties inward and outward, except those transported to *Lyons*, and even those were to pay only a fourth of the usual duties upon entry, and those of the custom-house belonging to that city. Such was the situation, and such the repeated benefits bestowed upon this company during the ten first years of its subsistence; by which we see, that nothing but the care of the government prevented it from sinking into ruin^e.

d At the close of the year 1681 some private persons having insinuated that they were willing to embark their fortunes in a trade to the *Indies*, provided they might obtain licences; and the company likewise having signified to the king, that it might prove beneficial to them, if they had a power to grant such indulgences; this favour was likewise added to the rest, and private traders were permitted to engage in this commerce upon the following conditions: That they should transport themselves and their effects on board the company's ships, both outwards and inwards: that they should pay their freight and passage before their departure: that the goods they brought home, precious stones only excepted, should be exposed in the company's sales, and their produce fairly accounted for: that these licences should be in force only for five years; and that, if they should be found prejudicial to the affairs of the company, the directors might abridge or cancel them at their pleasure^f. But, notwithstanding these advantages, and though they scarce asked any thing of their patron Mr. *Colbert* but what was granted, yet their affairs continued declining; and, as he died in 1683, the

^a Histoire de la compagnie des Indes, p. 74, 75. Histoire des Indes Orientales, tom. iii. p. 158. ^e La vie de JEAN BAPTIST COLBERT. Histoire des Indes Orientales, tom. iii. p. 150. ^f Histoire de la compagnie des Indes, tom. iii. p. 71. ^g Histoire des Indes Orientales, tom. iii. p. 150, 151. ^h Histoire de la compagnie des Indes, p. 224, 259, 342. ⁱ Histoire des Indes Orientales, tom. iii. p. 158, 159, 160.

(L) This project of abandoning the island of *Madagascar*, which the crown had yielded to them in property, reserving only a crown and sceptre of gold, of the weight of eight hundred ounces, upon the accession of a new king, was by no means agreeable to their patron Mr. *Colbert*; though, at the earnest request of the company, he disposed the king to accept of their renunciation, not doubting that in a short time the company would perceive how indiscrete a step this was, and apply for its restitution. But those who were in the direction of the company's affairs had very different sentiments; they knew, from experience, that their colonies were only a dead weight; and that, notwithstanding all the changes they had been able to make, those intrusted with the management of them preferred their own interest and pleasures to their duty; and, while they expected that the company should do every thing for them, would do

nothing for the company (31): for these reasons, therefore, as we shall see hereafter, they persisted in refusing this island when the property was again offered. But how right soever the directors might be in their notions, which were indeed founded on facts and ample experience, yet Mr. *Colbert* was far from being wrong in his notions, as time has fully demonstrated, and as will sufficiently appear in the course of this chapter. His only mistake was, if indeed it was his mistake, and not Mr. *Charpentier's*, in supposing that *Madagascar* might serve commodiously for the centre of the company's commerce with the *Indies*, as *Batavia* did to the *Dutch*; whereas the securing a post in this part of the world, though it was convenient, and even necessary, yet became so for quite another purpose; and ought rather to be compared with the *Cape of Good Hope* (32), as we shall have occasion to shew at large hereafter.

(31) Histoire des Indes Orientales, tom. iii. p. 162.

(32) Lallier voyage dans les Indes Orientales, p. 17.

spirit of this commerce might be said to expire with him^a. The body indeed of the company was kept up, not much perhaps to its advantage; they had not only a court of directors at *Paris*, but, in imitation of the *Dutch East India* company, chambers of direction at several ports, a council in the *Indies*, and, in short, the appearance and trappings of a great society, when at the bottom they were distressed and poor; so that upon stating a general account in 1684, it clearly appeared, that, instead of gaining one penny by their commerce, they had actually run out one half of their capital. This was attributed to several causes, but principally to three; the war with the *Dutch*, which lasted from 1672 to 1678; the frauds of the persons employed in their service in *Madagascar* and the *Indies*, who, though they were sent by the company, acted as if they had no other business there than to mind their own interests, which they did at the expence of their masters; so that some private fortunes were made, while the concerns of the public were running to ruin; and, lastly, to the supineness, timidity, or inability, of their subscribers, who had not paid in as they ought to have done, to the great detriment of their affairs^b.

^a La vie de JEAN BAPTIST COLBERT, p. 303.

^b Histoire de la compagnie des Indes, p. 73, 74.

S E C T. III.

Various efforts made to restore their credit, and to keep their trade alive, in which they are sometimes assisted by, and sometimes meet with discouragements from, the ministry, which at length induces them to let out their privileges to private persons. The consequences of these licences, which, amongst others, produce a China company, and, upon the whole, turn to very little account, in whatever light they are considered.

To retrieve some degree of credit, it is found requisite to make a change in the company's administration.

TO remedy these disorders, and to retrieve, if possible, the trade of the company, it was resolved to change their system of government, to suppress all the little chambers of directors, and to put the whole management of the company's concerns into the hands of twelve directors residing in *Paris*, who were each of them to pay in thirty thousand livres upon the forfeited actions, and to be allowed reasonable salaries. It was also resolved, that all who had not paid in should forfeit their shares to the company; with a proviso, that if, in two years, they made good their payments, they should enter into their former rights, and have all their actions restored. This regulation was confirmed by a royal edict dated in *February* 1685, by which the king left the company free liberty either to resume the sovereignty of the *Isle Dauphine*, which they had surrendered in 1670, as has been before-mentioned, or to leave it as it then was in the king's hands. As the company were left at liberty to do as they thought fit in this affair, they, after mature deliberation, thought proper to adhere to their last resolution, and to quit this island intirely to the crown; which act of theirs was confirmed by the king's arret, dated *June* 4th, 1686^c.

New directors added to increase the much exhausted fund of the company.

IN the succeeding year eight new directors were added upon a very laudable motive, which was, that of increasing the capital of the company; for they were obliged to pay in ready money forty thousand livres in case they were possessed of twenty thousand of the company's stock, and sixty thousand if they were possessed of none; and these sums, together with those advanced by the proprietors, brought such a supply to the company's cash, that even the most intelligent people began to entertain great hopes, that, after so many disappointments, this commerce would be put upon a solid foundation; and these hopes were not a little augmented by the dividends made in that year, and in 1691, amounting, in the whole, to thirty per cent.; but these flattering expectations soon gave way to presages of another kind, that were better founded, and which were intirely owing to a new strain of politics that prevailed in *France*; whereas hitherto the power of the crown had been solely employed in protecting and advancing the commerce of this company, notwithstanding repeated losses and miscarriages; so now of a sudden, when this trade began to answer in some degree, that very power was employed to distress it; and the consequence was, that it made it plainly appear, that how difficult soever it might be to raise, yet there was nothing easier than for a minister to destroy, a trade by an ill-judged and untimely interposition^d.

When their commerce began to turn in their

IN order to understand this, which is indeed one of the most material points in the history of the *French* commerce, it is necessary to observe, that, finding gold and silver brocades and painted cottons, were goods of the quickest sale, they struck into that branch of trade, by which they were very considerable gainers; and, that they might encourage the artificers of

^c Histoire des Indes Orientales, tom. iii. p. 162, 163, 82, 83.

^d Histoire de la compagnie des Indes, p. 81,

- a their own country, they imported chiefly white cottons, and caused them to be painted after the *Indian* manner in *France*, by which they had the command of the fashions; and, when people began to be tired with one sort of goods, they revived their appetites by introducing another. The demand for these goods being by this means kept up, and continually increasing, the manufacturers in *France* set up a general clamour, that they were sacrificed to strangers; and that, if a stop was not immediately put to the importation of these silks and cottons, they should be all starved. Upon this out came an edict, dated *January 27th 1687*, by which this branch of commerce was prohibited; and it was with very great difficulty that the company procured leave to sell off what they had in their hands, and what might arrive by the next ships; but, what was most extraordinary, they were required to break all their
- b moulds for printing, without considering that this was as much a manufacture for *France* as any other. As to the brocades, they were allowed some little indulgence, which however did but just keep them from sinking; with the assistance of some other favours, which the few friends they had yet left at court, not without much solicitation, obtained. By this instance the reader may see how little safety there is for trade under an arbitrary government, where all things depend at best upon the understanding of a minister, which is a very precarious tenure, and very often upon his caprice, or the influence that he is under; which is the most dreadful situation people can be in who have any property at all ^r (M).

- THESE, however, were but the beginning of their misfortunes; the farmers of the public revenue, who have generally speaking the ears of ministers more at their command than other people, insinuated, that their great idol the revenue was prejudiced by the privileges and immunities granted to the *East India* company; to which though their patrons readily listened, yet they knew not well how to proceed; for, to have gone roundly to work, and abolished these, would have been such an apparent infraction of the original edict, as would have been too glaring even in that country. But the farmers general soon got the better of this scruple, by shewing, that it was easy to enervate laws without repealing them; and furnished them with such a variety of expedients for this purpose, that though the company lost the benefit of their immunities, yet they were not taken away. The next step was, the forbidding the sale of piece goods to foreigners, upon a supposition that, if they could not buy *Indian* manufactures from the *French* company, they must purchase those of *France*; but, as they could not be forced to this, they bought none at all; and, as the company lost her profit, so the nation lost the whole produce of this branch of trade, and were much the greatest sufferers of the two. Then a high duty was laid upon raw silk, of which the company imported about seven thousand weight a year; and, though this produced a great deal, yet that could not prevent an absolute prohibition, under colour that this was prejudicial to the silk of *France*, though in fact the greatest part of it was bought by foreigners for ready money; and thus, by mistaking public spirit, those who were then in power were continually undoing all that Mr. *Colbert* had been labouring to do; and therefore we need not at all wonder, that, after a short gleam of prosperity, the affairs of the *French East India* company wore very quickly a more

^r *Histoire des Indes Orientales*, tom. iii. p. 165, 166, 167, 168.

(M) It would be tedious to enter into an exact detail of all the expedients proposed from time to time by the company, and either accepted or rejected by the minister; the contrivances practised by the merchants and retail dealers, to make advantage of the company's distress, and to constrain them to take back goods at a high price, which had been in reality sold them at a lower; and the trouble they had to procure, by long and expensive solicitations, such temporary alleviations as kept them from totally sinking. All these things ought to have been previously considered, and such exceptions made in their privileges as might have prevented these disputes; for, to erect an *East India* company with full powers, and give the strongest assurances that those conditions should never be violated, and yet prohibit their importing the most saleable goods they could import, was not only inconsistent with the honour of the crown, but destructive of that principle of security upon which all rational hope of seeing commerce flourish is founded (33). There is no doubt that this inconvenience was foreseen by Mr. *Colbert*, and was the true reason why he at the same time erected a *West India* company, and laboured some other establishments, from a well-grounded judgment,

that, without a proper circulation, an *East India* company could not be beneficial to the kingdom. He had just and extensive notions of trade; and whereas his successors had recourse to expedients, he had always remedies in view; so that if this affair had happened in his time, we may fairly presume that he would have conciliated all the disputes between the company, the merchants, and manufacturers; and have procured satisfaction to all, by providing a proper vent for all their respective goods, which was the only effectual method that could have been put in practice (34). For want of this, the *East India* company was hated, cramped in her commerce abroad, and distressed every-where; which sufficiently shews how dangerous a thing it is to confide in the promises made by the ministers of an absolute prince; which those who make them may be often tempted, sometimes forced, to break, and which will be seldom thought, and never can be made binding upon their successors. In such countries, therefore, as trade can never be raised but by the interposition of the government, so it will be continually exposed to ruin from the same quarter (35).

(34) *The advantages of the East India*

gloomy aspect than ever, notwithstanding all the pains taken by the most intelligent persons in the direction to set these points in a clear light * (N).

The great distresses of the company's affairs, notwithstanding all the helps that had been given them.

THE war that broke out in 1691, as it deeply affected the whole commerce of *France*, so it was particularly fatal to that of their *East India* company, which was already in so indifferent a condition as to be scarce able to support itself under the hardships which it suffered at home, without the addition of other attacks from abroad; and those by powers so infinitely superior in force, as to be able to complete, almost as soon as they had formed, the design of its destruction. They lost, as the reader will see hereafter, the only place of consequence they had in the *East Indies*, which they recovered again by the peace of *Ryswick*; but their affairs were then in so miserable a condition, that, though the directors resolved to make their utmost efforts to resume their trade as a company, yet they found that it would be so long before they would be in a condition to bring about what they desired, that they very willingly accepted, in the mean time, a proposal for carrying on the trade to *China* by a private person, under the authority of the company * (O).

A new China company arises out of a licence granted by this company to a private merchant.

THIS was effected by granting a licence, which was likewise confirmed by the crown, to one Mr. *Jourdan*, a rich merchant, who fitted out a very large ship, called the *Ambitrite*, for that voyage, which sailed in *March* 1698, and returned safely to *France* on the third of *August* 1700, very richly laden. The success of this voyage encouraged the merchant before-mentioned, and those who were concerned with him, to fit out the same ship again; and this they accordingly did in the following spring, and she returned in the month of *September* 1703, with as great profit as from her former voyage, though she narrowly missed being

* Geographie Moderne, par ABRAHAM DU BOIS,

(N) There are very few countries in *Europe* where the public revenue is raised in a manner more severe with respect to the people, more inconvenient with regard to commerce, or more expensive as to the crown, than in *France*, where those who farm the public revenue, their substitutes, and under-officers, acquire prodigious fortunes by methods most mischievous to society. While the *East India* company had but little trade, and while Mr. *Colbert*, and his son the Marquis de *Seignelay*, lived, these cormorants could not prey upon that body; for those ministers not only understood, but loved trade, or rather they loved it because they understood it. But when these great men were dead, and the importations of the company for a few years became pretty considerable, these ravenous people became very impatient, and were perpetually teasing the ministry about the injuries done to the revenue. The ministers, whose instruments they were, who had them in continual use, and who could supply no public necessities without them, listened, and indeed could not help listening, to their representations; in consequence of which new difficulties were gradually put upon those who had otherwise but too many difficulties to struggle with, and whose demands were rejected when they were ever so reasonable (36). Instances make these matters best understood, and therefore we shall produce one: The *East India* company had three thousand weight of coffee in their warehouses, for which they had actually paid duty; and they desired the liberty of being allowed to ship one third part of this for *Holland*, where there was a demand for coffee, and to be allowed to replace it duty-free out of their next cargo; which, though in itself highly reasonable, was refused, because the farmers were changed, and therefore it was said that those who were now intitled to the duties ought not to be prejudiced by a transaction in the time of their predecessors (37); and though this might be good exchequer logic, yet it was such a solecism in respect to commerce, that we need not wonder the directors of the *East India* company thought their proprietors hardly treated.

(O) The reader will be certainly surprised at various inconsistencies that are visible enough in the text; such as, that the company should have servants in the *Indies*,

with factories, forts, and garrisons, and yet carry on little or no trade; that they should be continually applying to the court for new favours when the old had produced so little effect; and that, in the course of so many assemblies of the proprietors, the true origin of all these evils should not be traced out. But, to speak impartially, though there might be, and very probably was, cause for some blame, yet both the directors at home, and those intrusted with the company's affairs abroad, rather deserved pity. The major part of the time their establishment subsisted, the crown of *France* was engaged in wars prejudicial to the commerce of her subjects in general, and more especially destructive to those who were embarked in this undertaking. In those short intervals of peace, which gave them time to look about them, they were certainly not idle; and their servants made them very large returns, which brought in immense sums of money at their sales, which might have given them an opportunity of retrieving things, if the proprietors could have been persuaded to have patience, but the sight of so much money excited a desire of receiving dividends which, not to call it unjust while they were in debt, was at least very inconvenient. However, in 1687 and 1691 they made dividends to the amount of thirty per cent. which put it out of their power to send proper cargoes to the *Indies*, where their servants had borrowed large sums, and bought vast quantities of goods upon credit (38). The directors were forced to make use of the same methods at home, the proprietors, who were so ready for dividends, being very backward in paying calls. Add to all this, that the magnificence with which the company set out, and which it was judged inexpedient for her to let fall, absorbed very large sums. Grievous disappointments, debts at a large interest, and bad oeconomy kept on to prevent a suspicion of worse, are principles so naturally productive of declension and destruction, that the reader can no longer wonder the *French East India* company was reduced to great extremity; but will be rather amazed that she was still able to creep on, when nothing came in for the present to their directors, and had no better fund for their future expectations than flattering hopes (39).

(39) Histoire des

shipwrecked,

a shipwrecked, falling down the river of *Canton*, at her return^b (P). The success of these voyages, one would have thought, might have established this new company; but the general war in which *France* was then engaged against most of the princes of *Europe* rendered it impracticable; and thus the actual powers of the company lay dormant again, though she was still possessed of her rights, which extended to the coasts of *China*, *Tonquin*, *Cochin China*, and the isles adjacent; or, to put it in other words, which perhaps may raise more suitable ideas in the reader's mind, the rest of the subjects of *France* were excluded from trading to these places, in favour of a company that never had been in a condition to trade to several of them, in all the time which she had subsisted^c.

While the *China* commerce was thus let out, as it were, in farm, the directors exerted themselves as far as they were able, in hopes of restoring their affairs in the *Indies*, or at least doing something towards it; but, finding that absolutely surpassed their abilities, they were forced to apply themselves to the court in the beginning of 1701; and to confess, that they were again under such difficulties, that, without his majesty's gracious assistance, their trade and establishments must be let fall^d. *Lewis* the fourteenth, who retained the maxims which Mr. *Colbert* had so often impressed upon his mind, lent them eight hundred and fifty thousand livres, upon condition that the directors advanced each 40,000 livres, and the proprietors fifty *per cent.* upon their respective capitals. With this condition the directors complied; but the proprietors, or, as they are called in *France*, the actionists, absolutely refused it; which occasioned a warm and tedious dispute, which was not ended till the year 1704, when the court decided by an arret, that the proprietors should receive the profits, and be liable to the debts, of the company, in proportion to their respective interests in its capital: that a general state of their affairs should be immediately laid before them; and that they should be allowed to chuse a committee of five out of their own body, without whose consent, or at least without the consent of the majority of them, the directors should be restrained from borrowing^e. It does not appear that this had any good effect; for in 1708 they became in a manner absolute bankrupts; so that the king, by an arret, stayed all prosecutions at law against them for debt; and, that the trade to the *Indies* might not intirely cease, granted his permission for the company to enter into a treaty to lease out their privileges, upon the best terms they could, to any private persons who should be inclined to contract with them^f (Q).

In pursuance of this scheme, and the concession before-mentioned, they granted leave to Mr. *Croizat* to fit out two ships in the name of the *East India* company, upon condition that

(P) The historians, who have made the *French* commerce the object of their care, mention several companies for carrying on the trade with *China*; and with these companies it is requisite that the reader should not be altogether unacquainted. The first of these was formed in 1660, chiefly through the care of Mr. *Fermencel*, a very rich merchant at *Rouen*, who associated with him several persons of great rank, upon principles chiefly of piety, as their great view was, to carry over certain prelates, whom the pope had appointed to preach the gospel in those countries (40). The fund of this company was one hundred and forty thousand livres, of which forty thousand were advanced by Mr. *Fermencel*. It is doubtful whether they had any regular establishment, or only a bare licence from the crown; however, the success was so indifferent, that the first voyage they made was likewise the last (41). The second company was erected by virtue of a licence from, or rather a treaty with, the *East India* company, bearing date *January* 4th, 1698, supported by an arret of council dated the 22d of the same month, and produced those two voyages mentioned in the text (42). In consequence of these, letters patents were granted to the proprietors, dated in the month of *October* 1705, by which they were incorporated under the title of The Royal Company of *China*, with the consent of the *East India* company (43). Their privileges determined at the same time with those of this company; and, in consequence of this, two or three ships returned into *France* in the space of eight years; but, as their car-

goes consisted chiefly of silk, they found a prohibition in their way, which disgusted the persons interested in this company so far, that they declined continuing this commerce (44). A third *China* company was, however, set up, by letters patents dated *February* 19, 1713, which was altogether independent of the *East India* company, and was to continue fifty years from the month of *March* 1715. They sent two ships to *China*, one of which returned to *Osford* in 1718, as the other did the same year to *Genoa*. However, in 1719, this, with many other companies, was finally absorbed in that of the *Indies* (45).

(Q) The pretence for obtaining this edict was, the appointment of a general assembly of the proprietors on the first of *January* 1709, in which it was presumed some method might be fallen upon to retrieve their affairs; and this made way for the licences, as well as for another expedient, founded on the favour of the crown, which permitted the company for once such an importation of piece goods as might enable them to pacify the most clamorous of their creditors, and gain them leisure to consider what next was to be done. All these expedients, though at first sight they appear to be marks of bounty and favour in the administration, yet in reality are so many instances that commerce is not natural to this country; and that where so much care is necessary to defend it from ruin, it can hardly ever thrive as in other countries, where the people have a natural turn thereto, and enjoy the blessing of a milder constitution (46).

But, finding that impracticable, having recourse to the former method of granting licences.

he paid them fifteen *per cent.* upon all the goods imported under this privilege, and two *per cent.* upon all the prizes they should make beyond the *Line*; with a farther reservation, that the company might be at liberty to bring home, on board his ships, ten ton of whatever commodities they pleased, without paying freight. It is reasonable to believe, that they found from this expedient some relief, which induced them to extend their project; and, for the preservation of their servants in the *Indies*, who by this time were above ten millions in debt, they sacrificed themselves^a. For, in the year 1712, they entered into a treaty with some private traders at *St. Malo's*, by which they yielded up to them all their privileges as a company, upon the best terms they could obtain; and this with a view to supply such as were employed by them in the *Indies* with sums sufficient to keep under the interest of their debts, and thereby prevent all things from falling into confusion^b. A miserable situation this! and yet the company found themselves unable to undertake any thing upon their own bottom; so that on the expiration of their own privileges, by the elapsing of their term about the time of the king's death, they warmly solicited a renewal of them, not from any hopes of reviving their trade, but purely with an intention to renew their agreement with the merchants of *St. Malo's*, that they might gain so much as might preserve their settlements, and not suffer such as they had employed to be utterly undone in their service^c (R). This naturally leads us to the *Indies*, where we shall resume the history of the *French* affairs, from the miscarriage of their design upon the island of *Ceylon*, down to the same period we arrived at in the history of the company, that is, to the determination of the fifty years granted by the original edict of creation, and without which previous detail what we are now about to relate would have been extremely embarrassed and perplexed, if not absolutely dark and unintelligible.

^a Dictionnaire de commerce, tom. ii. col. 1049.

^b Histoire de la compagnie des Indes, p. 87.

^c Histoire des Indes Orientales, tom. iii. p. 193, 194.

(R) It is not easy to conceive how these merchants of *St. Malo* could carry on their commerce to the *East Indies* with any considerable profit, if we reflect on the many inconveniencies to which they were exposed; for, besides the hard agreement made with the company, they laboured under a variety of restrictions. To mention only a few: the subjects of the *Mogul* made no distinction between them and the *East India* company, the debts of which were so large, that these private traders durst not send any ships to *Surat*, for fear of having their effects seized; they were likewise precluded from sending any vessels to *China*, on the score of the new company erected for carrying on that commerce; and, in consequence of the treaty of *Utrecht*, they were prohibited from sending any ships into the *South Seas*; which was one great point they had in view, and might certainly be considered as

capable of turning more to their advantage than all the other powers that were left them (47). But it seems that all these, and many other disadvantages, were balanced by this favourable circumstance, that private merchants only were concerned in this commerce, and managed their own money and their own affairs as they thought fit; so that they could go on with more vigour and less expence, make whatever changes they thought convenient, and reap all the benefits of the company's privileges, without being subjected to those incumbrances which inevitably attend on public companies under the influence of a minister (48). A lesson that ought to be regarded, and for the sake of which the pains taken in explaining this matter are certainly well bestowed.

(47) Histoire de la compagnie des Indes, p. 87. their contract.

(48) This appears from their not being obliged to throw up

S E C T. IV.

History of the company's concerns in the Indies; manner in which they acquired the town and fortress of Pondichery. Description of that place, and every thing belonging to it; pains taken to preserve and fortify it. Excellent behaviour of those intrusted with the company's affairs in the East, by whom all their possessions are maintained, and some degree of credit kept up abroad, though wholly lost at home.

An account of the company's affairs in the Indies, and in what manner they acquired Pondichery.

IN the very beginning of the year 1674, Messieurs *Baron* and *De la Haye*, directors of the *French East India* company, finding themselves blocked up in the city of *St. Thomas*, with the small remains of that large force which had failed from *France* on the expedition against *Ceylon*, and foreseeing that it would be a thing impracticable for them to hold out long, resolved to procure, if possible, a safe retreat; and, for that purpose, employed Mr. *Martin* to treat with *Circam Landi*, governor of the adjacent country for the king of *Visapour*, who had shewn himself at all times a friend to their nation, for any place that he should judge proper to answer this necessary end^k. Accordingly Mr. *Martin* repaired to *Pondichery*, and found no great difficulty in obtaining leave from the governor to fix there upon reasonable

^k Histoire des Indes Orientales, tom. iii. p. 213.

- a terms. The town of *St. Thomas* being surrendered, the two directors marched thither with their small forces, where they continued to the beginning of *May*, and then left Mr. *Martin* in possession of the place, with a garrison of sixty men, exclusive of those on board the *Vigilante* frigate which remained in the road; intrusting him likewise with the money and effects belonging to the company, which were pretty considerable¹. Mr. *Martin*, considering that this wealth was of no service to him, and the danger to which he might be exposed with so small a garrison, if it remained in his possession, very wisely lent the greatest part of it to his friend *Chircam Laudi*, at the interest of one and a half *per cent. per mensem*; by which he made him his fast friend, and also procured wherewith to support his garrison without breaking in upon the capital. He then wrote an account to the company of his situation; and that, if they had any demand for piece goods, they might be as conveniently furnished from thence with those manufactures, to the amount of two hundred thousand crowns a year, or more, as from any other place upon the coast; which was the most agreeable news at that juncture he could have sent, and suited exactly with the report they had received from their directors at *Surat*: that, considering how small a force they had in the *Indies*, they could not form an establishment any-where more safely or more commodiously than at *Pondichery*; which they were the better able to affirm, as they had taken all possible pains to acquaint themselves with its advantages during the time they resided there^m (S).
- b They had any demand for piece goods, they might be as conveniently furnished from thence with those manufactures, to the amount of two hundred thousand crowns a year, or more, as from any other place upon the coast; which was the most agreeable news at that juncture he could have sent, and suited exactly with the report they had received from their directors at *Surat*: that, considering how small a force they had in the *Indies*, they could not form an establishment any-where more safely or more commodiously than at *Pondichery*; which they were the better able to affirm, as they had taken all possible pains to acquaint themselves with its advantages during the time they resided there^m (S).

- It was for these reasons that the *French East India* company directed Mr. *Martin* to procure that place for them on the best terms he could; with which order he complied exactly. This gentleman obtained from the before-mentioned governor, who first gave him leave to settle there, a licence to fortify and to secure his people and effects in the best manner he could: which he accordingly did, and settled under the protection of his factory a little *Indian* village of about forty houses, in which those who wrought for the company lived quietly and happily. Things had not remained long in this condition before he found his small establishment threatened with total ruin; for the famous *Seva-Gi*, falling with a vast force into that part of the country, endeavoured to overwhelm him, as a dependent upon his enemies. However, Mr. *Martin* supplied by prudence what he wanted in force; and, by a timely application, brought about a treaty, which was managed on his side by an *Indian* prince, whose friendship he had secured, which ended in a licence from *Seva-Gi* to trade in his dominions, for which he paid one thousand six hundred rupees. This was in the year 1680; and he had the year before purchased the territory of the king of *Visapour*, whose inheritance it was; so that now he was tolerably secure, only he was apprehensive that the son of *Seva-Gi*, who was become sovereign of the place by right of war, might take it amiss if he presumed to raise a regular fortification without his consent; which he obtained in 1689, and then put it in a posture of defenceⁿ.
- c This gentleman obtained from the before-mentioned governor, who first gave him leave to settle there, a licence to fortify and to secure his people and effects in the best manner he could: which he accordingly did, and settled under the protection of his factory a little *Indian* village of about forty houses, in which those who wrought for the company lived quietly and happily. Things had not remained long in this condition before he found his small establishment threatened with total ruin; for the famous *Seva-Gi*, falling with a vast force into that part of the country, endeavoured to overwhelm him, as a dependent upon his enemies. - This was a very timely provision; for the *Dutch* began to be extremely disturbed at the flourishing condition of this little colony, and offered very large presents to the *Rajah*, in whose dominions it lay, in case he would dispossess the *French*. But the *Indian* prince, who was also son to *Seva-Gi*, rejected these offers with contempt. He said, "the *French* had fairly purchased that settlement, for which they paid a valuable consideration, and that therefore all the money in the world should never tempt him to dislodge them^o." The *Dutch*, however, resolved to carry their point; and, the war having broke out between them and *France*, they made dispositions for attacking it by force; which they did in 1693, when they came before the place with a squadron of nineteen sail, landed an army of between two and three thousand men, with a fine train of artillery, and six mortars. To make their conquest the
- d paid one thousand six hundred rupees. This was in the year 1680; and he had the year before purchased the territory of the king of *Visapour*, whose inheritance it was; so that now he was tolerably secure, only he was apprehensive that the son of *Seva-Gi*, who was become sovereign of the place by right of war, might take it amiss if he presumed to raise a regular fortification without his consent; which he obtained in 1689, and then put it in a posture of defenceⁿ.

¹ Dictionnaire de commerce, tom. ii. col. 790, 791. ^m Histoire des Indes Orientales, tom. iii. p. 213, 214, 215. ⁿ Memoire dans les archives de la compagnie des Indes, num. 1. ^o Histoire des Indes Orientales, tom. iii. p. 231, 232.

(S) The reader may possibly think what we have advanced in the text invalidated by what we find affirmed, on their own knowledge, by some who have made voyages thither; who complain, that the climate is very indifferent, the soil barren, provisions scarce, the situation on the land side very inconvenient; as the road is open, without defence, and the landing extremely uneasy; from all which they conclude, that it is very difficult to say what the motives were that determined the servants of the company to make choice of this place (49). We have shewn what were their motives; they were in immediate want of a place, and this was the best that could be had. If most of these complaints were well founded,

in 1690, we shall find, from the subsequent account of this fortress, with how much industry and skill competent remedies have been applied; but it must be always remembered in what situation things were when Mr. *Martin* fixed himself here, and how very little it was in his power either to have changed his quarters, or to attempt any great matters; for, many years after he made his residence at *Pondichery*, what he did was indeed very wonderful; and we may certainly ascribe to his prudence, moderation, and diligence, the preserving for the *French East India* company any place whatever on the coast of *Coromandel* (50).

(49) Journal d'un voyage fait aux Indes Orientales, par M. De Quæfne, tom. ii. p. 172.

(50) Histoire des

surer, they applied to the new Rajah, who was not of the same temper with the old one; and, for about twenty thousand pounds of our money, purchased the whole district. They then invested and attacked the place; which, after a good defence, Mr. Martin, who was still director-general for the *French East India* company, surrendered, upon very honourable conditions, on the sixth of *September* 1693, as we have already acquainted the reader in a former section^p (T).

Upon the resignation of it, the director-general Martin put Pondichery into a good state of defence.

This stroke, which seemed to put an end to the company's authority in those parts, proved, in its consequences, the happiest thing that ever befel them. For the *Dutch* were no sooner in possession of the place, than they raised new walls, erected seven regular bastions, and whatever else was necessary to render it one of the completest fortresses in the *Indies*, on account of its excellent situation, and to keep out the *French*. In 1694, upon the conclusion of a general peace, the place was restored to the *French*, who thereby acquired the property of *Pondichery*, and all those fine new fortifications, for so trifling a sum as five thousand pounds, which they paid to the *Dutch* governor upon his delivering up all that he possessed; which probably he would never have done, if he had not been compelled thereto by the orders of the States General, who, as they were great gainers by that peace in *Europe*, would not perplex themselves with the disputes between the two companies^q. As soon as the news of this was brought into *France*, the *East India* company received orders from the government to put that place into such a condition, as that, in case of a second war, they might not lose it as they had done before; and, to enable them to do this, a squadron was sent from *France*, with two hundred regular troops for the augmentation of the garrison, several able engineers, a vast quantity of military stores, and whatever else was requisite to secure *Pondichery* from any future attempts of the *Dutch*. The *Sieur Martin* was again intrusted with the command of the place, which in the space of four or five years he so changed, as that it was scarcely to be known. He not only completed the fortifications according to his instructions, and assembled a good garrison of between seven and eight hundred men, but built one hundred new houses, and laid out a regular plan for a large town, into which, by his own prudence and good management, he drew, within the space of five years, more than fifty or sixty thousand inhabitants; so that in the year 1710 it was become one of the most considerable places in the *Indies* in the hands of the *Europeans*; and, if the affairs of the company in *Europe* had kept pace at all with the improvements made by this gentleman in the *Indies*, the *French* company, in point of trade, might very soon have been in some measure upon a level with their neighbours the *English* and *Dutch*^r (V).

How-

^p Memoires dans les archives de la compagnie des Indes, num. 1. 791. ^q Histoire des Indes Orientales, tom. iii. p. 247. ^r Dictionnaire de commerce, tom. ii. col.

(T) As the preparations for attacking this fortress could not be made without the governor's having intelligence of them so long before the siege began, he took the necessary precaution of sending the women, children, and other useless mouths, to the city of *St. Thomas*, where they were very kindly received, and very charitably entertained, by the *Portuguese* (51). The town was very far from being regularly fortified; or the garrison in any degree of proportion to the force that formed the siege; for which reason, though the governor Mr. Martin had taken care to be supplied with ammunition and provisions, as well as to throw up some new works, yet he did not think fit to let things come to extremities; but, having made such a defence as might justly intitle him to honourable terms, he surrendered upon articles that were for the company's benefit, and to his own credit (52). The garrison was permitted to march out with all marks of honour; vessels were provided to transport them to *Batavia*, from whence they were to be sent into *Europe*; and the governor was permitted to send for his wife and grand daughter from *St. Thomas*, without subjecting their baggage to any search. The governor's conduct was so well approved at home, that he was not only continued in his former employments, but the king was also pleased to honour him with the order of *Mount Carmel* (53).

(V) What chiefly attracted the natives of the country, and more especially weavers, dyers, painters, and other

manufacturers, to settle at *Pondichery*, was, the freedom as well as protection which they enjoyed, and the ready sale they had for their goods. It is true that the *English*, *Dutch*, and *Danish*, had forts and factories at no great distance, where they would have been as welcome, and lived with equal security, but not upon so easy terms, or in such intire liberty. We may in some measure ascribe this mild and equitable administration to the temper, experience, and probity, of Mr. Martin; but we ought likewise to consider, that the *French* were the latest comers, that they were weaker, and that they had a great interest in procuring the natives to settle under their fortresses (54). It may be wondered how they found means to keep the *Indians* employed, and to keep the terms of payment with them in a pretty tolerable manner, notwithstanding the small assistance they derived from *Europe*; but, as their own subsistence, as well as the maintenance of the place, depended intirely on the right management of this point, they chose to act as factors for all strangers that would employ them; and by this means they lived upon good terms with their neighbours, and at the same time kept their subjects busy; and, tho' their profits were but small, yet still they were somewhat; which, to people who had scarce any other dependence, was a matter of such moment, that we may easily account from thence for their exact justice, and all their other good qualities, by which they recommended themselves so strongly to the natives of all religions (55). We may

(52) *Histoire de la compagnie des Indes*, p. 77.
(54) *Memoires historiques sur les rois de Malabar*.

- a HOWEVER, this was so far from being the case, that both this gentleman and succeeding governors were obliged to find means to support themselves; the factory and town by the trade carried on in it, and by the industry of the *Indians* settled there; in which they were so fortunate, that, while the company was daily declining, every thing carried the face of plenty and prosperity there, and none knew or felt any difficulty but the governors and their council, who yet were never tempted to oppress the people with taxes, or to endeavour to make their own circumstances easier by laying part of the load upon others. It is true, that when the town grew too large for the old fortification, it was found necessary to surround it with a new wall; but how clear soever that necessity, and however advantageous to the people, such an improvement might be, yet the governor found it absolutely impracticable to defray the expence without the assistance of the inhabitants. In order to procure this, he acted with equal integrity and caution; for, having first ordered the wall to be marked out, and part of it to be erected at each end, he thereby shewed his people at once the advantages which would be derived from such a fortification, and the expences that would attend it; so that when, in order to complete his design, he imposed upon the inhabitants a capitation tax of two pence a month, they were satisfied as to the end, and the sum raised by this imposition; and therefore, instead of murmuring or complaining, they paid it with the greatest cheerfulness, and gave the governor hearty thanks for the care he had taken of their interest^a. By this the reader may clearly see, that though the *French* pride themselves so much at home on the grandeur and absolute power of their king, and talk in so high a strain of his conquests, yet they affect quite another language in the *Indies*; for they value themselves there upon their justice and moderation, their having purchased the small territory which they possess, their having lived upon good terms with their neighbours, and their establishing so large a town, and acquiring so many thousands of subjects, purely by the equity and mildness of their administration. This fact, which is equally true and strange at the same time, plainly demonstrates, that common sense directs all to think the same way, and that the great difference of opinions, and what we call the temper and disposition of nations, arises purely from accidents in education and government. Independent of these, reason is every-where the same; which shews the reality and certainty of the laws of nature, to which all men return when the influence of power, and other accidental restraints, are removed^b. As we have shewn by what course of events this fortrefs of *Pondichery* is become the chief seat and capital residence of the *French East India* company, it will be necessary to give the reader a more particular description of it.

THE town, then, of *Pondichery*^c is situated in the province of *Gingy*, on the coast of *Coromandel*, in the latitude of twelve degrees north, and in the longitude of one hundred degrees thirty minutes, that is, seventy-eight degrees east from the meridian of *Paris*. It stands at the distance of one hundred yards from the sea-shore, and has nothing more than a road before it, so that they are obliged to carry all their goods in boats for a full league^d (X). The magazines

^a Dictionnaire de commerce, tom. ii. col. 791.

^d Journal d'un voyage fait aux Indes Orientales,

guess in some degree at the consequences of these prudent regulations by the rents accounted for to the company from 1685 to 1710; which, notwithstanding the interruption suffered by the conquest of the *Dutch*, amounted to eight hundred thousand livres (56).

(X) The trouble and danger in landing is much insisted upon by some of the *French* writers of voyages, who differ as to the name of the boats made use of for this purpose; one calling them *Chelingues* (57), and the other *Lingues* (58). The former of these writers describes them thus (59): "Vessels (says he) cannot anchor nearer than half a league to the shore, which is very low, neither is it possible for either shallop or small boat to row with safety nearer than musket shot; because the sea breaks with so much violence, that nothing could save them if they went closer. The black people of the country come to take such as are desirous of going on shore, with their baggage and merchandize, in great flat boats, which are called *Chelingues*, the sides of which are very high. These boats are made of thin planks, not nailed, but barely

"sewed together with cords, without so much as bitumen, tar, resin, pitch, or oakum; so that the water comes in on all sides, and that to such a degree, that passengers run the hazard of being drowned, and goods being spoiled, every moment. I cannot tell why the company have not made a quay, since it would certainly save all the expence of these *Chelingues*, and put people's lives and goods out of danger; for these boats are so very insecure, that two men are constantly employed in throwing out the water with large leather buckets; there is another at the helm, and six labour at the oars; so that the wages of nine men in each of these boats would be saved by the company's being at the expence of a quay. They say, indeed, that all this coast is a quick sand, upon which it is impossible to lay any foundation." One would think this answer might have satisfied the gentleman; but he is, notwithstanding, very positive that a quay might be made; and adds, he would undertake to do it at the hazard of his head. However that matter be, this inconvenience appears to be a common complaint upon this

magazines of the company, and of private persons, are both numerous and magnificent, as far as any thing of that nature can be so. They have a large and beautiful market place, six fine gates, eleven bastions for the defence of their walls, a regular citadel well fortified, upwards of four hundred cannon upon their works, besides a good train of field pieces, bombs, mortars, and other military stores, in their arsenal *. The governor has a very fine house, with convenient offices, and whatever else is requisite for the service or credit of the company. On the west side of the town the company have a fine garden, beautifully laid out into public walks, and whatever else may contribute to the satisfaction and pleasure of the better sort of inhabitants; adjoining to which garden there is a fine house richly furnished, made use of for the reception of foreign princes and ambassadors, who, whenever they resort thither, are treated with infinite respect, and all their expences defrayed by the company; which has been found a wise and useful contrivance, of much more consequence to the interest of their commerce than the expence it occasions †. The other public buildings consist of a large convent of the Jesuits, where they have usually twelve or fifteen priests, who, besides officiating in that character, keep school, and instruct the children of the inhabitants in reading, writing, mathematics, and whatever else may be of use in civil life; for, as to the learned languages, they trouble not themselves about them, and indeed they would be of little service in this part of the world. There are, besides that of the Jesuits, two other convents, but not so considerable by any means as the former, which is the case throughout the *Indies* ‡ (Y).

The great extent, yet exact regularity, of the place, with the number of houses and people.

THE houses of the town are as regularly laid out as if it had been all built at once, though it is now near four leagues in extent. The *Europeans* build with brick; but the *Indians*, and other nations, use only wood, in that manner which we call lath and plaister; for the latter they have the best in the world, which is composed of all sorts of shells ground to powder, and wrought up into a kind of paste, which, when exposed for some time to the air, becomes altogether as white, and almost as hard, as stone. These houses are one story only, and are usually eight yards in front, and six in depth; and yet fifteen or twenty people live in them. They are but very indifferently lighted, so that it is not easy to conceive how they are able to dispatch their business in them. Their roofs are all flat, for the conveniency of lying upon them, which they do almost naked, agreeable to the custom of the country; for *Pondichery*, lying in the torrid zone, is extremely hot, though the climate is found by experience very

coast, as the reader will see from what Mr. *Lockyer* has said on the same subject with respect to the *English* settlement at *Madras*, or *Fort St. George* (60): "Here being a very high surf, which sometimes breaks a great way from shore, our *English* boats are of no use for landing or shipping off goods. For this end, therefore, they have *Mussoolas*, large flat-bottomed ill-shaped boats, not nailed as ours, but sewed together with coyr-twine, whence they are so pliable, that the planks never start with the most violent shocks: their hire is six *Fanbams*, or eighteen pence a trip; but the company has seven boats *per Pagoda*, which is thirty-six *Fanbams*, and is money dearly earned, two or three turns a day being the most ten fellows can make; however, they are merry birds, howling out an *Ela*, *Yela*, as chorus to their songs, at almost every stroke." The reader will be hereafter informed in the text, that, supposing it possible to remedy this inconvenience at *Pondichery*, it is doubtful (at least in her present circumstances) whether the *French East India* company would think it expedient.

(Y) It cannot but be agreeable to the reader to be informed of a very singular act of dexterity, by which the Jesuits preserved this noble convent of theirs at the time *Pondichery* was taken by the *Dutch*, though they very well knew, that, by saving this edifice, the place must be lost (61). The church of the Jesuits was seated on an eminence that overlooked the citadel; and it was therefore easily foreseen, that, when once the enemy became masters of this place, *Pondichery* must soon fall into their hands. The governor posted as many men as he could spare on this important spot for its defence, and likewise directed the church to be undermined, that, if the *Dutch*

became masters of it, it might turn little to their advantage, and nothing to his detriment. The place, as he foresaw, was very soon attacked; the officer who commanded, and most of the men that were there, killed in its defence, after which the *Dutch* presently took possession. The business then was to spring the mine; but, to the amazement of the governor, the powder would not take fire. The soldier who was sent on this service applied the match over and over to no purpose; and at length threw a small quantity of dry powder he had with him upon the train, which scorched his face and his hands when fired, but without producing any other effect; the powder being so thoroughly mixed with oil, that it was impossible it should take. The success of this contrivance to save the church, obliged the governor to surrender. The suspicion fell strong upon the Jesuits, and it was soon reduced to a certainty; for the very person they employed, and who fled for fear of discovery, returned after the *Dutch* became masters of *Pondichery*, and had restored this church, at the request of the reverend father *Tachard*, to its original owners; by which the whole secret came out. The same reverend person, returning soon after to *France*, acquainted the ministry with the whole affair, magnifying the detriment the public had sustained from the method taken to save this building; but at the same time he was pleased to give the credit of this contrivance to the *Capuchins*, whose church he affirmed it to be; but unluckily the superior of that order returned likewise, and set the whole affair in its true light, as we are informed by an author whose veracity is above suspicion, and who has been a confessor, and almost a martyr, to the arts of these exquisite politicians.

- a wholesome. One thing is very singular ; and this is, that it never rains, except seven or eight days, at the most, towards the end of *October*, which falls out constantly and regularly, and is therefore the more extraordinary^a. The native *Indians*, or, as they are called here, *Gentiles*, or *Gentoos*, are most of them weavers or painters ; and, though the best workman cannot earn above two pence a day, yet upon this he is able to subsist himself, his wife, and his children, their principal food being rice boiled in water, or wrought up into a paste, and baked upon the coals. The adjacent country is extremely well cultivated, and produces rice in abundance ; so that there is hardly a place in the *Indies* of greater plenty, or where they have flesh, fish, and fowl, on more reasonable terms ; and this notwithstanding they have no other water than what is derived to them from the overflowing of the *Colram*, and other great rivers, which
- b they preserve in lakes or ponds, and draw it for use through their plantations in artificial canals, after the same manner as in *Egypt* (Z).

THE governor, who is also director-general for the company, as he is lodged in a fine palace, so, on all public occasions, he makes a figure suitable thereto in every respect. He has twelve horse guards clothed in scarlet laced with gold, and an officer, who has the title of captain, commands them. He has also a foot guard of three hundred men, natives of the country, called *Peons* ; and, when he appears in public, he is carried in a palankin, very richly adorned with gold fringe. But all this pomp and state is displayed only on proper and particular occasions, upon the receiving of princes or ambassadors ; at other times his guards are employed in the necessary service of the company, and earn to the full the wages they are

c paid ; for there are very few settlements better regulated than this, which the reader will more easily believe when he is told, that, according to the last account taken of the inhabitants of this place, there appear to be in it no less than one hundred and twenty thousand Christians, *Mohammedans*, and *Gentiles* ; a thing altogether incredible, if the fact was not supported by testimonies not to be disputed^b. There cannot be a place better situated for trade than *Pondichery*, being in the midst of the *European* settlements on the coast of *Coromandel*, and having all the *Bay of Bengal* open before them ; so that the company's magazines are full of all the commodities and manufactures not only of the coast of *Coromandel*, but of other parts of the *Indies*, as *Bengal*, *Surat*, and the coast of *Malabar*, as also of such as are imported from *Persia*, and the coasts of the *Red Sea* ; and here likewise are their warehouses for all sorts of

d *European* commodities, which are conveniently transported from thence, as occasions require, to the several markets in the *Indies*^c. The staple trade, however, of the place, is esteemed to be piece goods, of which the finest are made in the neighbouring kingdom of *Golconda*, and the best painted here ; they likewise have great quantities of silk raw and manufactured, gold and silver brocades, perfumes, spices, and diamonds, in which they are said to have made a great progress of late, and for which it is certain they are very conveniently situated, as being at a small distance from the finest mines in the *Indies*, and by having amongst them persons as well skilled in jewels as any in the world (A). The *French East India* company, therefore,

Magnificence of the governor on particular occasions, and the manner in which commerce is carried on from thence thro' the Indies.

^a Lettres edifiantes, tom. xv. p. 19. Histoire des Indes Orientales, tom. iii. p. 250. ^b Memoires dans les archives de la compagnie des Indes, num. 1. ^c Dictionnaire de commerce, tom. ii. col. 750. Memoires dans les archives de la compagnie des Indes, num. 1.

(Z) The reader has seen, that, when *Pondichery* was first in possession of the *French*, great complaints were made of its wanting almost all the conveniencies of life, and even those two great necessities bread and water (62). However, the complaints were a little louder than they need have been, since there is actually a river that runs through the town ; and, though the adjacent country be naturally barren and sandy, yet, through the industry of the natives, assisted by the skill of *European* engineers, water is so copiously and equally distributed, that they raise vast quantities of rice and great plenty of fallading : abundance of *Indian* fruits and *European* vines are cultivated there with such success, that they bear twice a year ; and, though it must be allowed that the fruit does not come to such full perfection as to admit of making wine, yet the grapes have a good taste, and are very wholesome and refreshing (63). The large account which we have given in the text is extracted from a memorial sent to the *French East India* company, which is allowed to be very exact by those who have visited that

fortress lately (64). We must also consider, that different countries and climates demand quite a different manner of living ; and it is in furnishing what is necessary and convenient for that way of life which best suits these, that plenty really consists ; for to expect what would be so in *Europe* upon the coast of *Coromandel*, is absurd and unnatural, and therefore those who visit such places, in a voyage to the *Indies*, stay there but a little time, and are unacquainted with the manners and customs of the place, are by no means proper judges (65).

(A) The finest diamonds in the *Indies* are found in the kingdoms of *Visapour*, *Golconda*, and *Bengal*, from all which the *French* settlement of *Pondichery* is at about an equal distance, which does not exceed an hundred leagues. The most common method at coming at these precious stones is, by purchase from the natives, who bring them with great secrecy to those in whom they have a confidence ; but seldom, if ever, above one stone at a time, which they sell as dear as they can (66). It is said that great caution is requisite in dealing with these people,

(62) Journal d'un voyage fait aux Indes Orientales, par Du Quesne, tom. ii. p. 162—165. (63) Histoire des Indes Orientales, tom. iii. p. 251, 252. (64) Voyages dans les Indes Orientales, par Lullier, &c. (65) The reader will discern the truth of this by comparing books of this kind with each other. (66) Bernier, Tavernier, Lullier, &c.

therefore, can neither be blamed for the choice of their residence, which, all things considered, is the fittest for them of any in the *Indies*; or for the pains and expence they have bestowed about it, amounting, in the whole, about forty years ago, to about eight hundred thousand livres, or forty thousand pounds sterling. Since they have rendered it so strong and so commodious, that it may easily drive ten times the trade they ever had in this part of the world ^a.

The great inconvenience of wanting a port, and how this is in some measure balanced. ONE disadvantage it has, and that too very considerable, which is, the want of a port, for there is, as we have more than once observed, only a road before *Pondichery*, and that none of the best, the flux and reflux of the sea is not above a foot or two at the most, the landing very difficult and troublesome, ships not being able to come within a less distance than half a league of the place; so that every thing with respect to lading or unlading must be performed by boats always, with much trouble, and very often not without danger: yet even this situation, or rather this disadvantage in its situation, was very serviceable during the time that the *Sieur Martin* was director-general there; since, if the landing had not been both difficult and dangerous, the place, no doubt, had been taken and demolished in the last general war, during the reign of *Lewis XIV.* as well as in the first, or battered or bombarded by the *English* and *Dutch* fleets, if that had been practicable. For we must put the reader in mind, that, notwithstanding we have proceeded in the description of *Pondichery* almost as low as the present times, that we might shew its augmentations and improvements at one view, yet we are advanced in our history no farther than the beginning of the present century, at which time the sovereign council of the *Indies*, as it was called, was suppressed at *Surat*, because indeed it could subsist there no longer, and that swelling title conferred on those who had the direction of the company's affairs at *Pondichery*, which was made the seat of the director or governor-general of the *French* company by letters patent dated in *February* 1701, by which the factories of *Ougli*, *Ballezor*, *Kasumbazar*, *Cabripatan*, *Masulipatan*, and others, in the kingdoms of *Bengal* and *Golconda*, were put under its direction, which, though it might seem an augmentation of honour and power, was in truth a new burden upon those who had the management of the company's affairs for above twenty years ^c.

How the governor, garrison, and the company's servants, supported themselves in this place. IN this space of time, as the reader has already seen from the history of the company, her affairs were continually declining from bad to worse, so that it is really matter of amazement how the servants of the company contrived to keep so many places as they did, not only with very little but almost without any assistance. The cheapness of the country, and their entertaining for the most part natives in their service, was a great help; to this they joined what little trade they carried on to the adjacent ports in the *Indies*; they likewise availed themselves, in their distress, by making up cargoes for the *English* ships, who bought without scruple where they could have them cheapest; then came the private traders with the company's licence, whom they also supplied: but all these contrivances could not keep them out of debt, or even help them to sums sufficient to keep down their interest, and thereby preserve some little credit to ^d

^a Dictionnaire de commerce, tom. ii. col. 61, 62.

^c Histoire des Indes Orientales, tom. iii. p. 182, 183, 184.

with whom civility will do much, but flattery nothing at all, the *Banyan* merchant esteeming complaisance a shrewd sign of insincerity. It is requisite to make a hard bargain, and not to give a good price, in hopes of being better used another time; for the *Banyan* will deal always upon the same foot, and, rather than sell an *European* cheaper than he did before, will find another chapman (67). These stones are sold for ready money, and of the newest coin. A fair reputation is the best method of attracting *Indian* merchants, who never deal but with those whom they esteem to be men of probity. We are told that the *Jesuits* drive a greater trade in jewels than either the *English*, *French*, *Dutch*, or *Danes*; and it is very positively asserted, that, using the dress, the language, and the customs, of the *Banyans*, they frequently travel to the diamond mines with them, and make large purchases upon the spot (68). It may seem a little strange how these reverend fathers get their stones to *Europe*; but, with respect to this, we have a very singular story from a man of honour, and of their own communion, which will at once instruct and entertain the reader. These reverend persons, conforming to the mode of the country, wear the *Portuguese* shoes, with large wooden heels; and it so fell out, that a *Moor*, whom they had converted at

Surat, in a pious fit of humility, was very desirous of cleaning these holy mens shoes; but, being apprehensive that the fathers would not permit it if he had desired their leave, he with great secrecy took away two pair of shoes; and, retiring to a private place, fell to rubbing them very assiduously. He had not been long at his labour before he heard something rattle in their heels, which the poor superstitious creature took for an evil spirit; and roared out so violently, that the *Portuguese* came to see what was the matter, to whom he told his story; upon which this old Christian, who was better acquainted with the *Jesuits* than the *Moor*, ripped off the heel-pieces, and took out four neat iron boxes, made exactly in the form of wooden heels, in which were twenty rough diamonds of great value. The reverend fathers, being informed of what had happened, applied themselves to the *Portuguese*; and, partly by threatening him with the inquisition upon his return to *Goa*, partly by good words, and a reasonable present in ready money, recovered their diamonds; but the *Moor* made such a noise about the iron boxes and flint stones, as he took them to be, that all the traders of *Surat* were let into this secret, and the *Jesuits* in all probability obliged to have recourse for the future to some new invention (69).

(67) *Instruction pour le commerce des Indes Orientales*. p. 52.

(68) *Basnage annales des Peres de l'Ordre de S. J.* tom. i. p. 125, 126, 127.

a serve them upon emergencies ; infomuch that they were pitied by the wiser and better sort, and laughed at and contemned by the generality of the rest of the *European* nations, who saw with no small satisfaction how mean a figure the *French* made in the east, and with what inexpressible trouble they kept up factories that turned to no manner of advantage ^f.

But this, however, is very remarkable, that the company, which had been plundered and abused while she had funds, and was able to send supplies, was now served with great integrity, and with all imaginable diligence, when there was no other reward to be hoped for than fair words, and ample acknowledgements of their honour and fidelity. It is also worthy of notice, that all this time the town of *Pondichery* was gradually increasing, and, from four or five hundred inhabitants, came within that period to have between seventy and eighty thousand, merely from the mildness of the government, and the personal virtues of the *Sieur Francis Martin*, the founder of this settlement, and who lived to see it, and all that depended upon it, in a flourishing condition, while himself and his masters would have thought it a great felicity to have been barely even with the world, and not worth a groat. Some expectations, no doubt, they had upon the peace ; but when they found that this produced nothing, and that it was not altogether certain whether the company had interest enough to procure a longer term, we may very reasonably believe that they lost all hopes, and began to apprehend that they should be abandoned in the same manner that some of the *Portuguese* colonies were, when the affairs of that nation fell into confusion ^g.

An extraordinary instance of probity in those who were then intrusted.

c But as the seeds of destruction are often sown, and take deep root, in the time of apparent prosperity, so penetrating people, and those who are allowed to be the most capable judges of things of this nature, have been of opinion, that the *French* commerce had never lifted its head again in the *Indies* but for certain advantages which accrued to the company in this time of her humiliation ; for, as they never had any power, from the time of their settling at *Pondichery*, but what was produced by their address, this hindered that fierceness and haughtiness from appearing which quickly renders the *French* nation suspected, and in process of time insupportable, in foreign countries. By their remaining so many years in this depressed condition, which obliged them to study the tempers of different princes, and the disposition of various nations, they really acquired a settled habit of affability, moderation, and equity. They shewed all possible respect to the *Indian* kings and princes, their neighbours, and to all their great officers who came into those parts with forces ; by which they obtained the friendship of all, and very singular marks of esteem from some of them ^h. They frequently did good offices both to the natives and to the *Europeans*, by which they acquired the good-will of the former, and softened the resentment of the latter ; who, making use of them in their factories, as agents and brokers, not only forbore giving them any disturbance, but also gratified them for their services. They protected the people who had settled under the fortrefs of *Pondichery*, the works of which they were continually improving, and kept parties constantly abroad to scour the roads from the banditti, mairauders, and other plunderers, with which the country was infested ; and by this means attracted a sober, harmless, and industrious race of people, to settle in their territory, where they were sure of enjoying in peace the fruits of their labour, though that seldom rose higher than a bare subsistence, with which, however, they were easy and contented ⁱ.

How many and great advantages accrued to the company from this circumstance.

By this manner of living in the *Indies* for the space of full fifty years they attained, and that very deservedly, a fair reputation, their fortrefs and their vigilance securing them from surprises or oppression, as their poverty defended them from envy, and their politeness from those insults to which otherwise that would have exposed them. Yet these were but inconsiderable benefits in comparison of that knowledge they acquired of the interior part of the *Indies*, by the facility which their intercourse with the natives gave them in passing from one court to another ; so that in this space of time there were multitudes bred up amongst them who had a more perfect acquaintance with the inland traffick, the places from which the richest goods came, and where the best manufactures were made, than could possibly be obtained by those who resided always in their own settlements, and who had not either the opportunities or the temptation to undertake any such new journeys ^k. By this means likewise many in quality of itinerant merchants and jewellers found means to pick up small fortunes ; and, returning into *Europe* on board the *English* or *Dutch* ships, became afterwards the instruments of that private trade which was carried on by the company's licence at *St. Malo's*. All these, though circumstances very little considered at a time when the company's affairs were so low that they were constrained to lease their privileges to save their servants from starving, yet contributed

Who by this conduct gain a very high reputation with the inhabitants of the country.

afterwards to carrying on the affairs of their trade with more ease, less expence, and consequently larger profit, than any other nation trading to the *Indies* (B).

Of what consequence perseverance is in points of this nature to a nation.

BEFORE we part with this subject, it may not be amiss to observe of how great consequence perseverance is in a concern of this nature. The *Portuguese* came into the *Indies* with a small force, which quickly became superior to any thing that could be opposed to them; so that, using the advantages that conjuncture gave them, they became as it were at once lords of the *Indies*. The *Dutch*, driven by despair, and having chiefly the spice trade in view, fell upon that part of the *Portuguese* settlements where they were weakest; and the rich cargoes which they carried home to a country where many had money, and many more had none, but were willing to do any thing to get it, easily excited that spirit which bore down all before it, and established a sovereignty in the *Indies*, vastly greater and richer than their possessions in *Europe*^a. The *English* trade was carried on in a middle way, without any tincture of the *Portuguese* haughtiness, or the *Dutch* selfishness. All these nations, when they came thither, had been for some time used to trade, and were well able to be at the charge of the first establishments. But it was otherwise with the *French*; they came last, when the trade of the *Indies* was almost engrossed by other people, who had wealth and experience on their side; found great difficulties in fixing themselves at all, and, when fixed, found little support from home: yet, by bearing with and struggling against these difficulties; by long-sufferings, and a resolution to remain there as long as it was possible, which, by the practice of a variety of expedients, they rendered practicable, not only contrary to the expectations of others, but perhaps also of their own; they have carried their point; which shews, that there are no obstacles that patience will not overcome, and no nation but what may be taught patience, since certainly that is not among the number of virtues for which the *French* are famous (C).

^b Testament politique de Mons. DE LOUVOIS, p. 439, 440.

^c SIR WALTER RALEGH's discourse on the invention of

(B) This humour of travelling from place to place, and endeavouring to recommend themselves to such as are at the head of public affairs, where-ever they come, is very natural to the *French*, and has been also very useful to them, notwithstanding it has been ridiculed under the notion of levity and vanity by some of their neighbours. It is in consequence of this disposition that they make a greater progress, and gain a better footing, in almost all countries where they come, than any other nation. It is a proof of this that some of the best descriptions, and most accurate accounts, that we have of the *East Indies*, were written by *Frenchmen* who went thither in a private capacity, and chiefly with a view to make their fortunes. It is from the same turn of mind that we find them so ready to embrace settlements of any kind, posts either civil or military in the courts of eastern princes, which makes them and their nation better known to many of these little potentates than any other. While the kingdoms of *Vijapur*, *Goconda*, and *Bengal*, subsisted, there were always *Frenchmen*, or at least persons in the *French* service, that were residents in, and had considerable interests with, these courts (70); and, since they have been swallowed up by the power of the *Mogul*, the *French* have taken care to maintain the like correspondence with his nabobs, and have besides very assiduously cultivated a friendship with the *Indian* rajahs, or princes, great and small, dependent or independent of that empire; which has turned highly to their advantage, as the reader will see in the sequel of this chapter, and as indeed we are continually taught by the advices we receive from those countries (71).

(C) The great and enterprising Mr. *Louvois*, whose

work we have cited in support of what is advanced in the text, thought apparently in this way; and, though he did not live to see any very great points achieved either in the *East* or *West Indies*, yet he ventured to foretell the king his master, that the *French*, by their perseverance, would carry their point at last, and distinguish themselves in commerce as well as in negotiations and war. He acknowledged that this prophecy might very possibly expose him to be laughed at whenever it came to be known; but, notwithstanding this, he was positive, that, in process of time, those that laughed would find their mirth spoiled by his countrymen, who would attempt and succeed in overturning the settlements, and encroaching on the dominions, of other powers in *Asia* and *America* (72). He confesses that to his time they had not been very fortunate in these endeavours; but he comforted his master and himself with observing, that these are enterprises which are seldom prosperous in the beginning; and compares the progress of a rising naval power to that of a strong man walking upon a bad road, where though he may often trip, and sometimes fall, may find himself embarrassed in craggy paths, and forced to bear scratches and blows in passing through thickets and close woods, yet, keeping up his spirits, and pressing on, stopping now-and-then to take breath, and keeping the issue of his journey ever in his mind, he will sooner or later overcome all difficulties, and reach the place which he is bound. These suggestions and reflections of a *French* minister, who died so long ago (73), as *July* 16th, 1691, are not a little extraordinary, and the reader cannot well doubt that they have made a very strong impression upon his successors.

(73) Histoire

S E C T. V.

The state of the company's domestic situation at the time of the demise of Lewis XIV. On what terms, and with what views, the regent duke of Orleans took up the concerns of this, and other companies; and what were the real ends proposed by that consolidation to which he gave the sounding and specious title of the UNION, that a revival of credit might in some measure result from the name.

- ^a **W**E must now return again to *France*, from the history of their difficulties abroad to that of their endeavours at home. Upon the demise of *Louis* the fourteenth, the founder of this company, and their kind protector and patron, thro' his whole reign the administration of affairs devolved upon, or at least was assumed by, the duke of *Orleans*, with the title of regent; a prince of great parts, and who, at his entrance on the government, affected whatever might procure him the character of being a lover of peace, a friend to the people, and the guardian of commerce. To him, therefore, as was natural, the distressed company applied for an additional term; the renewal of their privileges in that state in which they stood, was all that they desired; to have them augmented, was what they never hoped; for though, before the death of the king they had obtained a prolongation for ten years, to be accounted from the first of *May* 1715, yet this, like most of the royal favours they had received, was of very little use, since they had no funds left for carrying on their commerce; and, besides, the new term was so short, that it added very little to their credit at home or abroad. It was from the duke regent that they expected more solid assistance, and such helps from the treasury as might enable them to revive their trade. But the regent and his ministers were in sentiments quite opposite to those the company had flattered themselves with; and, instead of being at all inclined to part with money for other people to employ in trade, they were contriving how to make use of the sound and reputation of commerce to fill the king's coffers, to pay off the debts of the crown, and to discharge the loads which lay on the government, and upon the shoulders of the nation, by that series of contrivances which are still known in *France* by the name of
- ^b THE SYSTEM.
- ^c **THE SYSTEM.**

- It was with this view that the regent shewed so much favour and kindness to the *West India* company, and established its capital at one hundred millions, and thereby procured an opportunity of lessening that immense quantity of incumbrances which the long war had made necessary. But when the *East India* company came to represent the condition they were in, and sue for assistance, they soon found that they had to do with those who understood their affairs as well as themselves; and therefore, instead of governing them, as they had done former ministers, they were forced to put themselves intirely into their hands, and trust to their generosity and discretion. The consequence of this was very probably what they had not foreseen, since it proved to be the dissolution of the company in effect, by uniting them with that of the *West Indies*, which also swallowed up others; and this with a view of immediate benefit to the government, and perhaps a remote prospect to the advantage of the *East India* commerce, the state of which was now laid open to the very bottom, and the whole brought to public view, that the world might be induced to believe the squandering such large sums, the feeble progress, and at length absolute decay, of their traffick, was owing to mismanagement; which being corrected, a correspondence with the *East Indies* might become as beneficial to *France* as it evidently was to *England* or *Holland*. If we consider this revolution in the company's affairs, and the dissolution of their privileges, in a strict and absolute sense, we must look on the new establishment as the fifth *East India* company erected in *France*; but if reflecting upon other circumstances, such as carrying over the effects and debts of the old company to the new one, and some other particulars that will be hereafter mentioned, we are content to receive it in a more restrained acceptation, then it will be no more than a continuance of the old company, or at most a revival (D).
- ^d of the *West Indies*, which also swallowed up others; and this with a view of immediate benefit to the government, and perhaps a remote prospect to the advantage of the *East India* commerce, the state of which was now laid open to the very bottom, and the whole brought to public view, that the world might be induced to believe the squandering such large sums, the feeble progress, and at length absolute decay, of their traffick, was owing to mismanagement; which being corrected, a correspondence with the *East Indies* might become as beneficial to *France* as it evidently was to *England* or *Holland*. (D) In the latter part of the reign of *Louis* the fourteenth, when the public revenues of *France* were anticipated for several years; when the debts of the state were swola so high, that new denominations were introduced into the computation, and they reckoned not only by

millions, but milliards; and, when the wisest men thought all things most desperate, Mr. *Desmaretz* had the direction of the finances, who had been the disciple of Mr. *Colbert*, and, which posterity will hardly believe, found means, to the very death of his master, to maintain something

In the pre-
amble to the
edict of
UNION, the

THIS edict of UNION extinguished the title of both the *West* and *East India* companies, as well as of the rest of the societies comprised therein, and gave to the whole the comprehensive title of the company of the *Indies* (E). In the preamble of this edict we have a succinct

^r *Histoire des Indes Orientales*, tom. iii. p. 195, 196, 197.

like public credit. But, on the king's demise, he withdrew, and left the direction of all things to those enterprising spirits which the duke regent brought into employment (74). The first great measure they struck out was, a kind of political inquisition, by which all who had interfered in any manner with public money were called to a most rigorous examination; the very fear of which deprived many of their senses, and some laid violent hands upon themselves: yet, after all, this flaming tribunal produced nothing more than confusion, and the regent was forced to have recourse to milder methods (75). At this juncture Mr. *John Law*, a native of *Scotland*, who, by the exercise of his great abilities, had raised a considerable estate, offered his service; and proposed, with many improvements, a project which he endeavoured to set on foot in his own country twelve years before. His scheme was accepted; a new establishment erected, and prodigious quantities of old securities, being liquidated, were discharged by bank bills; which, in consequence of that establishment, and his management of it, had such an effect as could scarce have been expected. The *Mississippi* company, of which we shall speak particularly in the succeeding note, was next erected, which by degrees was to be charged with the whole foreign commerce of the kingdom, and the cash of this company was to be kept by the bank. This, in few words, as a very able writer well observes, explains the theory of the system, which was so much magnified by the creatures of power, that, when this new company changed its title for that of the *Indies*, with an augmentation of its capital, the new actions sold for one thousand and forty *per cent.* and the old ones for eight or nine hundred *livres* more (76). Mr. *Law* was comptroller-general of the finances, director of the bank, and inspector-general of the company of the *Indies*, so long as the rage of stock-jobbing prevailed; but when the bank-bills lost their credit, and the actions of the company began to decline, he was obliged to leave the kingdom privately, after losing all his places. This rotation of things happened between 1717 and the close of 1720 (77). There is no doubt that the principal, or at least primary view of the court, was, to free themselves in some measure from that load of debt which it was impossible to discharge; and, when this was in some degree effected, messieurs *Paris*, and other antagonists of Mr. *Law*, contrived, as the reader will see in the text, the gradual delivery of the company of the *Indies*, and the establishing its trade upon a regular and practicable basis. We have in this note anticipated much of the succeeding history, in hopes of rendering so complicated an affair in some degree perspicuous.

(E) All the *French* authors of any degree of eminence, who have written upon the subject of commerce, acknowledge the famous cardinal *de Richlieu* for its founder, and the celebrated *Colbert* for its restorer (78). The cardinal had countenanced several undertakings for carrying on and improving the *French* commerce on the coast of *Africa* and the *West Indies*, none of which had any tolerable degree of success, that is, they were very far from turning to the profit of those who were concerned in them, notwithstanding all the privileges, immunities, and encouragements, they received from the crown; so that to the eyes of the generality of mankind, and even to the greatest part of speculative politicians, they seemed

but so many commercial illusions. But to the penetrating view of *Colbert* they appeared in quite another light; for he clearly discerned that it was to these illusions *France* owed the possession of those dominions which she had in different parts of the world; and though these were but very small and inconsiderable, yet he judged the preservation of them to be a point of great importance; and it was this that induced him, at the same time that he set up an *East India* company, that is, in 1664, to set up a *West India* company also, in hopes that the time was come in which the *French* might make as great a figure in foreign commerce as their neighbours (79). But as the foresight even of the wisest men is far from being infallible, to this *West India* company came to nothing; and the like issue attended many other new companies, some of lesser, some of larger extent, that were set up with plausible appearances, and continued from time to time, with such alterations as were judged requisite, and which, notwithstanding they were well contrived, and wanted no assistance the ministry could give, yet proved in the end feeble and ineffectual (80). In the mean time, however, by the assistance of some or other of these companies, several establishments were made on the coast of *Africa*, the *French* colony in *Canada* preserved and augmented, several islands in the *West Indies* settled, a part of *Hispaniola* or *St. Domingo* reduced, and at length a new establishment formed on the famous river of *Meschaussi* or *Mississippi*, that is, in the language of the country, the *Great River*, deservedly so called, since it has a course of eight hundred leagues, and is navigable to within eight leagues of its source (81). This establishment, like all the rest, struggled in its infancy, that is, from about the year 1669 to the end of the last century, with almost unformountable difficulties; and had been at last utterly lost, but for the public spirit of the *Sieur Au bery Crozat*, who, having acquired by many years indefatigable application to commerce a very large fortune, engaged in its support, and procured letters patents, dated *September* the 14th, 1712, by which he was enabled to undertake what he thought necessary for promoting the interests of his country in that part of *North America* which is now stiled *Louisiana*, in which he was somewhat more fortunate than his predecessors (82). When therefore it was found necessary to the carrying on of THE SYSTEM to frame some new commercial settlement, to which the most dazzling advantages were to be ascribed, this was fixed upon, and the *Sieur Du Crozat* having resigned his letters patents which had still ten years to run, the king, by his edict dated in the month of *August* 1717, and registered in parliament on the 6th of *September* following, erected a new trading society, under the title of *Compagnie d'Occident*, the company of the west, or, as it was commonly called, the *Mississippi* company, the capital of which, by an edict registered in parliament the last day of the year before-mentioned, was fixed at one hundred millions (83). To this company, besides the original concession of the country stiled *Louisiana*, reduced into the form of a province, and described by that edict, there was quickly added the exclusive contract for castors or beavers skins from *Canada*; and in 1718 the company of *Senegal*, and the slave trade; to which, in 1719, fell in likewise the *East India* and *China* companies, from the motives which are set forth in the text (84).

- a history of the transactions upon which this union was built; for therein it is said, that the king, having principally applied himself to the restoring the commerce of the kingdom, and thereby repairing the losses occasioned by a very long and expensive war; and having already had the pleasure to see the circulation of money wonderfully quickened by the establishment of the *West India* company, his majesty had from thence been led to look into the state of the old companies erected before his accession to the throne, and in particular into that of the *East India* company, which he had found to be most deplorable. In the space of fifty years they had, notwithstanding repeated assistances from the crown, managed their affairs so indifferently, as to be obliged to abandon their commerce intirely, and to take up with such trifling advantages as could be obtained by letting out their privileges. The king declared, he was satisfied that this did
- b not proceed at all from insurmountable disadvantages in the nature of that commerce, but from the mistakes and ill conduct of such as had been intrusted with the management of the company's affairs, who, in the first place, had their bottom too narrow, and had undertaken the traffick of the *Indies* upon too small a capital: that, in the second place, to keep up the credit of their own administration, and to countenance their taking such considerable salaries to themselves, they had made large dividends when there were no profits; and having by this means exhausted the company's stock, they carried on their trade by borrowing as much money as they could at very high interest: that, however, the king his great-grandfather having always protected and encouraged this company, and even granted them a new term towards the end of his life, they might have enjoyed it, or at least have drawn all the profits from it they could, if their conduct had not become so flagrantly bad, that neither the glory of the king, nor the interest of his people, would permit him to overlook it any longer* (F).

- ON the one hand, there were continual complaints from the *Indies*, that the company had borrowed vast sums of the *Gentiles*, without paying them either capital or interest, having, in the space of sixteen years, not sent so much as a single ship to *Surat*. On the other, the private merchants carrying on this commerce in the name, and under the authority, of the *East India* company, were so cramped and oppressed by the duty of ten *per cent.* and other gratuities to the company, that they were unable to pursue their trade with the same spirit and advantages which are enjoyed by the subjects of other nations; and besides, being afraid to go to *Surat* on account of the danger they were in of having their ships seized for the company's debts,
- d they found themselves obliged to purchase most of the *Indian* commodities and manufactures, which they brought into *Europe*, from foreigners, at a very high price, and this equally to their own and the nation's disadvantage. For these reasons, and others of the like nature alleged against the *China* and *African* companies, his majesty declares, that the privileges of all those companies are, by this edict of his, dated in the month of *May* 1719, revoked, extinguished, and suppressed. He granted at the same time to the new company of the *Indies* an exclusive privilege of trading from the *Cape of Good Hope* to the utmost extent of the *East Indies*, as also to the islands of *Madagascar* or *Dauphine*, of *Bourbon*, and of *France*, the coast of *Soffala* in *Africa*, the *Red Sea*, *Persia*, the dominions of the *Mogul*, of the king of *Siam*, and of the emperors of *China* and *Japan*, as also of the *South Seas*, from the *Streights of Magellan* or *La Maire* to the *East Indies* that way: forbidding all the rest of his subjects these several trades,
- e under pain of the confiscation of their vessels and effects' (G).

* This is precisely an extract from the preamble mentioned in the text.
p. 114.

† Hist. de la compagnie des Indes,

(F) In this, as in all papers of state, there is a mixture of falshood and truth; some things are exaggerated, and some extenuated, that the whole of the king's proceeding might wear a more plausible appearance. The raising the credit of the company of the *Indies*, in order to the augmentation of its capital, was the primary and principal design of the court, and the promoting the *French* commerce to the *Indies* only a colour and pretence. The making dividends, when they had it not in their power, might be a wrong measure; but was not to be attributed wholly to the directors, since they were compelled to it by the general assemblies of the proprietors (85). This false step was the real cause of the debts incurred in the *Indies*, and of their borrowing money at high interest; but it was necessary to make their errors and misconduct appear as flagrant as possible, in order to qualify so strong a step as that of dissolving the company that had been so lately continued; which, if duly weighed, might have been esteemed a dangerous precedent in respect to the

new company of the *Indies*, which could receive no higher sanction from the crown than that which had been cancelled in respect to the *East India* company by this edict of union.

(G) The reader is not to expect here a particular account of all the concessions made to the perpetual company of the *Indies*, and the prodigious favours heaped upon her in a short space of time, that she might the better answer those ends for which she was erected; and this for two reasons: first, because many of these concessions no longer subsisted; and next, because they have no relation whatever to our subject, which by no means requires that we should explain all those operations in respect of this company, which barely regarded the finances, but those only that are so connected with the history of the *French East India* commerce, that they cannot be separated or omitted, without running the hazard of rendering that intricate or obscure (86).

(85) Hist. de la compagnie des Indes, p. 84.
Le may consult the histoire du Visa.

(86) If the curious reader desires to be acquainted with these,

In what manner the former companies were consolidated therewith, and their privileges continued. He likewise grants to this company the possessions and effects of the other companies; at the same time charging them with all the just debts which those companies had contracted and were liable to. The better to enable them to discharge those debts, and to carry on the vast trade granted them by this edict, he created in their favour twenty-five millions in new actions, to be purchased only for ready money, on the same terms that the *West India* company possessed one hundred millions in actions, and with the like privileges and advantages in every respect. He likewise granted full licence and authority to import all sorts of manufactures of silk, silk and cotton, gold and silver stuffs, dyed cottons, as also painted and striped; on condition, however, that none of these shall be vended in his dominions, but be sold and disposed of to foreigners; for which reason they were to be deposited in magazines under double locks, the keys of one to be kept by the farmers general, and the other by the directors of the company, for the better preventing frauds and collusions. He likewise grants them leave to import all sorts of white cottons, raw silks, coffee, drugs, spices, metals, and whatever else the *East India* company might have imported under their privileges, arising from the several edicts of the late king his great-grandfather^a (H).

^a Histoire des Indes Orientales, tom. iii. p. 203, 204.

(H) The reader will perceive, that by this time they had totally overcome all their old prejudices in *France*, and were content to follow the maxims of the maritime powers, in suffering the company to bring whatever commodities she thought expedient from the *Indies*, notwithstanding the wear of them was prohibited in *France*; since it was absurd to restrain them from a commerce with other *European* nations, in goods which might be bought at the *English* or *Dutch* sales, even if all the former restrictions had been continued: yet we must not

suppose, that all these immunities and privileges were any more inviolable than the concessions before mentioned; on the contrary, they have been altered, augmented, or restrained, as the circumstances of things required; which it is fit should be mentioned, in order to keep the judicious reader's eye fixed to this point, that commerce is subject to a great variety of regulations in this country, and remains under perpetual dependence on the state (87).

(87) *Titres de la compagnie des Indes concernant ses diverses concessions et privileges, et son administration generale, depuis 1719 jusque à present, à la suite de l'histoire de la compagnie des Indes.*

S E C T. VI.

Upon the incorporation of all the old trading societies, the grants formerly made are confirmed, extended, and made irrevocable in the new one, which is therefore stiled the PERPETUAL COMPANY OF THE INDIES, which from the beginning, and in its nature and operation, is a mere creature and engine of the state, which affords it not only countenance and protection, but actually provides for its subsistence.

All these declared irrevocable, and the new establishment stiled the PERPETUAL COMPANY OF THE INDIES.

THIS edict had all the effects, and even more than was expected; and such an eagerness appeared of subscribing to this company, that, instead of twenty-five, the subscriptions amounted to fifty millions; which encouraged the *French* ministry to venture upon some new regulations, which were made public by an edict of the month of *June* in the same year: the principal of which was, that they should take off four times the number of old actions to be intitled to the new; so that, in order to purchase five thousand livres of the new actions, the subscribers were obliged to take twenty thousand livres of old ones. The great end the government proposed was, to find the means of calling in and suppressing that immense quantity of paper-money which was such a burden on the state; and, to this end, annuities to the value of twenty-five millions were created, which not answering that intention, the new company of the *Indies* offered their assistance, and undertook to discharge them at the rate of fifty millions in every month; so that the whole load of this paper, amounting in the whole to near sixty millions of our money, was to be extinguished by the end of *July* 1721^a. In consideration of the zeal manifested by the company in this proposal, the king was pleased, by his arret dated in the month of *July* 1720, to change the terms on which they held their privileges, and to declare them perpetual; restraining himself, and his successors, from ever treating them as other companies had been treated, in order to their establishment; and thus this company acquired that title by which they are now known in *France*; viz. THE PERPETUAL COMPANY OF THE INDIES^b, with all the privileges of the other four companies confirmed to them for ever (I).

IN

^a Dictionnaire de commerce, tom. iv. col. 1072.

^b Histoire des Indes Orientales, tom. iii. p. 209, 210.

(I) In this edict, which is penned with peculiar pomp and peripatuity, and said to be made by the advice of the

duke regent, the duke de *Chartres*, the duke of *Bourbon*, and the count de *Charolais*, the prince of *Conti*, the count

- a** In two years time more it was settled and declared, that, in consequence of the annuities granted and assigned to the company from the crown, they should be able to divide annually the sum of ten *per cent.* which should be paid punctually for ever; in consequence of which, the directors were to be at full liberty to export and import what they thought proper, without being accountable annually to their constituents, because the dividends were to be regular and certain; and they were to manage things so, as that the deficiencies of one year might be made up by the profits of another. This last provision regards the *East India* trade, and not the value of the company's actions, considered as a kind of property, to which an annuity from the public is annexed; for, according to this new model, the company of the *Indies* comprehended as well the public credit, by taking into a participation of her capital such as had claims upon the state, and all the extensive commerce of the kingdom, having not only all the power of the *East India* company, but also of the *West India*, and other suppressed companies erected in her'. In these two capacities the rule of conduct prescribed by the government was very different, and yet, upon the whole, very rational, or at least very plausible; for, as public creditors, they were enabled to pay a fixed and settled dividend upon their actions; but, as a trading company, they were not bound to give any account, because, under the circumstances that things then were, it must have been under very discouraging incumbrances, which it would require pains and time to overcome; and the dividends paid to the actionists in the mean time, tho' in another capacity, was thought sufficient to make them easy till the face of their commercial affairs should wear a better aspect, and might bear to be exhibited without a veil ² (K).

This new settlement considered necessarily in two different lights; viz. as annuitants and traders.

- b** It is not a little uncertain who was the real author of this new system, very different from those that were made use of to amuse the *French* nation, and indeed all *Europe*, while that strange humour of stockjobbing lasted, which might be truly stiled a political madness, of which, however, the government availed itself highly, and, by the edict of union, drew out of that chaos without form or order this new and beautiful structure, which has been so truly beneficial to the public credit and commerce of *France*. To the perfecting of this, however, some further strokes were found necessary, and were accordingly in due time very dextrously applied. The capital of the present company of the *Indies* was, as we have before observed, composed of the original capital of the *West India* company, and of twenty-five millions added thereto upon the union of the *East India* company; but it was found requisite, in order to settle all on a just foundation, that the king should make a revision of the actions possessed by the pro-

The great political secret in the construction of this new and wonderful structure.

² Dictionnaire de commerce, tom. ii. col. 1073.

de Tholouse, and other peers of *France*, and of the certain knowledge, full power, and royal authority, of the king (88), it is declared, in the first article, that the grants therein after-mentioned are in consideration of the company's discharging and taking up billets to the amount of six hundred millions, if so great a sum shall be standing out. In the second article, those billets are ordered to be burnt in proportion as they are brought in. In the third, the company is confirmed in her perpetual right to an exclusive commerce in, and sole government of, the province of *Louisiana*; and yet that has been taken from the company long ago. In the fourth article, the company's right to a certain duty upon castors, in lieu of their exclusive commerce in them, is confirmed. In the fifth, the cession made to the company of the rights, privileges, and establishments belonging to that of *Senegal*, is likewise confirmed; as in the sixth and seventh articles are their titles to the exclusive trade of the *East India* and *China* companies, and to all the effects of both those companies at home and abroad, subject to their debts. By the eighth article, a perpetual bounty of fifty livres for every ton of commodities or manufactures of *France* exported, and of seventy five livres *per* ton of goods and manufactures exported from the *Indies*, are confirmed to the company. The ninth article settles the several kinds of piece goods, which, tho' prohibited to be worn in *France*, the company may import; and regulates the manner in which they are to be kept and disposed of. The tenth grants them the liberty of importing for use and consumption in the realm, from the countries of their concession, all kinds of white cotton, raw silks, coffee, drugs, spices, metals, and other merchan-

dizes not prohibited, under the usual duties. The eleventh, twelfth, and thirteenth articles regard the manner in which their concerns with the proprietors and creditors of the dissolved company shall be settled. The fourteenth grants them to perpetuity all the rights, privileges and exemptions of the old *African* company, which, however, do not remain in their hands. This edict is sealed with the great seal of *France*, on green wax, registered in parliament, and approved in council.

(K) It would require a particular treatise, and that of no inconsiderable length, to enter into a complete discussion of all the transactions and operations of the company within this period, during which they were made the engines for liquidating, adjusting, and cancelling those immense demands which private persons had upon the state, and with a view to which the company of the *Indies* had been obliged to expose her credit, and to consent to a conjunction with the bank; which was fatal to one, and was very near being so to both establishments; but the administration saw so clearly the necessity of sustaining the company of the *Indies*, and had so probable, tho' so distant a prospect of reviving foreign commerce by her means, that they neglected nothing which could be possibly contrived to keep up the spirit of the actionists, and to lay a foundation for public credit, by extricating this society from all difficulties, and this by degrees, and through the intervention of a variety of methods, in which the absolute power of the crown had a large share, was in a great measure effected, and people in general began to have a good opinion of property vested in this capital (89).

(88) Hist. des Indes, tom. iii. p. 209.

(89) Dictionnaire de commerce, tom. ii. col. 1072.

prietors of this company, in order to distinguish between such as had acquired their property fairly, and by purchase, and such as had thrust themselves into the company's books only to serve their own purposes by stockjobbing. It was in consequence of this revision that, by an edict in the year 1723, the king fixed the actions of this company to fifty six thousand, and which formed a capital of one hundred and twelve millions for their dividend, upon which they had a yearly revenue assigned them of eight millions four hundred thousand livres ^a.

Another instance of the government's attention and regard for the company's interests.

By another arret in 1725, five thousand of these actions were cancelled and burnt; so that the capital of the company, by this means, was reduced to fifty-one thousand actions, and their dividends secured by the annual payment of eight millions from the farmers-general of the farm of tobacco, the exclusive, perpetual, and irrevocable privilege of vending which had been granted to the company in 1723, and confirmed to them in 1725, together with the profits arising from the furs imported from *Canada*; so that the fund for the payment of their annual dividends was as effectually secured as it was possible a thing of that nature could be in *France* ^b. As for the commerce of the *Indies*, it was assigned to them as a collateral advantage, not to be touched for the present, but to be employed in strengthening the funds for restoring and maintaining that important trade, discharging all the incumbrances thereon, and putting it in a condition to become as certain a security for the payment of still higher interest to the proprietors than they have hitherto received: it is therefore no difficult thing to apprehend, that, upon so fair a prospect as this, the actions of the company of the *Indies* rose into higher credit both at home and abroad than any thing of that kind had ever done in *France*, more especially when people found by experience, that dividends were regularly paid, and the funds upon which they were assigned certain and stable (L). ^c

Which, notwithstanding, were not in such a situation as to enable them to carry on their trade.

BUT to return now to what is more properly our subject, and inquire how the commerce to the *East Indies* was bettered by these projects and contrivances: it is very certain, that those who were intrusted with the direction and management of the company's concerns had a far greater weight of business upon their hands than those who had the care of the *East India* company's affairs. It was likewise very certain, that they acquired nothing by the grant of all that the other companies possessed, since they were charged at the same time with all their debts, which rose to a much higher sum than the value of their effects; and it was farther certain, that the purchase-money of their actions did not remain in the company's hands, but went into those of the government, who indeed seemed to have a title to it from the funds established for paying interest on the whole capital; yet, after all, this scheme was very well contrived, perhaps was the very best upon which the public credit and commerce of that kingdom could be established ^d.

^a Dictionnaire de commerce, tom. ii. col. 1080. de la compagnie des Indes, p. 154.

^b Hist. des Indes Orientales, tom. iii. p. 373.

^c Hist.

(L) The perpetual company of the *Indies* having so well answered the intentions of the government, and public affairs being now in a more settled condition, it was a very wise and prudent resolution to put this company, with which almost the whole foreign commerce of *France* was intrusted, upon such a basis as might remove, in the highest degree possible, all apprehension, and even suspicions. In order to this, the king, by his edict, read and published while his majesty was sitting on his bed of justice in parliament, consisting of nineteen articles, gave the highest sanction to their affairs that the most absolute authority could confer; and as it was foreseen that nothing could turn so much to the advantage of this establishment, as convincing the world that, whatever it had been, it was now, and was ever to remain, a trading company, without intermeddling with any other matter, or embracing any other project. The eleventh article of that edict was conceived in the following terms (90): "As in confirming the company of the *Indies* in her privileges of commerce, which can never turn to the advantage of the state, unless they occupy her whole care, and are intirely directed with that view; our intention is, that the said company shall promote and improve the commerce of our kingdom, without interfering in any manner with that of private merchants; we therefore declare, that, for the future, the said company shall pretend to no other exclusive privilege whatever than what is expressed in, and confirmed by, the present edict. As it is also known to us from ex-

perience, that in the same proportion the establishment of this company is useful and necessary while intirely occupied in the management of those important colonies, and other considerable branches of commerce which we have conceded thereto, it would be contrary to all good order, to our interest, and to those of the company, if she should meddle in any manner whatever with our finances; we therefore, in the most express terms, forbid and prohibit the said company from interfering with our affairs or finances at any time, it being our will and pleasure, that she shall be and remain, conformable to her institution, purely a trading company, yielding her application solely to the support of the concerns committed to her care, so as to improve by her wisdom and oeconomy the effects of our subjects interested therein; without permitting that the funds of the company of the *Indies* shall, upon any occasions whatsoever, be applied to any other use than that of her commerce." To complete this settlement, the king, by another edict, consisting of thirteen articles, exonerates the company of the *Indies* from all former transactions whatsoever, cancels all engagements with the crown that might turn to her prejudice, and declares null, void, and annihilated all pretensions grounded upon the operations preceding that edict, which, as well as the former, bears date in the month of *June* 1725 (91), and, together, are considered as the fundamental charters of the perpetual company of the *Indies*.

(90) Hist. des Indes Orientales, tom. iii. p. 376.

(91) Dictionnaire de commerce, tom. ii. col. 1087, 1088, 1089.

- a** We shall shew this in a very few words. It has already fully appeared, that little or nothing could be done for supporting the trade to the *East Indies* but by the government; and therefore the *French* ministers very wisely thought it was as well to take it immediately into their own care, and to advance the sums requisite to maintain it, as to let other people manage it, and then, from time to time, to indemnify them from losses, which perhaps might proceed from their own management. With the like prudence they reflected, that, considering the state of things at that time, immense sums of money would be necessary to set them right; and that, if this came to be known, the proprietors would grow uneasy and suspicious; and therefore they took care they should not be troubled with accounts, which could be no hardship while they received regularly a reasonable dividend; and, lastly, they foresaw, that when the commerce was put upon a proper foot, so that some profits arose from it, it would be highly requisite to suffer these to accumulate for some time, that a proper stock might be raised as well in *Europe* as in the *Indies*; which, they knew, could never be done, if the proprietors had an insight into their own affairs, because a majority of them would be always for a present dividend, without troubling themselves about what might happen for the future: against all which evils they took care to be guarded, in a manner with which every-body was pleased at first, because they had nothing immediately to hope, and because very few penetrated the meaning of those precautions, which, in another country indeed, how just and necessary soever they might be, could not well have been taken^d.

The means of doing which they were to expect entirely from the public treasury.

- b** But, notwithstanding all these prudential methods, the ministry were very sensible, that, unless something was speedily done that might carry the aspect of reviving this trade, and reviving it with effect, suspicions would quickly arise, and murmurs speedily follow; and therefore, while they had money in their hands, they judged it best to enable the company of the *Indies* to do something extraordinary, so as to answer the high idea that had been conceived of the advantages that were to flow from this great revolution. Accordingly, towards the end of the year 1720, three ships were fitted out, which, besides carrying a large cargo of *European* commodities and manufactures, had on board a great quantity of silver in specie and bullion^e. This was certainly very judicious; it raised the credit of the company in *Europe*, augmented the value of their actions, and excited a general expectation of what this would produce. The ministry, however, who were extremely well apprised of the true state of things, could not flatter themselves with much hopes; they very well knew, that not only this, but much more must be done only to put things in motion, to recover some little degree of credit, and restore honour to the nation, and respect to the *French* flag in the *Indies*. They set, however, the best face upon the matter they could, and treated the business as done when it was but just undertaken. The directors likewise ordered improvements to be made, and magazines to be erected at *Port L'Orient*, as if vast returns were to be made; and tho' this was a measure attended with expence, yet, as it might be some time or other necessary and useful, as well as for the present very expedient, they were fully enabled to act in a proper manner^f.

The first assistance, derived from peace, and how applied at home and abroad.

S E C T. VII.

The great efforts produced by these wise regulations, which, by degrees, brought about two establishments which hitherto had been judged impracticable in France, an effectual commerce with the Indies, and public credit. Upon the breaking out of the war with Great Britain in 1744, the court being no longer in a condition to supply the sums necessary for the support of the company, the state of their affairs is laid open to the proprietors, which has an unexpected bad effect on the system that had been hitherto so well conducted.

These have a great effect on their affairs in the Indies, which afterwards sink lower than ever.

AS those who were intrusted with the company's concerns in the *Indies* could know nothing ^a of this mighty change in their affairs at home, so, when they received this news, and those ships, they could not but be extremely astonished. These supplies, which exceeded their hopes, their wishes, their conceptions, came as it were out of the clouds; and coming also backed with assurances of a regular correspondence for the future, it is easier to imagine than express how much they were transported. However, as they made an honest use of what they received, and began to discharge their debts in several parts of the *Indies*, the best part of it was soon absorbed, and consequently they were able to make but slender returns to *Europe*. Their sanguine expectations met with a sudden and severe check; for the downfall of the SYSTEM, as it was styled in *France*, happening soon after those ships sailed, the directors were disabled for two years from complying with their promises, or so much as sending a single ^b ship; which exposed their servants in the *Indies* to railery and ridicule from other *European* nations, unhinged their credit again, and threw them into so sad a situation, that it may be truly affirmed the *French* were never in so bad a plight as in the year 1723, from the very time that they first settled in the *Indies*. Such strange and surprising changes, than which nothing can be more contrary to the nature of commerce, must have had a dismal effect; the rather, because the director at *Pondichery*, and those who were intrusted with the management of other factories, could not, at that distance, have the least comprehension of the causes of this conduct of their directors, and, after what had happened, could have very little, if any, confidence in their new masters ^c: but, as there was no remedy, they were obliged to endure this evil, great as it was, as well as they could, comforting themselves, if that phrase may be properly used, that, let things take what turn they would at home, they could never be in a worse way abroad than they were; but two ships arriving the next year, and seven others in the space of two years following, they began to recover both their courage and their credit, and found themselves also in a capacity of making some, tho' not very considerable returns; but, however, these, such as they were, had a good effect, and created a general opinion, both in *Europe* and the *Indies*, that the *French* trade thither would still subsist, and turn to a better account than hitherto it had done ^d.

An impartial and circumstantial account of the true state of the company of the Indies.

YET, in the midst of this seemingly settled and regular establishment, the perpetual company of the *Indies* remained upon such a foundation, as nothing of the like nature ever stood upon before; and with respect to which the time will not be lost to the reader, if he will be pleased to reflect this company had a vast capital, but nominal only; for in reality, and at the bottom, they were without funds; their commerce, as described, or rather prescribed, by the edict of UNION, was beyond comparison more extensive than that of any trading company in *Europe*, and the means of carrying on this as much out of comparison less ^e. Besides all this, there was another circumstance no less extraordinary than the other two; which was, that the directors of this mighty company, whatever they might seem in the eye of the world, were really under direction themselves; that is, they depended for instructions, ships, money, and every thing else, upon the ministers of state; and yet, to speak from what time and experience have taught us, these very instances of weakness and instability appear to have been the sources of all their good fortune ^f; for the directors, in quality of that employment, having the capacity only of representing the state that things were in, and the necessities they were under, had no temptations to depart at any time from truth; with this additional check upon them, that, if they did, it would have been certainly discovered, and themselves removed ^g.

^k From private information.

a On the other hand, the ministers of state, knowing that their continuance in power must always depend upon the maintenance of public credit, took care to furnish the directors with such supplies as were requisite to keep the machine of their commerce in constant motion, that the opinion which the public had entertained of the restitution of their affairs, might be fortified from their progress. Thus this balance, which originally arose in some measure from necessity, and in some measure from accident, was more happy in its operations than any contrivance that could have been formed by human wisdom to have answered those ends ^a (P).

It was in consequence of this system, procured by a prudent management of all occurrences, ^{Which, tho' preserved and supported by the ministry, recovered, but with much difficulty, and very slowly.} and a constant attention to every incident which either happened, or had a probability of happening, that things went on in this way for about fourteen years; during which space some-
 b times three, sometimes four ships were sent every year to the *Indies*; and the affairs of the company were by these means recovered and restored, tho' but slowly. They had still great difficulties to struggle with; for, in proportion as their commerce revived, their expences enlarged, by their being obliged to re-settle their old factories, and to establish new ones; so that in all this space of time there was very little, if any, clear profit accrued from their trade. On the contrary, they ran some years into debt, but not, however, without prospects of future advantages: but as the other trading nations in the *Indies* were intirely unacquainted with the secrets of the *French* commerce, so, judging by appearances only, they were fully persuaded, that their trade was in a flourishing condition, because they saw it visibly extended, and the returns made to *Europe* far more regular, and at the same time more considerable also, than
 c they had hitherto ever been: yet, notwithstanding all this, if they had gone on in the same manner, it would have been many years before they would have been able to support themselves, and carry on their trade upon their own bottom; for gradual supplies were still necessary, and the continuance of peace enabled the ministers to furnish them, yet always in a frugal manner, and sometimes sparingly ^o.

THE directors, having the disposition and management of these supplies, as well as of the returns from the *Indies*, were obliged to make the one go as far as it was possible, and the other rise as high as they could; which contributed greatly to save appearances, and to keep things in tolerable order, tho' they could not help perceiving, and even remonstrating sometimes, that this was living merely from hand to mouth, and consequently mis-spending that
 d season of tranquillity, when, if ever, they might have an opportunity of retrieving their affairs ^p. ^{Mr. Orry and de Fulvy, being at the head of the finances, grant them effectual assistance.} But in the year 1737, Messieurs *Orry* and *de Fulvy* being at the head of the finances of *France*, which they managed with surprising success, the company fell naturally under their care and protection: they saw plainly, that larger supplies were necessary to extricate them from the difficulties under which they laboured; and therefore, having first made a strict inquiry into their affairs, and taking care to put them into the best order possible, they furnished them with such sums as were necessary for augmenting their commerce; so that, in the short space of two years, they doubled their returns, and, in three years more, brought them to thrice as much as they had formerly been. By this management, their sales at *Port L'Orient* became regular and considerable, increasing in such a manner, that the public sale in the year 1742
 e produced twenty-four millions of livres, or about one million of our money; besides which, they reserved in their magazines goods to the value of four millions of livres more; and the first ships that arrived in 1743 brought home still a more valuable cargo. This extraordinary change in the company's affairs alarmed and amazed all *Europe*, but more especially

 private information.

^o Hist. des Indes Orientales, tom. iii. p. 369.

^p From

(P) There cannot well be a stronger proof of that excellent maxim, that whatever government is best administered is best, in comparison of those that subsist at the same time, than this conduct of the *French* ministry towards the company of the *Indies*. There are certainly many defects in an absolute, and many advantages in a free government, in reference to trade; and therefore, in the former, the utmost wisdom of a ministry consists in discovering expedients to supply some of those deficiencies, and plausible methods of concealing the rest. The *French* ministers not only did this, but extracted out of that chaos, into which all things fell upon the ruin of the *system*, a plan of universal commerce, more perfect, because more practicable, than any that had been conceived either by *Richlieu* or *Colbert*; which if they did not immediately manage to the best advantage, yet they so managed as to preserve and keep it on foot, and with won-

derful address fixed the new establishments at *Louisiana* upon such a basis, as not to need the care of the company, and this without losing sight of their concerns in the *Indies*. They found these not so easily reduced into order; they met daily with new difficulties at home and abroad, which to surmount required a larger expence than the finances could possibly spare; and this obliged them to have recourse to palliatives, and to content themselves with doing a little where much was wanting. Their conduct, upon the whole, was very commendable; and if the consequences that have attended the measures of their successors appear with much greater lustre than the fruits that followed their endeavours, yet if we duly attend to the times when, and the circumstances under which, these first efforts were made, we cannot refuse a just tribute of applause to their authors (92).

(92) Hist. des Indes Orientales, tom. iii. p. 369.

the maritime powers, who saw with infinite concern a company, that but a few years before was looked upon as sunk and destroyed, now rising into as high credit as any of their own^a. But perhaps their concern would have been in some measure alleviated, if they had but so much as suspected, that this prosperity was chiefly artificial, and consequently much more in the power of accidents than, in all appearance, it seemed to be (Q).

How much the care of this important company has influenced the system of the French politics.

WE may from hence discover what great benefits accrued to *France* from pursuing the maxims introduced by the regent, and which seemed to govern the court during the pacific administration of cardinal *Fleury*. We may likewise perceive what the real motives were, which, upon certain occasions, produced so much real or pretended complaisance for the maritime powers, since, as the sequel will shew, any rupture with them must have exposed this tender system to storms and tempests that it could not have sustained; and it helps us further to understand why the court of *Versailles* entered so easily into, and continued so steadily to prosecute, whatever measures were thought necessary for procuring, first the suspension, and then the suppression, of the *Ostend* company. They knew that, if this establishment prevailed, it must be at the expence of some other, and most probably of their own, as it was still the weakest, and in reality much weaker than either friends or enemies conceived. If these reasons did not prevent the war with the late emperor, it was intirely owing to the cardinal's persuasion, in which he was not mistaken, that the maritime powers would take no share therein; the hopes of settling a branch of the house of *Bourbon* in *Italy*, and annexing *Lorraine* to *France*; all which was done without running into such an expence as might affect the affairs of their commerce, the great consequence of which, as it was now better known, so it was more attended to in *France* than ever; which lesson, tho' taken from times past, may have great use in times to come, as it gives us true notions of the moderation of this court, and what those losses are which she is least able to repair, and by which she must be most sensibly affected, notwithstanding the figure she makes upon the continent, and the terror that may arise from her numerous armies^b.

By what means that salutary system came to be unwillingly relinquished by the French ministers.

WE may very justly attribute to the same causes, at least in a great measure, that parsimony for which the cardinal was so much condemned at the beginning of the last war, his indefatigable endeavours to have procured a neutrality with one of the maritime powers, and to have avoided, if it had been possible, a direct breach with the other, as foreseeing that this would not only be highly prejudicial to the commerce, and thereby lay open the weakness of *France*, but also bring to light the manner in which it had been for so many years sustained, as well as put it out of the power of the ministry to sustain it any longer. These considerations, which made no manner of impression upon those who preached up the king's glory, and his having it in his power to give law to *Europe*, were, however, intolerable to another race of men, who had the good of their country sincerely at heart, and thought the king's glory could never be provided for so well, as by rendering his subjects rich and happy; besides, they only could and did foresee what events would follow this spirit of giving law, and extending the *French* influence where its power could never reach, and where consequently they must trust to the honour of those who received their wages whether they would earn them, or whether, in regard to their own interest, they would not manage matters so as to receive them as long as possible; which was an expence their treasury could not bear, and which must therefore quickly put it out of their power to make those annual payments which had been hitherto the only true and availing resource of their *East India* company^c (R).

It

^a Hist. des Indes Orientales, tom. iii. p. 369—372.

^b From private information.

^c Collected from the propositions made to the company on the part of the crown, after the war was declared against Great Britain.

(Q) It was to this signal and well-timed assistance of the minister, that the *French* company of the *Indies* owe their revival and thorough establishment. The situation of public affairs at that time in *France* was such, that the royal treasury might have been full, if this prudent measure had not been taken of employing those large sums that would have been useless in the king's coffers for the service of the nation, without any hazard of the crown's losing by this judicious confidence. We see clearly from hence, that how repugnant soever arbitrary power may be to a spirit of trade, yet, when this arbitrary power is directed by able and honest men, it may be so managed as to be serviceable to commerce in an extraordinary degree (93). But how plain and evident soever these facts render this deduction, yet we ought to take into our consideration at the same time, that this is a support of so extraordinary a nature as cannot often happen, and is

consequently not to be relied on; which is also an observation of importance, and which, for that reason, we shall endeavour to explain more largely in the subsequent note.

(R) It was a notion that prevailed generally among the common herd of politicians in *France*, as well as in other countries, that cardinal *Fleury* acted upon maxims very different from the cardinal ministers his predecessors. In this, however, they were strangely mistaken. Cardinal *Richieu*'s plan was very extensive, and, as we have fully shewn, commerce had a considerable share therein; but the then conjuncture of affairs required his attention to other parts of his scheme, that is, the extending the power of the crown at home, and its influence abroad, in both which he went very great lengths, and was very steadily, as well as successfully, followed by *Mazarin*, *Colbert*, and *Louvois*. These ministers did not, however,

lose

- a It was some time, however, after the last war began, before any suspicions of this kind reached the company, or the public. On the contrary, the former exerted herself as if, in such an emergency, she thought it her duty to give her assistance to the latter. All this, however, was calculated to keep the true state of things as much concealed as possible as long as they could be concealed at all; and, the dividends being likewise regularly paid, the actions of the company were kept up very high, which gave no small credit to the nation; nay, so far were the proprietors from having the slightest notion of the real state of things, that they disapproved the public spirit of their directors, speaking of the offers they had made for the king's service as a direct proof, that the trade of the *Indies* was carried on for the benefit of the crown, contrary to the promises that had been made them^a. This suspicion, having once got abroad, met with a general reception, at least amongst such as were interested in the company's stock, who were firmly persuaded, that if part of the produce of their vast sales had not been diverted to supply the expences of the government, their dividends might have been increased to fifteen, or even twenty *per cent.* and from these surmises, instead of being thankful for what they had, and for all that had been done for them, they murmured that the directors kept every thing secret; that they were shut not only out of the management, but from the knowledge of their own concerns; and that, whatever benefit this might be to the state, it did not alter the case with respect to them, who were deeply injured by it. So easy a thing it is for people to mislead themselves, and to believe confidently, that things are as they wish them to be, for no other reason than because they wish them so, and suffer their interests to be the only guides both of their desires and of their opinions^b.

But this alteration in their conduct, being produced by necessity, was long as possible.

- c But, the war with *Great Britain* increasing the expences of *France* on the one hand, and lessening her income on the other, the secret at last came out; and Mr. *Orry* was forced to acquaint the directors of the *East India* company, that the king's affairs were in such a posture, as would no longer permit him to supply the company in the manner he had hitherto done; so that now they were to stand upon their own bottom, and to carry on their trade for the future as well as they could^c. This unexpected stroke demolished the whole fabric which had been raising for so many years, and reduced the actions of the company to eight hundred, from two thousand and upwards^d. The main cause of this was, the several propositions made by Mr. *Orry* to their directors, that either the proprietors should subscribe upon their actions, or suffer their dividends to be postponed for a certain time, or should come to some agreement amongst themselves for compounding these two methods, by advancing part in ready money, and allowing their dividends to go in discharge of the rest^e. The motive that obliged the ministry to this discovery was, the necessity of having money to carry on the *East India* trade, which they knew must be ruined even by a temporary stagnation; which money since the crown could no longer furnish, it was necessary that the proprietors should. But to this it was answered, that hitherto the proprietors had been no gainers by that trade, had no general accounts made up to them of it, and, according to the confession of the directors themselves, were to have received no such account, if this accident had not happened, by which they asserted, that their properties had already lost one half of their value, and might very probably lose part of the other half; so that they were least in a condition to pay when this demand was made, which would have been sufficiently grievous even in the midst of peace, and when their actions were highest^f.

At length, however, they were constrained to open this affair to the proprietors of the *East India* company.

- Mr. *Orry* told them in return, that they had no reason to complain of the king, or his ministers, who had hitherto supported this trade for their advantage, without their contributing to it at all; that, if they had received no profits from their trade, it was because no profits had accrued; and this not through any ill management, or because this commerce had not been carried on to great advantage, but by reason of that immense load of debts which lay upon them at their first establishment, and which the profits of the trade were to pay off, and the prodigious

The ministers refute all the objections raised against their propositions for the support of the trade.

lose sight of the other part of his plan; for, as we have seen, *Colbert* had it particularly at heart, tho' the circumstances of things during his ministry were not all favourable to his measures. But cardinal *Fleury*, with those moderate and yet active ministers whom he brought into business, discerning the propriety of the season, and being perfectly apprised of how great consequence it was to work on that part of *Richlieu's* system which was yet unfinished, applied themselves with such assiduity and

secrecy, took every advantage so dexterously, and amused and cajoled those who could alone have opposed them with so much address, that, if their schemes had not been disconcerted and unravelled by the authors of the late war, they must in a few years have carried their point, and all *Europe* would have seen with astonishment the *French* company of the *Indies* making a figure there, that their wisest statesmen looked upon as a thing impracticable (94).

(94) From private information.

gious expence the company had been at, both in *Europe* and in the *Indies*, for putting their a commerce on a solid and certain footing^b; that, to remove doubts upon this subject intirely, and that they might be satisfied of the truth of these particulars, a general account of their trade should be laid before them, by which they would see, that, though slowly, it had been continually improving, and that, of late years especially, it had thriven exceedingly^c. From which also they might be satisfied, that even at present it was so far from being in a desperate condition, that, notwithstanding an immediate sum was necessary for carrying it on, yet there was no danger of their being called upon for another supply, since what was now asked would be sufficient to put the company into a condition to maintain itself without intrenching upon their dividends, which should for the future be as regularly paid as they had been in times past^d. It is from this general account that strangers, as well as the proprietors, have come to so distinct a b knowledge of their affairs, since, had it not been for this unexpected accident, they would never have let the world into the truth of an affair which they had concealed with so much care for so many years, which nothing but necessity could force them to reveal, and which had such immediate bad effects as they very well foresaw it would: notwithstanding that, all things considered, the proprietors had less grounds to complain than they imagined; and, if their great expectations were defeated, they had at least the satisfaction of knowing, that they had been better served all this time than their predecessors had ever been at any other; and, after all, there was a better prospect than ever, if they could but have a reasonable degree of patience, and bear with some kind of temper a misfortune that would admit of no other remedy than what the ministers proposed^e (S).

What consequences attended these declarations, and how far, and in what degree, they operated.

THE worst consequence that attended this affair, with respect to the nation and the company, c was, the letting all *Europe* see, that this commerce was a thing not to be carried on in *France*, as in other countries, by a society of private persons incorporated by public authority, but must be directed, upheld, and managed, by ministers, or at least in subordination to them; so that whereas in other countries trade supports the state, in this, on the contrary, trade cannot flourish, or even subsist, but from the attention, and through the assistance, of the state^f. As to the company, it shewed, that, notwithstanding appearances, it was very far from being upon a level with other companies, tho' never any of them in any country had been so much cherished, or received such supplies from the government that gave them being; yet after all, this affair, which made so great a noise at the time, passed over easier than could have been expected: the d proprietors, after a little murmuring, submitted to what they could not help, and, by the assistance of a few lotteries, are pretty well extricated from the difficulties brought upon them by this declaration^g. To say the truth, their stock, even since the return of peace, has not risen so high as it was before; but then it has risen as high as could be expected, and the regularity of their sales and dividends has been again restored^h.

^h January 1, 1757, the actions of the

(S) The reader will, no doubt, make many reflections upon these matters of fact, which are so singular and extraordinary, and will, in all probability, not take it amiss if we drop a few hints upon the occasion. It must certainly seem very surprising, that the ministers of a monarch so jealous of his authority should condescend to enter into a discussion of their own conduct, and that of their predecessors, with so much mildness and moderation; which demonstrates, in the most sensible manner, how closely commerce is connected with liberty, and how necessary it is to admit one, in order to obtain the other. Whence it may pass for a certain rule in politics, that, where trade thrives, the government grows daily better, if not in its principles, at least in its administration; and, where trade declines, it shows, that either the government is altered for the worse, or that the executive part of it is in bad hands. We may from hence also perceive the tenderness of public credit, which, tho' sustained for so many years by the regular payment

of dividends, could not bear so small a check, even when so much pains were taken to render the motives of it apparent. The par of the *French* actions was 1500 livres; and the whole capital, consisting of fifty-one thousand, amounted to seventy-six millions and a half; and as the company received annually eight millions from the farmers general, this was a sufficient fund for their dividend at ten *per cent.* so that we need not wonder at their advanced price: but when, upon this shock, they fell to half their intrinsic value, it afforded such as were able to enter fully into the true state of things an opportunity of making near twenty *per cent.* of their money, exclusive of their expectations from the *East India* trade; and very probably foreigners availed themselves of this conjuncture. Whether the company remains in that situation into which she was put by this exigency of state, or whether she has since received the like assistance as formerly she met with from the ministry, is what we cannot decide with any certainty.

S E C T. VIII.

The history of the company's proceedings in the Indies, and an accurate account of their settlements, and particularly of those two important islands of France, while in the hands of the Dutch styled Mauritius; and of Bourbon, formerly called the Isle Mascarenhas; the pains taken to put them into their present condition, and the prodigious advantages accruing from these new establishments.

- a** **I**T must also be allowed, that, in the course of the last war, the *French* government took particular care of the company's concerns in the *Indies*, and supplied them with a sufficient force not only to defend themselves, but to act offensively, as will be seen in another place; as, on the other hand, the care of those intrusted with the direction of affairs, as well in the islands as in the *Indies*, manifested their zeal and diligence by the preservation of the places with which they were intrusted, tho' vigorously attacked. As we have now conducted this history from the earliest endeavours of the *French* to fix a correspondence with these remote countries, so there remains only one thing more to be done, and that is, to describe their possessions in *Africa*, in the *Indies*, and in *Europe*, which have a reference to this commerce; and then the reader will be able to judge for himself as to the future prospect of this nation in regard to a branch of trade, which, for about a century and a half, has been the great object of her desires and endeavours, which has employed the skill and diligence of her ablest ministers, and which has cost her infinitely more than was expended by other nations, that have managed it with incomparably better success. These are points extremely worthy of our knowledge at present, and which bid very fair for occupying also the attention of posterity; so that none can, with better title, pretend to a place in Universal History, which ought to give an idea of whatever has occupied, or may hereafter occupy, the arms or councils of those nations most conspicuous for wealth, power, and influence, and most likely to exert themselves in the improvement and augmentation of those in times that are to come; of which no true judgment can be formed, but by reflecting upon what has already past, and considering attentively what we are next to represent, that is, the state they are now in.

The present state of the company of the Indies settlements and commerce in all parts.

- b** We will begin our account of the places actually in the possession of the perpetual company of the *Indies* with a description of the *Island of France*, which seems to belong to this society in a peculiar manner, as not being included in the concessions made to any of the old *East India* companies. We might also, if that was at all necessary, justify this method, by observing, that, though it has not been above thirty years settled by the *French*, it is almost one hundred and twenty years since they had some intentions of fixing there; and that it was in consequence of their disappointment in this design that they went first to the island of *Madagascar*, as will hereafter appear*. In order to make this account as complete as possible, that from hence the value and importance of this settlement may appear, which is at present very considerable, which, if the best judges may be believed, is likely to become more so every day, and of which, notwithstanding we have no tolerable description even in the best modern books of geography, we will begin with giving the reader a succinct but clear view of the situation, nature, and quality, of this island. We will next enter into a short history of its possessors, from the time it was first discovered by the *Europeans*. We will then shew how it came into the possession of the *French*; what improvements it has received since it came into their hands; and from what motives it is at present beheld in a light so very different from that in which it was before looked upon by the most intelligent *European* nations, and even by the maritime powers.

An account of the Isle of France, its situation, produce and importance.

- c** **T**HE *Isle of France* lies in the latitude of twenty and twenty-one degrees south, having the island of *Bourbon*, which is the nearest land, to the south-west; the island of *Diego Roys* on the north-east; the *Indian* ocean directly open to the north; the great island of *Madagascar*, and the continent of *Africa*, on the west; and the unknown southern continent on the east¹. The climate is pretty warm; but withal very wholesome; the air serene, and very little exposed to hurricanes, of which they have seldom more than one, and sometimes not that, in a year. The soil is, generally speaking, red, and stony; very mountainous towards the sea-coasts, but within land there are many spots both flat and fertile. The whole extent of the island is about fifty leagues, and the form nearly circular. Some of the mountains are prodigiously high, and

The natural history of this island.

* Relation du voyage de FRANÇOIS CAUCHE, de Rouen, en l'île de Madagascar, îles adjacentes, et cotes d'Afrique. p. 1.
¹ Géographie moderne, par ABRAHAM DU BOIS, p. 818.

their summits covered with snow all the year round. They make, however, no despicable appearance, as they are clothed with trees of different kinds, that entertain the eye with perpetual verdure. The whole island is well watered, or at least there is no part but may be so, by the proper application of art and industry in its inhabitants^a.

Advantages
and commodi-
ties.

THIS country produces all the trees, fruits, and herbs, which grow in this part of the globe, and in great plenty; but it was and is still famous for its ebony, esteemed the most solid, close, and shining, of any in the world. Besides the black, which is the most valuable, and indeed particularly distinguished in *Europe* by that name, there are also trees of the same kind which are red, and others of a citron colour^a (M). Groves of oranges, both sweet and sour, are common, as well as citrons; and the pine-apple grows spontaneously in very great perfection. It is true they have but very little rice, or indeed of any other grain; but this defect is, in some measure, supplied by admirable potatoes, and other nourishing roots, but more especially of late by the planting of *Manioc* from *Brazil*^b (N). There is a sufficient quantity of black cattle, and plenty of venison, wild fowl in abundance, of different kinds. The lakes, rivers, and the sea that surrounds it, are full of fish of different sorts, many of them large, wholesome, and delicate. It was formerly famous for land and sea tortoises, of an enormous size, the flesh, eggs, and shells of which were excellent, but these are now become more rare. However, it

^a Voyage de LEGUAT, tom. ii. p. 64, 65. 1750.

^b Dictionnaire de commerce, tom. ii. col. 186, edit. à Genève, Memoire de LA BOURDENAYE, tom. i. p. 18.

(M) It is a point strongly disputed, whether the ebony known to us be the same with that mentioned by the ancients, with whom it was in great credit, not barely as a beautiful kind of wood, but for its physical uses, more especially in curing diseases of the eyes (95). Ebony, during the greatest part of the last century, was in very high esteem in *France*; insomuch, that they gave then the name of *ebonists* to such as we style cabinet-makers, because they chiefly wrought in that kind of wood (96). What contributed greatly to sink its value, was the dexterity with which it was counterfeited, chiefly by staining pear-tree, filling up its pores, and giving it an artificial gloss after it was polished. The red ebony is styled *Cassandilla* by some writers; and though it is not either so close or so heavy as the black, yet it is very beautiful, and wrought with more ease. In the *West Indies* they have a kind of green ebony, which is not only valuable for the uses before-mentioned, but also considered as an ingredient in dying, affording a deep, rich, and strong colour (97). The citron-coloured ebony, of which there is a great deal in the *Ile of France*, is frequently very beautifully veined, which enhances its price, and renders it a great curiosity; and yet, after all, none of these woods bear any thing like the price that they formerly did (98); but as this depends only upon what the world calls fashion, it is not at all impossible, that, some time or other, they may resume their credit.

(N) The savages of *Brazil* call this root, in their own language, *Manioc*; from whence are derived all that variety of denominations under which it is known to the learned and unlearned, the bare recital of which would take up a line or two. The most common name, however, amongst *English* writers is *Maniot*; and, for its general use, deserves to be more largely insisted on (99). The inhabitants of *Hispaniola*, and other islands, are not destitute of this plant, the root of which they call *Taca*, but the *Mexicans* style it *Quauacamotli*, and, after it is prepared and reduced to flour, *Cassavi*, as we are assured by *Moravians*. All the other people of *America*, from *Florida* even to the straits of *Magellan*, make their bread of it, though they are not destitute of the frumentaceous grain called *Mays* (100). The *Maniot*, which is natural to *Brazil*, and there most carefully cultivated, is a shrubby plant, which grows from five to eight feet in height, with a woody, twisted, nodous, brittle stalk, containing a pith like that of alder; the leaves are digitated like of those of the lupine, or black hellebore; the flowers pentapetalous, and of a pale yellow colour;

the seeds like that of the ricinus, but of no use. The root is not unlike a parsnip, and turgid with a lacteous juice. After it is taken out of the ground, it is put into a hand-mill with iron teeth, and turned by two men, and ground to meal, which is afterwards subjected to a press, by which all the superfluous and noxious humour is evacuated, and the mass left quite dry: this done, they pass it through a sieve, called *Urapeba*, then set it over the fire in a flat-bottomed vessel of earth or copper, and stir it about till it is duly dressed. What is half dressed is still moist and esculent, and they call it *Farinha relada*, that is, meal dressed, but not dried. What remains, and is intended to be reserved, they keep stirring over the fire, till it is perfectly dried; for the drier and better dressed, the more durable it becomes. The plant being pressed, yields a liquor, called by the natives *Manipuera*, which poured into a vessel, after two hours sticks to the bottom: hence is produced another sort of meal, better than the former, and yielding more flour; this they call cream of *Tipica*. Of the water of this meal, what subsides to the bottom serves to make a sort of comfit, called *Tipicete*, of an excellent taste: there is also a sort of gum, or rather amyllum, which serves for the same use. This liquor *Manipuera* is most greedily coveted by all sorts of animals, for its pleasant and sweet taste, but is present death to them; yet, what is strange and remarkable, while it remains unpressed in the root, nourishes every animal except man. Besides the former preparations, of the root dried in the sun there is made another sort of meal (1), and a whitish flour, which make fine white bread and biscuits, as good as those made of wheat, and very much resembling them. The root reserved intire, without grinding, serves to feed cattle and beasts of burden. The plant is miserably infested by worms, and whole swarms of ants, and not only the stalks and leaves, but the very roots, are greedily devoured by wild beasts, as well as domestic animals. It is easy to discern from hence, why the introducing of this kind of improvement, attended with much labour, some difficulty, and the great advantages of which could not be immediately understood, met with some opposition; as also, that, after the culture was become a little familiar, the different methods of curing, preserving, and preparing the *Manioc*, were thoroughly diffused, and peoples palates in general reconciled to this sort of diet, it grew into universal acceptance and esteem, more especially as, with due care and attendance, the annual crop might be depended upon (2).

a may, upon the whole, be styled, if not a rich, yet a pleasant and plentiful country, where the inhabitants, with a reasonable degree of care and pains, may be furnished with all the necessities, and even conveniencies of life; more especially, since it is now annually visited by vessels from *Europe* and the *Indies*. We shall conclude this description with observing, that it does not harbour either serpent, frog, toad, or other venomous animal. The most disagreeable creatures therein were bats of a prodigious size, which some old writers of voyages style flying cats; but these are, in some measure, extirpated^p (O).

Some antient geographers having mentioned an island in these seas, called *Cerne*; this probably gave occasion to the *Portuguese* to bestow that name on the island of which we are speaking, notwithstanding that *Pliny* expressly places it in eighteen degrees thirty minutes of south latitude; so that for this, as well as other reasons, we may pronounce them in a mistake. They discovered it in the beginning of the sixteenth century; and, according to their usual custom, put on shore some hogs, goats, and fowl, that they might multiply, and supply the necessities of those who should, at any time, call there, the island being uninhabited; and some think that they likewise planted there certain fruits and seeds from *Europe* and the *Indies*. Being the extensive empire they held, the numerous enemies they had to cope with, and the smallness of their own numbers, we may much rather wonder that the *Portuguese* sought out and described so many countries as they did, than that they reduced and settled no more. However, what they did served to make the place remarkable, and the *Dutch* had it early in their charts, as well as another island, called *St. Apollonia*, with which this has likewise been confounded, and which is now very justly believed a fiction, since modern seamen could never meet with any such isle^q (P).

The *Dutch*, in the second voyage they made to the *East Indies*, under the command of the Admiral *James Cornelius Vanneck*, came thither, on the 18th of September 1598, with five ships, and anchored in a safe port, capable of containing fifty large vessels. They found the country, which probably had been for many years undisturbed, abounding with cattle, fowl, fish, and fruits; so that they landed such of their crew as were sick, who speedily recovered: and, having supplied themselves with all kind of refreshments, and bestowed the name of *Warwick's Haven* on the port where they anchored, in honour of their vice-admiral, they continued their voyage, and entered, as an useful observation in their journals, that this island might be as commodiously visited by outward-bound ships as that of *St. Helena* in their return. But though many of their countrymen reaped the benefit of this advice, and though they named this island after Prince *Maurice of Nassau*, yet it was near forty years before they thought of settling there; and were then just before-hand with the *French*, who actually sent a

Mistakes about this island, visited by the Portuguese, and supplied by them with hogs and goats, &c.

Visited by the Dutch, who settled in it, and bestowed upon it the name of MAURITIUS.

^p Voyage de LEGUAT, tom. ii. p. 70—72.

^q Voyages de la compagnie des Indes Orientales, tom. ii. p. 157.

^r Geographie moderne, par ABRAHAM DU BOIS, p. 818.

(O) We have, in *Leguat's* voyages, a very good description of this island, upon which himself and his companions resided for some time (3). These people sailed from *Holland*, July 10th, 1690, with a view of settling in the island of *Mascarenbas*, now styled the island of *Bourbon*, and which, if they could have settled, they proposed to have called the island of *Eden*; but finding that in the hands of the *French*, eight of them were put on shore on the desert island of *Diego Rajs*, or, as they styled it, *Rodriguez*, where they remained two years and twenty-one days, and at length, growing weary of the solitary life they led there, ventured, in a vessel of their own framing, to sail to the island of *Mauritius*, then in the hands of the *Dutch*. We may, from their description of the island of *Diego Rajs*, which is equally copious and curious, frame a just notion of that island of which we are speaking, before it was settled by the *Europeans*, when the land and sea tortoises were met with in the greatest plenty and perfection, and other natural advantages were undiminished by the resort thither of strangers; for the candid reader will distinguish between the times in which the several accounts we have of this country were given, and not conclude so rashly as some have done, that because modern travellers see none of those prodigious tortoises that were able to move with four men upon their backs, therefore the old relations are false or exaggerated; whereas, by comparing the description of these two islands, in the state they both

were about sixty years ago, it will appear highly probable, that the old accounts are as accurate, and as authentic, as any that have been since published (4).

(P) We find in *Hondius's* general map of *Africa* all the three islands mentioned in the text, very tolerably laid down; that of which we are particularly speaking is thus marked, *I. de Sirne*, alias *Mauritii Insula*, and is placed in the latitude of somewhat more than twenty degrees south, and in the longitude of seventy-nine degrees. In this map there is no name given to the island of *Mascarenbas*. In *Danckert's* map of *Africa*, published at *Amsterdam* in 1661, we have that now called the *Ile of Bourbon*, laid down some degrees more to the south than it ought to be, under the title of *I. de Mascarenbas*, and to the north-west lies another island, called *St. Apollonia*; which shews, that though this map is very beautiful, and well engraved, yet it is not at all accurate, or to be depended upon. In the map of *Madagascar*, taken from *Samso*, and published by *Nicholas Sanson*, there are two large islands, to which the name of *Mascarenbas* is given in common, and to the north-west of them is an island, styled *St. Apollonia*, otherwise the island of *Maurice*. In *De Lisle's*, and the best modern maps, the island of *Mauritius* is placed, as it ought to be, between the latitudes of twenty and twenty-one degrees south, and in the longitude of between seventy-four and seventy-five degrees; and the island of *Mascarenbas* lies south-west from thence, without any mention of *St. Apollonia* at all.

(3) Voyage aux Indes Orientales, tom. ii. p. 64, 65.

(4) The reader may be satisfied of this, by consulting the authors that we have cited in the order of time in which they visited these places.

vessel thither from *Dieppe* for the like purpose, who found the *Dutch* in possession, and very busy in raising a fort, that might command the haven, and the place where ships took in water (Q).

The Dutch and French break faith with the natives, which ruins this settlement, and that of Madagascar.

ABOUT the year 1640, the *Dutch* had two or three little settlements, besides their fort, upon the island; but wanting slaves to cultivate their plantations, they sent over a bark to *Madagascar*, where the *French* had just begun to plant, and prevailed upon the governor, and another officer, to steal fifty blacks, of those that were settled under their protection; which scandalous breach of faith proved the ruin of both colonies, for the people of *Madagascar* never had any confidence in the *French* afterwards; and as for the negroes that were carried to *Mauritius*, most of them fled into the woods and mountains, where they became what in the *Indies* they call *Marons*, that is, outlaws or banditti; and as they readily afforded shelter to all who would join them, the *Dutch*, notwithstanding they had a constant garrison of fifty men in the fort, were continually exposed to their insults and depredations, which, with other incidental calamities, made them weary of the place, where, through the company's parsimony, but chiefly through their own laziness, they were sometimes in great want, notwithstanding that ebony bore a good price, they were also able to have raised considerable crops of indico and tobacco. At length therefore they quitted the island, but whether gradually, or all at once, is a little uncertain, and left the wild negroes in possession, who kept, notwithstanding, for the most part, in their fastnesses, from whence they sallied upon the crews of such ships, as came thither for refreshments, and often surprised and cut them off; which occasioned such complaints at *Batavia*, that the general and council came at length to a resolution, that the island should be resettled, believing that such precautions might be taken, as would obviate all the objections raised against the colony at *Mauritius*.

The Dutch resettle the island, but are again constrained to quit it.

THIS was accordingly done, and three establishments formed, one on the north-east, another on the south-west extremity of the island, and a third upon that which is called the *Black River*. To this place state criminals were frequently banished, from *Batavia* and other colonies, and orders were given for erecting a stone fort, with magazines and warehouses, for the conveniency of such *Dutch* ships as touched there; which very quickly put things upon a better foot than they had been. The seeds of mischief, however, remained, and some new ones began to take root, and display themselves very apparently. On the one hand, the *Marons* remained lords of the interior part of the island, so that the *Dutch* were forced to confine their settlements to the sea-coasts, and this led them very naturally to an illicit trade. Amongst those who were banished thither, some were very skilful in this kind of traffick, the governor's allowance was but small, his perquisites not very large, and therefore he was but seldom able to withstand temptation. *English*, *French*, and *Portuguese* ships met with strange accidents, which obliged them to put into *Mauritius* to refit, though the inhabitants had hardly any thing better than canoes, nor so much as a dock or a yard where they could build a bark, but they had magazines, into and out of which goods could be conveyed with singular dexterity. About the beginning of the current century, the directors of the *Dutch East India* company in *Holland* came to have so thorough an understanding of the practices at *Mauritius*, that they resolved to withdraw the colony; which was accordingly done, some say in 1703*, and others, with more probability, in 1710*: and thus the *Dutch* government and the name of *Mauritius* were extinguished together.

* Relation du voyage de FRANÇOIS CAUCHE, de Rouen, en l'isle de Madagascar, isles adjacentes, et cotes d'Afrique, p. 1. Histoire de grande ile de Madagascar, par Monsieur FLACOURT, P. ii. c. 8. From private information, which may be depended upon. * HAMILTON's account of the East Indies, vol. i. p. 154.

(Q) It was with a view to the settlement of this island, that Francis Cauche, of Rouen, made his voyage to *Madagascar*, and the adjacent islands, of which he has given a very entertaining and instructive account. He informs us, that they arrived at the island of *Diego Rays*, in the latitude of twenty degrees south, and forty degrees east from *Madagascar*, June 25th, 1638, in which island they set up the arms of France. From thence they proceeded to *Mascarenbas*, two degrees from the tropic of Capricorn, and set up the French arms there likewise. After twenty-four hours stay, they went and anchored at *St. Apollonia*, one degree nearer the line, where they found the *Dutch* settled at a port on the south-east extremity, where they were building a fortress. The next

day they went to the north-west end of the island, where they found an *English* vessel of five hundred tons, and carrying twenty-eight pieces of cannon, homeward-bound from *Batavia*, laden with spice, the crew of which offered to assist him in dispossessing the *Dutch*; which proposal they did not think fit to accept. This author assures us, that the bats in the island of *Mauritius* are as big as crows, and their heads resembling foxes, hanging by a claw at the end of their wing on the branch of a tree, whenever they sleep, or recline to refresh themselves. He also affirms, that there were thornbacks in these seas, of such prodigious magnitude, that one of them would serve three hundred men (5).

(5) Relation du voyage de François Cauche, de Rouen, en l'isle de Madagascar, isles adjacentes, et cotes d'Afrique, p. 1. 2. 3.

^a We have no distinct account at what time, or in what manner, the *French* took possession of this deserted isle; but it must have been during the space that the old *East India* company's privileges subsisted, since we find it conveyed, with the rest of the company's territories, to the company of the *Indies*, by the name of the *Isle of France*, yet possession was not formally taken till more than two years after; the edict for uniting the company being in May 1719, and the monument of possession taken, and the new name imposed, erected by the Chevalier *De Fougerey*, is inscribed September the 3d, 1721^b. It seems that in this, as in other cases, the *French* government had a mind to make the world believe, that to begin and perfect was the same thing; for, by an edict, dated two months after possession was thus taken, a provincial council was erected in the *Isle of France*, dependent, however, upon that of *Bourbon*, the council there being declared superior upon this occasion; and the *Sieur De Nyon*, governor of the *Isle of France*, was directed to take his oath of office in the superior council of the *Isle of Bourbon*, before he presumed to take his seat in his own, where he was to be assisted by six counsellors, which might very probably be the better part of all the masters or heads of families in the island^c (R).

Granted by the title of the Isle of France, to company of the Indies, by Lewis XV.

^b But, notwithstanding the magnificent figure it made upon paper, the company of the *Indies* had much ado to resolve, after more than ten years trial, whether they should keep this potent colony, or leave the island to the wild negroes again, as the *Dutch* had done. To say the truth, the grounds of this perplexity were by no means trifling. The company had furnished all who went thither, either whites or blacks, with utensils, arms, and provisions, to be paid out of the fruits of their industry, which were so great after their arrival and establishment, that they could never maintain themselves, but continued a dead weight upon the company. At length, in 1735, it was resolved to send over *Monsieur de la Bourdonnaye*, with the swelling title of *governor-general* of the *islands*, both the councils, by his advice, being declared independent, and that superior in which the governor was present^d. Upon his arrival in the *Isle of France*, he found it in as miserable a condition as ever colony was, very thin of people, and those ignorant, lazy, and seditious, as if they had not been as they really were, naked, defenceless, and starving. This gentleman went to work with all the vigour and public spirit imaginable, and at the expence of making every man under his command his secret enemy, though they all professed that he was the wisest, gentlest, and best of governors, he soon put things to rights, and brought the greatest part of them to believe that he really was, what out of servile flattery they called him^e.

Yet this settlement, for many years, but very unprofitable.

^c *Histoire de la compagnie des Indes*, p. 381. *M. Bruzen la Martiniere*, tom. iv. p. 180. *moire de la Bourdonnaye*, tom. i. p. 18.

^d *Le grande dictionnaire géographique et critique*, par *Histoire de la compagnie des Indes*, p. 357. ^e *Me-Idem, ibid.*

(R) We are very sure that the *French* were not possessed of this island in the summer of the year 1717; but we are no less sure, that, very soon after, the captain of a ship from *St. Maloes* took possession of it, on behalf of his most Christian Majesty, and the *French East India* company, though, as to the exact time or manner, we can affirm nothing distinctly; for the reader will observe, that this transient possession is very different from that formal one, mentioned in the text. This last seems to have been done by order, and was performed in this manner. A large post was set up in a conspicuous place, and on the top thereof a pole forty feet high, with a white flag. On the post was inscribed a kind of instrument of possession, in *Latin*, to the following effect (6):

Long live Lewis the fifteenth, king of the Gauls, and of Navarre. Let the king live for ever! whose pleasure it is to unite this island to the rest of his dominions, and, in testimony thereof, to bestow on it, for ever, the name of the Isle of France. In praise and honour of so great a prince, Jean Baptiste Garnier de Fougerey, captain of the ship called the Triton, native of the town of St. Maloes, in Little Brittany, erected this white standard, September 23d, 1721, and on the 3d of November following, with the blessing of God, set sail from hence, on his return to France.

We may reasonably conclude, that the edict for settling the

provincial council was issued with a view to an establishment upon this island, and to give some kind of lustre to the new company of the *Indies*, who, in this respect, seem to have proceeded exactly on the scheme of their predecessors, supposing that whatever plans they formed in *France* might be carried into execution in these distant islands, in such manner and form as they thought fit to prescribe, provided they were at such an expence as appeared to them requisite for that purpose; but it seems they were miserably deceived, and that for a long course of time, since, when *Mr. de la Bourdonnaye* arrived in his government, and expected to have found, according to the information of the company, four or five engineers, and several public structures, he was not able to meet with one; for though they been sent over, they were so little able to agree with the council, that, except one *Malatto*, they had all quitted the service. As for public works, he found in the *Isle of France* a small wind-mill, carried up to the height of eight feet, but unfinished, a little house for an engineer, and some magazines, begun four years before, the walls of which were about as high as a man could reach; in short, about three hundred yards of masonry-work; and in the island of *Bourbon*, those employed in the service of the public had been industrious in the same degree. At his departure, he left about eleven thousand toises of masonry-work, built under his direction (7). All the success, therefore, that the *French* have to boast in the *Indies*, has been owing to the superior capacities of a very few private gentlemen, who happened fortunately to be in their service.

(7) *Me-*

Improved, for-
rified, and ren-
dered of the
greatest conse-
quence by Mr.
de la Bour-
dennaye.

HE sent for young negroes over from *Madagascar*, bred them up in honest and religious principles, and then made use of them against the *Marons*, whom he obliged either to submit, or to quit the island. He found in the island scarce a planter, manufacturer, or soldier; he made every able man that resided there all of these, by shewing him that it was his interest, and placing the essence of his power in his own example. When he came, there was nothing but cabins; in the space of a few years, besides private habitations, he erected magazines, arsenals, barracks, fortifications, mills, quays, canals, and aqueducts, particularly one that carried fresh water down to the port, and to the hospitals, three thousand six hundred toises in length, which effectually removed the most troublesome circumstance that hitherto had impeded their thriving. They had never been skilful enough to clean or repair the smallest vessel for their own service, but were forced to lay them up when foul or decayed, till some ship came in, when they could hire the carpenters to do what they wanted. They had not either roads, carriages, or sawing-mills; the governor enabled them to get the better of these wants, and, in eighteen or twenty months, brought down a large quantity of serviceable timber to the port, where he provided yards, wet and dry docks, pontons, canoes, shallops, and whatever else was requisite for careening, which he performed as effectually as in *Europe*. In 1737, he launched a brigantine; in 1738, he built two good ships, and, towards the close of the year, put one upon the stocks of the burden of five hundred tons. In a word, in four years time the port of the *Isle of France* was as fit for building or careening as *L'Orient*, the business as effectually done, and with more expedition^d (S).

Methods by
which the
inhabitants
have been
drawn to im-
provements
agreeable to
the company.

ALL these public services could never have been brought about, if he had not attended, at the same time, to the personal interests, and private advantages, of every planter in the island. A few instances will suffice to set this important affair in a clear light. In the first place, he prevented their ever being distressed for food, that is, for bread, which had often happened before, and was the principal cause of their poverty. He did this, by obliging them to plant five hundred feet square of *Manioc* for every black man and their families. At first they were very averse, and some were so wicked as to destroy these plantations, after they were made; but, by degrees, becoming more accustomed to this diet, they acquired sagacity enough to perceive, that brown bread was better than none. He next prevented their slaughtering cattle at random, obliged the crews of the company's ships to be satisfied, during their stay, with fish and turtle, when it was absolutely requisite; and, by this temporary short allowance, secured to them perpetual plenty. He put them upon raising commodities and manufactures of which they never thought; and, amongst the rest, he set on foot sugar-works, for the profit of the company, which brought in, when he left the island, sixty thousand livres a year^e.

Mr. de la
Bourdennaye
accused in
France, not-
withstanding
all these ser-
vices.

ALL these strange things were performed between 1735 and 1740; and from thence we may account for that otherwise inexplicable mystery, how the *Island of France* came to be in a condition, when the *British* squadron arrived on its coast, so diametrically opposite to all the accounts with which the most intelligent persons here were able to furnish the administration. But, for all this, Mr. de la Bourdennaye was on the point of being disgraced, when he returned; the company of the *Indies* was implacable, the ministers in general prejudiced, and the good-natured Cardinal de Fleury very sour. Mr. de la Bourdennaye insisted upon knowing the causes of all this, and refuted every charge so clearly, that the company had nothing to say; the ministers were convinced, and the cardinal satisfied. In the course of his justification, he shewed, that he never was possessed in property of a foot of land; that he never traded for a single livre; and that he had decided but one law-suit all the time he was governor. He farther shewed, that the inhabitants of the *Isle of France* were able to carry on a legal and bene-

^e Dictionnaire de commerce,

(S) The reader will very probably ascribe it either to partiality or credulity, that what is advanced in the text, and in the last note, as indubitable matters of fact, stand upon no other authority whatever than the assertion of the person to whose conduct they do so much honour. To justify this proceeding, and to give the reader as much satisfaction on this head as is possible, he is desired to consider the following remarks. First, that these are not general, vague, indeterminate accounts of wonderful things done, and vast improvements made, but plain, direct, and distinct facts, which if they had been falsely asserted, must have turned to Mr. de la Bourdennaye's utter confusion. Secondly, that all these facts have been juridically examined, while this gentleman was a close prisoner in the *Bastille*, when his enemies had

all the opportunities, and all the provocation imaginable, to refute them, notwithstanding which, the truth of his allegations has been acknowledged, and certified under the hands of his judges. Thirdly, that the accounts given here of the state of the *French* islands, by such as had visited them before the year 1735, agreed exactly with Mr. Bourdennaye's representation, as did also the circumstances in which they were found by Admiral Boscawen, when he took a view of them, in his passage with the fleet of his allies to the *East Indies*. Upon the whole, therefore, we must say fairly, that the man of merit is a citizen of the universe, and that those acquire some share in him, who have the honesty to own, and courage to applaud, his virtues.

a ficial commerce, in goods and manufactures of their own, both to the *Indies* and *Europe*[†] (T). It is now time to step over to the other island of *Bourbon*, and see in how strange a manner that colony was originally formed, and what in process of time have been the advantages gained thereto, and improvements made therein, by the companies to which it belonged.

We have already given the reader some account of the repeated attempts made by the French *What the French proposed to themselves from establishing settlements on the coasts of Madagascar.* to establish a settlement upon *Madagascar*, or the isle of the *Dauphin*, as they call it, of which they kept possession above one hundred years, and to which they yet maintain a title. They had three principal points in view in attempting this settlement[‡]: the first, was the fixing a powerful colony in a commodious place for carrying on the trade of the *Indies*, without which they judged it in a manner impossible to make any considerable progress, knowing well that they should be warmly opposed by the *European* nations already in possession of this commerce. In the next place, they conceived that a very profitable intercourse might be carried on with this island which would be highly beneficial to their navigation, augment the number of their seamen, increase their shipping, and, in many other respects, facilitate their schemes for extending their trade; and lastly, they proposed, by making this establishment the centre of their commerce, to put it into so good a condition as not only to answer all the ends of affording protection and refreshment to all their outward and homeward bound *East India* ships, but farther flattered themselves that the colony might be rendered so populous, and the towns and fortresses so defensible, as, in case their success in the *Indies* should provoke the maritime powers to endeavour their destruction even by open force, they might find such a resistance here as would effectually preserve that trade when it should be acquired (V).

[†] *Memoire de la Bourdennaye*, tom. i. p. 18—25.

[‡] *Discours d'un fidele sujet du roi, touchant l'establissement d'une compagnie Francoise pour le commerce des Indes Orientales.*

(T) When we attentively consider the methods taken by the *Sieur de la Bourdennaye*, we may easily comprehend how all these vast alterations were wrought. Numbers of young *Indians*, brought from *Madagascar* at thirteen or fourteen years of age, well treated, and brought up to several trades, were able to perform many things that could never have been expected from black slaves; and he even engaged those unhappy creatures to exert themselves in another manner than they had done formerly, for the sake of living more at their ease, and in somewhat greater plenty. As the whites recovered in the hospital established for the relief of such as were in the service of the company of the *Indies*, they were immediately employed some way or other for their own benefit, and that of the colony; so that all improvements were disposed in such a manner, as not only to go on together, but to assist and facilitate each other. However, if in the circle of the *Sieur de la Bourdennaye's* scheme there was any circumstance more excellent than another, this happy thought of cultivating commodities of great value, as well in the *Indies* as in *Europe*, ought so to be esteemed. The sugar that is raised here has a constant and regular vent at *Surat*, as, on the other hand, cotton and indigo are staple commodities for the homeward-bound ships (8). In consequence, therefore, of these improvements, the people of this island are enabled to purchase, in a great measure, all they want either from homeward or outward-bound ships; and in time, perhaps, as the island becomes more populous, and consequently more flourishing, they may be encouraged to undertake discoveries in those southern countries which we have before mentioned, as being at least as well, if not better, situated for that purpose, than any other people upon the globe (9).

(V) All the great consequences resulting from a thorough plantation of *Madagascar*, and the proper means of bringing this about, were very well understood by the servants of the old *East India* company, tho' they did not publish them with so much pomp and eloquence to the world as the persons employed by *Mr. Colbert*, which indeed had a good effect in making the generality of people understand what mighty improvements it was possible to make in this large country, while more penetrating people saw, at the very same time, that the whole capital of the company was hardly sufficient to

carry the project of the settlements into thorough execution, that nothing very considerable could be projected in the company's favour till these settlements were completely made, and the inhabitants in fit circumstances, and in a proper disposition to carry on such a commerce as might be for the company's service; and that, as all this would be attended with a vast expence of money and time, without the possibility of making any great returns, be subject to repeated disappointment, and depend altogether, and through the whole series of time, on the wise, steady, and uniform conduct of the directors at home, and of those whom they employed to administer their affairs abroad, they foresaw, and were not at all mistaken, that how beautiful (10), how feasible soever the plan might seem in theory, it would meet with little or no success when it came to be carried into practice. We must not be too hasty in concluding from hence, to the prejudice of the *French* nation, since, if we consider how many years were spent, what a succession of societies arose, and were ruined in establishing our colonies of *Virginia* and *New England*, we shall easily discern how very difficult a thing it is for any nation to succeed in bringing her first foreign colony to bear; tho', after all, as we have explained things in another place, there were some peculiar improprieties in the temper of the *French* adventurers, which nothing could have redressed but their being under the direction of able, experienced, and disinterested officers, who, without attempting to meddle with trade, might have taken all the preparatory steps to the procuring an extensive commerce, by a proper distribution, and bringing into a thriving condition all the plantations necessary in the adjacent islands, and along the coast of *Madagascar*. If such persons were not to be had, the blame did not lie upon *Mr. Colbert*, who could only chuse, and had it not in his power to make instruments for this service. On the other hand, if the company was too much in a hurry, in reference to these colonies, or if, as the truth seemed to be, those who were sent thither misbehaved themselves, and ruined the design, no arguments can be drawn from thence in refutation of the points advanced in the project published by that great statesman's (11) directions, which is an observation more than once repeated, because it is a matter that deserves particular attention.

Their expectations not improvable, yet prove abortive.

THESE notions were indeed were lofty and magnificent, worthy of their authors *Richieu* and *Colbert*, and, at the same time, they were far from being unnatural or impracticable. The climate, tho' not so healthy and pleasant as they represented it, was however tolerable; the soil wonderfully fruitful; there wanted not good ports; all the necessaries of life were to be had in abundance; and, to say nothing of gold, iron, lead, of all which however there are certainly mines in that island; cotton, wax, sugar, black and white pepper, tobacco, indigo, ebony, and a great variety of other valuable commodities might have made this place answered not only all their expences in settling it, but even their most sanguine expectations. That it did not answer them is very certain; but that the defect was not in the country, but in themselves, their best writers agree. That the scheme they went upon was rational, and not so only, but absolutely necessary, time and experience have since made appear, but they stand indebted for the advantages they now possess, to chance and accident^b. For, tho' they have long ago abandoned *Madagascar*, yet, as we have seen, they are still possessed of some islands near it, which are of such consequence, that without them it would be very difficult for them to preserve what trade they have in the *Indies*, as will hereafter appear, though in the accounts they have given of this commerce, they have scarce mentioned, much less described them.

A description of the island of Mascarenhas, ago the name of *Bourbon*: it lies in the latitude of twenty-one degrees twenty-three minutes south, and in the longitude of seventy-six degrees to the east of *Madagascar*, and a small distance from the island of *Maurice*, or, as it is now styled, of *France*. We have already hinted that they touch'd at, and slightly examined it, even before they attempted *Madagascar*, but in all probability were deterred from settling there, on the score of its wanting a port. The island of *Bourbon* being in some parts inaccessible, the length and breadth have not been well determined, but the circumference, as a person who resided there several months assured us, may be fifty-seven leagues, or thereabouts^c. It is for the most part mountainous, but in some places there are very pleasant and beautiful plains. In the south part of the island there is a burning mountain which has thrown out vast quantities of bitumen, sulphur, and other combustible materials; neither does it cease throwing them out still, so that the country about is useless, and is called by the inhabitants *Pays Brule*, that is, *Burnt Land*. The shore is high and rocky all round, so that there are no ports (but there are several good roads, particularly one on the west and another on the north-east), which is the greatest disadvantage^d it has: as to its form, it is irregular, so that it is difficult to judge from the maps whether it be round or long (W).

Its climate, soil, and produce.

As to the air, it is equally pleasant and wholesome, insomuch that the people live there to a vast age without feeling either infirmities or diseases. This is an excellent effect from a very troublesome cause, by which we mean the hurricane, a kind of storm too well known to be described here; of these they have one or two every year, which purge and cleanse the air so as to render it highly salubrious; the certainty of which is thus distinguished, that when they fail of making their annual visits, as sometimes they do, the people are sickly, and death finds an entrance into the island, which otherwise would be soon overstocked^e. The climate is hot, but not to such a degree as might be expected from its situation; the breezes from the mountains being constant and very refreshing; the tops of these mountains are in the winter covered

^b CAUCHE. FLACOURT. RENNEFORT. &c. p. 116.

^c Relation de l'isle de Bourbon, par DU BOIS.

^d Tour du monde, par L. G. DE LA BARBINAIS, tom. iii. p. 127.

(W) In the memorial written by the *Sieur Anthony Thureau*, who had a commission to take possession of this place on behalf of the crown of *France* in 1654, it is asserted that the island is ten leagues broad and about sixty in extent, this gentleman and his companions making the tour of it in eleven days. In their passage they found the north-east part of the island very fruitful and pleasant, as well as plentifully watered; and this extent of country they judged to be about fifteen miles. The south-east part of the island, which they apprehended to have been still more fruitful and pleasant, and of the extent of twenty leagues, was entirely burnt and consumed to a coal; which dreadful effect, in their judgment, was produced by lightning. The south west part of the island they judged to be six leagues, a very tolerable country, with a large lake and a fine river in it; but a great proportion of the north-west of the isle of *Bour-*

bon is represented in this memorial as uninhabitable (12). There was a particular description of this country under the name of the island of *Eden*, published in *Holland* by the direction of the *Marquis Du Quesne*, of which, as it is visibly calculated to represent it as a perfect Paradise, we esteem it best to say nothing, since it is not from such kind of accounts that any true judgment may be formed (13). The author of a journal of Mr. *Du Quesne's* voyage, which in other respects is very exact and much esteemed, was so very little acquainted with this island, that he confounds it with *Madagascar* (14): which is a proof, that at the end of the last century it was far enough from being considered even by those best acquainted with the *East India* company's affairs; for the author of this journal, who was in their service, did not look upon it as a place of any great importance.

(12) *Histoire de la grande isle de Madagascar*, par le *Sieur Flacourt*, cap. 85. tom. i. p. 50.

(13) *Voyage de Leguat*, tom. ii. p. 7.

a with snow, which, melting in the summer, furnishes abundance of rivers and rivulets, with which the country is plentifully watered; so that the soil, tho' not very deep, is wonderfully fruitful, producing *Turkey* corn and rice twice a year, and the latter in vast abundance. Most sorts of cattle are found there, good in their kind, and very cheap: wild goats and wild hogs are found in the woods and on the tops of the mountains: vast plenty they have of wild fowl of different kinds: fish too, in great abundance; and, before the place was so well inhabited, vast quantities of land tortoises, affording at once the most delicate and most wholesome food: as to fruits, they have the guavas and bananas, oranges and citrons, tamarinds, and other kinds: neither does it want valuable commodities, particularly ebony, cotton, white pepper, gum benjamin, aloes and tobacco, all excellent in their kind, when compared with those
b of other countries. It is also happy in its deficiencies, for no venomous creature is to be found therein, and but two that are disagreeable to the sight; the one, spiders of the size of a pigeon's egg, which weave nets or webs of a prodigious strength; and some curious people have thought that these might be so treated as to become as valuable as silk; the other, bats of a most enormous size, which are not only skinned and eaten, but esteemed also the greatest delicacy that they have; in which opinion, when they can overcome their natural aversion, so far as to taste them, *Europeans* agree^m (X). Such is the island of *Bourbon* in itself; let us now speak of its inhabitants.

WHEN the *French* first settled in *Madagascar*, the island *Mascarenhas*, as it was then called, was absolutely desolate; three *Frenchmen*, being banished thither, and left in it for three years, made such a report of it at their return as surprised their countrymen: they lived most of that time upon pork, and, tho' they were in a manner naked, yet they affirmed that they never had the least pain or sickness whatever. This tempted one *Anthony Taurcau* to go over thither in 1654, accompanied by seven *French* and six Negroes, and they carried with them cattle, with which the country has been stocked ever since. The first thing they did was to erect the arms of *France*, by order of M^r. *Flacourt*, who was governor of *Madagascar*, and to bestow upon the island a new name; then they set up huts and laid out gardens, where they cultivated melons, and all sorts of roots and tobacco; but just as the last-mentioned herb grew ripe, came a hurricane, and destroyed allⁿ. The *French*, however, went to work again, and by having some acquaintance with the climate, succeeded better, and added aloes to the rest of their plantations; but receiving no succour from *Madagascar*, and being tired of living there by themselves, they very readily embraced the offer made them by the captain of an *English* ship, and in the year 1658 embarked for *Madras*; so there ended the first colony. When the last great blow was given to the *French* at *Madagascar* by the natives, who, provoked chiefly by their gallantries, surprised *Fort Dauphine*, and cut them off in one night, there escaped as many men, as, with their wives, who were natives, filled two canoes; and, these being driven by the wind on the island of *Bourbon*, were the next sett of people that inhabited it; and, for want of an opportunity to remove, were constrained to cultivate this new country of theirs, and to remain in it; neither was this any great hardship, considering the evil from which they escaped, and the peace and plenty they might have found here in return for a very small expence of labour and industry^o (Y).

IT

^m Histoire de la grand isle de Madagascar, par Monsieur FLACOURT, p. 431. Relation de l'isle de Bourbon, par Du Bois. ⁿ Histoire de grand isle de Madagascar, par Monsieur FLACOURT, p. 431. ^o Tour du monde, par L. G. DE LA BARBINAIS, tom. iii. p. 121.

(X) As these hurricanes happen always within a certain period; that is, either in the months of *December*, *January*, *February*, or *March*; proper precautions may be taken against them; more especially, as they are of short continuance, and as these storms of a day or two excuse the island from all ill weather for the rest of the year (15). Some writers assert, that in the isle of *France* the hurricane is fixed to the ninth of *February*; which day once past, they look upon themselves as secure for that year; but all agree, that the want of these periodical storms is commonly succeeded by unwholesome seasons (16). We have good reason to believe that, as this island is better cultivated, the woods rendered passable, and great tracks of land manured, the seasons may be in some measure altered, and the terror of these hurricanes lessened by a timely provision against their consequences. Besides, experience has taught them to be very exact in distinguishing the prognostics of an hurricane, which are said to be a hollow frightful noise in the

mountains, three or four days before the storm rises; and while this noise continues, there is a dead calm both on sea and on shore. The night before the hurricane, the moon appears of a crimson colour; and the storm begins either a little before or a little after, the break of day. As soon as the signs appear, the people begin to take their measures for the safety of their persons and effects, and if there be any ships in the road, they go to sea without delay, to avoid being driven on shore, which otherwise they can hardly escape (17).

(Y) When the *French* took possession of this place, they set up a pillar with the arms of that crown on the same spot where the *Portuguese* had set up their pillar of possession; and some writers say, that the *French* arms were only inscribed on the opposite side of the same pillar. The date of the *Portuguese* entry is 1545, and on the *French* side 1653; tho' it seems pretty evident that those who set them up did not arrive till the year 1654 (18). The *French* authors say, that they were first

How a new augmentation of inhabitants came into this island, which was now taken into the hands of the French East India company, against whom they rebelled. It was not long before they acquired a farther stock of inhabitants; for a pirate that had been committing depredations in the *Indies*, returning to *Europe*, ran ashore and was split to pieces upon the rocks, so that the crew were forced to join themselves to the former inhabitants, and as they had on board their vessel a great many *Indian* women they had made prisoners, they lived with them, and in process of time had a numerous posterity. As *East India* ships touched here frequently when they were too late to double the *Cape*, many of the sailors, for the sake of the women, deserted at the time of their departure, and, staying behind, became planters in the island of *Bourbon*. As the place grew more populous, the people naturally became more civilized, and desirous of living in a more commodious manner, which induced them to build small vessels, that in these they might make a trip sometimes to *Madagascar*, and purchase slaves, which they employed in their plantations, to cultivate aloes, tobacco, and other things with which they drove a small trade, when ships of any nation anchored in their roads for the sake of refreshments^p. In this situation things were when the *East India* company of *France* put in their claim, and, assuming the property of the island, sent thither five or six families, and a governor. At first, no doubt, the inhabitants expected to reap some benefit from their new masters, but finding very little, and thinking the governor took too much upon him, they revolted at the instigation of a priest, seized their governor, clapped him into a dungeon, and kept him there till hunger and sorrow made an end of him. For this some of the ringleaders were afterwards punished, a kind of fort erected, in which some guns were placed, and the *French* flag kept flying; but, in other respects, so little care was taken, that till within these thirty years, the island was in no state of defence, exclusive of the number of inhabitants, and the advantages of its situation; which we have before described^q, and from which the reader will perceive they were in no great danger from single vessels (Z).

How the inhabitants of the island came to be of such various, and even opposite complexions. THE number of inhabitants in the year 1717 was computed at two thousand; that is, nine hundred free, and eleven hundred slaves. Amongst these people the usual distinction of whites and blacks entirely fails, for even the free are of different colours; and a *French* writer assures us, that he saw in a church one family consisting of five generations of all complexions. The eldest was a female, one hundred and eight years of age, of a brown black, like the *Indians* at *Madagascar*; her daughter a mulatto; her grand-daughter a mestizo; her great grand-daughter of a dusky yellow; her daughter again, of an olive; and the daughter of this last (it is the author's own expression) as fair as any *English* girl of the same age^r. These people are, generally speaking, of a gentle, quiet disposition, very industrious, and submissive enough to authority, provided it be exercised with a tolerable degree of equity and decency; for otherwise they are apt to rise, one and all; and the slaves have so little reason to complain of their masters, that they are always on the same side. The island is divided into four quarters; the first is, that of *St. Paul*, which is the largest and the best peopled; their houses are built at the bottom of a steep mountain, on both sides of a fresh water lake. As for the plantations, they are on the top of a mountain, which they ascend by a very rough and troublesome passage. On the summit there is a spacious plain, a great part of which is divided into plantations of rice, tobacco, corn, sugar, and fruits. The quarter of *St. Denis* lies seven leagues from that of

cheated out of the possession of this island by one Captain *Gosling*, who persuaded them that their countrymen were entirely destroyed at *Madagascar*, which induced them to proceed with him to the *Indies*, in hopes of making a large profit upon the commodities they had cultivated, and for which the captain assured them they would find a great demand; but, when they debarked at *Madras*, they found the whole a falsehood, and themselves in a very wretched condition (19).

(Z) The reader will easily perceive that we are constrained to pick up whatever fragments we can meet with in the works of different authors, to procure for him, in some measure, a continued history of the revolutions to which this country has been exposed, and therefore he will not be surpris'd, or attribute to any supineness or want of care in us, that every minute particular is not so clearly or fully explained as he would willingly find it. We have not been able to discover, for instance, when the *French East India* company took the administration

of this island into her own hands, but we find among the archives of the company an edict of *Levis* the fourteenth, dated the seventh of *March*, 1711, by which a provincial council, dependant upon that of *Pondicherry*, was established in this island, against which the revolt mentioned in the text must have been made (20). In 1723, the number of inhabitants in the island being greatly increased, the council was declared supreme and independent, and, as we have already observed, was made superior to that established by the same edict in the isle of *France* (21). But tho' from these edicts we learn pretty clearly what the form of government ought to have been, yet we have intimations that may be depended upon, that the same seditious and mutinous temper continued, at least in a great measure, and that licentiousness, confusion, and anarchy were the characteristics of those settled here when Mr. *de la Bourdennaye* was named to the supreme command in both islands (22).

a St. Paul, towards the east, and there the governor resides: it is not so much peopled, but the country is pleasanter and better situated. At two leagues distance, proceeding along the sea-coast, is the quarter of St. Mary's, which is but thinly peopled. The last and most fertile quarter is that of St. Susannah, which is at the distance of four leagues from St. Denis; and the road between these two quarters is tolerable, tho' part of it has been cut with much difficulty through a wood; but the passage from St. Denis to St. Paul is only by sea. We have been the more particular in this description, because it is difficult to find so good a one (A).

WHEN the present company of the *Indies* became, in right of the edict for their perpetual establishment, masters of this island, they soon discerned what vast advantages might be drawn from it, as well as how strangely it had been neglected. In consequence of this, they have improved it exceedingly, raised new forts and batteries, which render it in a manner inaccessible; and have also settled in the most effectual manner several of the adjacent islands, which are well supplied with cannon, military and naval stores, and whatever else is necessary for the defence of the inhabitants. There is no doubt that this must have cost considerable sums of money; but the company of the *Indies* have no reason to complain of that, since the island produces annually more than all they have laid out can amount to; for they bring from thence one year with another coffee to the value of one hundred thousand pounds.

It is no easy matter to come at the knowledge when this improvement was first made, or, indeed, how it came to be made at all; on one side we are assured that the coffee-plant was carried to the isle of *Bourbon* from the country of *Yemen* in *Arabia*, which is the true coffee-country, in the year 1718, and the very person is named who carried it thither; on the other hand, an author who visited the isle of *Bourbon* in 1717, and who wrote an account of what he found remarkable there the very same year, assures us that Mr. Para, who was then governor of the island, was actually in *France*, and that his errand thither was to inform the *East India* company that the coffee-plant had been found growing naturally in several places of the island. It may be that these accounts may be reconciled thus; the plant brought from *Mocha* to the isle of *Bourbon*, might be with a view to compare it with the coffee said to grow there naturally; but however that might be, the cultivation of this plant now is become the principal business of the inhabitants of the isle of *Bourbon*, and it is believed that they produce an eighth, some say a sixth part as much coffee, as is raised in the kingdom of *Yemen*, and it is likewise held next in goodness to that. The diligent endeavour of the *French* company of the *Indies* to strengthen and improve the settlements in the islands, for that is the term used in *France*, has not only answered all the purposes that they could possibly expect from it, but has likewise fully demonstrated that the principles laid down by *Richlieu* and *Colbert* were perfectly just, and that nothing could have so effectually contributed towards the acquiring a share in the *East India* commerce for the *French* nation, as the making a considerable establishment on the island of *Madagascar*, and that the fault lay only in those who undertook the execution of it.

It was therefore very judiciously advised, when Admiral *Boscawen* sailed with the combined fleet of the Maritime Powers for the *Indies*, to strike the first blow here. If that could have been done, there is no doubt that the expedition, in its event, would have been as prosperous as it was prudent in its contrivance. But, alas! when he arrived he found the islands of *Bourbon* and *France* quite other things than they had been represented by such as had visited them some years before. The whole coast of the *Isle of France* was a continued breast-work, a prodigious artillery was provided for his reception, and as there were no ports capable of receiving his ships, and no possibility of landing men in open boats, to attack fortifications lined with

* Relation de l'isle de Bourbon, par Du Bois. Tour du monde, par L. G. DE BARBINAIS. Histoire des Indes Orientales, par GUYON, tom. iii. p. 379, 380. † Memoire sur l'origine & usage du Caffé. ‡ Tour du monde, par L. G. DE BARBINAIS, tom. iii. p. 135, 136. * GUYON. BARBINAIS. Du Bois.

(A) The description given in the text is from Mr. de la Barbinais, who, in his return to *France* from the *Indies*, remained in the island of *Bourbon* five months, which afforded him sufficient leisure to make many curious and useful observations, without the assistance of which it had been absolutely impossible to have exhibited any tolerable account of an island that is already of so great consequence, and which, the principal obstacle to its improvement being now removed, cannot fail of becoming more and more important every day (23). This gentleman gives it us as his opinion, that the *Burnt Country* became in that condition from the effects of a vulcano, which, as he conceives, has traversed the whole island in the space of several ages; which notion of his is grounded upon a matter of fact that cannot be disputed,

which is, that the soil is no where of any great depth, and that, immediately underneath, there is a black-burnt rock resembling that of *Pays Brule*. We may conclude from hence, that possibly this and all the little islets about it were raised by a subterraneous explosion from the bottom of the sea, which has been likewise the case in other countries; neither is it all improbable that in process of time, more especially if any assistance is afforded to nature, a great part, if not the whole, of the *Burnt Country* will be recovered and rendered habitable. But whether there may not be reason to apprehend that, in succeeding ages, this vulcano may make another tour, and renew its devastations in some other quarter of the isle of *Bourbon*, is what time must disclose, and the will of Providence determine (24).

(23) *Geographie moderne*, par Abraham Du Bois, p. 818. tom. iii. p. 183.

(24) *Tour du monde*, par L. G. de Barbinais,

numbers of people, expert in the use of fire-arms, and well supplied, he was obliged, after some cannonading to very little purpose, to pursue his voyage. This likewise gave the *French* an opportunity of sending a great supply from these islands, of men, artillery, ammunition, provisions, and money, to *Pondicherry*, which made the reduction of that place likewise impracticable⁷. These are facts in which both our accounts and theirs very fully agree; so that there can be nothing plainer than that these islands are of the utmost consequence to the *French*, and that the success of their *East India* commerce must depend upon their remaining in a prosperous and thriving condition (B). Neither is it at all impossible, that, by degrees, they may open a commerce to all parts of the *Indies*, directly from these islands, which are certainly as well situated for that purpose as can be wished, as, by a proper attention to the seasons, voyages may be made with great facility and safety from them to the *Persian* and *Arabian* gulfs, and even to the straits of *Sonda* and *Cbina*, without the necessity of touching at any port in the *Indies*, and returns might be made thither in the like manner⁸. But it is now time to quit this establishment, which is not properly in but near the *Indies*, and to proceed next to those in the *Arabian* and *Persian* gulfs, which, strictly and accurately speaking, are not in the *Indies* either, and yet, as the trade carried on from them produces nothing that is not carried home to *Europe* on board the *East India* ships, they are generally, and with propriety enough, reputed a part of the *Indies*, amongst all the nations that carry on any trade thither, and as such are included in the charters of all the companies that have been any-where settled for the management of that commerce.

⁷ See the proof of this in the notes.

⁸ *Histoire de grande île de Madagascar*, par Monsieur FLACOURT, p. 445, 456.

(B) The shortest and most authentic account we have of this matter is contained in the admiral's dispatch, dated at *Fort St. David's*, October 17th, 1748, which was published by authority, and gives a just view of the state of things at that juncture; so that it may be looked upon as a proper historical supplement to what has been said in the text (25). "On May the 18th, the rear-admiral sailed from the *Cape of Good Hope*, with his majesty's squadron under his command, and six ships of the *Dutch East India* company, and after a fatiguing passage, occasioned by a series of contrary winds, very unusual at that season, on June 23d, at day-break, they made the island of *Mauritius*, having parted from three of the *Dutch* ships in the bad weather, in their passage. Upon sight of the land, the admiral consulted with his captains about the most proper passage for the ships to take in going in; and it being determined to run between *Long Island* and the *Gamer's Quoin*, the men of war to lead in line of battle, and the *India* ships to follow them; orders were given accordingly, and the greatest part of the fleet anchored the same night in a place called *Turtle Bay*, between the river of that name and *Tomb* river, about two leagues to the eastward of the harbour, and the rest got in the next day, having been fired at in their passage from fascine-batteries of about six guns each; but without receiving any damage. At daylight, the enemy began to fire from two other fascine-batteries they had raised on each side of the entrance of the two aforesaid rivers, and they were perceived to be hard at work in the wood fronting where the squadron lay, in throwing up in entrenchments, and raising other batteries, and several large ships were seen lying in the harbour. Hereupon the *Pambrake*, which was nearer in, was ordered to fire, and disturb them at their work, and the *Swallow* sloop was sent, with Capt. Lloyd, of the *Eltham*, the two principal engineers, and an artillery officer, to run along the shore, and reconnoitre the coast, in order to discover what place would be most convenient for landing the troops; who, on their return, reported, that the enemy had fired on them in their passage, from eight different batteries, as well as from the forts at the en-

trance of the harbour; that a large ship of two tier of guns lay with her broadside across the mouth of the harbour; that there were thirteen other ships in the harbour (several of them large ones), fitted or fitting for the sea; and that they thought it impracticable to land any-where to the eastward of the harbour, on account of the thickness of the woods, which came down close to the water-side; it was therefore judged most feasible to attempt to land before the great river to the westward of the town. So soon as it was dark, the masters of the six line of battle ships were ordered to go in the barges, and sound all along the shore, to try the depths of water, and see particularly whether it was practicable to land at the place proposed; but they, on their return, having declared, that there was a reef of rocks run all along about twenty yards from the shore, which made it impossible for boats to land, except at the river's mouth, right against where the fleet lay, and at the harbour, where the channel was not above one hundred fathoms wide, and very difficult to get in, as the wind always blows right out; this determined the admiral to call a council of war, composed of the principal sea and land officers, to lay before them these reports, and his instructions, so far as they related to the attack of *Mauritius*, and to consult with them what was best to be done. It was agreed, as they were unacquainted with the strength of the enemy on the island, to send three ten oar boats, under the command of Major Caming, to endeavour to surprise and get a prisoner from the shore; which was accordingly attempted, but in vain; and the council being met again next morning, and it appearing to them, that the reduction of the island of *Mauritius* was not the principal design of the expedition; and as there was such a strength of ships in the harbour, and the preparations which the enemy had made all along the coast rendered it certain that the attack must be attended with considerable loss, they were of opinion, that, upon these considerations, no attempt should be made at this place, but that the squadron should proceed, with the utmost expedition, to the coast of *Caraman*, so as to begin the operations there before the moonson shifted."

(25) From the *London Gazette*.

S E C T. IX.

An historical account of the French commerce at Mocha, Bassora, Surat, on the coast of Malabar and Coromandel; their acquisitions in point of territory, through the arts and address of their governors; the state of Pondicherry resumed, and deduced to the last siege thereof by the English, under the command of Admiral Boscawen; with an account of their obligations to, and use they made of, the Indians in that siege.

- a** **T**HE French company in the *Indies* established a factory at *Mocha*, on the coast of *Arabia*, in 1720, for the sake of carrying on the coffee trade, which, about that time, became more considerable than ever, and this they have kept up ever since^a. The other European nations have their factories also. But besides the particular concerns of their respective factories, those who are entrusted with the management of this trade, are obliged not only to live upon good terms, but also to concert measures together, that they may all purchase coffee at the same price, and not raise its value, by bidding upon each other, which has sometimes happened, when this commodity was scarce, to the no small advantage of the natives, and prejudice of the Europeans, who therefore came into this method to prevent it^b. The valuable article of coffee was, in a great measure, taken from the *East India* company, before the edict of union, by which it was restored to the perpetual company of the *Indies*, and the duty with which it was charged, of ten French pence per pound, was valued at a very moderate sum, upon payment of which annually, coffee passed every-where through *France* freely, and without any duty. But, in 1736, the farmers-general of the revenue representing this as a great hardship upon them to the ministry, the composition was declared void, and the duty has been ever since paid; but, by way of indemnification, the sum of fifty thousand livres is paid annually, out of the treasury, to the company of the *Indies*^c. We have mentioned this circumstance particularly, to shew that there is nothing stable in *France*; and, that notwithstanding the solemnity of edicts, and occasional favours and indulgences, in order to raise a new, or revive a declining commerce, the revenue will, sooner or later, obtain a preference; and as the government really does all, so, under one pretence or other, it will never fail to avail itself of all that is done by the French in the commerce of the *Indies* (C).

In respect to the commerce of the *Persian* gulf, no pains have been spared by the French ministry to do every thing that was possible for promoting the commerce of the company. As a proof of this, it may be sufficient to give one instance. The Count *de Maurepas*, while the affairs of trade and the marine were under his care, made choice of one Mr. *Otter*, a Swedish gentleman, of calm but determined courage, and of great capacity, who had an inclination to visit the east, and to perfect himself in the knowledge of the oriental tongues, to be the instrument of promoting a correspondence between the French in the *Indies* and the subjects of *Persia* and of the Grand Signior^d. This gentleman, being furnished with proper instructions, set out from *Paris* in 1734, and, after remaining some time at *Constantinople*, prosecuted his journey to the court of *Persia*, notwithstanding the troubles that were then in both empires;

^c Histoire

(C) We are indebted to the judicious and indefatigable Mr. *Dufréne de Franchville* for a most accurate history of all the variations in the management of the coffee trade in *France*, as well as for publishing the edicts, and other authentic papers, relating to this matter; for the reader must observe, that, from being a commodity of small consequence at the beginning of the current century, the trade in coffee, within the first twenty years of this, became a matter of very high importance, in which not only the company, but the revenue, was deeply interested, as well as the merchants of *Marseilles*, and the proprietors of the French colonies in the *West Indies*, and more especially in the islands of *Cayenne* and *Martinico* (26). At present, as far as our intelligence reaches, the French commerce in coffee stands thus: the company of the *Indies* is at liberty to import whatever quantities her directors judge expedient, either from

Mocha or the isle of *Bourbon*. The traders of *Marseilles*, by a special privilege, have the like liberty with respect to the *Levant*, but are obliged to vend whatever coffee they import to the *East India* company, and to that company only, unless they export it (27). The *West India* merchants have likewise free liberty to import coffee from the French plantations, which may remain in their magazines a full year, in order to its being exported, without paying any duties, and the merchants at *Marseilles* may purchase this coffee, and convey it by land to *Genova* free from all duties (28). But, with respect to the home consumption, which is very great, all sorts of coffee indiscriminately stand charged with the duty of ten livres on each hundred weight; notwithstanding which, the best *Mocha* coffee sells in *France* from fifteen to eighteen French pence per pound (29).

(26) Histoire de la compagnie des Indes, p. 145.
(28) Histoire de la compagnie des Indes, p. 153, 154.

by which, though he travelled in the train of a *Persian* ambassador, yet he found his life in imminent peril almost in every day's journey. He was able to do little with the *Shah*, whose affairs were so embarrassed, that how much soever he might be inclined thereto, yet he could give but very little attention to matters of this nature. Mr. *Otter* therefore returned into the dominions of the Grand Signior, and, according to the instructions that he had received, neglected nothing that could procure him an interest with *Achmet*, bashaw of *Bagdat*, or *Babylon*, who acted rather as an independent prince, than as a subject of the *Porte*, and who had forced the Grand Signior to put the important city of *Bassora*, *Balsora*, or *Basara*, again into his hands, which they had taken from him^a.

Mr. *Otter* is established, after the death of the first consul, in that office at *Bassora*.

It was this city, which stands upon the famous canal formed from the waters of the rivers *Tygris* and *Euphrates*, that was the great object of the *French* views. The *English* and *Dutch* had both consuls there; and the former had the liberty of displaying his flag, which the latter had not been able to obtain, though he had offered no less than twenty thousand crowns for that favour. Mr. *Otter* went to this city towards the close of the year 1741, and soon after a *French* ship arrived from the bay of *Bengal*, with a person on board who had the character of consul from the company of the *Indies*, who, though a man of parts and experience, thought his own reception in that quality a thing so little likely to take effect, that he intimated to Mr. *Otter* his intention to return, in case any disputes were made about it. But the interest of the latter was so powerful with the bashaw of *Bagdat*, that he procured the necessary instruments for establishing the *French* consulate, with the honour of the flag, not only to the surprize of the other *Europeans*, but also of the bashaw's governor in that city, who had not the least intelligence of the negotiation, till he received his master's orders. This consul dying, Mr. *Otter* himself, in the month of *August* 1742, was appointed, by the company, to succeed him, and held it till the year following, that he returned to *France*, soon after which he died^c (D).

The great advantages derived from this factory, in respect to their commerce in the *Indies*.

THE establishment of this consulship was a thing not only highly honourable, but very serviceable also, to the company of the *Indies*, on account of the great traffick carried on there, and the large demand there is for almost all sorts of *Indian* commodities, which passed from thence by land, by the way of *Bagdat* to *Aleppo*. The rich goods and manufactures taken in exchange, are shipped on board the company's vessels, which, according as the director-general in the *Indies* thinks expedient, are either transported from thence to the islands, and, at the proper season, to *Europe*, or return into the *Indies*. This trade, carried on either way, is extremely profitable, especially in times of peace; and as it rarely happens that things are in confusion in the *Indies*, and in the Grand Signior's dominions, at one time, so, with proper attention, a market is commonly found for both cargoes, without bringing any part home to *Europe*; and the more there is of this sort of intercourse, the greater gains accrue to the company, and the better returns they are able to make of those goods that are most in demand in *Europe*. But it requires very great talents in those who are intrusted with the management of things at these ports, and at *Bassora* in particular; because, exclusive of their ordinary functions, they are frequently put to very great difficulties, by the bashaws, and other officers of the *Porte*, who are continually watching for an opportunity to plunder or oppress them^d. Against this, the best security is a good understanding with the other *European* nations, who, if they act in

^a Voyage en Turquie et en Perse, par Mons. OTTER, tom. ii. col. 7. ^b Eloge de M. OTTER. ^c Dictionnaire de commerce, tom. iv. col. 712.

(D) The account that Mr. *Otter* has given us of his travels is not only entertaining, but, which is of far greater consequence, very instructive. There is nothing that regards the geography, history, antient and present state, of the countries through which he passed, or of the customs, learning, manners, virtues, vices, or tempers, of their inhabitants, in which he does not explain himself with that perspicuity and plainness which chiefly recommend books of this kind to the favour of the candid peruser. Yet, with respect to his negotiations, he is silent in points of the greatest consequence, and never suffers the vanity of magnifying his own abilities to engage him in the discovery of things which it would be improper should come to the ears of strangers. He says, that he went to *Basara*, in order to perfect himself in the knowledge of the *Arabic* language, but principally that he might be useful, if any occasion offered, to the *French* nation (30). An intelligent reader will easily discern, that the first was his pretence, the latter his design. To bring about his pretensions with ease, it was necessary to

acquire proper acquaintance; and this led him to contract a great intimacy with *Jesuf Aga*, musellim of *Basara*, from whom he learnt the proper method of applying for an establishment; which, upon the coming of the *French* consul, he practised with such dexterity, as to procure the decisive order for his reception, and for allowing him to display the *French* flag in the same bag, with the answer of *Achmet* bashaw of *Bagdat* to his application; which he ascribes intirely to the goodness of that great man, upon which he must have had a pretty strong reliance, since he treated this whole affair without the least participation of his friend the musellim. One need not wonder that *Jesuf Aga* was equally surprized and displeased at such a proceeding; neither did he take any pains to conceal it. The *French* agent, however, was so assiduous, and so submissive, in his future application, that, in a short time, he recovered the honest musellim's good graces, drank coffee with him every afternoon, and drew from him many useful pieces of intelligence (31).

(30) Voyage en Turquie et en Perse, tom. ii. p. 79. Voyage en Turquie et en Perse, par M. Otter, tom. ii. p. 85.

(31) Dictionnaire de commerce, tom. iv. col. 711, 712.

a concert, are generally sure to get the better; whereas want of union becomes prejudicial to them all in their turns; and yet, through national prejudices, incompatibility of interests, or personal jealousies, this so rational and necessary harmony is very rarely of any long continuance^a (E).

It is now about fourscore years since the *French* established themselves first at *Surat*, where they have only a lodge, or factory, in the same manner as the *English* and *Dutch*, for which they pay an annual rent to the *Mogul*; but it is very strong notwithstanding, and so well provided with every thing for its defence, as to be in no danger of being easily surprised. Whatever methods they took, certain it is, that the *French* for many years were highly considered by the great monarch of the *Indies*; but upon the declension of their affairs, and through the great debts they contracted with the *Indian* merchants, this was, in a great measure, lost; and, a little before the establishment of the perpetual company of the *Indies*, they were fallen so low, as to be in danger of having their lodge seized, and those who were in the company's service imprisoned, for the debts they had contracted¹. This score, however, has been gradually wiped off, and the *French* have recovered their credit again, not only with the merchants, but with the ministers and generals of the *Mogul*, with whom they have commonly a closer understanding than any other *European* nations, for reasons with which we shall acquaint the reader hereafter. Their trade, however, is nothing near so considerable in this city as that of the *English* and the *Dutch*; because, as they have not so many settlements in distant parts of the *Indies*, they cannot have that variety of commodities which is necessary to drive a great traffick, that is, and has been ever since the *Portuguese* lost their power, the principal magazine of all oriental riches, as well as the commodities and manufactures of *Europe*, which are circulated from thence through the whole extent of the *Mogul's* dominions². But, if no new revolutions happen in their affairs, there is little reason to doubt, that they will continue to mend here as well as in other places; so that, in time, they will have a share in that, as well as other branches of commerce. At present they send no ships from hence directly, as in the time of the former *East India* company, who, as the reader has already seen, transferred their chief residence thither from *Madagascar*; which was one of the first false steps they made, and which has been since repaired, by transferring it to *Pondicherry*, from whence, and from their settlements in the bay of *Bengal*, all their returns are now regularly made; and it is from the first of these places that a correspondence is established with *Surat*, in which several ships are employed yearly³ (F).

Upon the coast of *Malabar*, the *French* first settled a factory at *Mirzeon*, which lies about eighteen leagues south of *Goa*, between the kingdoms of *Visapour* and *Canara*, so that to which of the two it properly belongs is doubtful. They afterwards removed to *Rajapour*, the coast of

³ Histoire des Indes Orientales,

(E) The prosperity of every *European* nation in the *Indies* must always depend, in a great measure, upon the capacities of such as have the direction of their several establishments, and in no particular more than this of concerting, when occasion requires, the proper measures to be taken with the other *Europeans*. At the very time that Mr. Otter was here, the inhabitants of *Basara* were so much alarmed by the revolt of the *Arabs*, that some of the richest merchants withdrew, with their effects; and, upon this, all the *Europeans* thought it high time to take some step for their own preservation, and acted therein very wisely. There was an *English* ship in the road, on board of which they all agreed to send their effects; but as it was necessary to obtain leave for this from the musellim, Mr. Otter was deputed from all the three nations to desire it; but the musellim, who by the way was not that gentleman's old friend, but a new officer, peremptorily refused, from an apprehension that it would intimidate the inhabitants, and so produce a greater mischief immediately, than that which was apprehended (32). Upon this they changed their measures, and resolved to take a guard of janizaries into each of their factories, and to act in concert, in case they were attacked. But the storm blew over, and consequently it cannot be known how far this resolution would have availed them.

(F) It will be proper to insert in this plate, an obser-

vation that may deserve the judicious reader's notice, and which perhaps merits his serious consideration. The true reason of that terrible embarrassment into which the *French East India* company's affairs fell at *Surat*, was the very high interest accumulated on their debts, which raised them to immense sums in the space of a few years. The great difficulty is to account for this high interest, in a country where there is as much ready money, if not more, than in any with which we are acquainted; since it has been known, that some of the *Baniyan* merchants have acquired larger estates than ever were heard of in *Europe*. Yet on the best security, nine per cent. is the usual interest. We commonly apprehend, that, in proportion to the plenty of specie, the rate of interest decreases, and that high interest is a proof of a country's being poor. Here it is directly the reverse; for immense sums of ready money are to be had, the circulation is continually brisk, and yet interest continues high (33). To solve this knotty problem, we can only suggest, that they have a very extensive and lucrative commerce; and as the profits arising from thence are much superior to any thing that can ever be acquired by trade in *Europe*, those who borrow are enabled to give, and those who are in a condition to lend have a right to expect, better interest. However, without doubt, this is a matter capable of furnishing much speculation.

the pepper
trade.

which has been considered as a wrong step, of which the *Dutch* took advantage, and drew the pepper trade in that neighbourhood to themselves^a. They had also some other factories upon the same coast, and have still a considerable trade there; but the memoirs we have of the company of the *Indies* do not furnish us with light sufficient to be so precise in this matter as we could wish. All we can affirm with certainty is, that a large quantity of pepper is a constant article in their sales; which is a proof sufficient of their being in possession of a considerable commerce upon this coast, though, for the reason before-mentioned, we cannot enter into the particulars^b. We will therefore pass on to the coast of *Coromandel*, upon which the *French* have the only considerable places of which they stand possessed in the *Indies*, and which have been very much augmented, since their affairs have been under the management of the new company, and thereby so intimately connected with the government, as to be always considered as under the direction of the ministry.

The district of
Karical on the
coast of Co-
romandel, pos-
sessed by them
in sovereignty.

THE first of these is *Karical*, situated in ten degrees thirty-five minutes of north latitude, and in the longitude of seventy-eight degrees from the meridian of *Paris*, lying four leagues north from the *Dutch* settlement at *Negapatan*, two leagues south from the *Danish* settlement at *Tranquebar*, and twenty-five leagues south from *Pondicherry*^c. This territory, which they possess in full sovereignty, consists of the town before-mentioned, which stands upon the river *Calran*, which, however, is not navigable but for very small vessels; the fortress of *Karcangery*, at the mouth of the river; upon the sea-coast nine or ten villages; and a tract of country fifteen or sixteen miles in extent, very fertile in rice, and producing also cotton and indigo, inhabited by ten or twelve thousand people, who subsist themselves by making piece-goods of several kinds, and from whom the *French* draw a yearly rent of ten thousand pagodas, which is about four thousand five hundred pounds sterling^d. The *French* writers boast, and it may be with truth, that none of the *European* nations settled upon the coast are in possession of so large a tract of country; and therefore the reader may reasonably expect, that we should acquaint him how it came into their hands, and this we shall do in the most concise manner possible (G).

Upon the depo-
sition of the
king of Tan-
jour, he re-
sires to Pondi-
cherry, and
demands suc-
cours from the
French.

THE kingdom of *Tanjour* comprehends the south-east part of the extremity of the peninsula without the *Ganges*; and the monarch of this country dying in 1738, left his dominions to his nephew *Sabagy*, who was soon dispossessed of them by a natural son of his predecessor; upon which he fled to the *French* for refuge, and was kindly received by the *Sieur Damas*, who was at that time governor of *Pondicherry*. In order to obtain succours for the recovery of his kingdom, he made a voluntary cession to the *French* of the territory before-mentioned, in the month of *July* the same year, and two of the company's ships were sent to take possession of the places yielded to them, and to furnish the king's subjects, who should take up arms for him, with the succours that had been promised him. In the mean time, *Sabagy* understanding that those who had set his competitor upon the throne, began to be dissatisfied with him, made them secretly such offers, as induced them to seize him, and proclaim their old master; who returned to *Tanjour*, and was received with universal acclamations; and having got the usurper into his hands, ordered him to be immediately cut into four quarters^e.

Who, in vir-
tue of his con-
cession, become
possessed of this
district, which
he afterwards
confirms.

THE next thing he did, was to send a detachment of between four and five thousand men, to prevent the *French* from getting possession of the places he had given them; upon which the two ships were obliged to return back to *Pondicherry*. *Sabagy*, however, pretended, that, at a convenient time, he would fulfil his treaty, but that, being engaged in a war with the nabob *Sander Sabeb*, the *Mogul's* general in the adjacent provinces, it was not convenient for him to do

(G) The situation, or even the name, of the town of *Karical*, seldom occurs in any of the common maps of *India*, which makes it necessary to speak of it more particularly. At the time the *French* became possessed of it, there were in it six hundred thirty-eight houses of stone and brick, exclusive of meaner structures, comprehending also five mosques, five large pagods, nine of a lesser size, and upwards of five thousand inhabitants. It stands upon a large navigable stream, which will admit *Indian* vessels of two hundred tons burden and upwards. In some maps this is styled the *River of Karical*, but in the best, it is made no more than a branch of the *Coloran*, or *Calran*. The fortress of *Karcangery* is seated above half a mile from the sea, and is about a

cannon-shot distant from the town before-mentioned. It was formerly defended by eight large towers, but a great part is demolished by its new masters. *Triumale Rayen Patnam*, after the capital, is the largest and most considerable place in the whole district. It lies to the south of *Karical*, at the distance of about a league, and a very small space from the sea. It is composed of about five hundred brick houses, four mosques, four great pagods, twenty-eight smaller, and twenty-five places of accommodation for travellers (34). As to the hamlets and villages mentioned in the text, there is no necessity that we should enter into any farther particulars about them.

- a it then. *Sander Sabeb* having notice of this, and having received great civilities from the *Sieur Dumas*, offered him his assistance; which being readily accepted, he sent a body of troops upon the coast, who made themselves masters of the fortrefs by storm, and put it into the hands of the *French*, February the 14th, 1739^{*}. The king of *Tanjour* was no sooner informed of this, than he sent an agent of his to the *Sieur Dumas*, to acquaint him, that he need not have had recourse to this method, and to throw the blame of what was past upon the *Dutch*. The better to prove the reality of his professions, he sent by the same person two instruments, dated April the 20th, 1739, one of which contained a ratification of his former treaty, and the other an order to the inhabitants of the district he had yielded up, to acknowledge and obey the *French* for the future as their sovereigns[†]. In a very short time after this,
- b followed a new revolution; for the uncles of *Sabagy*, disliking his conduct, deposed, and caused him to be strangled in a bath of warm milk, and set upon the throne one of his cousins, whose name was *Raja Singue*. This new prince, not knowing how soon he might have occasion for their assistance, not only ratified his predecessor's treaty with the *French*, but also added some farther concessions, advised the *Sieur Dumas* to fortify the places he had given him, and had an interview with him there, in the beginning of the year 1741; ever since which, the *French* have continued in quiet and peaceable possession[‡].

- THE next settlement on the coast of *Coromandel* is that of *Pondicherry*, which having already described, we shall here add only some particulars that have happened since the erecting of the company of the *Indies*. In the year 1736, which was the second year the *Sieur Dumas* had possessed the government, he obtained from the *Mogul*, *Mahomet Shâh*, the same who was deposed by *Kouli Khân*, the privilege of coining money, that is, of striking rupees, with the stile of that monarch on one side, and the name of the place on the other[§]. The rupee is a coin of the value of forty-eight *French* pence, which make between two and three shillings of our money. Of these the governor coined five or six millions every year; and, as these were of the *Mogul's* standard, the company gained by that means about four hundred thousand livres annually, by the coinage; which was a very considerable article, and shews with how great address the *French* act, in procuring funds for the support of their establishments, in the very country where they are made, and at the expence of those amongst whom they inhabit^{||}. But it was not long before the same governor procured still higher marks of distinction, and far greater advantages for his successors in that government, and for the *French* nation, by his prudent management in a war that threatened destruction to all the provinces adjacent, and of which, so far as it is connected with the business of this chapter, we shall give a succinct relation (H).

History of Pondicherry continued, with the detail of favours granted by the Great Mogul.

(H) This article of coinage, as a matter of great consequence, deserves a more particular explanation. They coin at *Pondicherry* both gold and silver, and of all the denominations current in the dominions of the *Great Mogul* (35). Of these, the *pagoda* is of gold, and of an odd figure, resembling a button, with some grains on the flat part, and the form of an idol on the convex surface, from whence it receives its name; in weight they are 2 dwt. 4 gr. 27½ mt. and the gold so fine, that they are generally esteemed worth nine shillings of our money. The *roupie*, as the *French* write it, *roupes*, or *rupes*, as it is spelt in our authors, is a silver coin, something broader than one of our shillings, and much thicker; in point of fineness, it is better than the *English* standard; for its weight is 7 dwt. 11 gr. which, reduced to our standard, would be 7 dwt. 22 gr. 13 mt. ½. Three hundred twenty-six rupees are equal to one hundred *pagoda's*, both being of proper fineness and weight (36). *Fanous*, or, as our authors style them, *fanham's*, are small pieces of silver, which, the *French* writers say, are accounted

twenty-four to the *pagoda*, and seven and a half to the rupee; according to our writers, there are six-and-thirty to the *pagoda*, and sometimes more. *Cash* is a kind of copper coin, of which there go about fourscore to a *fanham*; but, in keeping accounts, they make use of imaginary cash, that are supposed to be sixty to the *fanham*, to prevent confusion (37). Our own nation at *Fort St. George* had the like privilege, and gained the same advantages, the coin being of the same fineness, and bearing the same inscriptions; viz. on one side of the rupee, *such a year of the glorious reign of Mohammed Shâh*; and on the other, *this rupee was coined at Arcatte*, both establishments being under the jurisdiction of the nabob of that province; but, for the sake of distinction, there is a half-moon on that of *Pondicherry*, and a star on the *Madras* rupees (38). The profit of the *English* coinage was computed at an half per cent. for gold, and two per cent for silver, and was thought to produce about one thousand *pagoda's* a month (39).

S E C T. X.

The history of the rise of the Indian war; the conduct of Mr. Dupleix in that respect; the measures made use of by him to avail himself of these disputes; favours procured from the Mogul; and the solemn installation of Dupleix, as a Nabob, at Ougli. With other particulars necessary to set the French Indian scheme of policy in its proper light.

Rise of the war in the Indies, which has produced extraordinary consequences in respect to this company.

AT the time that *Kouli Khán* dethroned the *Great Mogul*, and made him prisoner in his own capital, the viceroys of that unfortunate monarch, though they would not draw a sword, or stir a step, in his favour, were strong enough to think of conquering countries from the *Indian* princes, with intent to erect them into principalities for themselves and their children. *Dauud Aly Khán*, nabob of *Arcatte*, a province upon which both the *French* settlements at *Pondicherry* and the *English* at *Madras* depend, was of the number of these ambitious viceroys; and, in order to carry his designs into execution, he assembled an army of between fifty and sixty thousand men, with which he reduced several *Indian* princes, and pushed his conquests to the other side of the peninsula, with a view of reducing several districts on the coast of *Malabar* *. The *Indian* princes, in this distress, applied themselves for assistance to the king of the *Marattes*, a potent, numerous, and warlike nation, inhabiting the country to the south-east of the mountains behind *Goa*, upon the coast of *Malabar*. That king, who was persuaded by his priests to consider this as a religious war made by the *Mahometans*, with an intent to extirpate the Gentiles, ordered his son to march with an army of sixty thousand horse, and one hundred thousand foot, to the relief of the distressed princes of his own religion. This happened in the month of *October* 1739; and that young hero, before the close of the year, attacked and defeated the nabob's army, himself being killed on the spot. His son, and son-in-law, to make princes of whom this fatal expedition was undertaken, were at a distance, each at the head of a small army, and his widow, with the rest of his family and all his riches, were obliged to take refuge at *Pondicherry*, and to demand the protection of the *Sieur Dumas*, who, with the advice of his council, received her, and all her retinue, into that place, to which also multitudes of people repaired from all the adjacent countries †.

THE prince of the *Marattes* did not fail to demand them, all that they had, and a vast sum of money besides, from the governor of *Pondicherry*, which place he threatened to besiege; and, though the *French* highly magnify his courage, in presuming to defend himself against such a force, yet if we consider that he was in a place regularly fortified, well supplied with provisions, with a garrison of between six and seven thousand men, and between four or five hundred pieces of cannon mounted, we cannot conceive that he was in any great danger of being distressed. The *Marattes* continued in the field all the year 1740, and till the month of *April* 1741; and, having plundered every place within their reach, and tried, without success, what menaces would do with the governor of *Pondicherry*, they at last accepted a small present and retired; and thus ended this war, which strongly recommended the *French* to the favour of the *Mogul* and his ministers, who thought they could never do enough to express their esteem for the *Sieur Dumas*, and their kindness for the nation ‡ (I).

In the first place, *Nizam El Mouk*, prime minister to the *Mogul*, wrote the *Sieur Dumas* a very respectful letter of thanks, with an ample acknowledgement of his services, and sent him also a vest of honour, which is the usual present upon such occasions. Afterwards *Pabder Aly Khán*, son of the deceased nabob, came in person to *Pondicherry*, as well to thank the governor as to comfort his mother. The *Sieur Dumas* received him with all possible marks

des Indes Orientales, tom. iii. p. 281, 282, 283.

‡ Archives de la compagnie des Indes, num. 114. c. 88.

(I) The facts related in the text are taken indeed on the authority of the *French*, and differ very considerably from those accounts which have been transmitted to *England* directly from the *Indies*. It is therefore equally just and reasonable that we should acquaint the reader with the motives upon which this preference is founded, and these are chiefly three. The first is, that the *French* accounts are uniform, perspicuous and consistent, which make them more likely to be true. In the next place, the original papers, such as letters, grants, and patents,

are actually deposited amongst the archives of the *French* company of the *Indies*. Lastly, certain notorious matters of fact, about which there neither is nor can be any dispute, correspond very well with the *French* accounts, whereas they do not at all agree with others. On the whole, therefore, though there may be some marks of vanity and exaggeration, yet the truth seems to be evidently on this side, and our business is to keep to that, on which side soever it lies.

- a of honour, and offered him very considerable presents, as is the mode in the *East*, of which he received only a pair of gilt vessels for holding rose-water, and in return sent the governor a very fine elephant with rich trappings. Some time after this visit, as a more significant mark of the sense he had of the respect paid to his family in the time of their distress, he made a cession to the *Sieur Dumas* personally of three districts in the neighbourhood of *Pondicherry*, of the value in the whole of above one thousand pounds sterling *per annum*; a year after he sent the *Sieur Dumas* all the armour of the deceased nabob his father, richly adorned with gold and precious stones^a. The *Mogul*, having been informed of the cession made by the nabob, in favour of the *French* governor, was so far from being displeased thereat, that he confirmed it by his letters patents, and at the same time declared the *Sieur Dumas* himself a nabob, and in that quality gave him the command of four thousand five hundred horse. As all these testimonies of kindness were personal, the governor exerted all his interest to procure them to be transferred to his office, that so they might pass to his successor, which he obtained, and in the month of *October* 1741, upon the arrival of his successor *Mr. Dupleix*, as soon as he had put him in possession of the *French* town and fortress, he declared him likewise the *Mogul's* nabob, and caused him to be acknowledged as such by the body of four thousand five hundred horse, of which he was to have the command, so that he was as much established in the rights of his *Indian* as his *French* post^b (K).
- b
- c SOME short time after *Mr. Dupleix* had assumed the government, he went to *Bengal* in order to be received there, pursuant to the orders of the *Mogul*, with the honours due to his dignity, and, having put himself at the head of the cavalry belonging to him, as nabob, he made his public entry, preceded by several flags displayed, together with kettle-drums of an enormous size, trumpets, hautboys, and other martial music, the *Mogul's* standard and kettle-drums being carried each upon an elephant. When the ceremony was over, he went to pay the *salami*, or salute of respect, to the governor of *Ougli*, which the governor declined, *Mr. Dupleix's* post in the *Mogul's* service being of a rank much superior to his^c. As persons of this dignity have their standards, flags, and music, posted at certain hours before the place of their residence, so *Mr. Dupleix* gave orders for erecting such a one at the gate of *Valdaour*, which is the principal entrance into *Pondicherry*. It is scarcely to be conceived how many and how great advantages attended this connection which the *French* governors of *Pondicherry* have with the court of the *Mogul*; which are altogether extraordinary, nothing of the like nature having of late been bestowed upon the *Europeans*, and of which there is no

^b Archives de la compagnie

(K) These are in themselves very extraordinary and very important facts; facts that are of the utmost consequence to be well known here, notwithstanding which, they are facts with which the generality of the world are but very little acquainted. We might cite, in support of them, the letters, paravanas, and phirmaunds, mentioned in the text, the originals of which are preserved in the archives of the company of the *Indies*; but these would take up too much room. We will therefore, for the reader's satisfaction, give him an authentic abridgment of their contents under the great seal of *France*, being the preamble of the letters patents of the *French* king, dated September 4th, 1742, which runs thus (40). "The king having resolved to honour, with the cross of St. Michael, his dear and well beloved *Sieur Benedict Dumas*, formerly governor in the *East Indies* and of *Pondicherry*, and at present director of the company of the *Indies*, declares, that it is in consideration of his having for the space of thirty years given continual and distinguished marks of his zeal for the service of his majesty, and for extending the commerce of this kingdom. Having taken his passage to the *Indies* in 1713, in the service of the company, being then no more than seventeen years of age, he was promoted to the rank of counsellor in the supreme council of *Pondicherry*, June 23d, 1718, and appointed attorney-general in the month of June 1721. Being named to a general government of the *Indies*, he had the post assigned him of director-general of the company in the *Indies*, in the *Isle of France*, and of *Bourbon*; was afterwards made president of the superior council, and then governor of those islands. In 1735 he was declared governor of the town and fortress of *Pondicherry*, and commandant-general of all the *French* forts and

establishments situated in the *East Indies*. In 1737 he obtained from the *Mogul* permission to coin rupees at *Pondicherry*, from which the company receives an annual profit of four hundred thousand livres, which important services determined his majesty to enoble him in 1737, and to associate him into the order of St. Michael. His subsequent conduct fully justified the recompences bestowed upon him, since he obtained in free gift from the king of *Tanjour*, in 1739, the fort of *Karcangery* and town of *Karical*, with their dependencies, at present let to farm for one hundred thousand livres *per annum*. In 1740, the *Marattes* having attacked and defeated the army of the *Moors*, and having killed the viceroy of *Carnate*, the *Sieur Dumas* found himself under a necessity of giving a retreat to the family of that viceroy, and the remains of his army, in *Pondicherry*. The *Marattes* upon this, having made the dispositions necessary for besieging that fortress, the governor, by a negotiation, which did honour to the *French* nation, not only dissuaded them from that design, but determined them to send an ambassador with presents to demand the friendship of the *French*. It was in acknowledgement of all these services that the *Mogul* emperor *Mohammed Shah*, honoured to perpetuity the governor of *Pondicherry* with a patent of *Mansupdar*, or commandant of five thousand horse, and confirmed the donation which the viceroy of *Arcatte* had made to the *Sieur Dumas* of lands to the value of twenty-five thousand livres *per annum*, contiguous to the possessions of the company at *Pondicherry*. In consequence of the recited premises, his majesty commands the marshal duke de *Duras*," &c.

(40) Extraite de lettres patents du roi du 4 Septembre 1742, qui confirment le noblissement du *Sieur Dumas*.

doubt they will make all possible advantages, as well by extending their territory, already become very considerable, as by procuring such grants and concessions as may be useful to their commerce^d. It appears to be a great testimony of public spirit that these governors are so careful to procure these new honours to be attached to their office rather than to their persons; but a little reflexion will shew us that they are also marks of prudence, for it is only there that they can enjoy these honours, but the rewards for procuring them must be found at home; and, to render these considerable, a wiser step could not be taken than to render those perpetual; so that, in reality, it is not a sacrifice of interest, but of vanity, which will cost a man of good sense and experience, as their actions shew these governors to have been, little or nothing (L).

The fortress of Pondicherry besieged without effect, by the English fleet and army.

It was this *Sieur Dupleix* who defended *Pondicherry* against admiral *Boscawen*, of which, as the *English* were the aggressors, an account is already given in its proper place; we shall add therefore only a very few particulars: The governor had an early account of the design, which gave him an opportunity of raising and strengthening the fort of *Ariacoupan*, as well as forming lines and redoubts, which kept danger at a distance till the *English* regular troops were fatigued, the sailors discouraged, and their country auxiliaries totally dispirited. He had, as we have observed before, a timely supply from the islands, of men, money, and ammunition, by which his garrison was augmented to two thousand *Europeans*, besides three thousand of the natives well armed, thoroughly disciplined; and who, as the relation published by Mr. *Dupleix* acknowledges, did very great service^e. These circumstances, together with the inexpressible advantage he had in point of artillery well conducted and well served, and the *English* fleet not being able to come near enough to cannonade the place with any great effect, makes his success in the defence not at all surprising. But at the same time this does not at all lessen either the merit of his service, which was very conspicuous, as well in the prudent dispositions he made during the siege, as in the proper precautions taken before it, or diminish the credit that must have resulted from defeating a design, which, if it had been carried into execution, would have given such a blow to the company of the *Indies* as could not have been hastily repaired, in which a very considerable force was employed, and the expectations from which, in *Europe*, were very great, and the disappointment consequently none of the least^f (M). As we have deduced the history of this place as low as the nature of this work requires, we shall now proceed to the few *French* settlements that still require our attention.

^d Archives de la compagnie des Indes, Cotte D. published by authority in the London Gazette.

^e *Mercure François*.

^f See the relation pub-

(L) In the empire of *Indostan* they have not, strictly speaking, any hereditary honours, though sometimes, and more especially of late years, persons in great offices find means to establish them in their families. The general title in the *Mogul's* service, which still affects a military form, though the spirit is much declined, is *Manfoupdar*, (so it ought to be written) which signifies a commandant of horse; and those who are honoured with it are called *Omrabs*, the common stile of the nobility in the court of the *Mogul* (41). But there is a wide difference between the *Omrabs*, arising from their *Manfoupdars*. In the language of this country, a corps of one thousand horse is called *Azary*, and the *Manfoupdar* consists of any number of *Azarys* from two to six. There are indeed *Manfoupdars* of ten *Azarys*, but these are never given but to princes of the blood (42). The *Manfoupdar* annexed to the government of *Pondicherry* is of four *Azarys* and a half, and the sum assigned for their subsistence being considerably more than is necessary for that purpose, the *Omrab* puts the rest into his pocket; the kettle-drums and trumpets belong to this military honour (43). The title of *Nabob* respects the civil administration, and is equivalent to that of governor, or viceroy of a province; to this dignity belong the elephants, and other ensigns of authority which have been mentioned in the text.

(M) In another part of this work some remarks are

made upon the conduct of this gentleman, which shew, that he was not altogether without his failings; that the force by which he baffled the *English* troops and seamen of *Pondicherry*, was derived to him from the islands of *France* and *Bourbon*, under the command of Monsieur de *la Bourdennaye*, and that his attachment to the interest of the *Mogul* carried him to certain lengths, which might very probably be disliked at home (44). But as to the point before us, which is the defence of *Pondicherry*, there is no doubt that this was very well managed, and contributed not a little to keep up that high reputation, which, by a series of fortunate incidents, his nation had raised in the *Indies*, and to which he has added very considerably since (45). Yet for all this, we may discover through different parts of his conduct, and of the animadversions that have been made upon it, how very possible it is that this connexion, or rather conjunction, may turn to the prejudice of the company of the *Indies*, if not very skilfully and cautiously managed. It is there as it is in *Europe*, Force is frequently stiled *Right*, and it depends rather on the sagacity of the head than the uprightness of the heart, whether a stranger who draws his sword in the civil wars amongst the *Moors*, shall escape the punishment of rebellion; a crime always imputed to the unfortunate, though perhaps their conscience taught them they were fighting against it (46).

S E C T. XI.

Account of the remaining part of the French commerce in the East Indies; their intercourse with China; the plan of their domestic management; a view of the grand establishment of Port L'Orient; the amazing assistances given them by the ministers, in completing and maintaining that establishment; and the conclusion of this subject.

^a **T**HE famous city or town of *Masulipatan*, situated on the mouth of the river *Chrisna*, and which by its commodious port has attracted all the *European* nations to settle factories therein, belonged formerly to the king of *Golconda*, as has been before-mentioned, but is at present in the hands of the *Mogul*. We have said so much already of this celebrated mart, justly reputed the most considerable upon the coast of *Coromandel*, that we shall confine ourselves here solely to what regards the *French* nation. Their trade flourished exceedingly when first settled, but was disturbed by Mr. *de la Hay's* expedition, and his seizing the city of *St. Thomas*, which produced a war with the king of *Golconda*, by whom it was at last retaken, by the assistance of the *Dutch*^g. Their friendship on this occasion gave them a vast ascendancy in trade, and the *French* made afterwards but a small figure till within these few years. But the company is in good credit there at present, and has her share in the great dealings that are carried on in almost all the commodities and manufactures of the *Indies*; and particularly in the fine cottons, which are so much and so justly esteemed preferable to all others. It is from hence the *Jesuits* are suspected to find their way to the diamond-mines, of which there are many extraordinary stories told, which however deserve more authentic support than they have hitherto received before they meet with entire credit^h (N). Some of the *French* relations speak of the heat here as most intolerable, and equal to what is felt at *Gambron*, and add, that the overflowing of the rivers in the rainy season rendered travelling impracticable, their residence there very uncomfortable, and the climate very unwholesome; but, at the same time they ought to add, that to these annual inundations the country of *Golconda* derives a fertility equal to that which *Egypt* receives from the same causeⁱ.

^b **O**UGLI, on the west bank of the *Ganges*, at the distance of twenty leagues from the sea, is the great mart of the bay of *Bengal*, and we may from hence form some idea of the vast advantages which the dominions of the *Mogul* receive from the *European* commerce; since this port belongs also to that monarch, as well as *Surat*, which is almost at the other end of the *Indies*. The *French* have a very flourishing factory here, under the inspection of a director-general, and other officers, as at *Pondicherry*; receive, generally speaking, the same number of ships from *Europe*, and make the like returns thither^k. It is from hence that they drive a trade with *Siam*, *Cambodia*, *Cochin-China*, and other countries situated in the peninsula with-
^d out the *Ganges*, which is, properly speaking, the country-trade. All sorts of rich commodities and valuable manufactures are common here, and thereby afford them an opportunity of making proper assortments for the cargoes of their homeward-bound ships. The diamond-mines of *Soumelpour* are seated in the northern part of this kingdom, and are of a very different kind from those of *Golconda*, for they are dug out of the earth; whereas here they are found in the sand of the river *Goual*, and that through its whole course from the mountains

(N) There is, generally speaking, such an air of prejudice, and at the same time the facts are so strange that the enemies of these reverend fathers relate, as to give a candid and impartial reader sufficient reason to doubt whether he shall yield belief to all, or even to a great part of what they say. But, notwithstanding this, there are some facts that come attended with unanswerable evidence; such as the seizing of the *Jesuits* at the diamond-mines, in the habits of *Faquirs*, by the information of the *Dutch*, almost one hundred years ago; which is a fact publicly known (47), and must, if their design had been absolutely free from blame, have cured

them of this strange humour of quitting their own to wear the habits of heathen priests, under the colour of facilitating conversions, with which they were then infected, and to which they have ever since, in spite of all the scandal with which it was attended, pertinaciously adhered. A modern writer, an ecclesiastic of their own church, charged them with something worse than this, with respect to a rich *Indian* broker, whom they persecuted to an ignominious death upon false informations, as appeared by the *French* court's causing his relations to be ennobled, who were at the trouble to go and seek justice as far as *Verfailles* (48).

down to *Soume!pour*, that is, for fifty leagues together ¹. The proper season for searching for them is in the month of *February*, when the waters are low; and, at that time, above ten thousand people are employed in digging and washing the mud and sand taken out of the river. The stones found here are very fine, but very small; and those which the *French* stile *pointes naïes*, or *clean sparks*, are brought from thence. It is judged from these circumstances, that there are very rich mines in the mountains, but they are inaccessible, and therefore both the natives and *Europeans* are forced to content themselves with these pieces that are torn off by the torrents, and are brought down with the land floods. The company of the *Indies* have also a factory at *Pepeli*, and perhaps some other small ones under the direction of that at *Ougli*, where they have likewise an opportunity of dealing with merchants from all parts of *Asia*; such as *Persians*, *Arabians*, *Guzurats*, *Malabarians*, *Turks*, *Moors*, *Jews*, *Georgians*, and *Armenians*; so that it is here they dispose of the greatest part of their *European* goods and manufactures, and at a better rate than in other parts of the *Indies* ^m (O).

The French
send annually
ships to China;
the nature of
that commerce,
and their ac-
counts of it.

THE *French* company of the *Indies* send their ships regularly to *China*, in the same manner as the rest of the *European* nations, and carry on a considerable commerce there. Their cargoes consist partly of commodities, but chiefly of silver; the former seldom amounting in value to above a tenth part of the latter ⁿ. As to the merchandize, it consists of arms, such as fusils, pistols, scymitars richly mounted, clocks, repeating watches, and toys in gold and silver; camblets of several colours, but chiefly blue, scarlet, and cinnamon, stuffs of several kinds; tapestry, paper and pens, mathematical instruments, and a great quantity of glass and crystal wares; as also several sorts of distilled and perfumed waters, and red coral ^o. With the first ships, the company sent an agent, with an intention that he should have resided at *Canton*, for which, with little difficulty, they obtained a permission; but he found himself so uneasy there, and plagued with so many demands, that he was obliged to send away the home-bound ship without leave, and to take shelter in a *Chinese* habit in a convent of *Dominicans* ^p. Many *French* vessels have made the run from *Peru* to *China* with success, and have traded, some at the port of *Amoy*, but without much profit; most of them at *Canton* with better fortune ^q. The *French* have been desirous of intriguing in that country, as well as in the dominions of the *Great Mogul*, but hitherto without effect; for the *Chinese* are so subtle and so suspicious, more especially of foreigners, that it is very improbable they will ever be able to make any impression there ^r. All the *Europeans* who have visited that country agree, that, as traders, the *Chinese* are as great cheats as any in the world; but none give them a worse character than the *French*, who represent them as a base, brutal, cowardly, insolent, and perfidious people, notwithstanding the fine stories that they are told by the missionaries, of their wisdom virtue and politeness (P). It does not appear that the *French* have yet attempted any intercourse with the *Manilla's*, and therefore all we have to say of their commerce in the *East* ends here.

BUT,

^q *Nouveau tour du monde*, par L. G. DE LA BAR-

(O) We need not wonder that here, as well as at *Surat*, the *French* draw to themselves a great trade, since they have a wonderful facility of accommodating themselves to the manners of the *Oriental*s as well as all other nations. In consequence of this disposition, they enter into such intimacies with them, by their suppleness and address, make themselves such favourites, that they obtain earlier intelligence, and are treated with more confidence than other nations, who have a contempt for this manner of acting, and think it injurious to the honour of their countries. But, in extenuation of this, it must be allowed that the *English* and *Dutch* are better established, and, having been much longer in possession of this commerce, carry it on in a more regular manner, and with a greater air of dignity and distinction; so that it is to balance this, as well as to supply some other defects, that the *French* apply themselves so assiduously to the *Moors* and other *Mahometan* traders; and it is visible enough, from the progress they have made of late, that, notwithstanding all the objections to which this method is liable, it is, nevertheless, very successful, as well as reconcileable to those maxims of policy that have been

adopted by the governors and directors general at *Pondicherry* (49).

(P) We have a large account of *China*, its produce and commerce, and of the genius, manners, and behaviour of the natives, in the letters of Mr. *Le Gentil de la Barbinais*, who made a voyage thither from the coasts of *Bretagne* in the year 1716, but did not publish his account of it till eight years after; his dedication to the count de *Morville*, then secretary of state, being dated at *Rome* the 10th of *July*, 1724. In those letters there are abundance of curious things, and the conduct of the *Chinese* is laid open with such an air of freedom and truth, that one cannot help believing the author meant to paint them as they appeared to him, not to deceive others, or to gratify his resentment. He very candidly acknowledges, that the nation in general are patient, frugal, and industrious; that their country is every-where improved to the utmost; the endeavour of nature assisted where it is requisite, and her defects supplied by labour and art: but then he describes them as full of flattery, hypocrisy and deceit; profuse in promises without any view of performing them; accustomed to fraud, and so adroit in

(49) *Tavernier, Carre, Lullier, Guyon, &c.*

- a But, before we conclude this section, it is necessary to say something of that extraordinary establishment, which, from the favour of the crown, and for the use of her proprietors, the perpetual company of the *Indies* enjoy in *France*. The ministry considered that, for the commodious carrying on of this commerce, it would be necessary for the company to have a port for the reception of her ships, docks, yards, magazines, and arsenals for constructing, equipping and repairing them, as well as warehouses for the reception of merchandize; and, to accommodate them as well as possible in all these respects, no place was thought so proper as *Port Louis* in *Bretagne*^s. This is a very spacious, safe, and convenient harbour, at the mouth of the river *Blavet*, capable of receiving large ships, which may safely pass to the bottom of the bay. Yet, notwithstanding all these advantages, it was very little frequented by vessels of any sort, and hardly ever by any thing better than fishing-vessels; so that, bestowing it upon the *East India* company was no detriment to the trade of the kingdom^t. It was granted by the king's declaration, dated in the month of *June* 1666, purporting that his majesty gave and granted unto the company the village called *Feandick*, and several others seated on the rivers *Henneban* and *Ponscot*, with whatever void, waste, and unoccupied places belonged to the crown thereabouts, to be disposed of in such a manner as they should think most convenient for their intended establishment; and in this they had the full property and seignory, without any rents, service, or restrictions, save only rendering homage upon every change of the crown^u. Here therefore the *East India* company fixed the centre of their commerce in *France*, and spent a great deal of money in making docks and yards, and other conveniences, bestowing upon it the pompous name of *Port L'Orient*; and, in time of war, the king caused several large ships to be built and launched there, without any interruption to the company's affairs, which were then upon the decline^w (Q).

The noble establishment of an arsenal, magazines, &c. at Port L'Orient.

- d But this coming with the rest of the effects and possessions of the *East India* company upon the same terms, and on the like trust, into the hands of the perpetual company of the *Indies*, they have made it quite another thing than it was, and have rendered it in all respects worthy the title given it by their predecessors^x. The park, which is of a considerable extent, incloses their warehouses and magazines, which are prodigiously large, very conveniently disposed, thoroughly well built, strongly vaulted, and covered with blue slate; the apartments of the directors, and other officers of the company, compose all together two handsome piles

All of which are now improved by the company now subsisting.

commerce, tom. iv. col. 220.

^x Histoire des Indes Orientales, tom. iii. p. 151—375.

base practices, and so inexhaustible in their fund of artifices, that it is extremely difficult, if not impossible, to prevent being dupes to them in dealing. He particularly observes that, with great dexterity, they / as much as possible, in order to take advantage of that hurry which the near approach of their departure must occasion; and he instances their bringing them a great quantity of raw silk, so moist as to weigh a third part less, on their return for *Europe*, and then offering to stay till it was dry, which would have taken up at least two months, when they could scarce afford so many days (50). He expatiates on the avarice, injustice, and prevarication, conspicuous in their magistrates and the officers of their revenue; and, in short, shews them in much the same light in which they are represented by the most judicious writers of our own nation, and who have written from their own knowledge and experience (51).

(Q) This royal grant of a most capacious and commodious port, was one of the earliest, and none of the least considerable favours obtained for the company from the crown by the interposition of Mr. *Colbert*, who foresaw the advantages that might result from it (52), and to whose sagacity all the improvements that have been hitherto made, or that shall be hereafter made, ought in justice to be ascribed. If we consider it only in the relation it bears to the nature and design of this commercial establishment, we must allow it to be an advantage which the *French* company of the *Indies* enjoy beyond that of any other company in *Europe*; and though as yet the importance of it has not appeared in its full extent, yet in proportion as the company's affairs advance, we may be

well assured that the benefits arising from this convenient and magnificent centre of their trade, will become more and more conspicuous. If we look into it more strictly, we cannot help seeing that it is of vast utility to the company in keeping all her concerns immediately under the eye of proper officers in one place, where they may assist each other in cases of emergency, and where such measures may be taken for preventing frauds and embezzlements, as must contribute to their security in a high degree. It likewise prevents those continual difficulties and disputes which would otherwise arise between the company and the king's officers or farmers general, in respect to duties, and to the distribution of *East India* commodities through the kingdom, and which, from the credit these kind of people usually have with the ministers, must turn to the company's prejudice. Lastly, if we reflect upon it as a national point, it is of no less consequence, since it affords both strangers and subjects an opportunity of seeing and contemplating this branch of commerce, raises the credit of it, and, by attracting inhabitants to the towns in the neighbourhood, as well as a great concourse of people upon certain occasions, and producing a brisk and regular circulation of money, it is of great service to this part of *Brittany*, where the port being most unaccountably neglected, the people throughout the adjacent country were in a very low and indigent condition; whereas, in 1746, the town of *L'Orient* is said to have offered fifty thousand pounds sterling to prevent being burnt and pillaged by the *English* at the time of their making a descent upon this coast (53).

(53) From a manuscript history of that expedition by a person who served therein.

of building, and are very commodious; they have likewise a spacious rope-walk, a magazine of masts, and a fine arsenal. Before the magazines lie the quays, which are always kept clean and in good repair: close to them the vessels are moored, so as to take in or deliver their lading with all imaginable facility; and the town, port, docks, yards, and all their dependencies are covered and protected by a good citadel ^y. The company of the *Indies*, at the breaking out of the last war, had upwards of forty very fine ships of their own; and, according to their present establishment, they send ten or twelve every year to the *Indies*, that is, two to *China*, three to the gulph of *Bengal*, three or four to *Pondicherry*, one or two to the islands ^z. Thus the reader has seen, in as narrow a compass as it was possible to bring so great a quantity, and that too of such variety of matter, the history of the *East India* companies formed in *France*, as well as of their commerce and settlements from their first attempting such a correspondence to the present time; with all the changes and revolutions they have undergone, and the constant and zealous attention which the ablest of their ministers have shewn in protecting and promoting a trade which they have ever considered as of the highest importance, and which, in spite of repeated disappointments, and notwithstanding innumerable obstacles, they have at length brought into a promising, at least, if not a prosperous condition (R).

^y Dictionnaire de commerce, tom. ii. col. 220.

^z Histoire des Indes, p. 369, 370.

(R) The judicious and intelligent reader will discern clearly from this history, the truth of what has been suggested not only by other writers but their own also, that the *French* are less qualified for undertaking and managing with success schemes of extensive commerce than their neighbours. For, without doubt, there have been more pains taken, more money employed, and greater losses sustained in procuring from them what ever share they enjoy at present in the *East India* trade, than were found requisite for establishing any of their rivals. But notwithstanding this, the prodigious encouragements given to the perpetual company of the *Indies*, the vigilance of the ministers in superintending the direction of their affairs, and several other favourable circumstances, have undoubtedly put their concerns on a footing incomparably better than any of their predecessors, and may reasonably inspire them with the hopes of seeing their returns augmented, and their profits enlarged, as well as their power and influence in the *Indies* very much extended. But

then, on the other hand, they are not altogether freed from apprehensions. The maxims and measures of the court may change; nor is it at all impossible that the state of public affairs may alter, any or all of which must prove detrimental to this company. The connexions into which they have entered with the ministers and governors of the *Mogul*, may, if they are not blessed with a succession of able and prudent officers in the *East Indies*, turn as much to their danger and prejudice as they have hitherto done to their benefit and reputation; neither is it at all impossible that, in case of a new rupture, the affairs of their neighbours may be more wisely, or at least more fortunately managed, than during the course of the last war; and if, through any of these accidents, they should be subjected to considerable losses, the consequences might be very fatal, notwithstanding all that has been done for them, notwithstanding the surprising success they have met with, and notwithstanding that florid appearance she makes at present.

C H A P. X.

The history of the establishment of a company trading to the East Indies, under the charter of his imperial majesty from Ostend: the foundation, views, and progress of that company: the opposition formed against it by the maritime powers and other potentates of Europe: the consequences of this opposition in embarrassing the general state of affairs: the suppression of the Ostend company: the endeavours used to revive it; their failure; and its total extinction.

S E C T. I.

The pretended as well as the real motives to the proposing a commerce between the Austrian Netherlands and the East Indies: the measures taken upon this head by the imperial court; the alarm this gave to the subjects of the maritime powers; and the colour of right they alleged to hinder any such settlement, as being repugnant to treaties.

- ^a **T**HE distinction between the *Austrian* or *Spanish* and the *United* or *Dutch Netherlands*, arose from the cession made by his catholic majesty, who had been the legal sovereign of them all, to the archdukes *Albert* and *Isabella*, of those ten provinces that continued in obedience to him, when the other seven threw off the yoke and became a free state. This great event happened in the year 1598, when, by the very act by which these provinces were given to the princes before-mentioned, it is declared that none of their subjects shall be at liberty to send any ships to, or carry on any traffick in, either the *East* or *West Indies* upon any pretence whatsoever; and, in case they should offend in this particular, his catholic majesty reserved to himself the power of punishing them who shall be found so offending, and that in the severest manner, by the confiscation of their goods, and even with death itself^a. This restriction, which, no doubt, was intended for the benefit of the subjects of *Spain*, and with a view of preserving to them all the advantages accruing from the commerce of both the *Indies*, was the reason that the inhabitants of these provinces contented themselves with their own manufactures, and such a foreign trade as they could safely and legally carry on, not only while they remained under those princes, but also after they were again united to the crown of *Spain* upon the demise of the archduchess *Isabella* in 1638^b. But during all this space, they looked upon that restraint as a thing very harsh and grievous, and from which they were very desirous of being released, though the applications made for this purpose from time to time to the court of *Madrid* were constantly rejected, either from principles of policy or prudence, to avoid giving offence to the *Spaniards*, who looked upon this exclusion as one of the highest and most valuable prerogatives of their monarchy, and by which they were particularly distinguished from the rest of the subjects of his catholic majesty, and who were all under the like incapacity^c (A).

The inhabitants of the Austrian Low Countries excluded by the kings of Spain from trading to either Indies, and from what motives.

^a Corps diplomatique, tom. v. P. 1. p. 574.

^b LE CLERC histoire des Provinces Unies, tom. ii. p. 148.

^c Histoire de las Indias Occidentales, por ANTONIO DE HERRERA, decad. 1. lib. ii. c. 4.

(A) The inhabitants of the *Low-Countries* objected to this restriction at the time, and opposed it as a thing inconsistent with the rights of the joyful entry which was the known constitution of these provinces. Nay, they would not submit, or take the oath of fidelity to the archdukes *Albert* and *Isabella*, upon the conclusion of the truce with the States, till they had sworn to defend them in all their just rights; whence they concluded the restraint

from sailing to the *Indies* void, because it was incompatible with those rights. This is the reasoning of the States of *Brabant*, in a memorial of theirs, in support of the *Ostend* company (1); but how far it is conclusive must be left to the reader's judgment, since, in regard to these matters, we barely represent, without presuming to decide concerning them.

(1) *Memoire pour servir de réponse de la part des Etats de Brabant à la remontrance que les directeurs de la compagnie des Indes Orientales et de la Hollande ont faite aux Seigneurs Etats Generaux des Provinces Unies au sujet de la navigation & du commerce des habitans des Pays-Bas autrichiens aux Indes Orientales*, Oct. 22d. 1723.

How far the
cardinal in-
fant procured
this severe re-
striction to be
mitigated.

BUT at length the cardinal infant, being intrusted with the administration of these coun-
tries, to ingratiate himself with the people, solicited *Philip* the fourth with such earnestness
and assiduity, that about the year 1640 he had almost brought this point to bear, and pre-
vailed so far as to obtain leave for the inhabitants of the *Austrian Netherlands* to trade in all
those parts of the *East Indies* that had been conquered, and were possessed by the *Portuguese*.
But it fell out unluckily, that before any benefit could be had from this grant, the people of
Portugal revolted, and then it was thought requisite to cancel, and even to disavow any such
concession, that it might not give offence to the *Portuguese*, or prove a hindrance to their
submitting themselves again to the crown of *Castile*, with which the *Spaniards* flattered them-
selves then, and for a long time afterwards. It was the more unfortunate for them that no
memorial was preserved of this grant, except a letter from the cardinal infant to the magistrates
of *Antwerp*, in which there is no more than his catholic majesty's being brought to incline to
such a concession as is mentioned^a. After this we hear nothing farther of such a project for
near threescore years; during all which space, however, these provinces remained in sub-
jection to his catholic majesty, and, the people, sensible of this restriction, never intermeddled
with this prohibited commerce; and if any of them visited the *Spanish* territories in *America*,
it was in the king's ships, and in his service; in which case it was supposed that they did
not fall within the penal clause before-mentioned; yet, in this time, the inhabitants of the
Low-Countries were in a very mean and distressed condition, and so much a burthen upon
Spain, that the court ought in reason to have listened to any proposal that could have been
made for their relief, occasioned chiefly by the wars with *France*, and their having often two,
sometimes three, armies living upon them^c (B).

An East India
company said
to be establish-
ed in the Low
Countries by
Charles II.

IN the reign of *Charles* the second, the last king of *Spain* of the house of *Austria*, the States
of *Flanders* resumed this design, and, having represented to that monarch how much such an
establishment would contribute to the welfare of his subjects, and the augmentation of the royal
revenue, they procured a charter for erecting a company impowered to trade in such parts of
the *East Indies* and the coast of *Guinea*, as were not in the possession of other nations; and
the capital was to consist of two millions of florins, one fourth part to be actually raised before
the end of the month of *October* 1698, and the rest in the year 1700 and 1701^f. But here
again they met with another misfortune; for the treaty of partition being made about this
time, damped the spirits of the people to such a degree, that the scheme could not be carried
into execution^g; and the death of his catholic majesty following soon after, and, immediately
upon that, the long war about the right of succession, all thoughts of this nature were let fall,
at least for the present; whereas, if any thing had been done, or so much as a ship sent, it
might have prevented those disputes which have given occasion to this section. After the bat-
tle of *Ramillies* in 1706 the *Austrian Netherlands* fell under the protection of the maritime
powers, who held it as it were in trust for his imperial majesty, into whose possession it did
not come till ten years afterwards, and then, in consequence of a negotiation by which it pas-
sed under the same restrictions to which it had been subjected by the crown of *Spain*, in respect
to the commerce of the *Indies*. In this state they were when his imperial majesty declared his
serene highness prince *Eugene* of *Savoy* governor-general, and the marquis *de Prie* counsellor of
state, with the power of administering affairs in his highness's absence, and under his orders; not
long after which the thoughts of attempting a correspondence with the *Indies* were revived, and
some attempts made to effect it^h.

When the first
steps were tak-
en for erect-

WE may clearly perceive from this deduction, that there is no foundation for the sentiment
which commonly prevails, as if the subjects of his imperial majesty were tempted to set up
an *East India* company by the example of the *Mississippi* project in *France*, and the *South Sea*

(B) These facts are all mentioned in the memorial of
the States of *Brabant*, which we have before cited; and
they distinguish therein between the right of navigating
to, and trading in, the *East* and *West Indies*, to the pre-
judice of the *Spaniards*, and the natural right of all peo-
ple to trade where other nations are not legally possessed
of an exclusive commerce, which they affirm they always
had, which was no way affected by this restriction, and
which was acknowledged and confirmed by the octroi of
Charles the second, granted in 1698, and in consequence

of which, a company would most certainly have been
erected, if the unhappy state that public affairs soon after
fell into had not prevented it (2): they farther add, that
with respect to this right, it was not in the power of their
sovereigns, as dukes of *Brabant*, to lessen, much more to
give it up by any treaty; because they were previously
engaged to their subjects by oath, never to take any step
of this kind; in proof of which they cite several clauses
from their fundamental constitution (3).

de la joyeuse entrée de sa majesté imperiale et catholique en langue Brabançonne.

(3) *Extrait*

- a scheme in *England*; whereas, in truth, this design was of an earlier date than either ¹. Some ^{ing an East} private persons sent a ship or two in 1717, and these meeting with tolerable success, were ^{India company} followed the next year by two or three more, authorized only by the governor-general's letters ^{at Ostend.} and passports; or, as they are stiled in the letters and memorials relating to this business, *Lettres de Mer*. In this shape the new commerce succeeded so happily that many were desirous of engaging in it; and the granting of these licences, or *Lettres de Mer*, became a thing very lucrative to certain persons in the administration ². About this time some active foreigners began to intermeddle and to project the forming of a company at *Ostend*, in which design they soon met with so great encouragement, that they ventured to make overtures to the ministers at *Vienna*, which were favourably received. In the month of *October* 1719, they had
- b the first intelligence that one of these licensed ships had been seized by a *Dutch* vessel in the service of the *West India* company on the coast of *Guiney*, and confiscated with her whole cargo, without so much as the ceremony of a process ³. Of this the imperial minister complained at the *Hague*, but could obtain only dark, indeterminate answers, which manifested an intention rather to maintain this action, since it was done, than to enter into an explanation of the motives that might serve to justify it; except that this was an illicit trade, in which some merchants of *Antwerp* had engaged through avarice, and which, if they continued pursuing, would be found rather ruinous than advantageous; and much the same usage they met with from another quarter, upon a complaint of the like nature, for the seizing another ship, under colour of her being engaged in an illegal commerce in ports where she had no right
- c to come ⁴ (C).

But, upon an application to the government in the *Austrian Low-Countries*, signifying the treatment ships had met with under his imperial majesty's flag, letters of reprisal were easily obtained by the interest of those who began to stile themselves a company. Captain *Winter*, who commanded the vessel that had been taken on the coast of *Guiney*, conceiving he should be justified by the authority of these letters, proceeded to the *Downs*, where meeting with his own ship, he seized her again, and brought her into *Ostend*, with a very valuable lading of elephants teeth and gold dust, belonging to the *Dutch West India* company ⁵. That company complaining to the States General, their ministers at *Brussels* and *Vienna* interposed warmly, in which they were supported by the influence of *Great Britain*. The letters of

d reprisal, however, were insisted upon, and the ministers put in mind of the small regard that had been shewn but a small time before on a like application from his imperial majesty; so that it was easily perceived, that though they met with many good words and great assurances of friendship and esteem, yet satisfaction and restitution was hardly to be expected ⁶. This was a very hardy and a very extraordinary enterprise, considering the naval force of the maritime powers, and how nearly they were concerned, and which it was not at all difficult to see they were resolved to make a common cause. But notwithstanding this, the ministers at *Vienna* remained firm, and insisted that the subjects of the emperor having been first injured, it was but reasonable they should be the first also that received satisfaction. This drew the negotiation into some length; and as gaining time in such cases is gaining a great deal, so able

e ministers are never at a loss for expedients in matters of this sort; and their management through the whole was such as shewed them to be perfect masters in that art; than which nothing could be more useful at this juncture, since it served to keep the maritime powers in suspense, and to raise the spirits of his imperial majesty's subjects, who saw plainly how well inclined the court was to support and protect them ⁷.

This gave so much credit to the new company, that in the year 1720 they equipped

f five large ships for the *Indies*, and the year following six more; three for *China*, one for *Mocha*, another for *Surat*, and the coast of *Malabar*, and the sixth for *Bengal*; which provoked the *Dutch* to such a degree, that they seized a vessel richly laden by the merchants of *Bruges*, and ordered her cargo to be sold, notwithstanding the applications of the imperial ministers at the *Hague* to prevent it. This misfortune was followed by another; an *English*

The traders under some apprehensions, which, however, are soon dissipated.

(C) We are indebted for these facts, and the explanation of them, to the treatise written by the famous Mr. *du Mont*, baron of *Carlevisoon*, who by order of his imperial majesty composed a treatise, in which he undertook to give a true state of the fact, the right and the interest of the commerce carried on from the *Austrian Low Countries* to

the *Indies*, under his imperial majesty's charter (4). Several learned pieces were also written on the other side, which we have likewise consulted, in order to represent this important affair with as much impartiality and perspicuity as it was possible.

(4) *La verité du fait, du droit, et de la interet de tout ce qui concerne la commerce des Indes, établi aux Pays-Bas Autrichiens, par ordi de sa majesté impériale & catholique, Bruxelles, 1723, 410.*

privateer taking very soon after, on the coast of *Madagascar*, an *Ostend* homeward-bound a ship very richly laden, which so discouraged the new company, that they ordered a new ship they were then fitting out to be laid up¹. But, in the months of *May* and *June* 1721, they received two ships from the *Indies*, and in the month of *September* two more, the cargoes of which being exposed to sale, went off at so round a rate, that they found themselves not only indemnified for their losses, but likewise in a condition to carry on their commerce with greater success than ever. The only thing they wanted was a legal establishment; for though the imperial court had, for a long time, flattered them with the hopes of letters patents, yet they had hitherto delayed them, to avoid an open quarrel with the maritime powers, which, at that juncture especially, would have been very inconvenient².

Obtain a promise of a charter, and the communication of its contents. BUT, soon after the arrival of these last-mentioned ships, the company having money in b their hands, and powerful friends at the court of *Vienna*, resolved to neglect nothing that might contribute to put their affairs on the best foundation possible; and, with this view, they sent some of their directors to court, very well furnished with instructions and bills for considerable sums of money. These gentlemen managed their affairs with such diligence and prudence, that they obtained a promise of a charter as extensive as they could wish, or any company in *Europe* had received; the draught of which was immediately communicated, and gave them intire satisfaction³. This charter was to have consisted of several articles; importing, that the directors should be restrained to eight, to be chosen out of the wealthiest and most experienced merchants in the *Austrian Low-Countries*; that they should be allowed c four thousand florins a year salary; that none of them should continue above six years, or be capable of being rechosen till they had been a full year out of office: that a general court of the proprietors should be held every year for the choice of directors, when the company should name twenty-four, out of which list the emperor should chuse eight: that the court of directors, the treasury, and books of account, belonging to the company, should remain the first three years at *Antwerp*, and the next three years either at *Ghent* or *Bruges*; but that their sales should be constantly either at *Ostend* or *Bruges*: that the company's capital should consist of ten millions of florins, and should be divided into ten thousand actions of one thousand florins each. The prizes which the vessels in the service of the company should take in time of war, were to belong intirely to the company, and were to be sold and disposed of for their profit. All the ammunition, provisions, artillery, and naval stores, d requisite for the forts and factories of the company, were to be exempted from duties and impositions in their passage through the territories either of his imperial majesty, or of any of the lords or ecclesiastical communities in the *Low-Countries*. And lastly, that all the goods transported on board the ships of the company should pay for all customs and duties inwards and outwards four *per cent.* and no more, till the expiration of the month of *September* 1724, and from that time six *per cent.* for ever. The emperor likewise promised to send a person vested with a public character to the *Great Mogul*, to settle an alliance with him, and to return him thanks for the permission he had granted the company, not only to erect a factory, but a fort to protect their commerce, in his dominions. The prospect his imperial majesty had of enriching his subjects in the *Low-Countries*, and augmenting the revenues he e drew from thence, by fixing so extensive and profitable a commerce there, engaged him to assure the agents of that company of still greater favours. He even intimated, that he would remit all customs and duties for three whole years, and would make the proprietors a present of three hundred thousand florins in ready money, to indemnify them from any losses they might sustain on the first establishment of their commerce, which must, in the nature of things, be regarded as inevitable, and therefore some provision ought to be made against it⁴.

S E C T. II.

The political conduct of their High Mightinesses the States General, the court of Great Britain, and the crowns of France and Spain, in order to procure satisfaction upon this head, and to prevent the commerce of their subjects suffering, from the schemes of the new-erected company.

- a **T**H E S E favours raised such a spirit not only among the merchants, bankers, and other persons concerned in trade and money, but also among the nobility and gentry, that they shewed an inclination to exert themselves to the utmost in support of the new company. It was not, however, the inhabitants only of these provinces, and other subjects of his imperial majesty, that encouraged this undertaking, but the *English, French, and Dutch*, who were chiefly concerned in the shipping, and in the management of the company's affairs, notwithstanding they very well knew they could never prosper, but at the expence of their native countries, and of the establishments for the same commerce long ago erected in them". We need not wonder, therefore, that this new company at *Ostend* should occasion such noise throughout all *Europe*, or excite great discord and disturbance, so as to render this chapter as remarkable a part of general history as any that finds a place therein. But it must seem a little strange at first sight, that the warmest friends, and most faithful allies, of his imperial majesty, should be the most violent in this opposition. One would have imagined, that the emperor had the same right in his dominions that other princes and states have in theirs, and that how contrary soever the erecting such a company in the *Austrian Low Countries* might be to the interests of other nations, they could, however, have no just claim to demand or expect that his imperial majesty should forego such apparent advantages for their sakes, or, in plain terms, hinder his own subjects from becoming rich, that theirs might remain so". Yet this was the case, and the maritime powers declared, in express terms, that they expected his imperial majesty should do this, and that he was bound by treaties to comply with their demands. The States General, who thought themselves most aggrieved, were earliest and loudest in their complaints; and, as it is impossible to give the *English* reader a fuller or clearer account of the grounds upon which they were founded, than by laying before him the memorial presented by Mr. *Bruyninx*, envoy from the States to the court of *Vienna*, which contains the substance of all that was alleged against the emperor's right to establish such a company, we have made a succinct extract of that very long memorial, and placed it at the bottom of the page * (D).

SEVERAL

* *Mercure historique et politique*, tom. lxxi. p. 715. *traitez*, par M. ROUSSET, tom. iii. p. 64, 65.

* *Recueil historique d'actes, negotiations, memoires, et Historical register*, vol. viii. p. 346.

(D) This excellent memorial was presented by the *Dutch* minister at *Vienna*, Mr. *Hamel Bruyninx*, on the 15th of *March* 1723; and though the whole is well worth of perusal, yet, for the ease of the reader, and to keep the more within bounds, we will cite only the most material paragraphs; which are these (5).

" Their High Mightinesses foreseeing the unavoidable troubles that must attend this affair, if his catholic and imperial majesty should, contrary to all expectation and equity, permit his subjects of the *Austrian Netherlands* to proceed in their undertakings with respect to navigation and trade to the *East Indies*, contrary to the tenor and letter of treaties, and if opposition should be made to their High Mightinesses, in case they attempt to make use of their right obtained by treaties. But their High Mightinesses, being desirous of nothing more than to prevent such kind of troubles, could not, in the present juncture, avoid making such representations to his imperial majesty, that by the treaty concluded in 1648, at *Munster*, between his majesty the king of *Spain* then reigning, and his successors, on the

" one part, and their High Mightinesses on the other part, commerce and navigation to the *East* and *West Indies* were regulated and limited, with regard to the subjects of *Spain*, upon the foot they then were established, without power of farther extension; and with regard to the subjects of this state, it was agreed, that the former should refrain from places which the latter possessed.

" These articles have always been religiously observed, and the inhabitants of the *Spanish Netherlands*, at present *Austrian*, have never been permitted or tolerated to trade to the *Indies*. The said *Netherlands*, being fallen under the dominion of his catholic imperial majesty, have not thereby acquired larger privileges than before; nor can it ever be imagined, that their High Mightinesses, who have made such signal efforts, contributed so much to the recovery of the *Spanish Netherlands*, and so many other parts of the *Spanish* monarchy, in favour of his catholic and imperial majesty, pursuant to their engagements on that behalf, could possibly, by entering into those very engagements, depart from, or ever intend to depart from, their cha-

*Motives
which induced
the Dutch to
flir therein,
and what
their hopes of
succeeding.*

SEVERAL circumstances concurred to quicken their High Mightinesses in taking this step; a for, first, they were extremely pressed by their own *East India* company, some of the principal managers of which had also a considerable interest in the government; next, the state of affairs in *Europe* seemed to add weight to their interposition; not that they depended much on the remembrance of services already done, but because they knew there were many things which the imperial court would be glad to do, and which they could not well do without their assistance; lastly, it was judged easier for them to obtain, and more honourable for the emperor to grant, a total rejection of these offers made by the projectors of this new company, before a charter was actually granted. Yet their expectations in this respect failed them, and this memorial, however warm and pathetic, had by no means that influence with which they had flattered themselves, notwithstanding they had the concurrence, though from very different motives, of two of the greatest personages at, and a minister in the highest credit with, the court of *Vienna*. The first of these was the illustrious prince *Eugene* of *Savoy*, who, solely out of respect to justice, and the true interests of the house of *Austria*, declared against this measure, and, with his usual candour and plainness, foretold that it could not fail to lessen that perfect intelligence that had so long subsisted between his imperial majesty and the maritime powers, and which, in its consequences, must disturb that system upon which the tranquility and independency of *Europe* were established. The other was the marquis *De Prie*, who, being at the head of the administration in the *Low Countries*, was a great gainer by licences, passports, and commissions, all of which he knew would cease when the company obtained their charter; and though his opposition was less reasonable, yet it was rather more violent. (E).

*Precautions
used in Great
Britain, to
prevent any of
its inhabitants
from being
concerned in
this trade.*

In *England*, things took exactly the same turn as in *Holland*; and the *East India* company having, with the consent of the ministry, petitioned the house of commons upon this subject, it began to be considered as a national affair. To quicken, however, the parliament in its proceedings, the directors of that company caused the *Dutch* memorial before-mentioned to be translated, and delivered to the members at the door of the house; which produced all they could desire. A committee was immediately appointed, of which Sir *Nathaniel Gould* was chairman, and, in due time, a report being made, the house came to certain resolutions, upon which a bill was framed for preventing any subjects of *Great Britain* interesting themselves in the capital of the *Ostend* company, or entering into its service, under very severe penalties; which bill passed both houses, received the royal assent, and became a law; which, without doubt, had a considerable operation, though it did not totally eradicate the evil, some, who

⁸ *Historical register*, vol. viii. p. 346.

⁹ *Recueil historique d'actes*, &c. tom. ii. p. 4.

“rafters, and the right of maintaining themselves there-
“in to perpetuity, obtained by the said treaty of *Munster*,
“or that his catholic and imperial majesty had any in-
“tention, in recovering the said *Netherlands*, to make
“alterations in the said treaty, much less design, con-
“trary to the stipulation therein so plainly expressed, to
“cause any prejudice to the States in a point so essential
“and important to them, upon which it was so strongly
“insisted in the negotiations at *Munster*, and without
“which that treaty could not have been concluded.

“Moreover, it is expressly stipulated, by the twenty-
“sixth article of the barrier treaty, that commerce, and
“all things relating to it, should remain, to all intents
“and purposes, upon the same foot as it was established
“at the treaty of *Munster*, and in the manner expressed
“in the articles of the said treaty; insomuch that the
“said treaty of *Munster* is evidently confirmed by the
“treaty of the barrier, even at the time his catholic and
“imperial majesty was already in the possession of the said
“*Netherlands*, as likewise by the guaranty of his *Britan-
“nic* majesty.

“And whereas the right of the States, in this parti-
“cular, is so manifest, that their High Mightinesses have
“the utmost grounds to expect from the so much re-
“nowned friendship and equity of his catholic and im-
“perial majesty, that he will not favour or tolerate any
“prejudice to the said right of the state; they there-
“fore amicably require, that the patent, which is said
“to have been granted for navigation and commerce of
“the *Austrian Netherlands* to the *Indies*, may not be pub-
“lished, but withdrawn, or at least rendered ineffectual;

“and that such orders may be given by his imperial ma-
“jesty, that such kind of navigation and commerce,
“whether with patents or without, may intirely cease;
“and that the treaties in that respect may be executed,
“&c.”

(E) It may not be amiss to acquaint the reader with the arguments advanced by such of the imperial ministers as disapproved the erection of the *Ostend* company. They observed, that, independent of all abstruse points, it was a fact sufficiently clear, that the *Austrian Low Countries* were acquired for his imperial majesty by the arms, and at the expence of the maritime powers: that, without doubt, when they did this, they could not apprehend that their commerce in the *East Indies* would be in any danger of suffering from thence, since, if they had, there was nothing easier than for them to have prevented it: that if his imperial majesty entered into the possession of these countries, even under a tacit condition of holding them upon the same terms, and in the same manner, as they had been held by other princes of the house of *Austria*, the breaking through that condition to the prejudice of the powers by whose assistance these countries were obtained, was not consistent either with his interest or his glory: and that whatever advantages this new commerce might promise, it could not be reckoned secure, if the maritime powers had recourse to violent measures; and, at all events, could never balance the detaching those powers from their connections with the house of *Austria*, and obliging them, for the sake of supporting their own interests, to enter into a conjunction with that of *Bourbon* (6).

(6) *Recueil historique d'actes, negotiations, memoires, et traites*, par *Mons. Roussel*, tom. ii. p. 43.

a were by birth subjects of the crown of *Great Britain*, continuing still to act against the public interest, for the sake of acquiring or adding to their private fortunes^b. But one great end it certainly answered, which was, to let the rest of *Europe* see, that the court and the nation had the same sentiment upon this head; and that the maritime powers were determined to take the same part, as they were alike concerned in interest in the event of this transaction^c (F).

It was from hence very reasonably imagined, that the court of *Vienna* would, from a tenderness for its own interests, have reconsidered this point, and endeavour to find some means to pacify those powers, by whose treasures and armies those very countries were acquired, which had given rise to this dispute. But, notwithstanding the joint solicitations of the *English* and *Dutch* ministers, the emperor seemed more and more determined to maintain his point; and therefore, in the month of *August* 1723, actually published, as at the close of the preceding year he had granted, his letters patent to the *Ostend* company, though with some variations from the plan before laid down. In the preamble to these letters, the emperor not only took all the titles of the head of the house of *Austria*, but likewise those of the king of *Spain*, and, in particular, stiled himself king of the *East* and *West Indies*, of the *Canary Islands*, &c. with a view probably to grace this new and ample grant to the *Ostend* company, which was established for thirty years, with licence to trade to the *East Indies* and *West*, and on all the coasts of *Africa*, on this side and on the other side the *Cape of Good Hope*, their ships observing the usual customs; so that, supposing it could be maintained, a more ample charter could hardly be desired^d (G).

His imperial majesty's charter granted, and published in the Low Countries.

(F) There is nothing that can set this matter in so strong and proper a light, as giving the reader a succinct account of the contents of this severe law, by which it was enacted (7). That if any subject of his majesty shall contribute to the establishing any foreign company trading from any part of the *Austrian Netherlands*, to or from the *East Indies*, and other places beyond the *Cape of Good Hope*, described in former acts for securing the sole trade thither to the united *East India* company of *England*, or shall be interested in any share of the stock or actions of any such company, or make any payments in money, bills of exchange, or otherwise, towards supporting such company, or shall subscribe to the establishing any other foreign company trading to the *East Indies*, or be concerned in any stock therein, &c. the person so offending shall forfeit their interest and share in the stocks of any such company, with treble the value; one third to the crown, and two thirds to the *East India* company, if they inform or sue for the same, otherwise one third of two such thirds to the common informer; recoverable by action of debt, &c. as is usually directed by all penal statutes of a like nature, that convictions may be easily made; and the attorney-general, of his own authority, or at the relation of the said united company, and for the company, may file a bill, in the court of chancery or exchequer, against any person who shall have subscribed, contributed, or promoted, any such foreign *East India* company, for the discovery of his offence, remitting or waving the forfeiture of the treble value of the offender's stock in any such company, and insisting only on the single value; and thereupon such person shall answer to the bill, and not plead or demur to the discovery thereby sought; and in case the single value shall be decreed to be paid, one third part thereof shall go to his majesty, and the other two thirds to the company. If any subject shall have accepted of any trust, or know of any interest, share, or concern, which any of his majesty's subjects shall have in any such foreign company, and shall not, within six months after accepting the trust, or coming to the knowledge of any such interest, &c. truly discover the same, in writing, to the said united company of *England*, or their court of directors, he shall forfeit treble the value of the interest, &c. so accepted in trust, or so known and not discovered, one moiety to the crown, the other to him who will sue for the same; or such offender shall, at the discretion of the court where

the prosecution is commenced, suffer one year's imprisonment; and he that, within the time limited, shall voluntarily come to the court of directors, and make a true discovery, in writing, of the interest, share, or concern, of any subjects in the stock of any such foreign company, shall have one half part of the clear amount of the forfeitures arising by this act: and in case any of his majesty's subjects (other than such as are lawfully authorized) shall go to, or be found in, the *East Indies*, they are declared to be guilty of a high misdemeanour, and may be prosecuted for the same, in any court at *Westminster*; and, being convicted thereof, shall be liable to such corporal punishment or imprisonment, or to such fine, as the court where the prosecution is commenced shall think fit; and the offenders may be seized and brought to *England*, and any justice of peace may commit them to the next county gaol, till sufficient security be given by natural-born subjects or denizens, to appear in court, &c. and not to depart out of the kingdom without leave.

(G) The readiness with which the managers of this new commerce found money, and whatever else was requisite to support their design, proceeded chiefly from that extravagant appetite for gain that prevailed at this time through all *Europe*, as the discovery of various frauds committed by the servants of such companies as had already an established trade in the *Indies*, furnished them with agents and under-servants extremely capable of managing their affairs; and to these therefore we ought to attribute that surprising alacrity with which they caused squadron after squadron to put to sea. Thus, notwithstanding they had, in 1720, set six ships richly laden to the *Indies*, yet, in 1721, they equipped the like number, of which three were destined for *China*, one for *Mocha*, one for *Surat* and the coast of *Malabar*, and one for the *Bay of Bengal* (8). The names of these ships were, the *St. Joseph*, the *Wartemburg*, the *House of Austria*, the *Empress*, the *Brussels Galley*, and the *Town of Ghent*. They gave out also, to encourage and keep up the spirit of those who favoured them, that they had not only procured leave from the *Great Mogul* to build a fort, for the security of their factory, in his dominions, in which there was some truth, but also that they had obtained permission to establish themselves in *China*, tho' that was afterwards found to have no foundation at all, yet it is allowed they had a good interest there, and were as well received as any *Europeans* (9).

(9) List of ships

Substance of
this new and
ample insur-
ment in favour
of the com-
pany.

THE capital, however, of the company was, by these letters, reduced to six millions of a florins, and the number of their actions to six thousand; but, in other respects, they had all the powers and privileges laid down in the first plan, and many more; for they were permitted to build forts and castles in whatever parts of the *East Indies* they should think fit, as also to furnish them with all kinds of arms, artillery, and ammunition, that they thought convenient. They were likewise allowed to build and equip ships, of whatever size and strength they thought proper, in any of the ports of his imperial majesty's dominions in the *Low Countries*, *Italy*, or elsewhere; as also to make leagues, treaties, and alliances, with the sovereign princes and states of the *Indies*, in the name of his imperial majesty, with this restriction only, that they should not make war on any potentate whatever, without the leave of his imperial majesty and his successors first had and obtained. In consideration of all which grants, privileges, b benefits, and advantages, the said company bound themselves to offer, as a homage to his imperial majesty, his heirs and successors, on every succession, a golden lion crowned, of the weight of twenty marks, holding under his two fore-paws the arms of the company, which were a spread-eagle displayed, with the terrestrial globe between his two heads, surmounted by an imperial crown. Lastly, his imperial majesty undertook to protect and defend the said new company, against all who should unjustly attack them, and should even, in case c of necessity, employ the whole force of his dominions to support and maintain them in the full and free possession and entire enjoyment of the commerce and navigation granted them by these letters, and obtain for them full damages and satisfaction, from any nation, state, or potentate, that should presume to trouble or disturb them; and should likewise, for the future, c provide, in every respect, for their safety and welfare, by any treaties, alliances, or leagues, into which his imperial majesty, his heirs or successors, should hereafter enter with any power whatever.

Attended with
all imaginable
circumstances
of success on
the first ap-
pearance.

SUCH was the establishment of this famous company at *Ostend*, from which both the com-pany and his imperial majesty promised themselves so many and so great advantages. As soon as these letters patents were published, and registered in the sovereign courts of the *Austrian Low Countries*, the directors taking possession of their offices, held soon after their first general *Antwerp*, on the 11th of *August*; which was accordingly done, and that with such success as sur- f prised all *Europe*; for the next day by noon the capital was intirely subscribed, and by the end of the month of *August* the stock of the *Ostend* company was fifteen *per cent.* above par. The affairs of this new society were no less flourishing in the *Indies*, where the persons they employed, being most of them such as had served before either the *English* or *Dutch East India* companies, found ways and means to settle factories, with amazing facility and success, and to push their trade in such a manner, as very evidently shewed, that if the interests of such as opposed this company did not get it suppressed in *Europe*, their efforts in the *Indies* would do little, unless they had recourse to open force, since all the arts to decry them at the courts of infidel princes had been already put in practice without effect. (H).

* Lettres patentes, &c. imprimées à Bruxelles par Eugene Henri Friex, imprimeur de sa majesté imperiale et catholique, en 1723, in 4°. f Mercure historique et politique, tom. lxxv. p. 229. g Histoire des Indes Orientales, tom. iii. p. 73.

(H) The knowledge their agents had of the trade, and the manner in which it was carried on in the *Indies*, enabled them to get the better of any insinuations to the prejudice of the new company, by suggesting, in their turns, that they were calculated to prevent the natives from obtaining a new market, and by representing the advantages that must necessarily accrue to them, by having an increase of purchasers; and as the *Indian* princes want not a sufficient degree of sagacity, either for comprehending or managing their own affairs, it could be no difficult thing for them to sift out the truth, which was entirely favourable to these adventurers, since whatever clashing of interests there might be in *Europe*, it was plainly for their advantage that this new settlement should take place (10). In this light, therefore, the

Ostend factors were not like to be much hurt by any invidious representations with such as were free traders, and who had it in their power to choose with whom they would or would not carry on a trade; but in reference to other circumstances, all the skill and address in the world signified nothing; for they could not pretend to put into any of the ports belonging to other *European* powers, or expect any assistance or countenance from them, in case of ill usage from the natives, the bad effects of which they felt, in various instances, and would have felt in many more, if it had not been for their private friendships and particular connections with persons who were in the service of other companies, and who from those considerations were not inclined to execute with rigour the instructions they received from *Europe* (11).

S E C T. III.

The progress of this opposition; the several reasons urged by these powers against the right of his imperial majesty to fix any such establishment in the Austrian Low Countries; and the consequences of these applications to the imperial court.

- a **T**HE *Dutch East India* company was so far convinced of this, that they presented, in less than a fortnight, two memorials to the States General; in which they scarce kept any measures, but plainly intimated, that, as the establishment of this new company was in direct violation of treaties, so they ought to be left at liberty to act as if those treaties no longer subsisted, and do themselves that justice by arms, which, as was every day more and more apparent, could not be obtained any other way ^b. The States, however, were by no means inclined to break with his imperial majesty, if by any methods they might avoid it; and therefore still continued their applications at the court of *Vienna*, in conjunction with *Great Britain*, to obtain the revocation of the authority by which the new company acted, or at least a suspension of it; and, in the mean time, they made such laws at home in favour of their own *India* company, as they thought requisite, to prevent any of the subjects of their High Mightinesses from having concern either in the capital of the *East India* company in the *Austrian Netherlands*, or in the management of their affairs in the *Indies* ^c; as, on the other hand, the agents of the *Dutch* company in the *Indies*, though they did not proceed to direct acts of violence, took such methods in that part of the world, where their power is so great and so extensive, as gave this new society infinite trouble, by cramping their trade, and rendering it precarious; in which they were so well seconded by the *English*, that nothing but the activity and abilities of the persons concerned, and their finding themselves in a manner desperate, in case it did not succeed, could have kept it on foot, in spite of the difficulties and inconveniencies which they every day experienced ^k.
- c **B**UT not only *Great Britain* and *Holland* exerted themselves against this new establishment, for *France* likewise began to take umbrage at a scheme which threatened destruction to that establishment of the same kind, which she was endeavouring to erect; and therefore his most christian majesty's council published a declaration, dated the 16th of *August* 1723, by which all the subjects of the crown of *France* were forbid to interest themselves, in any manner whatever, in the capital of the *Ostend* company, under pain of forfeiting three thousand livres for every act of offence, besides incurring the confiscation of whatever they should subscribe into the capital of the said company; and, in case of a second offence, the same fine and forfeiture, together with banishment for three years. By the second article of this declaration, his most christian majesty directed, that in case the effects his subjects might acquire by interesting themselves in the stock of this new company could not be reached, so as to make them liable to the confiscation before-mentioned, then their effects and fortunes in *France* shall be liable to the like seizures and forfeitures, until the sums in which they were so concerned in the *Austrian* company should be raised and levied; and all this in the short, summary, and extraordinary method described by the royal ordinance of 1670. By the third article, all seamen, manufacturers, tradesmen, and in general all the subjects of his most christian majesty, were strictly prohibited and forbid to enter, in any manner or quality, into the service of the said *Ostend* company, on pain of imprisonment, and forfeiture of all their effects. By the fourth article, all persons whatever were prohibited from inviting, inlisting, inrolling, or otherwise entering into the service of the said company, any of the subjects of his most christian majesty, in quality of officers, soldiers, seamen, or in any other quality or manner, as also to sell, or buy, or lend, or equip any vessel, for the service of the said company, on pain of the pillory for the first offence, and of being sent to the galleys for the second, besides the confiscation of all that should be thus bought or sold, and a fine of three thousand livres each on both the buyer and seller ^l. The weight of all these great powers seemed more than sufficient to crush this infant company, how much soever it might be the inclination and the interest of his imperial majesty to cherish and support it (I).

(I) There are many arguments that prevailed upon the *French* court to act in this affair with great vigour, and, with respect to the maritime powers, with much uprightness and fair dealing; for, besides that their interests were precisely the same, there were certain circumstances that, in respect to this new establishment, particularly piqued them. They had, for a long course of years, been endeavouring to raise themselves such a company,

Mod. Hist. Vol. IV. 8 A

An example,
which is
copied also by
the crown of
Spain, in a
manner the
most public.

It was not long, however, before another great potentate interfered likewise, and declared a himself with equal vehemence against this new establishment; this was his late catholic majesty Philip the fifth, who conceived this affair precisely in the same light with the maritime powers, as appears from a representation presented to his *Britannic* majesty, by the *Spanish* minister, on the 26th of April 1724, conceived in the most express terms, and demonstrating the injustice and illegality of this new establishment^a, proving it utterly inconsistent with the treaty of *Munster*, by which the crown of *Spain* engaged not to disturb the navigation of the *Dutch* to their *East Indies*, in consideration of a reciprocal engagement on their side, not to disturb the commerce of the subjects of the crown of *Spain* in that part of the world. It was by these reciprocal stipulations, that the subjects of the crown of *Spain* in the *Low Countries* were restrained from trading to the *East Indies*; and it was under these restrictions that the *Spanish Low Countries* were yielded to the elector of *Bavaria*, and by *France*, with his consent, to the house of *Austria*, upon express condition, that this house should hold them in the same manner, and under the same restrictions, as they had been held by the crown of *Spain*, for which their High Mightinesses likewise engaged: so that if the *Ostend* company might be legally established, it would turn as much to the detriment of *Spain* as to that of the States General, contrary to the meaning and intention of all these treaties and alliances made for establishing and securing the tranquility of *Europe*; but, by this construction, if it could be put upon them, rendered hurtful and ruinous to all parties, save the emperor alone, and destructive of themselves. Such was the representation of the marquis *De Pozzo Lueno* at the court of *London*, and so clearly was his catholic majesty, at that time, convinced, that the establishment of the *Ostend* company was inconsistent with his own particular interest, as well as with the general system of *Europe* (K).

Some remarks
on the substance of the
Spanish memorial, and
the judgment
of the Spanish
ministers.

THE contents of this plain and pathetic memorial very evidently shew, that the natural and unbiassed sentiments of the *Spanish* ministers were the very same with respect to the right of his imperial majesty, to establish an *East India* company in the *Austrian Netherlands*, with those of the statesmen in *England*, *France*, and *Holland*, which is a point of very great, and will be of perpetual importance, because the treaty of *Munster*, in which the catholic king and the States were contracting parties, is explained on both sides in the same way; so that, if there can be any thing certain or settled in modern politics, it must be the true sense of those articles in that treaty upon which the States General founded their demand, since the *Spanish* court testified, that they understood their meaning as the States did; whereas it was insisted on by the advocates for the *Ostend* company, that those articles had no such meaning; except in the opinion of the *Dutch*, which by this memorial is absolutely contradictedⁿ. The only objection that can possibly be made to this reasoning is, that the *Spanish* ministers were induced to acknowledge this the genuine meaning, because it was the interest of the crown of *Spain*: but to this the most satisfactory answer may be given; for if these articles, so interpreted,

^a Recueil historique d'actes, negotiations, memoires, et traitez, par M. ROUSSET, tom. ii. p. 76. ⁿ Histoire des Indes Orientales, tom. iii. p. 69. Recueil historique d'actes, negotiations, memoires, et traitez, par Mons. ROUSSET, tom. iii. p. 65.

pany, and it must have given them no small uneasiness to observe, that, in so short a space, and without any other assistance than an appearance of countenance from the imperial court, this company had been able to make a better progress than theirs had ever done, under the protection of *Richlieu*, *Colbert*, and other able ministers (12). They saw, that if this trade went on, it would vastly enrich the *Austrian Low Countries*, to the prejudice of theirs; and, which was a point of as great or greater consequence than any, they discerned that this dispute furnished them with a fair opportunity of detaching from their rival the maritime powers, to whose assistance alone was owing the then formidable power of the house of *Austria* (13).

(K) In order to understand this matter clearly, and to apprehend thoroughly the force of what is asserted in the text, it will be proper to observe, that the States General insisted that the inhabitants of the *Austrian Netherlands*, while subjects of the crown of *Spain*, were absolutely excluded from having any trade or commerce in the *East Indies*; that by the treaty of *Munster* this commerce was

entirely regulated between the crown of *Spain* and the republic, and full provision made that it should for ever remain on the foot of this regulation, for the mutual benefit of both nations, as it actually has done; that by the treaty of *Utrecht*, all was again confirmed, and his catholic majesty and the republic undertook that this navigation and commerce should remain precisely as it was, without leaving either party at liberty to make the smallest alteration; and that by the barrier treaty it was stipulated, that his imperial majesty should possess and enjoy the *Austrian* or *Spanish Low Countries*, in the same manner, and upon the same conditions, that they had been enjoyed and possessed by the kings of *Spain* and other princes of the house of *Austria*, and not otherwise. His catholic majesty's minister represents these very same points, insists upon the very same treaties, and draws the very same conclusion on the behalf of *Spain*, that had been before drawn by the States General on their own behalf, as was afterwards very justly objected when this court changed her conduct (14).

(12) See the proof of these facts in our former chapter, on the commerce of the French to the Indies. Recueil historique d'actes, negotiations, memoires, et traitez, par M. Roussel, tom. iii. p. 148.

(13) Rep. (14) Id. ib. tom. ii.

a fall in equally with the interests of *Spain* and the republic, this is the most decisive proof that this was the original and only meaning of those articles, because it is to be presumed in all treaties, that the mutual benefit of the contracting parties is equally considered. However it might be in the course of these disputes, it was actually proved that the court of *Spain* had already regarded the thing in this light, and had ever taken this to be the sense of those articles in its greatest rigour^o.

^o See the fifth and sixth articles of the treaty of *Munster*, compared with the memorials before cited.

S E C T IV.

His catholic majesty makes a short turn, and, though his right of opposition was the strongest of any, enters into a treaty with the emperor; and, in consequence of that measure, undertakes the protection and support of the new company, which alarms all the other powers, and produces the treaty of Hanover.

- b **B** U T, notwithstanding all this, things soon after changed their appearance; and in consequence of some private negotiations, the court of *Spain* departed on a sudden from all its former maxims, and not only concluded a definitive treaty with his imperial majesty, but a formal alliance also; and, which is still more extraordinary, a treaty of commerce, dated at *Vienna*, May the 1st 1725, manifestly contrary to its own interests, as well as directly repugnant to what in this memorial had been laid down, as the judgment of his catholic majesty, upon the subject of this new commerce^p. It is not necessary to our purpose to enter deeply into the enquiry upon what motives the court of *Madrid* acted in the course of these negotiations. It is sufficient to observe, that, let those motives be what they could, it was impossible they should dissolve the engagements that either their imperial or catholic majesties had formerly entered into with other princes and states; and therefore it was very reasonable for such as had thought themselves injured by this new treaty, to insist upon so plain and so self-evident a principle. The great secrecy with which this negotiation was managed, which produced these treaties, was an argument that this was foreseen by the courts that concluded them; and, indeed, hardly any thing happened within the compass of mens memories that occasioned more universal astonishment than this sudden and surprising union between powers that had so long manifested an irreconcilable aversion; but, however, this would not have given any great distaste to their allies, if they had not been persuaded by this treaty of commerce, especially, that their interests were to be sacrificed to this new friendship, which they could not, and indeed had no reason to bear with patience, or pass over in silence (L).
- c
- d **O**N the conclusion of this treaty, the *Ostend* company seemed to be fixed upon so solid a foundation, that enemies and friends concluded they were not to be shaken, much less ruined and dissolved, by less than a general war; a thing hard of digestion to the maritime powers, who were very unwilling to pull down the work of their own hands, and to destroy that bulwark which, with so much difficulty and expence of blood and treasure they had erected for their own security. On the other hand, they were no less unwilling to see the commerce of their subjects torn away by a prince who had never been invested with this power of ruining them, but by the pains they had taken for his preservation. But, to return to matters of fact, and the methods employed by the maritime powers in conjunction with *France*, which, out of regard to its own interest, very heartily joined them for pulling down this edifice, which threatened its neighbours with the loss of those advantages that for so many ages, by exhaust-
- e

Notwithstanding which they suddenly change sides, and an alliance is concluded with the emperor.

This measure more and more disturbs France and the maritime powers.

^p Corps universelle diplomatique, tom. viii. P. 111. p. 106. 109. 114.

(L) It is generally believed that the court of *Vienna* was not sincere in its negotiations with that of *Madrid*, and that therefore all the mighty projects formed upon the treaties of *Vienna* would have vanished into smoke, even if they had not been opposed; but that fact is very far from being probable, much less clear, for *Spain* persisted as far as she was able, and actually commenced hostilities; neither is it at all unlikely that the emperor would have acted the same part, if *Spain* could have supplied him with money; but the galleons being blocked

up by the *English* fleet rendered that impossible. Now whether the court of *Vienna* was sincere in her engagements with *Spain* or not, yet, if the harmony between these two courts had lasted till *Spain* had recovered *Gibraltar*, and the emperor had thoroughly established the *Ostend* company, the maritime powers would have found themselves in a very untoward situation, which, by the measures specified in the text, was prevented, and both their imperial and catholic majesties brought to accept of reasonable conditions (15).

(15) *Remarks upon the treaty of Hanover*, p. 31.

ing

ing the wealth of their subjects and the naval power of their respective governments, had placed them in a condition to hold the balance of power, and to prevent the madness of ambitious princes from reducing the inhabitants of *Europe* into that abject state which renders *Asia* the most despicable, tho' in itself the richest, most populous, and most delightful quarter of the earth ^a. The *East India* company in *Holland* were so much alarmed at this accident, and so terrified with the thoughts of seeing this new company on a better footing than themselves, that they could not forbear once more representing their apprehensions to their High Mightinesses, which they did in a memorial that stated clearly as well his imperial majesty's departure from treaties in the setting up of a new company in the *Austrian Netherlands*, as his catholic majesty's breach of the fundamental maxims of the *Spanish* monarchy, and his direct violation of those treaties, to the conclusion of which he owed his crown ^b.

New memorials to the States from the Dutch East India company.

At the conclusion of this memorial there was a kind of insinuation couched indeed in dark and ambiguous terms, but intelligible enough to the penetrating reader, that the company could take no notice of these new treaties, in which the States General had no share, but must regulate their conduct by the old ones, in which they were determined to be very punctual. But, notwithstanding this was understood to hint at very vigorous proceedings in the *Indies*, yet it did not much alarm the two great courts that now made this new trade a common cause, neither did it deter the directors of the *Ostend* company from fitting out more ships for the *Indies*, or from making another call upon their capital, which was, generally speaking, complied with, and by which they were in possession of three fourths of the whole money subscribed, amounting in the whole to about four hundred and fifty thousand pounds of our money ^c. This mortified the *Dutch East India* company exceedingly; they knew very well that if their hands were at liberty they could easily rid themselves of their enemies in the *Indies*, without waiting for the suppression of the company in *Europe*; but they were at the same time sensible of the bad effects this might have, and that the latter, tho' it was plainly the slower method, was by much the safest. They did not fail, however, to represent to the States General, that while they were deliberating, the *Austrian* company were trading, the number of their ships increasing, their credit augmenting, and their interest in the *Indies* spreading daily farther and farther. They insisted therefore that no time was to be lost; that a categorical answer ought to be obtained from the courts of *Vienna* and *Madrid*; that, for want of this, their High Mightinesses might be still kept in a state of inaction, which was all that the protectors of the *Ostend* company could desire, since the last call upon their capital would enable them to erect some good fortresses in the *Indies*, where their flag began already to be known and respected; so that, if no way was left of crushing them but by force, it ought not to be long delayed, since, if it was, even that method would not be left ^d (M).

But their High Mightinesses were still inclined to delay coming to extremities.

WHAT they aimed at by these repeated applications, was to engage the States to take into their serious consideration how the *East India* trade was to be preserved, in case their negotiations should prove as hitherto they had done, altogether ineffectual; and also, that they might engage them to press the two courts so closely, as that they might be obliged to declare whether they meant to carry things to extremities, or were inclined to propose some terms upon which this new company might be suppressed, that they might know what measures themselves were to take, and what assistance the republic would expect from them in a case where the commonwealth might be obliged to risk its own safety in defence of those privileges which they had granted to this company. Of the expediency, and even necessity, of taking some such vigorous step the States General were so sensible, that they resolved to repeat their applications at the courts of *Vienna* and *Madrid*, in order to obtain redress ^e. They were strongly seconded by the courts of *London* and *Paris*, who, in the mean time, considering how little advantage had hitherto been obtained by slow and pacific measures, resolved, if possible, to quicken them by some step of another kind, which might convince both the emperor and the king of *Spain* that they were not to be frightened with high words, or persuaded out of their properties. They took advantage therefore of the disposition the king of *Prussia* ^f

(M) There is very little reason to doubt that, if things had come to extremities, the *Dutch* in the *Indies* would very soon have delivered themselves from their competitors by sinking or taking their ships, from which they were restrained only from the apprehension of reprisals being made in *Europe*; but, after the conclusion of the *Hanover* treaty, this apprehension was in a great measure

taken away, and therefore we need not wonder that the emperor consented to a suspension of that commerce, when, in fact, he saw plainly, that it could be carried on no longer; for if hostilities had begun in *Europe*, they would have begun and ended too in the *Indies* in a very short space of time (6).

(16) Recueil historique d'actes, negotiations, memoires, et traitez, tom. v. p. 19.

- a was in, who saw with some displeasure the exorbitant, and, as he conceived, the anti-constitutional power of the emperor in *Germany*, the consequences of which he thought might be fatal to the prerogatives of himself and of other princes, with which notions striking in they concluded a defensive treaty at *Hanover*, dated *September* the third 1725; which treaty was to subsist for fifteen years, and to which the States General were to be invited to accede^w. Tho' there is not the least mention in this treaty of the *Ostend* company, yet, in the second article, it being provided that the contracting powers guaranty not only each other's dominions, countries, and cities, as well in as out of *Europe*, but also all their rights, privileges, and advantages, particularly those relating to trade, it was well enough understood, that under this phrase *particularly*, the *Ostend* company was included, since it was impossible it should so subsist, and the contracting parties preserve their rights and privileges relating to trade. As soon as this alliance was concluded, it was not only made known to the States General at the *Hague*, but they were likewise invited and pressed to come into it, as the most effectual, and indeed the only way of procuring what they of all other powers were most interested to procure, the abolition of the new company. For, while the emperor and the king of *Spain* continued so closely united, and the rest of the princes of *Europe* unconnected by any counter alliance, it was evident they had it in their power to do what they pleased, which was likewise visible they intended to use for many purposes absolutely irreconcilable to the interest of other princes and states; more especially, in the case of this company, which stood now upon such a foundation as must have enabled it in a few years to have sustained itself against any force brought to disturb it, since never any establishment of this kind was possessed of equal advantages, or supported with the authority of two such potentates^x.

- But the *Dutch*, tho' they could not help acknowledging, in general terms, the wisdom and prudence of the treaty of *Hanover*, yet did not immediately accede to it; on the contrary, they resolved to try once more the force of applications at the court of *Madrid*. It was with this view that they directed Mr. *Vander Meer*, their ambassador at that court, to present a memorial to demonstrate the injustice that was done them by this late treaty with the emperor, which memorial was actually presented on the 4th of *November* 1725, and contained a most excellent deduction of their rights under several treaties, and a very strong, though succinct representation of the infractions upon these rights, made by the treaty of which they complained^y. This memorial was supported by the *English* and *French* ministers, though presented only by the *Dutch*, and though the ministry disssembled it as much as possible, yet it was known that some of the ablest members of his catholic majesty's council made no scruple of declaring, that the facts laid down in that memorial were not to be denied; so that from this time there wanted not a party in *Spain* that testified as great resentment against the concessions in the late treaty of commerce as the ministers of the maritime powers. By degrees this humour prevailed so far, that a paper was affixed at the gate of his catholic majesty's minister at *Rome*, containing these words: *The Spanish nation do hereby promise a reward of a hundred pistoles to any ingenious person who shall point out a single article in the three treaties lately concluded at Vienna, by which they are to be gainers.*

- e As soon as the conclusion of the *Hanover* treaty was reported in the *Austrian Low Countries*, the proprietors of the *Ostend* company discovered great uneasiness, upon which their directors called a general court, and declared therein a dividend of the six per cent. upon their whole capital; tho', as we observed before, there was still a fourth part unpaid. There is no doubt that this was a very prudent measure, and well-timed, but all the effect it had was to keep their stock from sinking so fast as it would otherwise have done^z. The directors likewise sent more ships to the *Indies*, and applied themselves with greater earnestness than ever to their protectors at *Vienna*, who gave them all the assistance in their power, and indeed the imperial court for some time appeared firm in its resolution to support an establishment that in so short a time had been brought to bear, and the advantages resulting from which were perfectly well understood. The news, however, was no sooner divulged, that the *English* had sent a strong fleet into the *American* seas, in order to block up the galleons, than all the politicians began to apprehend that the period was at hand when the new alliances, that had created so much wonder throughout *Europe*, would be gradually broken and dissolved, without creating any wonder at all, and therefore such as were cautious, and could find any opportunity, disposed of their actions in the new *East India* company, in order to place their money in other funds, where, if it produced less, it might be however more secure. These precautions, tho' taken with as much privacy as possible, operated much to the disadvantage of the *Ostend* company, and more especially, as it deprived them of the advice of some very able heads at the time when their assistance was become most necessary^b.

Conduct of the
courts of Vi-
enna and Ma-
drid towards
the States
General on this
treaty.

BUT, whatever might pass in the cabinets of princes, the public face of affairs still continued to wear a threatening aspect, and the two potent confederates, notwithstanding they saw how much the game was against them, did not hastily throw up the cards. On the contrary, the court of *Spain* set a good face upon the matter, entertained the *Dutch* minister at *Madrid* with the fairest words possible, and with usual marks of civility and respect, affected to make light of the remonstrances from the *French* and *English* ministers, and actually sent an ambassador into *Holland* to persuade the States General not only to refuse their concurrence to the *Hanover* treaty, but even to accede, under certain restrictions, to that of *Vienna*; in all which, though there was not the least air of probability, yet they left no step untried to make the world believe that they were not without hopes of success^c. The emperor on his side shewed as great obstinacy, and indeed with more reason, for all the articles of the *Vienna* alliance were entirely in his favour, and the establishing the *Ostend* company in the manner he designed, was a point of such infinite consequence, both with respect to honour and interest, that we need not at all wonder that he pushed it on in the manner he did, or that he laboured by several negotiations in the north to engage most of the crowns there in support of his schemes, in which at first he had extraordinary success, but by degrees the aspect of affairs was changed, by measures which we shall next explain^d (N).

Their High
Mightinesses
tired with in-
effectual re-
monstrances
acceded to the
treaty.

THE States General, seeing how very little they were able to effect by memorials and representations, and beginning to feel daily more and more the bad consequences of the establishment of the *Ostend* company, with regard to their commerce in the *Indies*, took at last a resolution of acceding to the treaty of *Hanover*, notwithstanding all that their imperial and catholic majesties could do to hinder it. They did accede accordingly, which very clearly demonstrated to the courts of *Vienna* and *Madrid* that it was impossible to prosecute their designs farther without the immediate hazard of a war^e. *Spain* seemed resolved to run the risque, and actually committed hostilities against *Great Britain*, by besieging *Gibraltar* with very little effect, and without any assistance from the emperor, who on his side was unable to make the necessary provisions for a rupture without the receiving such supplies from *Spain* as at that time she could not afford. The court of *France* remained steady to her engagements, and appeared so willing to enter into a war against *Spain*, in conjunction with the maritime powers, that this court at length began to dislike the situation she was in, and to wish for reasonable terms. The court of *Vienna*, perceiving that *Spain* began to open her eyes to her own interest, and having never had really any inclination to comply with a certain marriage which their catholic majesties had set their hearts upon, thought likewise of a timely return to her old friends, and of renewing those engagements which had been formerly productive of so many and so great advantages^f.

^f Recueil historique

(N) It appeared from a variety of circumstances, that the court of *Spain* was inclined punctually to fulfil the treaties of *Vienna*, if it had been in her power, and, after all, to have gone as far in the performing them as it was in her power, which appeared strange to such as had not considered the views of this court with attention, and very easy and natural to those who had: it is very certain that the *Spanish* nation have no reason to be pleased with the new system, injurious and prejudicial to them in all respects; but it certainly promised fair to the royal family, since if *Don Carlos*, the present king of the *Two Sicilies*, had married the eldest archduchess *Mary Theresa*, at present the empress queen, it would have raised a new

and formidable power, to which it would have been exceeding difficult to have set bounds, and the safety and independency of *Europe* must have depended continually on the jealousies and misunderstandings between the branches of one great family (17). According to this new system, all the immediate benefits flowing from these treaties would have resulted to the emperor; but if that marriage had taken place, they would all have centered in the possessions of their catholic majesties descendants. This accounts clearly for the conduct of the court of *Madrid*; and as it could be accounted for no other way, there is the greatest reason to believe that the secret hopes of such marriage were her real and only motives.

(17) Remarks on the treaty of *Hanover*, p. 55.

S E C T. V.

After a long train of operations and negotiations, the court of Vienna, finding it absolutely necessary to temporize, consent to a suspension of the company's charter, in hopes of gaining time, and availing themselves of some more favourable conjuncture for reviving and carrying their scheme into execution.

- a **T**HINGS being in this situation, it was not long before preliminaries were settled, in which there was an article that took away for the present those apprehensions that the settlement of this company had raised. It was some time before it could be so digested as to satisfy all parties; but at length, the preliminaries being absolutely settled and signed at Paris, by the 20th day of May 1727, the first article of them ran thus: "His imperial and catholic majesty, having no other view than to contribute to the public tranquility of Europe, and observing that the commerce of *Ostend* has given birth to jealousy and uneasiness, consents that there shall be a suspension of the charter of the *Ostend* company, and of all the traffick between the *Austrian Netherlands* and the *Indies* during the term of seven years." By the fifth article of the same preliminaries it was agreed, "That the ships which sailed from *Ostend* before this convention, the names whereof were to be given in a list on the part of his imperial majesty, were to be permitted safely to return home; and, in case any of them should be taken, it was agreed that they should be *bona fide* restored with their cargoes." This gave the decisive blow to the new company at *Ostend*, notwithstanding the prosperous condition in which their affairs had been affirmed to be in the month of September preceding, when, in a general assembly of the proprietors, the directors had declared, that their last sale having produced upwards of five millions of florins, they had placed a part thereof to the account of their capital, which being thereby rendered complete, they had no farther demands upon their subscribers, which was therefore looked upon as equivalent to a dividend of twenty-five per cent.^b (O).
- c It may be observed, that the antient allies of his imperial majesty were content, provided full satisfaction was given them, that it should be given in the gentlest manner, and in that which least affected the credit and authority of so great a monarch; for it is not to be doubted, that tho' nothing more than a temporary suspension appeared in the preliminaries, yet an absolute

Preliminaries settled and signed at Paris, by which the commerce of the Ostend company is suspended.

On what reasons the presumption is grounded, that the suppression

^a Corps universelle diplomatique, tom. viii. P. 11. p. 146. p. 358, 359.

^b Mercure historique & politique, vol. lxxxi.

(O) On the 30th of August 1727, his imperial majesty's minister, count *Konigsberg Erps*, delivered, with a very short memorial (18), a list of twelve ships belonging to the *Ostend* company that were in the *Indies* at that time, and consequently were to return under the protection of the preliminaries. But, to make this history as complete as possible, we will not only give the reader the names of those ships, but of all the ships that were fitted out by this company while it so continued (19).

"In the year 1724, the directors sent out three ships, viz. the *Emperor Charles*, captain *Michael Caiffes*, carrying thirty pieces of cannon, bound for the Bay of Bengal, but was lost in the river *Ganges*; the *Empress Elizabeth*, captain *Balthasar Rose*, carrying twenty-eight pieces of cannon, bound for *China*; the *Eagle*, captain *Nicholas Charpentier*, carrying five and-twenty pieces of cannon, bound likewise for *China*. These two ships returned.

"In the year 1725, there sailed from *Ostend* three vessels for the *Indies*, *Charles the Sixth*, captain *James Winter*, carrying thirty-six pieces of cannon, bound for the Bay of Bengal; the *Empress*, captain *Clarke*, carrying thirty-four pieces of cannon, bound for *China*; the *Marquis de Prie*, captain *Andrew Vlaendering*, carrying thirty six pieces of cannon, bound likewise for *China*; all these vessels returned.

"In the year 1726, the sailed five vessels, the *Lion of Gold*, captain *James Larne*, carrying thirty-six pieces of cannon, bound for *China*; the *Eagle*, captain *John Wael*, carrying thirty four pieces of cannon, bound likewise for *China*; the *Peace*, captain *Philip Peronet*, carrying thirty-six pieces of cannon, bound for Bengal; and the *Hope*, captain *Nicholas Charpentier*, carrying thirty-four pieces of cannon, likewise for Bengal.

"In the year 1727, there sailed four vessels for the *Indies*, the *Archduchess Elizabeth*, captain *Michael Caiffes*, carrying thirty-two pieces of cannon, bound for Bengal; *Charles the Sixth*, captain *De Meyenne*, carrying twenty-eight pieces of cannon, bound likewise for Bengal. The *Concord*, captain *Ryngaet*, carrying thirty six pieces of cannon, bound for *China*; the *Marquis de Prie*, captain *Branwer*, carrying twenty eight pieces of cannon, bound likewise for *China*. The *St. Anthony of Padua*, commanded by *John Van Bruckel*; the *St. Ann*, commanded by *Matthieu Clynkuert*; and the *St. Joseph*, commanded by *Daniel Petre*, sailed in May and June, in the nature of advice boats for the coast of *Brasil*, in order to meet the homeward-bound ships, to inform their commanders of the state of affairs; and these last twelve were the ships in the list before-mentioned."

(18) *Recueil historique d'actes, negotiations, memoires, et traites*, tom. iii. p. 413.

(19) *Mercure historique et politique*, tom. lxxxi. p. 383. *Recueil historique d'actes, negotiations, memoires, et traites*, tom. iii. p. 415.

was intended, suppression of the *Ostend* company was concluded, for nothing less could answer the ends of a the maritime powers, nor would they have gained any thing by this suspension of commerce when the suspension only of this company for seven years, considering what was stipulated on their side, but would rather have done their competitors a favour. Whereas, considering it in the other light, and that they relied on the tacit assurances given them, with which his imperial majesty afterwards punctually complied, that the commerce of this company should never be restored to activity, their concession appears to have been well founded, and to have been a caution necessary for preventing new jealousies or disputes, which it was expedient for both parties to avoid as much as possible: and thus this thorny and perplexed business was at length adjusted, which had so long attracted the attention of all *Europe*, the emperor preferring the security of the succession in his family, and the welfare of his dominions in general, to this favourite project on the behalf b of the *Austrian Low Countries*; as, on the other hand, the *Hanover* allies, satisfied in carrying this great point, were willing to afford his imperial majesty, as they some time after did, the most convincing marks of a sincere and thorough reconciliation ¹ (P).

The facts laid down in this account make the history of this section in dependent of arguments.

THERE have been, we are very sensible, accounts very different from this, in regard to the motives, measures, and issue of the *Hanover* alliance, in which it is suggested that the plan of the *East Indies* was only a plausible pretence; that the real ends of that alliance were of very little, if any, importance to the maritime powers; and that, in the conclusion, *France* found her particular interest better served by this treaty than any other power. It would be much beside our purpose to enter into this controversy, which, whatever way it turns, will not in any degree affect what we have advanced; to prove which, is indeed the only reason that we c mentioned it. For whether this new commerce to the *Indies* was in itself so directly contrary to treaties, or whether the destroying it was the prime ground of *Great Britain's* entering into this alliance, are matters which we are not bound to discuss. What related to our subject, and what concerns the business of this section, was to shew how, and by what authority, the new company was erected; whence so much umbrage was taken at its commerce; what arguments were advanced to prove its incompatibility with the general system of *Europe*; the means by which the powers insisting upon these arguments brought them at length to bear; and how, in consequence of all this, a company established with such high expectations, and carried on for some time with such extraordinary success, came at last to sink, and to be suppressed by that power which erected it, and was alone concerned in interest to support it. These are all d matters of fact, and matters of fact that very nearly concern us; if therefore these be set in such a light as is agreeable to truth, and give the reader a clear view from first to last of a very important transaction; those other political conjectures and discussions are out of the question with respect to us; for whatever the secret views of this treaty might be, how much soever *France* might avail herself of this alliance, to bring back *Spain* to a dependency upon her, yet the suppression of the *Ostend* company, which was a thing of infinite importance to the maritime powers, and to which therefore they owed particular attention, was thereby absolutely accomplished; and so far at least they were great gainers by this alliance ².

Motives which induced the ministers of the court of Vienna to

BUT it was not barely attachment to punctilio, and a desire of having every thing treated with the greatest decorum, that induced the imperial ministers to procure the first point in the e preliminaries to mention a suspension only; though a suppression was really intended of the company at *Ostend*, they had several other reasons for insisting upon that step, and, as some

¹ Recueil historique d'actes, negotiations, memoires, et traitez, par ROUSSET, tom. v. p. 133, 134, 135.
² Memoires des demandes faites, par les plenipotentiaires des Etats Generaux, au nom des allies de Hanover, aux allies de Vienne, Juin 30, 1728.

(P) It was impossible fully to discuss this affair without entering into the history of the negotiations with which the suspension and suppression of the *Ostend* company were attended; but we have brought these into as narrow a compass as possible, and with this view have avoided saying any thing of the treaty of *Seville*, or the disputes it occasioned, reserving this note to inform the reader that the crown of *Great Britain* having concluded with his imperial majesty a treaty, which was signed at *Vienna*, March the 16th 1731, by the fifth article of which his imperial majesty consents to the total and absolute suppression of the *Ostend* company, and undertakes that neither that shall be revived, nor any other of the same nature erected in any part of the *Spanish Low Countries*, at any time to come; but, at the same time, stipulates, that the *Ostend* company may, for the last time, send two

ships to the *East Indies*, which were to be permitted also a safe return, and thenceforward all their power and privileges were to determine; granted on the other hand her guaranty for the pragmatic sanction, and undertook to procure the guaranty likewise of the States General of the United Provinces (20). It is therefore plain, that in the sentiments of the contracting parties to these treaties, there were reciprocal advantages stipulated with which they were mutually content; and, as the maritime powers by this act took upon themselves a trust of the highest importance, and which they have since executed with great hazard and at an immense expence, we may safely infer that they have purchased, and dearly purchased, whatever benefits they either have derived, or may derive, from the concessions made in this treaty by the house of *Austria*.

(20) *Corps universelle diplomatique*, tom. xv. p. 288.

- a of these regard our subject, we shall mention them. The hopes of sharing in this lucrative commerce, having brought many rich as well as active people to interest themselves therein, it was held convenient to manage this affair with much caution, to avoid as far as possible either ^{protract as much as possible.} injuring or disobliging them, towards which nothing could contribute more than proceeding with visible slowness and reluctance on the part of his imperial majesty ¹. The gaining time in this matter was of consequence to the imperial ministers in another respect, as it afforded them an opportunity of magnifying the sacrifice they had made, and of procuring reciprocal acts of friendship from those in whose favour they had made it; which, in process of time, they in a great measure accomplished by the subsequent treaty of *Vienna*. Lastly, it afforded them leisure to consider whether, notwithstanding the suppressing the company at *Ostend*, some
- b other method might not be found for establishing either that, or the like beneficial commerce, in some other part of his imperial majesty's dominions, where it might not be liable to those formidable objections which had been already raised against this attempt in the *Austrian Netherlands*, in which, however, they were not very lucky, though they employed much attention and spared no pains about it; and as this likewise has a strict connection with our subject, it will not be amiss to shew the nature of those endeavours in a manner as clear and as succinct as possible ^m.

S E C T. VI.

The methods taken to support the company, and elude all stipulations for suppressing their commerce with the Indies, by obtaining passports from neutral powers, and bringing their cargoes into different ports, which protracted things for some time, but in the end proved ineffectual.

- c **T**H E places that were thought of upon this occasion were *Trieste* and *Fiume*, two small towns which are about fifty miles asunder. The former is situated in the principality of *Carniola*, at the bottom of a gulph which passes by the same name, and opens into that of *Venice*; the other in *Croatia*, upon the gulph of *Venice* likewise, with several islands before it. The peninsula of *Istria* lies between them, which belongs to the republic of *Venice*; and the communication through the country behind him is none of the safest or most convenient. These ports are neither of them large or commodious; of some improvements indeed they were capable, and these have been made, and the fortifications, which were tolerable, repaired ⁿ. After all, however, they are but poor places, and ill situated, so that it was plain their chief recommendation arose from their being the only ports that the emperor
- d had: all the measures were practised that could be devised to give these little havens an air of importance; the mole at *Trieste* was completed, magazines erected, and a man of war was said to be put upon the stocks. At *Fiume*, the harbour was cleansed, a fort or two erected in its neighbourhood, and an inspector of marine sent thither. New privileges were granted to the inhabitants; all sorts of immunities offered to strangers who would settle there; and, in a word, every art practised that might probably contribute to draw trade to them; and, as marks of still greater favour, his imperial majesty *Charles* the sixth went thither towards the close of the year 1728, saw the man of war launched at *Trieste*, and made his public entry into *Fiume*, where a triumphal arch was erected with a pompous inscription, celebrating his great power by sea as well as land, and complimenting him on his being the protector of commerce, and the guardian of the arts of peace. But all was ineffectual, the deficiencies of these places were apparent and not to be remedied; so that all the rhetoric of the court of *Vienna* was thrown away, and such of the *Ostend* projectors as embarked themselves in this scheme, lost some of their money and all their reputation ^o.

THE manufactories too, that had been erected in the duchy of *Austria*, and in other of the hereditary dominions, hardly supported themselves; and nothing but the interposition of their imperial majesties in favour of that of porcelain at *Vienna* could have prevented it from being given up, and it now turns to some account. These disappointments drove the undertakers for establishing an *East India* commerce from the imperial court, and lessened very much that attention which, for some years, the principal ministers had paid to trade, which they began to

A project for transferring this commerce to some other ports in his imperial majesty's dominions.

But, notwithstanding all imaginable endeavours to bring it to bear, proves abortive.

ⁿ Geographie moderne, par ABRAHAM DU BOIS, p. 189.

^o Dictionnaire de commerce, tom. ii. col. 295.

consider as a plant of foreign growth, that would not thrive in any soil where they could place it. Some of the younger ministers, however, began to take a pleasure in considering these schemes, and inquiring into the true causes of their proving always abortive; which they quickly discovered to be their introduction by strangers, to whom the people in those countries have a great aversion, and the weight of their taxes, and the bad management of their finances, by which all the branches of public service were in arrear, at the same time that the subject was exhausted, and in no capacity of undertaking any thing that would do more than supply immediate subsistence^p. By degrees, as some of these statesmen have risen in employments, they have made use of such lights as those inquiries furnished, have put many things upon a better footing, rendered the great roads more commodious, and have brought several manufactures to bear; all which ought to be attributed to the memorials that were presented by such as, if the thing had been practicable, would have repaired the loss the subjects of his imperial majesty had sustained by the suppression of the company at *Ostend*; and if, in those days, the court had been as well disposed in favour of the people of *Hungary* as they are at present, something might have been done on that side more considerable, while *Belgrade* was in the hands of his imperial majesty, which was very advantageously situated for carrying on of trade with the several Christian nations that were subjects of the *Ottoman* empire^q. But, while these measures were taking at *Vienna*, the directors of the *Ostend* company (without his imperial majesty's privacy) were contriving to keep their commerce still on foot by a variety of methods, which, tho' they sometimes promised success, in the close, however, proved absolutely fruitless and ineffectual.

The directors of the *Ostend* company, however, enter into schemes for carrying on their commerce

AFTER the first astonishment on the suspension of their commerce was over, those who were intrusted with the secrets of the *Ostend* company began to reflect with themselves, that ships had found their way to and from the *East Indies* without any better protection than passports, before they had any charter; and they concluded from thence, that it might not prove impossible to send some vessels thither still by the same method, and get them back again with the like success, provided passports could be obtained from some crowned head. Accordingly they formed a project upon this basis; and as it is said that money will purchase all things, so, by the help of that, they found a proprietor and a protector for some of their ships^r (Q). The former was Mr. *Adam Pruner*, a rich merchant of *Lintz* in *Austria*, who, on certain necessary occasions, was to pass for the owner of ships and cargoes; the latter was the late king of *Poland*, from whom the *Austrian* merchants procured a passport for the *St. Theresa*, and other ships, the names of which are not known. In the *Indies* the company had a very able agent residing in the factory on the *Ganges*, provided loadings for such ships as came thither, and particularly for two, of which the *St. Theresa* was one, at the proper season in 1730^s. This, though carried on very secretly, could not escape the notice of the *English* and *Dutch*, who, towards the close of the month of *January* in the same year, sent a squadron under the command of captain *Gosfricht* in the *Fordwich* to block up the river. Upon his arrival in his station, he found the two ships at anchor; upon which he ordered the *Princess Caroline* to

^p From private information.

^r *Recueil historique d'actes*, Mercure historique et politique, tom. xci. p. 100.

(Q) The dexterity of those who had the direction of this trading company at *Ostend*, appeared in every thing they did, and more especially in that diversity of methods by which they endeavoured to secure themselves a retreat, at the very same time that they laboured to keep up an opinion, as well in the *Indies* as in *Europe*, that they should still be able to stand their ground; and that, notwithstanding the situation of the emperor's affairs was such as obliged him to consent to a suspension of their commerce, yet this was only to give time for examining into the rights upon which their charter was granted; and, as these were incontestible, all things would at last issue in their favour. By these arts, and by the help of some ships that arrived from the *Indies*, they kept up the price of their stock for above a year after the signing preliminaries, upon which many knowing people thought it would have sunk to nothing (21). However, in *October* 1728, they discharged the workmen in their yards, and many other of their inferior servants; upon which their stock fell very considerably in the summer of 1729. However, they contrived, by a variety of reports, to raise it again to seventy-four; but, before the close of

that year, it fell to little more than fifty. After all these misfortunes, in a general court held *March* 30th, 1730, the directors produced their accounts, and acknowledged, that the cash of the company amounted to upwards of seven millions and a half, exclusive of four millions that, it was believed, would arise from the sale of their effects, fixed for the first of *June*; and, in consequence of this, they declared a dividend of forty per cent. (22), ten per cent. of which was to be paid in money, and the other thirty in bills, that were to be discharged in a reasonable time after the sale; an artifice by which numbers of the proprietors were deceived, and still flattered themselves with hopes that their directors, who had already done so much, would be still able to do more, and find the ways and means of carrying on their trade by some secret canal, in spite of all the negotiations and treaties, and in spite too of the vigilance of the maritime powers, who made no scruple now of owning their intention to seize and make prizes of any vessels that should appear to have sailed from *Europe* after the signing of the preliminaries (23).

(22) *Ibid.* tom. lxxxviii. p. 475, 476.

a attack them, and the *Duke of York*, another ship under his command, to support him. As soon as the *Princess Caroline* was within reach of the lesser of the two ships, she fired a gun, by which one of the men on board her lost his leg, and another had his arm broke, and the captain was very near being killed; who, perceiving that the *Duke of York* was preparing to grapple and board her, struck to the *Princess Caroline*, while his consort slipped, and took shelter under the cannon of the factory, where it was not thought expedient at that time to follow and attack her; and she afterwards had the good fortune to escape¹.

UPON the bringing of the prize to *Fort William*, she appeared to be the *St. Theresa*, com-
manded by captain *Dominick Braco*; but she had not taken in above one-third of her lading. In order to which they find means to procure pass-ports from the crowns of Poland and Prussia.
Not long after this news arrived in *Europe*, the directors of the *Ostend* company procured an
b application to be made by his *Polish* majesty's minister for the discharge of this ship, as having
sailed from *Europe* under his protection; which, however, did not succeed so well as they
expected². This was, in all probability, the reason that they had recourse to another court,
which was that of *Prussia*, and obtained from thence a protection for the *Apollo*, commanded
by captain *Michael Caiefas*, of the burthen of four hundred tons; which passport was dated at
Berlin, on the first of *May* 1729: but, as the blanks for the name and burthen of the ship
appeared, upon inspection, to be filled up long after it was granted, there was great reason to
believe that the court of *Prussia* was not acquainted with the use that was intended to be made of
it; and that this surreptitious pass was conveyed to the commander of that vessel, when he was
homeward-bound, by some of the advice-boats belonging to the *Ostend* company; but, how-
c ever it was, this matter was managed with such dexterity and diligence, that the secret was
never absolutely discovered; but captain *Caiefas*, having got this passport into his hands, availed
himself of it, as the reader will see, and thereby preserved both ship and cargo, though not
without running through some difficulties and dangers³.

UPON his returning into the seas of *Europe*, he hoisted *Prussian* colours; and, being obliged
to put into a port of *Ireland* for shelter, received such succours as he wanted, and then conti-
nued his voyage for the *Elbe*. In proceeding up that river, he came to an anchor under the
fortress of *Stade*, belonging to his *Britannic* majesty as elector of *Hanover*, where he paid the
port-duties, was received and treated as a *Prussian* ship, and, when he had dispatched whatever
affairs he had there, sailed for *Hamburg*, in which port he arrived the twelfth of *September*.
d 1731⁴. The directors of the *Ostend* company, being informed of the safe arrival of the *Apollo*,
were transported with joy; and, to revive the drooping spirits of their proprietors, very im-
prudently gave out, that, notwithstanding they were deprived of the liberty of supplying their
magazines in the *Netherlands*, they would nevertheless furnish all *Germany* and the north with
East India commodities, and for this purpose were determined to establish their staple at *Ham-*
burgh; and, in support of these declarations, they published advertisements in all the gazettes,
of the time when their public sale was to commence in that city⁵. They grounded their hopes
of being able to go through this affair with the same success which had hitherto attended it,
upon the great privileges granted by the empire for encouraging the navigation of the *Elbe*, and
upon the authority of the free city of *Hamburg*, not doubting that the magistrates, for the
e sake of the advantage their citizens would reap from these sales, and the great resort of mer-
chants thither on that account, would give them all the assistance in their power; in which, as
the event shewed, they were not much mistaken; and, all circumstances considered, this was
certainly as shrewd a contrivance as they could possibly have devised in the then desperate state
of their affairs, and shews, that these managers were men of very great abilities, and would
have sustained this traffick if it had been possible⁶.

BUT the maritime powers foreseeing that the last mischief would be worse than the first, if
a speedy and effectual remedy was not applied, agreed upon a joint application to the magi-
strates and senate of *Hamburg*; and accordingly Sir *Cyril Wych* and Mr. *Maurtius*, the *Bri-*
tish and *Dutch* ministers, presented a memorial conceived in very strong terms, in which they
f set forth, that an interloper, employed in a clandestine and illicit trade, in direct breach of
treaties, had taken shelter in their port, and pretended to expect protection and impunity; that
this vessel, called the *Apollo*, was returned with a cargo from the *East Indies*, to which they
had no right to resort; and therefore insisted the vessel should be sequestered, and her contents
secured; so that no clandestine sale might be made, before the maritime powers had an oppor-
tunity of discussing this matter with such potentates as might unexpectedly interfere; adding,
that they relied upon this, the rather as it would enable them to do justice to the magistrates
and senate, and to their high constituents, whose favour it behoved them to consider, rather
than expose the commerce of their great and opulent city to imminent dangers in the cause of

they knew not who *. This memorial was dated the tenth of *December*; and the magistrates, easily comprehending the importance of this affair, engaged the senate to communicate it immediately to the great assembly of their citizens, who, by the constitutions of *Hamburg*, are the judges of such matters in the last resort; and, having received their sentiments, the result of them was signified, on the twelfth of the same month, to the *British* and *Dutch* ministers, to the following effect †:

Answer made
to this memo-
rial on behalf
of the free im-
perial city of
Hamburg.

THAT the senate had been indeed informed, that the ship called the *Apollo* came from *China*, and was expected from thence some time before her arrival; but that this vessel had put into a port in *Ireland*, had passed freely through the *British* chanel, had declared whence she was bound, and her cargo, and had paid duty at the custom-house of *Stade*, belonging to the king of *Great Britain*, as duke of *Bremen* and *Verden*, and had been now three months in her port, where she had delivered most of her cargo, without interruption or complaint: that, in this case, they apprehended themselves not able to comply with what was desired; but that they hoped their reasons would be fairly represented: that, in the memorial demanding the arrest and sequestration of the ship and cargo, two points seem to be laid down; the first, that this vessel was not under any protection; the second, that, coming from the *Indies*, she had no right to anchor in their road. With respect to the first, the vessel had indubitably a *Prussian* passport, which had been examined and respected at *Stade*; and her having been three months in their harbour in that quality, and this fact being published in the gazettes, without any complaint from the king of *Prussia*, they could have no reason to question the fact; that the senate knew very well it did not belong to her to decide the rights and pretensions in question between great powers; and that as these ministers suggested in their memorial, that this point was to be cleared between their high constituents and some other potentates, that ought, in justice and equity, to excuse them from interposing precipitately, and thereby involving themselves in the dispute not only with his *Prussian* majesty, but with those other potentates, whoever they were: that, as to the second point, the *Elbe* was a common and free river to the whole *Germanic* empire, appertaining to his imperial majesty as chief of the empire, and to the electors and princes, more especially to those that have territories lying thereon; that therefore it is not in the power of the city of *Hamburg* to violate the liberties and privileges of a river which belongs to the emperor and the empire, since that would be a manifest departure from her fidelity and duty; and that, besides, it is utterly consistent with her interest and constitution, her inhabitants subsisting intirely by her free commerce, having a right to admit any ships whatever into her harbour, not known to be enemies to the empire, or pirates; so that she could not avoid receiving a vessel having his *Prussian* majesty's passport, and carrying *Prussian* colours; more especially after she had been respected and treated as such at his *Britannic* majesty's fortress and custom-house at *Stade*: that, as to the remaining part of the memorial, the senate, after the duties were once paid, never interfered farther with the cargoes of any ships, but left the proprietors of them to dispose of them as they thought proper, according to the usage of all free trading cities; so that, except the general declaration at the custom-house, they had no knowledge whatever of the contents of this vessel, and therefore it was impracticable, at the distance of three months, to do what was required; more especially as it was impossible for them to learn to whom the remains of these goods belonged, or how the property might be changed by their being sold, pledged, or bartered, not to mention their being bound by their oath, agreeable to the fundamental laws and constitutions of the city, not to search houses, warehouses, cellars, and other places, appertaining to the citizens and inhabitants, unless for some capital crime; which if they should attempt, it would be fatal to what little commerce and trade they had still left, and would be at the same time fruitless, and to no purpose; that therefore the honourable senate besought the envoy extraordinary *Wych*, and the resident *Mauritius*, to represent favourably to his *Britannic* majesty and to the States-General the impossibility of the senate and city's complying with the demands contained in their memorial; and that, on the other hand, the senate is ready and willing to do, to the utmost of her small power, whatever may contribute to promote and render flourishing the *British* and *Dutch* commerce in their city.

But, at the
same time, the
regency very
wisely demand
his imperial
majesty's pro-
tection.

THE magistrates and senate of *Hamburg*, the very same day that they returned this answer to the maritime powers, wrote a letter to the emperor, conceived in very strong, but at the same time in very respectful terms; setting forth the difficulties they were under, the apprehensions they had of incurring the displeasure of two great powers, and their inability to avoid this, without breach of their fidelity to the empire, violating the constitution of the liberties of their city, and sacrificing those privileges and immunities, by which not only its commerce was preserved, but upon which also its very subsistence depended; and therefore claiming his imperial majesty's interposition and protection in a case of such high importance, and as

† Recueil historique d'actes, negotiations, memoires, et traites,

- a their sole resource in that peril and perplexity in which they were^c. But, before they could receive any answer to this letter, the ministers of the maritime powers presented another memorial on the fourteenth of the same month, conceived in still stronger terms; requiring, that they should use their utmost endeavours to preserve the cargo of the *Apollo* intire; and that they should forbid, or at least suspend, the public sale advertised for the *Wednesday* following, at the house of one *Govers*, inasmuch as they were well informed, that those goods were not his property, but belonged to foreigners, and particularly to *Dutchmen*, for whom he was only factor; that it was not the intention of his *Britannic* majesty, or their high mightinesses, to offer the least wrong or prejudice to the city of *Hamburgb*, or its inhabitants, unless they drew it upon themselves, but was principally designed to hinder their own subjects from carrying on an illicit trade, under colour of some foreign protection; and that therefore the magistrates would easily comprehend, that, in case they tolerated this sale after this notice, it would become a very serious affair, since they did not protect therein their own subjects, but those of other nations, in the breach of the laws of their respective countries^d.
- b

- To this memorial those to whom it was addressed made a speedy and copious reply, still insisting on the grand privilege of the river *Elbe*, the great impropriety of their taking upon them to be judges in disputes between the principal powers in *Europe*, and the hazard they should run of disobliging the king of *Prussia*, and of being thought to dishonour the whole empire, if they pretended to do what was demanded^e. They likewise wrote again to the emperor, on the nineteenth of the same month, in terms more pathetic than before; beseeching him to take some measures for securing their sinking commerce, and to engage the maritime powers not to attempt any thing to the prejudice of the free navigation of the *Elbe*, which till now had never been disputed^f. But, notwithstanding all these memorials, the maritime powers found themselves in no situation to push this matter to the utmost; for soon after certain persons interposed, of too high a rank to be disobliged; so that, notwithstanding the goods were sold, they chose rather to let the thing be spun to a great length, and at last be intirely dropped, than to proceed to extremities, as not knowing how far his imperial majesty might find himself obliged to support the free navigation of the *Elbe*, or whether the king of *Prussia* might not at length interfere, from a point of honour, in support of his flag, with whom, at that juncture, it was by no means convenient to have any difference. In this instance, therefore, the *Ostend* company seemed to prevail; with which the directors were highly pleased, and flattered themselves from thence, that they had fallen upon a method of carrying on their trade, notwithstanding what was stipulated in treaties; but it was not long before they found the contrary, and that his imperial majesty was determined to make his peace with the maritime powers at their expence^g.
- c
- d

- UPON receiving advice at *Ostend* of the time when another ship of theirs, called the *Syren*, was to return to *Europe*, they took care to send an advice-boat, with orders to the commander to put into the port of *Cadiz*; where, on his arrival, he found a *French* ship, called the *Maria Armand*, on board which all the cargo was transferred; and the *French* captain took a bill of lading, importing, that the goods were the sole property of a *Spanish* merchant, and then sailed for *Hamburgb*, where they had their agents to sell them privately^h. The maritime powers, however, had intelligence of the whole transaction, and, to avoid the inconveniencies they had met with in the former affair, applied themselves directly to his imperial majesty; representing, that these artifices were direct violations of the treaties which his imperial majesty had concluded. The emperor, having considered this representation maturely, sent his rescript to his minister at *Hamburgb*, dated *October* the first 1732, at *Lintz* in *Austria*; by which he signified to the magistrates and senate, that being informed that the late company at *Ostend*, notwithstanding the signification of his pleasure, had caused a ship, freighted with commodities from the *Indies*, to be sent thither, in order to be exposed to sale in that city, his imperial majesty, being resolved not to permit either the late company, or any of the subjects of his hereditary countries, to carry on an illicit trade, contrary to treaties, desired that they would not only prevent any such sale, but also that they would cause the goods to be sequesteredⁱ. The burgomasters and council of *Hamburgb*, instead of complying with this rescript, remonstrated, that, upon inquiry, it had been made appear to them, that neither the ship nor the goods belonged to the *Ostend* company, or to any of the subjects of his imperial majesty; but that the ship was *French*, and the cargo belonged to a *Spanish* merchant, as might appear by the papers subjoined. His imperial majesty, however, was so well apprised of every artifice that had been used, that he

persisted in his demand, and this notwithstanding the *Spanish* court signified to the agent of a *Hamburg* at *Madrid*, that the cargo of the *Maria Armand* was *Spanish* property * (R).

* Recueil historique d'actes, negotiations, memoires, et traitez, par M. ROUSSET, tom. viii. p. 343.

(R) At the very same time that the directors were contriving and putting in practice these schemes to keep their commerce alive, notwithstanding the treaties that had been, or might be made for its suspension or suppression, they made no scruple of availing themselves of the stipulations his imperial majesty had made in their favour, in respect to their sending two ships to the *Indies*, to which the maritime powers were to give no disturbance either in their outward or in their homeward-bound passage. These vessels were, the *Concord*, of five hundred tons, forty pieces of cannon, and eighty men, commanded by captain *James de Lormes*; and the duke of *Lorraine*, of the same burden, carrying forty-four pieces of cannon,

and one hundred and ninety men, commanded by captain *Le Clerc*; which sailed from the road of *Ostend*, with *Dutch* passports, in the beginning of the month of *April* 1732, having on board a large quantity of timber and stores, for refitting a ship belonging to the company, then lying in the bay of *Bengal* (24). These ships returned safely to *Ostend* towards the latter end of the year 1734; and his imperial majesty being then engaged in a war with the crowns of *France* and *Spain*, and having a greater dependence than ever on the interposition of the maritime powers, all thoughts of supporting this commerce were intirely laid aside (25).

S E C T. VII.

The conclusion of this affair, and the total extinction of the Ostend company; with some curious remarks upon this interesting subject, and a display of the difficulties that will attend all projects for establishing any new companies of this sort, from the opposition of the European powers already in possession of this trade.

His imperial majesty interposes his authority, in order to put an end to all these practices.

AFTER the sequestration was made, this affair was spun to a great length, no endeavours being spared to get it removed; but when these were found altogether ineffectual, some overtures were made of another kind, and at last things were brought to this conclusion: the magistrates and senate of *Hamburg* published a decree, in which they recited, that the *Ostend* company being abolished, in conformity to treaties; and that whereas the sale of the cargo of the *Apollo*, and the arrival and delivery of the cargo of the *Maria Armand*, had given great suspicions and uneasinesses to the maritime powers, at whose solicitation his imperial majesty had signified his pleasure to them, that no countenance should be given to such illicit trade; they therefore, to shew the honour and respect they had for his imperial majesty, as well as to remove the before-mentioned suspicions, directed their subjects, the present circumstances considered, not to interfere with, or to have any thing to do, for the future, with such interlopers: and, upon the publication of this decree, the sequestration was taken off, and the goods in question were privately withdrawn¹. Thus ended these tedious disputes, and with them the artificial contrivances of the directors of the *Ostend* company to elude the suppression of their commerce with the *Indies*, which had given so much trouble and disquiet to the maritime powers, and which raised a spirit, which, though quelled in the *Low Countries*, has not, however, ceased to appear in other parts, as the reader will be informed hereafter, and which, it is very possible, may occasion, some time or other, new disturbances, when an acquaintance with the facts contained in this chapter will prove a very useful and necessary kind of knowledge; nor will it be amiss to add a few further particulars flowing from the same subject.

Some thoughts have been since entertained of sending ships to the East Indies.

WHEN, in consequence of a long train of negotiations, the grand duchy of *Tuscany* came into the possession of the duke of *Lorraine*, and that prince espoused the heiress of the house of *Austria*, some new schemes in favour of commerce, and even of an *East India* commerce, came again under consideration; which, however, were postponed upon the death of his imperial majesty, on account of the war which that event produced, and the complaisance that it became necessary to have for the maritime powers: yet it is reported, that certain privateers, fitted out in the havens of one of the maritime powers, had actually commissions to make reprisals in the *Indies*, for some injuries done, or said to be done, to the subjects of his late imperial majesty, when they traded there under the sanction of the charter granted to the *East India* company in the *Austrian Netherlands*². What the consequences might have been, if those ships had reached *India*, and had made captures amongst the *Moorish* ships by virtue of this commission, cannot with any certainty be affirmed; but, without doubt, they would not

¹ This decree was dated January 15th, 1734. admit of any explanation.

² This fact is too recent, and of a nature too delicate, to

- a have done either honour or service to the country from whence those ships were to have sailed, and where some notice being given of their design, it was very happily prevented : yet these vessels entering afterwards into the emperor's service, as grand duke of *Tuscany*, a report prevailed in the world, as if a new *East India* company would be erected at *Florence* or *Leghorn* ; but whether this was only a report, or whether, upon trial, the thing was found impracticable, the design seems to be laid aside, and another, better calculated to succeed, substituted in its room ; which, instead of an *Indian*, respects a commerce in the *Levant*, where, by means of the treaties concluded with the *Porte*, and all the corsairs of *Barbary*, it is supposed they may carry on a trade with advantage ; and, in this case, the ports of *Trieſte* and *Fiume*, which, in consequence of the pains taken about them, have more shipping and traffick than they had, will likewise receive benefit. Here then is an additional advantage arising even from disappointed projects ; so that it seems as if the very endeavouring to introduce trade into countries where it is not already settled, or opening new branches where it is, brings, sooner or later, benefits of some kind or other, though perhaps not precisely what were expected.

- ALL these endeavours, disappointments, and new projects, are so many cogent and incontrovertible proofs of the value of that commerce, by the hopes of obtaining which they were excited : for if the ministers of the imperial court were not fully satisfied that it was in truth the master-wheel which put in motion all the rest, why did they express so much concern and uneasiness about it ? or why embark in such a multiplicity of negotiations to preserve it, to recover it, or to retrieve but part of it ? All this certainly could not proceed from their being the dupes of projectors, but from a thorough conviction, founded on experience, which made them so heavily regret a loss, the value of which themselves could not compute, tho' they had made several trials while the trade was still subsisting ; and with the sight of something of this kind perhaps the reader will not be displeased, since it will at once furnish an apology for their conduct, and for our own in prosecuting this matter so minutely. They conceived then, if the *Ostend* company had been once effectually established, the whole *East India* trade, in less than a century, would have been confined to the *Austrian Netherlands*, and, perhaps, the greatest part of the trade in *Europe* must have followed it. In order to explain this, we must remember, that the *Austrian Low Countries* are in themselves much finer than the provinces which compose the *Dutch* republic, and much better situated for trade : their sales of *East India* commodities would have brought prodigious sums of ready money into those provinces ; and this must have revived and restored those manufactures which formerly flourished there more than in any part of *Europe*, which would have secured to them all the commerce of *Germany*, and, by degrees, that of the north. In such circumstances, what should have hindered their attempting and acquiring the fisheries ? and, by opening the ports of *Trieſte* and *Fiume* on the *Adriatic*, what could have prevented their ingrossing the *Italian* trade ? It may be said, that all these are suppositions : but what then ? they are reasonable suppositions ; and, which is much more, they were such suppositions as induced the late emperor to establish this company, and to struggle so hard as he did for the maintenance of it ; nay, the *Dutch*, who, beyond a question, were the best judges in the world of what might be done, and what could be done, thought all these suppositions both possible and practicable, which induced them to act in the manner they did. Take then all this together, and it will appear a very strong argument that the trade of the *East Indies* is in itself the foundation of commerce and maritime power, at least in the hands of such as know how to manage it ; and those who were intrusted with that by the imperialists, shewed themselves very capable in every respect, during the few years they were employed.

- THE great, and indeed the only mistake of the projectors, was their not being sufficiently versed in the general system of affairs, and the conditions under which his imperial majesty held the *Low Countries*. Their miscarriage taught some of them more wisdom ; and being persuaded that the experiment they had already made had removed all suspicion that their scheme was an impracticable chimera, part of them removed to *Copenhagen*, in order to graft upon the old *Danish* company ; and of their success the reader has been already informed. Others again thought of applying to the *Swedes*, that nation having been for some years employed in retrieving their affairs, improving their lands, raising new manufactures, reviving their commerce, and restoring their naval power. What reception they met with there, and how, by degrees, they brought their design to be relished and countenanced by the court, and supported by people who had money, whether *Swedes* or foreigners, will be the business of the next chapter, in which we shall present the reader with the history of this new company, which was but the other day the youngest in *Europe*.

Proofs collected from hence of the value of this trade in the sentiments of the ablest statesmen.

Dispersion of the projectors and principal proprietors into different parts of Europe.

C H A P. XI

History of the company established for carrying on a commerce to the East Indies from Sweden ; the opposition which it at first met with from the maritime powers ; the firmness of the Swedish government in its support ; the means used to carry the scheme into execution ; with some observations as to its consequences.

S E C T. I.

The Swedes, for many ages, inattentive to commerce, and to the arts of peace ; but at length come to form a right notion of their importance ; and, upon an application and due information as to the benefits of the East India commerce, a charter is granted, in the amplest form, for the advantage and encouragement of the proprietors.

The commerce of Sweden limited, and very inconsiderable for many ages.

THE martial disposition of the *Swedes*, and the wars almost continual in which they were engaged, either in defence of their freedom at home, or in pursuit of glory abroad, hindered them, for many ages, for making any figure at sea, though few nations were better qualified in all respects. The situation of their country, which has a long extent of coast, with several good ports, and many more that might be made so, the vast abundance of timber, as proper as any in the world for shipping, their great plenty of all other naval stores, the large quantities of excellent iron which the mines produce, and, above all, the good understandings, calm and determined courage, and cool temper of their minds, joined to the active and robust bodies of their people, gave them vast advantages^a. With all these, they contented themselves with fishing upon their own coasts, exporting their commodities, chiefly iron and copper, to *Dantzick*, or to *Bremen* at farthest, maintaining, however, a tolerable naval force, in which, as often as occasion required, they shewed themselves both brave and skilful seamen. The chief reason of their being thus confined in their commercial correspondence, was in part their natural frugality, and love of their own country, but chiefly the address of the hanse towns, the traders of which bought up and exported *Swedish* commodities into foreign countries, where, for a long time, they were not known so much as to come from *Sweden*^b ; till at length the *English* and the *Dutch* sent ships to *Stockholm*, and in process of time their wars in *Germany*, and the settling amongst them many thousands of *Scots*, brought them to have more extended notions of trade, and to take such measures as had a tendency to increase and render it more beneficial ; in which they were successful in some degree, but not in any proportion to what they might have been, if their affairs had been in that respect rightly conducted ; yet, as their native commodities were valuable and necessary to other nations, and themselves in those days very frugal, what trade they had turned to account^c.

Gustavus Adolphus and queen Christina first thought of extending it.

THE famous *Gustavus Adolphus*, one of the greatest princes that ever reigned in *Sweden*, or perhaps in any other country, had very early views in favour of the commerce of his subjects ; and, even while he was engaged in the war with *Poland*, formed the first design of opening a passage for them to the *East Indies*, to which he invited such as were desirous of reaping a share in the profits of this advantageous commerce, by his letters patent, dated at *Stockholm*, June the fourteenth, 1626^d ; but the wars in *Germany*, which followed soon after, and engrossed his attention during the remaining part of his reign, hindered, in all probability, that design from taking any effect. His daughter, the celebrated queen *Christina*, was also very desirous of promoting the glory and welfare of *Sweden* in this respect ; that is, in regard to its trade, and with this view projected a settlement on the coast of *Guinea*, and the establishing colonies in the *West Indies* ; and in some degree succeeded in both. But the *Dutch*, always attentive to their own interests, and preferring them in a very high degree to those of other nations, taking advantage of the circumstance of the times, soon worked the *Swedes* out of these establishments, and converted them to their own use^e. There are, however, still some remains of the latter

^c Reflexions sur ^e Reflexions sur

a in the *English* province of *New Jersey* in *North America*, recovered from the *Dutch*, and where the descendants are yet remaining of the inhabitants of three *Swedish* towns, in which consisted their plantation in those parts ^f (A). These discouragements, together with the succeeding wars against the *Danes* and *Poles*, took from them all thoughts of renewing their endeavours to benefit themselves in this way, foreseeing, that where-ever they attempted to settle, their title might be questioned, and their plantations overthrown by some other *European* stronger at sea, and consequently better able to support their claims, whether well or ill founded, than themselves, from their having had these thoughts earlier, and derived from thence those advantages.

b WHILE the *Swedes* remained closely attached to *France*, in consequence of the subsidies their monarchs received from that crown, and the pensions and other favours conferred on their nobility, their councils were absolutely guided by the views of the court of *Versailles*; and while they were totally occupied with the desire of glory, and the thirst of ambition, they exhausted their dominions both of men and money, in hopes of extending their conquests, instead of labouring to improve their country, or enlarge their commerce ^g. *Charles* the eleventh, indeed, in the latter part of his reign, had other views, and acted upon a very different plan, which, however advantageous to the crown, was in many respects detrimental to the subject. He it was who formed the plan of making himself, from a very limited king, an absolute monarch in *Sweden*, in which he succeeded, by gaining the confidence of the common people, administering justice impartially, repressing the insolence of the nobility, and laying open the corruptions that had been practised in the assemblies of the states. Something, however, he did for the trade of his subjects, and more he would have done, if he had lived; for he was a prince who knew, that to make a rich king there must be a rich people; and therefore he put many things upon a new foot, encouraged his subjects to manage their own traffick, and did whatever he apprehended might contribute towards rescuing them out of the hands of foreigners, and engaging them to transport their goods and manufactures in their own bottoms ^h. But the minority which followed upon his death made way for cancelling, or at least neglecting, these benefits; and his son *Charles* the twelfth, being never out of the field after he was old enough to take it, whatever he did to raise his own character as a hero, certainly did little towards promoting the welfare of his subjects; since, at the close of his reign, *Sweden* was so much exhausted, that there was hardly any but old men and boys left in the country, which was impoverished to the last degree, and her trade and naval power fallen much below what it had ever been; to say nothing of the loss of some of her finest provinces, from whence she drew many of the most valuable commodities that maintained her commerce ⁱ (B).

BUT after the peace with *Russia* was made, and the late king, then landgrave of *Hesse*, was placed on the throne by election, new measures were pursued, and experience and necessity, which are able mistresses, taught the *Swedes*, that the welfare and honour of a country might be supported, tho' every man in it was not a soldier. The states, being restored to their authority, endeavoured to make all ranks of people comprehend what a real blessing liberty was, and how soon the affairs of a country might be retrieved, even in the most distressed circumstances, when every man in his sphere, let that be what it would, made this his principal business ^k. The grievances, introduced under the late reign, were redressed; several abuses, that had crept in under plausible pretences, were removed; and the weight of taxes was as much softened as the circumstances of the government would permit ^l. Besides these, many other

^l Hist. de Suede,

(A) The names of these towns were, *Christina*, by the *Indians* called *Andastika*, *Elfsborg*, and *Gottenburg*, on the east side of *Delaware* river, at the mouth of which there is a fort which bears the name of *Elfsborg* at this day. When the *Dutch* settled in this country, they gave it the title of *New Belgia*; but when it was reduced by Sir Robert Carr in 1664, and left to the crown of Great Britain by the subsequent treaty of peace, it became divided into three provinces, *New York*, *East Jersey*, and *West Jersey*; and in the last of these lie those places that were planted by the *Swedes* (1); and, by the improvements that have been since made, it appeared that the *Swedish* project was very practicable, and, if it had been pursued, might have turned very much to their advantage: but at that time the nation was little disposed to such undertakings, which, if not well supported at the

beginning, speedily dwindle away, and come to nothing, as the case was here.

(B) Amongst these we may reckon the large and fruitful province of *Livonia*, part of *Pomerania*, and the duchies of *Bremen* and *Verden*, all of which might have been of prodigious use to the *Swedes*, in case they had attempted this commerce to the *East Indies* while they were possessed of them, or had even encouraged the industry and commercial spirit of their inhabitants; for want of which they brought no great revenue into the royal treasury, and contributed but little to the wealth of the nation. Their loss therefore was great, considering what they might have been; but very supportable if we reflect on what they really were; and that, being acquired by conquest, they kept *Sweden* always upon bad terms with her neighbours (2).

(1) British empire in America, vol. i. p. 222.

(2) Bishop Robinson's account of Sweden, chap. xv.

remedies were applied ; new methods of agriculture were put to the trial for the improvement a
of the soil ; a variety of machines invented to mitigate the labour of such as were employed in
the mines ; new manufactures erected ; encouragement given to strangers ; and, in short,
every possible method was practised that might give a new face to affairs. These endeavours
had quickly good effects, and, amongst others, they produced an active spirit of industry,
sharpened by emulation, and every man, who had an opportunity, striving to distinguish him-
self as far as he was able, both in acting and thinking for the public benefit, as it stood con-
nected with the method in which he pursued his own private advantage : and this was the situa-
tion Sweden was in at the time of the suspension of the *Ostend* company, by which a number
of busy and able men were thrown out of employment, and left under a variety of discour-
agements to seek it where they could ^m (C).

At what
time, and from
what motives,
their East In-
dia company
was erected.

ENCOURAGED by this and other coinciding circumstances, one Mr. *Henry Koning*, an emi- b
nent merchant at *Stockholm*, formed the scheme of establishing an *East India* company in Swe-
den. In order to this, he represented to the king and his ministers, that there were various
parts of *Asia* and *Africa*, to which an advantageous commerce might be carried on, without
infringing of treaties, or breaking in upon the trade of other nations ; that this was what Swe-
den had a right to at all times ; but that there never was a juncture in which she might avail
herself of that right with so much facility as at present ; that it was impossible to undertake an
enterprize of this nature without the assistance of foreigners, as well in contributing to the
expence with which it would be necessarily attended, as in entering into a service that the *Swedes* c
Ostend company were desirous of employing it elsewhere, more especially if it could be done
with secrecy ; and that there might be easily found persons every way capable of conducting
such a design in its infancy, if the season was not let slip. These arguments had their weight,
more especially when, upon due examination, Mr. *Koning* made it appear to the college of
commerce, or, to use our own phrase, the board of trade, that he had advanced nothing which
it was not wholly in his power to make good ^o. Upon mature deliberation, therefore, his pro-
posal was accepted, and his *Swedish* majesty, by and with the advice of the senate, granted him
a charter for his new company, dated *June* the 14th, 1731 ^p, precisely one hundred and five
years after the letters patent of *Gustavus Adolphus* for the like purpose ; the substance of which,
because it is generally regarded as one of the best digested instruments of its kind that is any- d
where extant, we will give the reader, bringing it, however, into as narrow a compass as,
without prejudice to its scope and meaning, is possible ; because, without the knowledge of its
contents, whatever we have further to say upon this subject, would not be so perspicuous and
intelligible.

The substance
of the royal
charter to
that East In-
dia company.

THE king thereby concedes to *Henry Koning*, and his associates, the liberty of navigating and
trading to the *East Indies* for fifteen years, with the inhabitants of all countries from beyond the
Cape of Good Hope to the islands of *Japan*, where-ever they shall think proper or convenient ;
with this single restriction, that they shall not trade in any port belonging to any prince or state
in *Europe*, without free leave first had and obtained : the ships, employed in this commerce,
shall constantly take in their lading at *Gottenburgh*, to which port they shall return, with all e
the merchandize they bring from the *East Indies*, and cause the same to be publicly sold as
soon as conveniently they can : the said *Henry Koning* and company shall pay to the crown of
Sweden during the said fifteen years, one hundred dalers *per* last for every ship they employ,
such ships being measured before their departure from *Gottenburgh* ; which money is to be paid
within six days after the safe return of the said ship from the *Indies* ; and they shall likewise pay
two dalers *per* last in full satisfaction for the town duties : the said *Henry Koning* and company
may employ, equip, and arm as many vessels as they shall think proper, provided those vessels
are built or bought in *Sweden*, and whatever else is necessary for equipping and furnishing them
be had in the *Swedish* dominions ; but, in case this should be found at any time impracticable,
then the company may provide themselves with ships, or whatever else shall be found requisite f

^m Reflexions sur le commerce de Suede.

(C) It appears from hence, that it had been much bet-
ter policy in those nations that found their commerce hurt
by the *Ostend* company, to have granted an indemnity
to all their subjects that stood in need of it, when they
procured a suspension of that commerce, than to leave
them exposed to those severe laws that were calculated to
prevent their going into the service of that company (3) ;
and, from their not perceiving this in time, both the

Danish and *Swedish* companies arose. Severity is very
seldom beneficial to a prince ; but almost always destruc-
tive to a people. Desperate men are very dangerous
creatures, more especially when their country is the ob-
ject of their resentment ; and therefore, for the sake of
prudence, tho' not of pity, every method should be tried
to reclaim them, since it is hardly possible to foresee how
far the reach of their malice may extend.

(3) See stat. 9 Geo. I. c. 26. § 6, 7, 8.

for

a for their commerce, where-ever they shall think fit; provided always that they give the preference to, and promote as far as in them lies, the building, manufactures, and produce of *Sweden*: the said ships shall carry the *Swedish* flag, and shall be furnished with passports under the king's hand, as also from the republic of *Algiers*: the said company shall be at liberty to raise what sum they think fit for the carrying on their commerce, by voluntary subscription, or otherwise, as they shall think proper; and such as shall become subscribers shall be obliged to pay in their money at the times prescribed, on pain of forfeiting their interest in the said commerce.

THE company may transport what ordnance or small arms they think proper, as also silver
 b coined or uncoined, *Swedish* money only excepted; and may likewise bring from the *Indies* what kind of goods or manufactures they think fit, without any restriction: the vessels of the company, when freighted, and ready to sail, shall not be stopped or hindered on any pretence whatever; nor shall they, at their return, be impeded from entering into the port to which they are consigned: the goods of the said company may be transported, at their pleasure, from place to place within his *Swedish* majesty's dominions, being first furnished with proper passports, without paying any other duties than those before stipulated: the captains of the company's ships shall have the like powers for maintaining discipline amongst their crews as the captains of the king's ships; and, with respect to trade, they shall conform to the instructions given by *Henry Koning* and company; provided always those instructions are not repugnant to the privileges
 c granted by this charter: the seamen and soldiers entered on board the company's ships shall not be liable to be pressed into the king's or any other service; and, on the other hand, it shall not be lawful for the company to take into their service any who shall have deserted that of the crown: the seamen and soldiers belonging to the ships in the company's service, and deserting from it, may be apprehended and detained, but according to the usual forms of law, and by the hands of the proper officers: the ships belonging to the company being returned and entered, having the merchandize on board them, the goods shall be duty-free, except only a very small acknowledgement to be paid on removing them.

THE persons acting under this character shall constantly chuse out of their own number at least three directors, who shall be all men of distinguished probity, and known abilities, of
 d which *Henry Koning* shall be one; and, in case of his demise, the members of the company are directed and empowered to make choice of another person in his stead; provided always, that these three directors be natives of the kingdom of *Sweden*, or at least naturalized *Swedes*, protestants, and resident in the king's dominions, unless necessarily absent in foreign parts for the service of the company; in which case the proprietors may substitute another director at home: the said *Henry Koning*, and his associates, may make such regulations for the management of their commerce as they shall think proper, provided they be agreeable to this charter: they shall render a faithful account to all the persons interested, as well of the profits and losses as of the capital of the said company; but they shall not be obliged to discover the names of their
 e subscribers, or the sums they subscribed; nor shall they be obliged to produce or suffer their books to be inspected on any pretence whatsoever: in case any of the directors shall find that the rest betray their secrets, or are guilty of any other fraud or misdemeanor, they may apply to the board of trade for justice and reparation, and, upon due proof, such offender shall be suspended or degraded from his office of director, and the company shall be at liberty to chuse another in his room.

In like manner, if any of the proprietors shall find that *Henry Koning*, and the rest of the directors, betray their trust, or are guilty of any frauds, they may make the same application, and obtain the like redress: the said *Henry Koning* and company may employ what number of supercargoes, officers, mariners, or soldiers, they shall think fit, either *Swedes* or foreigners; who, on their being so employed, shall enjoy the same privileges as if they were born *Swedes*;
 f and the money employed, either by natives or foreigners, in the capital of the company, shall not be liable to any stoppage or seizure: such persons as are interested in, or employed by, the company, shall be naturalized according to their respective qualities, upon their applying themselves to the king for that purpose: the said *Henry Koning* and company, and such as are authorized or employed by them, in case they are molested or disturbed in their commerce by any person, or in any part of the world whatever, shall have full power from his majesty to obtain ample justice and satisfaction by all convenient methods, and shall be at liberty to oppose force by force, and to consider such disturbers as pirates, and enemies to the public peace. His majesty will grant them these powers, especially in such commissions as their captains shall receive: and in case, notwithstanding, they should be attacked, and suffer any
 g injury or injustice from any nation whatever in the carrying on of this commerce, his majesty, upon due information thereof, will grant them his high protection, and will endeavour to procure for them speedy and ample satisfaction, either by way of reprisal, or otherwise: the rest of the subjects of the crown of *Sweden* are expressly prohibited and forbid to engage in, or interfere with, the trade of the said company, under pain of his majesty's high displeasure, and the

con-

confiscation of their vessels and effects. The king promises to alter or augment these privileges upon application from the company, as often and in such a manner as shall be found necessary for promoting the trade to the *East Indies*, and the interest of the persons concerned therein.

Why this instrument is esteemed one of the best drawn and least embarrassed of any.

THE reader will perceive that the powers contained in this charter, are such as concern commerce abroad, and are not calculated to give the company or its directors too much power at home, because it subjects them to the college of commerce; which consists of the president of the treasury and four counsellors, who hear and determine whatever comes before them in a summary way, according to the laws of the kingdom and the general maxims of equity^a. There were great expectations formed of this company for various reasons. Because they had all the powers granted them that they could reasonably expect or desire. Because they were not limited in their capital, but allowed to raise such sums, and in such manner, as they shall esteem most for their benefit. From their being prohibited from interfering with the commerce of other nations, and thereby running themselves and their country into difficulties and disputes. From their having the king's protection secured to them in such a manner, and for such purposes, as might serve to answer all good ends, without involving the crown of *Sweden* in any controversies with the maritime powers, or any other of her allies. And lastly, because, from the nature of the constitution in *Sweden*, there seemed to be as high security for the properties of such as interested themselves in this affair as in any other country whatever. It is not therefore difficult to conceive that the capital was quickly subscribed, and such a proportion of it raised as enabled the directors to make the necessary dispositions for dispatching two ships to the *Indies*, in which, however, they acted with great caution and deliberation (D).

^a Oñroy accordé par le roy de Suede, pour l'érection d'une compagnie des Indes, dans ses états, art. xv. Corps diplomatique du droit des gens, tom. ii. P. ii. p. 305.

(D) The custom of *Sweden* has been always to have causes of every kind examined by persons who must have a peculiar knowledge of the matters to which they relate. Thus, in all disputes about maritime affairs, things are decided by the sea-laws of *Wishy*, which are commonly known by all sea-faring people. The miners have likewise courts of their own, in which all suits are tried before persons of skill and experience in that kind of business, and in the customs of the miners; and so in respect to trade, a suit may be commenced for any thing that is a breach of honesty, tho' there be no express law against it, and the board of trade are not restrained to particular punishments, but may decide all controversies in an equitable way (4). But what is the greatest advantage in the proceedings before these courts, is their not being tied to forms, so that every man may be, if he pleases, his own lawyer, or he may employ one if he thinks fit, at a very small expence; which makes those of the pro-

fession but poor in *Sweden*, at the same time that it keeps the people from being impoverished by long suits and large costs. It was therefore a great advantage to the new company to have all controversies referred to the college of commerce, because they were speedily and effectually decided; without which, as many difficulties naturally arise at the setting up any new branch of trade, they might have been exceedingly embarrassed, thro' the folly or obstinacy of such as entered into their service; and besides, the knowledge that they might be immediately called to a strict account, was a very necessary and useful check upon the directors themselves, and probably contributed not a little to their making up clear accounts, and declaring dividends in as short a time as possible after their sales were over; which has given great satisfaction to the proprietors, and operated powerfully to the maintenance and support of the company.

(4) *Bishop Robinson's account of Sweden, chap. iii. xiv.*

S E C T. II.

Conduct of the Swedish monarch, and of the nation, in supporting this establishment, very candid and open, more especially in regard to the maritime powers, but, at the same time, very steady; by which they carried their point, tho' not very acceptable to these, or to some other potentates, who notwithstanding desist from their opposition.

His Swedish majesty gives notice of this charter to the States General.

AS soon as this charter was granted, his *Swedish* majesty directed his minister at the *Hague* to present a memorial to their High Mightinesses the States General, signifying that his majesty had thought fit to erect such a company in his dominions, and that at the same time they were restrained expressly by their charter from interfering with or disturbing the trade of any Christian nation whatever in those parts; and that he chose to inform their High Mightinesses thereof, that such as were employed in the *Swedish* company's service, might not be treated by any of their subjects in the *Indies* as people belonging to they knew not who, but as acting under the authority of a prince in alliance and friendship with their republic, a free and independent king, who had an unquestionable right to make use of his power for the benefit of those he governed^r. This memorial was accordingly presented July 18th, 1731, but no answer

^r ROUSSET recueil d'actes, negociations, memoires, &c. tom. viii. P. 355.

- a being returned to it by the States, the *Swedish* minister, by direction from his court, presented another memorial on the 31st of *October*^s following; in which he set forth, that the king, by establishing this company, intended to consult the welfare of his own subjects, without prejudice to those of any other prince or state whatever; and that he was particularly careful to avoid giving any just cause of offence to their High Mightinesses: that, as in the course of so long a voyage, the vessels in the service of the *Swedish* company might be obliged by distress of weather, or other accidents, to take shelter in the ports or roads of some of the *Dutch* settlements in the *East Indies*, in which case he hoped they would receive the same testimonies of kindness and humanity as they were accustomed to shew to other *European* nations, such as the *French*, *English*, and *Danes*; that his majesty had expressly directed, that the masters of those
- b ships, in such cases, should pay in ready money for whatever succours they received, and should not presume to enter into any kind of commerce; and should, upon these and all other occasions, whether in the open sea, or in any port or road, behave in every respect to the ships and subjects of their High Mightinesses as became them towards the good friends and allies of the king their master; and that his majesty persuaded himself that their High Mightinesses, from the same principles of equity and friendship, would direct their subjects in the *Indies* to treat the *Swedes* upon the same foot; and that his majesty had farther commanded him to assure them, that as his majesty had nothing more at heart than to cultivate the good correspondence, and to augment the harmony subsisting between him and their High Mightinesses, so nothing could be more agreeable to him than an opportunity of shewing their High Mighti-
- c nesses, or their subjects, marks of his sincere affection and good-will: and that, the premises considered, he hoped to receive their favourable resolution thereupon.

THE States General, finding it absolutely necessary, as well in regard to their interest as with respect to decency, to give an answer to these memorials, couched it in the following terms¹. The king of *Sweden* will always find their High Mightinesses disposed to the most strict friendship with him; but as his majesty cannot be ignorant that the company established in his dominions, for carrying on the commerce to the *East Indies*, must be prejudicial to the interests of that long since established under their protection, he cannot expect that they should favour this new company, tho' they are at all times willing to afford succours to his *Swedish* majesty's subjects. This dry answer was, in all probability, such as the court of *Sweden* expected; but, however,

d as nothing contained in it derogated in the least from his majesty's authority, or from his right of employing this or any other method that he thought proper for the benefit of his subjects, it did not in the least retard the preparations made for sending two ships directly for *China*; on the contrary it raised the spirits of those concerned, who, expecting no assistance, were satisfied if they met with no opposition (E).

In compliance therefore with their charter, the directors of the *Swedish East India* company caused two new ships to be built, one of which was called *the Frederick king of Sweden*, and the other, in honour of the queen, *the Ulrica*, very strong and complete, of proper force, and every way fit for the expedition in which they were to be employed². They proceeded with the like caution and diligence in the choice of the persons who were to be employ'd in all stations;

e as also in their seamen; and very fortunate they were in both respects; so that, by the time these vessels sailed from the harbour of *Gottenburgh*, the sentiments of those who attended to things of this nature were very much changed, and, notwithstanding the length of the voyage, the want of settlements where they might touch for refreshment, and other visible disadvantages under which this new company laboured, and which were scarce thought surmountable, it was generally believed they would make the voyage with success, more especially as there was not now the least apprehension of their meeting with any hindrance or ill usage from other nations. It imported indeed very highly the directors of the new company, that all things should be well considered in this their first attempt, since, from the temper of the *Swedish* nation, they might easily foresee that any disappointment would be fatal; which is the case in

f most countries where they are not used to long and perilous voyages, and where the first defeat of their expectations is commonly regarded as a proof that things are impracticable, and against which no arguments, however just or reasonable, will prevail.

(E) The reader cannot but remark great dignity and firmness in the conduct of his *Swedish* majesty throughout; and it may not be amiss to observe, that his majesty was very secure of being thoroughly supported by his subjects in whatever related to this affair, since he did not grant his charter for erecting the *East India* company, till the matter had been thoroughly debated and solemnly ap-

proved in the general dyet of the states of the kingdom (5); and, very probably, this was the reason that foreign powers did not present any memorials to the king upon the subject; because, being a national concern, and having the authority of a general dyet, they might well conclude it would be to no purpose.

One of them
seized in their
return from
China, in the
Streights of
Sunda, by the
Dutch.

BUT about the time when one or both of these ships were expected to return into the ports of a Sweden, Mr. Henry Koning received a letter, brought by some of the European shipping, from Mr. Colin Campbell, who was vested with a public character from his Swedish majesty to the emperor of China, and other sovereign princes of the east, and had also from the company the charge of supercargo on board the *Frederick king of Sweden*, by which letter he acquainted him, that when, in their return from China, they were about to enter the *Streights of Sunda*, they saw seven ships lying at anchor, which, as soon as they descried the *Frederick*, weighed and put to sea; upon this the *Frederick* endeavoured to get the wind, and to get through the streights, but was unluckily prevented by the setting of the current, which obliged them to come to an anchor. Upon this Mr. Bremer was sent on board the commodore) for the seven ships now came down upon them with Dutch colours displayed), to know the meaning b of this, and carried with them copies of their passports. The commodore detained Bremer, the shallop, and all that were in it, and continued to bear down upon the *Frederick*; and upon their coming near, the commodore fired a gun, to oblige them to strike.

THE next day in the morning he sent on board for the captain, and ordered him to bring his passports and commission, which he was obliged to obey; then the Dutch called a council, in which a resolution was taken to oblige a part of the Swedish crew to quit their ship, a proper number of Dutch seamen being sent in their room; and in the afternoon they took out the rest of the crew, leaving only the captain, Mr. Campbell, and twelve persons. The last-mentioned gentleman upon this drew up a protest, which he sent inclosed in a letter to the commodore, insisting upon the affront offered to his Swedish majesty's flag, the breach of c the law of nations in his own person, being vested with a public character, and the violation of the treaties subsisting between the republic and the crown of Sweden. As this protest was written in the Swedish language, the commodore alledged that he could not understand it; but the supercargoes, who were present, explained it to him; upon which he and the rest of the officers said, that no part of these proceedings ought to be imputed to them; having orders to do all that they had done from their superiors; which they should have been obliged to do, if the king of Sweden had been there in person. That their orders were to carry the vessel to Batavia, where they did not doubt the affair would be thoroughly examined, and the ship suffered to proceed on her voyage in a few days * (F).

The Swedish
minister com-
plains of this
usage in strong
terms at the
Hague.

UPON the communication of this letter to the court, his Swedish majesty sent orders to his d minister at the Hague to present a memorial to the States General, with a copy of the letter annexed; which he accordingly did, August 11th, 1733 *; and in this memorial he expressed the surprize his majesty was in at the unjust and violent proceedings in the Indies, so contrary to the friendship and good intelligence which their High Mightinesses had assured the king they would always maintain towards his majesty and his subjects; that this was increased from the consequence of the memorials formerly presented; in answer to which, they did not pretend to dispute his majesty's right, tho' they declared they could not favour that company; that therefore his majesty could not apprehend that they had any doubt of this being a Swedish company, and properly authorized, though possibly in this, as in their own and all other companies, foreigners might have some concern; that there was not the smallest pretence of his subjects having exceeded their powers, e or done any thing contrary to treaties; that therefore this proceeding, so disobliging, and which was in effect treating him and his subjects as enemies, could not but be very offensive to his Swedish majesty, more especially considering the little respect shewn to a person vested with the character of his minister plenipotentiary, and whose person ought therefore to have been esteemed sacred by the law of nations. That, notwithstanding the harshness of this action, his majesty had still so high an idea of their High Mightinesses, as not barely to believe they gave no orders for the excesses committed on his majesty's ship the *king of Sweden*; but was also persuaded that their High Mightinesses, in case it was not already done, would order without the least delay the said Swedish ship, her cargo and equipage, to be released; and also give a just, full, and proportionate satisfaction, for the indignity offered to the king and kingdom, by the insult f done to his minister plenipotentiary, as well as repair whatever loss the Swedish East India company

* Extracted from the letter.

* ROUSSET, recueil historique d'actes, negociations, &c. tom. viii. p.

(F) A report having been spread, that the *Ostend* company had applied themselves to his Swedish majesty to obtain leave for two ships of theirs to sail with Swedish colours for the *East Indies*, the king publicly declared that he would grant no such permission; and sent his orders to the directors, that they should not employ as an officer in their service any who had been in that of the *Ostend* company (6). Notwithstanding this, there is great reason to believe that the Dutch squadron, which

cruised in the *Streights of Sunda*, were directed by the council of *Batavia* to seize any ship under foreign colours, in hopes it might prove one of the *Ostend* interlopers, who, they very well knew, made use of the flags of several princes; and indeed this is the only rational account that can be given of this whole transaction; more especially, if we consider the answer given by the directors of the Dutch East India company to the States General, and signified by them to the Swedish minister.

(6) *Mercur historique et politique*, tom. xci. p. 691, 692.

had

a had received; and that his majesty farther commanded him to represent and require, that their High Mightinesses would instantly send their orders that the other *Swedish* ship, called the *Ulrica Eleonora*, may return from the *East Indies* freely, without impediment or injury from the subjects of the republic, his majesty being firmly resolved to protect and maintain his subjects in the enjoyment of the privileges granted them by his charter for establishing a commerce to the *Indies*.

THE States perceiving, by the language of this memorial, that this was like to become a very serious affair, and being unwilling to be suspected of having the least knowledge of such a transaction, sent immediately to the board of *East India* directors to know what it was that had given occasion to the regency at *Batavia* to act in this manner; the directors replied, that they had sent no order relative to any such transaction as that of which the crown of *Sweden* complained; and they farther believed the regency at *Batavia* was too prudent to take any such step without express orders; but that, however, their last letters were of the eighth of *September*, 1732; in which there being no mention at all of any such thing, it was impossible for them to give their High Mightinesses any farther lights; but they hoped they would defer the consideration of this affair till they had advice concerning it from the *Indies*. The States therefore answered the *Swedish* envoy, that he might assure the king his master, that neither they nor the company had ever given any orders of this kind; and that they were still in the same sentiments of friendship and cordiality towards his *Swedish* majesty and his subjects, as they had formerly professed themselves. The ship being dismissed from *Batavia*, returned soon after, which facilitated the setting this matter right; and thenceforward all things of this kind were forborne, and the *Swedes* suffered to carry on their trade to *China* as other nations do, without any trouble, opposition, or interruption.

THEIR first voyages, tho' not attended with so much profit as might have been expected, were however tolerably successful, and the company established their factory on the river of *Canton* in *China*, with the consent of the *Chinese*, who seemed to be very well pleased with these new comers, and every way disposed to favour and promote their trade; so that they were very soon upon the same footing there with other *European* nations². At home indeed they met with some difficulties; for the company being obliged to make use of many foreigners in all capacities for the better carrying on of their trade, and there being no nation in *Europe* naturally more jealous than the *Swedes*, this occasioned a great clamour, especially among the common people, which, however, was in some measure mitigated, by publishing an order that two thirds at least of the mariners should be, for the future, natives of the kingdom; and, as the execution of this order was apparently attended with difficulties and inconveniencies, it convinced the vulgar even of their first mistake, and that the company had done no more than what they were warranted to do by their charter, and what the circumstances of their affairs, more especially at the beginning, rendered necessary. Since that time the *Swedish* company have been very regular, both in fitting out their ships, and in their returns; which, being sold to foreigners, have brought in great sums of money to the kingdom; yet, as a great part of this money has been exported again for the carrying on this trade, a new complaint has been created thereby, in respect to the silver carried to the *East Indies*. We need the less wonder at this in *Sweden*, because, tho' the trade of the kingdom is not large, yet it produces annually a considerable balance in ready money, as is known experimentally here, since two thirds of the trade we carry on thither is managed with ready money only; and it is also pretty much the same thing with other nations who trade thither, the *French* only excepted, who have a balance in their favour³ from the *Swedes*, which has gradually grown less and less, in proportion as they have taken more naval stores of late years than they did formerly; and, as their subsidy treaties bring in considerable sums to *Sweden*, or, at least, keep the money there that would otherwise be employed in discharging the balance of trade; so that the *Swedes* being used to see great sums of money brought in by every other branch of commerce, and not so immediately acquainted with the profits arising from this, are less disposed to consider it as advantageous (G).

¹ Histoire de Suede, tom. iii. p. 279. ROUSSET, recueil historique d'actes, &c. tom. viii. p. 367, 368.
² State of the trade in the East Indies, p. 3. ³ Bishop ROBINSON's account of Sweden, chap. xiv.

(G) It is observed by Dr. *Robinson*, who was successively bishop of *Bristol* and *London*, and who was for many years the *British* resident at *Stockholm*, that in his time the *Swedes* were so poor as not to be able to carry on much foreign trade themselves; so that it was almost wholly in the hands of foreigners residing in that kingdom; and that, by their law, the king was intitled to a third part of any such merchant's estate, if he died

in his dominions; which, as he justly observes, was prejudicial to *Sweden*, inasmuch as it hindered foreigners from marrying and settling among them (7). But things are much changed since; and the *Swedish* orators, in their panegyrics upon the present king, very willingly do justice to his reign, by comparing their past with their present condition, pointing out the low and mean condition of their ancestors, and assigning the dates of those im-

tions.

IN consequence of these jealousies, some doubt arose, upon the expiration of the term granted ^a by their charter, whether the company would be continued, or the trade let fall; and various conjectures were thrown out in the foreign gazettes. But penetrating people easily saw that there could be but little foundation for any such notion, since the very application of the company, to have their term prolonged, was a plain indication, that not only they, but the kingdom, was the better for it: since, as it was a fact notorious, that the goods sold in their sales were bought by merchants residing in other countries, to which they were actually transported, and but a very small proportion of them consumed in the dominions of *Sweden*, a considerable part of the produce must be clear gains to the nation; since not only the dividends paid to the proprietors who reside there, remain to the nation, but also the large sums expended in building and equipping of ships, the pay of the seamen and officers, and the duties; and, besides all ^b this, the value of the commodities of *Sweden*, which are sent to *China*, which have been from the first very considerable, and have been ever since increasing ^b. These circumstances, duly weighed, made it very improbable that there should be any thoughts of abandoning this commerce, and gave no small weight to a suspicion, that those reports might not actually come from *Sweden*, but be rather intended to reach it, and to instil into a people, enough inclined to receive sudden impressions, such doubts and fears as might prejudice them either against the company or the commerce; which, if they had operated, would, no doubt, have afforded great satisfaction to their inventors, and would have been no less acceptable to those, who have all along envied them that success with which they have managed their affairs, and have acquired so much credit and honour both with the natives and *Europeans* who trade in *China*, as appears ^c from all the accounts we have had from thence, subsequent to the time in which they first resorted thither ^c.

^b Dictionnaire de commerce, tom. ii. col. 459.

^c Anson's voyage round the world, p. 528, 8vo edition.

provements that have been since made. It is in these pieces that we see the good effects of commerce, and how much it contributes to civilize and polish mankind by introducing arts and sciences, and by excluding those groundless popular prejudices, which are the effects of a narrow capacity, and are productive of nothing but poverty and pride. The same subjects are handled with more solemnity, as well as with greater authority, in the presentations presented to the throne at the close of

every dyet, in which the states never fail to compliment the king upon the care he has taken of their commerce; and, at the same time, to recapitulate the advantages that have flowed from it (8); so that we may be sure the same spirit of improvement will reign among the *Swedes* as long as their present constitution subsists; and it is not easy to conceive they will ever meet with temptations strong enough to induce them to make any considerable alteration.

(8) *Histoire de Suède*, tom. iii. p. 279.

S E C T. III.

Remarks upon the utility of this trade to the Swedes, tho' contrary to the common opinion, and in reference to the East India trade in general; as having hitherto proved the source of naval power and wealth to every nation, that has been able to carry it on for any considerable time successfully.

- a **B**UT what puts it out of all doubt that the *Swedes* are really gainers by their trade with *India*, that they are very sensible of this, and therefore very tenacious of the benefit, is the zeal and regularity with which they have persisted in sending their ships, since the term fixed in the charter expired ^d. Without having direct communications with *Sweden*, it is impossible to enter more deeply into this affair, since the subject is so very disagreeable to some of our neighbours that they mention it but seldom; neither would it be prudent to yield an implicit belief to whatever they say, whenever they do mention it; for, having so great an interest in giving a false representation of whatever regards the correspondence of other nations in those parts, it is a necessary piece of prudence to examine very attentively all their relations. Trade is the common mistress of all maritime countries, at least of all where the inhabitants have a just conception of the advantages flowing from their situation; and this naturally begets a jealousy amongst them of the progress made by each other; which is conspicuous enough to a curious eye, in most of the pieces written upon this interesting topic. But it becomes such as undertake to treat this subject historically, to lay aside prejudices and prepossessions, and to forget, as far as they can, even the concerns of their own country, while they are engaged in such a task; because the sole object they ought to have in view, is truth, which it is their business to set in the fairest light possible, and leave to others the care of applying or drawing consequences from those facts which they impartially relate; and this we hope will appear to have been our study through the course of this difficult part of our work, in which we have set forth the merits of the different nations that have been rivals to each other, in that which from this history plainly appears to be the true spring of extensive traffick, and that more especially from this section; with the demonstration of which we shall conclude it, and justify thereby what we asserted at the beginning.

- In the course of our history we have followed, as was fitting, a chronological order, and have treated of the discoveries and conquests of the several *European* nations, according to the times in which they were made. But the attentive reader must have long ago perceived, that from the nature of things, and the gradual progress of arts, this has been at the same time a kind of geographical order. When we first took up the subject, the trade of the *Indies* was in the hands of the *Venetians* and the *Italian* states, from their vicinity to *Egypt*, which was then the centre of that commerce; from them it removed to the *Portuguese*, by their finding a direct passage by sea round the *Cape of Good Hope*; and next, from a spirit of emulation, the *Spaniards* came to have a share in it, by the discovery of a new passage through the *Streights of Magellan*. The *English* and *Dutch*, provoked by the *Spaniards*, and ambitious also of gaining a part of the rich treasures brought from these distant parts of the world, sent their squadrons thither likewise: and the *Danes*, in their turn, visited those distant seas; last of all, the *Swedes*. Last, in point of time; and last, in the order of their situation in the remotest part of *Europe*, and making almost the circle of the globe to come at *China* (H).

WE

^d It appears from the advices from *Sweden*, that the company have a new term.

(H) The reader will enter into the force of this argument more clearly, if he considers how much the distance and the difficulty are increased by this retrogradation in the correspondence. The *Portuguese* were, of all the nations in *Europe*, the nearest to the *Indies*; and the countries which they first visited were the coasts of *Malabar*, which were also the nearest to them. But with respect to *Sweden*, it is every way the very reverse. That country is not only the most distant of any in *Europe* from which such a correspondence has been carried on, but the *Swedes* proceed likewise to the very remotest part of the *Indies*; so that the disproportion of the navigation is manifest. But it will appear still more visibly, if we consider the position of these countries upon the globe; for we shall then perceive, that when a *Swedish East India* ship doubles the *Cape of Good Hope*, she is actually at double the distance, or more, from *Stockholm*, than when she arrives at *Canton*. We may render this yet more familiar, by remembering, that the dominions of *Sweden* border on those of *Russia*, and the opposite frontier of *Russia* upon the territories of *China*; so that, if *Canton* were under the same parallel of latitude with *Stockholm*, the distance between them would not be more than two thousand six hundred miles: whereas the com-

gation is manifest. But it will appear still more visibly, if we consider the position of these countries upon the globe; for we shall then perceive, that when a *Swedish East India* ship doubles the *Cape of Good Hope*, she is actually at double the distance, or more, from *Stockholm*, than when she arrives at *Canton*. We may render this yet more familiar, by remembering, that the dominions of *Sweden* border on those of *Russia*, and the opposite frontier of *Russia* upon the territories of *China*; so that, if *Canton* were under the same parallel of latitude with *Stockholm*, the distance between them would not be more than two thousand six hundred miles: whereas the com-

Corroborative
proofs of the
great import-
ance and ad-
vantage of
this commerce.

WE might safely conclude from hence, if we had no other or more direct argument, that this trade must have been extremely advantageous to every nation possessed of it, since emulation is produced only by success; no people having been yet found so stupid as to envy others misfortunes, or to desire a share in what did their neighbours no good. On the contrary, where, by mistaking measures, want of oeconomy, or unforeseen accidents, one nation has thought proper to relinquish some certain branch of traffick, another very rarely has taken it up, or at least not till such a space of time had elapsed, as almost buried the knowledge of such an event in oblivion. But, in the present case, the new adventurers in this trade have certainly been excited by very just motives; for they have seen that the wealth and power of such maritime states as embraced it, rose and fell in the very same proportion as they were more or less able to preserve it. The *Venetians* were deprived of it gradually; and in consequence of this, their riches were exhausted by degrees, and by degrees their naval force declined. The *Portuguese* made a very rapid progress in their conquests, notwithstanding which, their wealth and power kept the same pace; and being more slowly worked out of those conquests, both have decayed in like manner; so that, from being masters of the seas in which their fleets appeared, they are now scarce able to defend the small remains of their vast possessions, and are even insulted upon their own coasts by the corsairs of *Barbary*. The *Spaniards* have made very little use, as we have shewn in its proper place, of their settlements in the east, and have therefore drawn but little advantage from them. The *English* and *Dutch* had scarce any naval force when they entered upon this trade; and yet in half a century they disputed the dominion of the sea with prodigious fleets, and with an obstinacy unknown, since the *Romans* and *Carthaginians* contested in like manner for naval empire. The *French* have often attempted, and that with no inconsiderable force, to fix themselves in the east, and at length with some success; and the consequences appear, and will appear, if the state continues its attention; which, from the nature of their government, is necessary to support that and almost every other branch of their commerce. The company at *Ostend* alarmed all the powers interested in the *India* trade; and, if it had not been very beneficial, the proprietors would not have struggled so hard against a suppression that was at last brought about by force. The *Danes* neglected their settlement at *Tranquebar*, because they wanted the funds necessary to support it; an accident recommended them to the protection of their government; and their concerns have been in a flourishing condition ever since. The *Swedes*, under all imaginable disadvantages, had the courage to venture upon this trade; and have shewn the wisdom of their conduct, by the regularity with which they have maintained it for twenty years together, and are like to maintain it; perhaps to extend it, when they feel the effects of those improvements in their own country, which the sweets of commerce have given them the spirit to undertake, and will supply them with the means to accomplish.

Several bene-
ficial conse-
quences attend-
ing it in the
countries
where it has
been esta-
blished.

FOR amongst the other benefits resulting from this and other trades, in which long voyages are necessary, none of the least considerable is the opening and enlarging mens minds, quickening their inventions, and putting them upon the exercise of arts in their own countries, unknown to them before. Thus the silk trade was long ago brought out of the east, before any direct passage was found thither by sea, which has proved of such infinite advantage to the inhabitants of the several countries where it is cultivated. In like manner sugar-canes were transplanted to *Sicily*, *Spain*, and other regions; from whence they were carried into the *West Indies*, where, by the superior excellence of the climate, fertility of the soil, and cheapness of labour, they are now become one of the staple commodities of *America*. All the porcelain manufactories in *England*, *Holland*, *France*, *Germany*, and elsewhere, have been erected to vie with the fine earthen-ware of *China* (1). Painted linens have been produced from the chintzes of the *Indies*; and from *Japan* we have borrowed the art of making lacquered ware. *Sweden* has already made some progress in the improvement of her old manufactures, and in acquiring new. Her shipping daily increases, and with it the desire of finding new trades, in which her vessels may be employed. To facilitate this, the *Swedes* have projected a communi-

pass they take in sailing, makes it eleven thousand; and in all this prodigious passage they have no port of their own, where they may expect refreshments or succours, or where they may pass the winter, or rest if they have any occasion.

(1) It has been before observed, that the states of *Sweden* never failed to compliment the king upon what is done by his orders for improving the trade or manufactures; and this, notwithstanding they had themselves

pointed out, and recommended, those very improvements. Amongst those proposed by the states some years ago, one was the finding out a proper earth for making porcelain, in which one of the most eminent professors in their universities (2) was employed for a whole summer; and tho' he was not so lucky as to succeed in that, yet he made and recorded many other useful and important discoveries in a work of his; which fully demonstrates what is advanced in this paragraph.

(2) *Voyage unto, and description of, the islands of Oeland and Gotland, performed in 1741, by order of the states of Sweden, by Charles Linnæus, professor of physic and botany, in the university of Upsal. Stockholm, 1745, 8vo.*

- a cation with the ocean, which, when perfected, will be of singular benefit to their navigation; and tho' this work was not without difficulty, as well as very expensive, yet the subscriptions for carrying it on have exceeded even their own expectations. Whence can this public spirit, this alacrity to labour, this readiness in advancing money arise, but from the nation's being sensible of the advantages flowing from commerce, and their willingness to contribute to whatever may extend it? All this they owe to that severe check given to the ambition of Charles the twelfth, more especially in the latter part of his reign, when a numberless train of misfortunes convinced them of the necessity of recurring to the arts of peace, to relieve them from the miseries brought upon them by fruitless and fatal wars. By pursuing this lesson steadily, they have, in a great measure, extricated themselves from a grievous and galling load of evils;
- b have given a new face to their country, of which both strangers and themselves judged it incapable; and, with respect to their domestic affairs, are in a much happier condition than ever they were; in which this is not the least ingredient, that they know this happiness may be greatly augmented, and that they have the means in their own hands, frugality and industry; more productive of solid riches than the mines of Mexico and Peru, or the armies and fortune of Alexander.

There are some points of great importance to all maritime states, and more especially such as are embarked in the commerce of the east, which may be learned from this very distinct and authentic history of the rise and progress of the *Swedish* company. In the first place, it will teach them never to be too secure, or to amuse themselves with an opinion, that much wealth, great experience, and long possession, amount to a title not to be contested. Some of them feel, and all may see, this is no better than a dream. Caution and courage carried thither the first *Europeans*; and the same qualities will always carry any *Europeans*, and bring them back too, with much success. It will therefore be prudent not to be too tenacious of their exclusive powers. The *East India* trade is very lucrative to any company, but still, properly managed, more advantageous to the nation where that commerce subsists. They should therefore ever remember they are but trustees, and liable to be called to account, if, through their imprudence in offending the pagan princes abroad, or pinching their own servants too severely at home, the trade be either injured or lost.

- Another circumstance of no less consequence, is demonstrated from the conduct of this company, that the *East India*, or at least the *China* trade, may be carried on without either conquests or settlements; which, considering the many and plausible reasons urged against it, nothing but experience could have shewn. It is true, the commerce, thus carried on, may be, in some respects, more inconvenient; but then these very inconveniencies produce an affluence and circumspection, which are attended with many beneficial consequences; and, besides, hinder either dishonesty or haughtiness towards the natives, from which much greater mischiefs arise. Add to this, that by making great diligence and strict oeconomy indispensably necessary in the management of their servants, secures to the company regular and constant, though less plentiful returns.

- Lastly, the success (indeed the very subsistence) of this company proves, that those of other nations have no title to reject, under the specious pretence that they are exceedingly difficult, or utterly impracticable, any projects that may be formed for the extension of this trade by the governments of those countries, respectively, to which these companies belong. For nothing of this kind can be possibly enjoined them equally hard to what the *Swedes* have performed. Other nations, therefore, who have it immediately in their power, ought to indemnify themselves for the losses, or rather diminution of their usual gains, by the setting up of these new traders, from the opening of unattempted branches of trade, the profits of which, at least for a time, they may keep to themselves; and if of this the possibility, or even the probability, be called in question, what has been already said as to the *Spanish* and *Dutch* discoveries, will clear the doubt; or, if any scruples should remain, the full solution of them, beyond the power of contradiction, will be given in the next chapter.

- The great fault of companies in general is, that they become too cold and phlegmatic in their management, under colour of being methodical, and maintaining a strict oeconomy. In order to guard against this, there ought to be a clause, whenever their charters come to be renewed, that, within the new term given them, they shall fix and establish such a new trade or make such or such a discovery. By this means, the nation would gain, as well as the proprietors, by the continuance of a company; an enterprising spirit, which otherwise every company is but too apt to discourage, will be kept alive; and new outlets, from time to time, be found for commodities and manufactures. This would likewise intitle the STATE to look a little into the management of this trade, and give them an opportunity of correcting mistakes early, and thereby preventing those evils they must be called upon, whenever or however they happened, to redress, at the nation's expence. This would also remove that veil of mystery and obscurity, which ever occasions suspicion, and support that ardour and activity, which is the soul of the *East India* commerce.

His Prussian
majesty, being
convinced of
this, has set up
a new compa-
ny at Embden.

AFTER all that has been said, we need not wonder that a new power is putting in for a share of this commerce; and that, after long deliberation on the ways and means of acquiring trade, and raising a maritime force, his *Prussian* majesty has judged that expedient, which hitherto has never failed others, the most convenient for him to employ; and for that purpose has actually granted a charter for the establishment of an *East India* company at *Emden* in *East Frizeland*. A port of which, to say no more at present, the *Dutch* have been always jealous, who are never so without a reason; a port once celebrated by the removal thither of the *English* staple from *Antwerp*; and a port which only wanted such a master as it now has, to render its importance more conspicuous than it once was. But, whatever the fate of this new company may be, the very erection of it is sufficient to the end for which we have mentioned it, as it affords a conclusive argument in support of the point we have been labouring to prove; so that the intelligent reader can lie under no doubt, that a commerce, ever productive of wealth and power to those who have been possessed of it, and used it properly; a commerce, the loss of which has been always ruinous; and a commerce, which all the pretenders to naval dominion have constantly struggled for in all ages; is highly valuable in itself, and inestimable in its consequences.

End of the FOURTH VOLUME.
